You say, “civil societies are instituted for the attaining all the benefits which civil society or political government can yield;” and the reason you give for it; “because it has hitherto been universally acknowledged that no power is given in vain;” and therefore “if I except any of those benefits, I shall be obliged to admit that the power of attaining them was given in vain.” And if I do admit it, no harm will follow in human affairs: or if I may borrow an elegant expression of yours out of the foregoing leaf, “the fortune of Europe does not turn upon it.” In the voluntary institution, and bestowing of power, there is no absurdity or inconvenience at all, that power, sufficient for several ends, should be limited by those that give the power only to one or some part of them. The power which a general commanding a potent army has, may be enough to take more towns than one from the enemy; or to suppress a domestic sedition; and yet the power of attaining those benefits, which is in his hand, will not authorize him to employ the force of the army therein, if he be commissioned only to besiege and take one certain place. So it is in a commonwealth. The power that is in the civil sovereign is the force of all the subjects of the commonwealth, which supposing it sufficient for other ends, than the preserving the members of the commonwealth in peace from injury and violence: yet if those who gave him that power, limited the application of it to that sole end, no opinion of any other benefits attainable by it can authorise him to use it otherwise.

Our Saviour tells us expressly, that “all power was given him in heaven and earth,” Matt. xxviii. 11. By which power I imagine you will not say, that the “spiritual and eternal interest” of those men whom you think need the help of political force, and of all other men too, could not any way be procured or advanced; and yet if you will hear him in another place, you will find this power, which being all power, could certainly have wrought on all men, limited to a certain number: he says, “thou hast given him [i.e.

thy son] power over all flesh, that he should give eternal life to as many as thou hast given him,” John xvii. 2. Whether your universally acknowledged maxim of logic be true enough to authorize you to say, that any part of this power was given him in vain, and to enable you to draw consequences from it, you were best see.

But were your maxim so true that it proved, that since it might “indirectly and at a distance” do some service towards the “procuring or advancing the spiritual interest” of some few subjects of a commonwealth, therefore force was to be employed to that end; yet that will scarce make good this doctrine of yours: “doubtless, commonwealths are instituted for the attaining all those benefits which political government can yield; therefore if the spiritual and eternal interests of men may any way be procured or advanced by political government, the procuring and advancing those interests must in all reason be reckoned among the ends of civil societies, and so consequently fall within the compass of the magistrate’s jurisdiction.” For granting it true that “commonwealths are instituted for the attaining all those benefits which political government can yield,” it does not follow “that the procuring and advancing the spiritual and eternal interest” of some few members of the commonwealth by an application of power, which indirectly and at a distance, or by accident, may do some service that way, whilst at the same time it prejudices a far greater number in their civil interests; can with reason be reckoned among the ends of civil society.

“That commonwealths are instituted for those ends, viz. for the procuring, preserving, and advancing men’s civil interests, you say, No man will deny.” To sacrifice therefore these civil interests of a great number of people, which are the allowed ends of the commonwealths, to the uncertain expectation of some service to be done indirectly and at a distance to a far less number, as experience has always showed those really converted to the true religion by force to be, if any at all; cannot be one of the ends of the commonwealth. Though the advancing of the spiritual and eternal interest be of infinite advantage to the persons who receive that benefit, yet if it can be thought a benefit to the commonwealth when it is procured them with the diminishing or destroying the civil interests of great numbers of their fellow citizens: then the ravaging of an enemy, the plague, or a famine, may be said to bring a benefit to the commonwealth; for either of these may

indirectly and at a distance do some service towards the advancing or procuring the spiritual and eternal interest of some of those who suffer in it.

In the two latter paragraphs you except against my want of exactness, in setting down your opinion I am arguing against. Had it been any way to take off the force of what you say, or that the reader could have been misled by my words in any part of the question I was arguing against, you had had reason to complain: if not, you had done better to have entertained the reader with a clearer answer to my argument, than spent your ink and his time needlessly, to show such niceness.

My argument is as good against your tenet in your own words, as in mine which you except against: your words are, “doubtless commonwealths are instituted for the attaining all the benefits which political government can yield; and therefore if the spiritual and eternal interest of men may any way be procured or advanced by political government, the procuring and advancing those interests must in all reason be reckoned amongst the ends of civil societies.”

To which I answered, that if this be so, “Then this position must be true, viz. That all societies whatsoever are instituted for the attaining all the benefits that they may any way yield: there being nothing peculiar to civil society in the case, why that society should be instituted for the attaining all the benefits it can any way yield, and other societies not. By which argument it will follow, that all societies are instituted for one and the same end, i. e. for the attaining all the benefits that they can any way yield. By which account there will be no difference between church and state, a commonwealth and an army, or between a family and the East-India company; all which have hitherto been thought distinct sorts of societies, instituted for different ends. If your hypothesis hold good, one of the ends of the family must be to preach the gospel, and administer the sacraments; and one business of an army to teach languages, and propagate religion; because these are benefits some way or other attainable by those societies: unless you take want of commission and authority to be a sufficient impediment: and that will be so in other cases.” To which you reply, “Nor will it follow from hence, that all societies are instituted for one and the same end, (as you imagine it will,) unless you suppose all societies enabled by the power they are endued with to attain the same end, which I believe no man hitherto did ever affirm. And therefore, notwithstanding this position, there may be still as great a difference as you please between

church and state, a commonwealth and an army, or between a family and the East-India company. Which several societies, as they are instituted for different ends, so they are likewise furnished with different powers proportionate to their respective ends.” In which the reason you give to destroy my inference, I am to thank you for, if you understood the force of it, it being the very same I bring to show that my inference from your way of arguing is good. I say, that from your way of reasoning about the ends of government, “It would follow that all societies were instituted for one and the same end; unless you take want of commission and authority to be a sufficient impediment.” And you tell me here it will not follow, “unless I suppose all societies enabled by the power they are endued with, to attain the same end;” which in other words is, unless I suppose all who have in their hands the force of any society to have all of them the same commission.

The natural force of all the members of any society, or of those who by the society can be procured to assist it, is in one sense called the power of that society. This power of force is generally put into some one or few persons hands with direction and authority how to use it; and this in another sense is called also the power of the society: and this is the power you here speak of, and in these following words, viz. “Several societies, as they are instituted for different ends; so likewise are they furnished with different powers proportionate to their respective ends.” The power therefore of any society in this sense, is nothing but the authority and direction given to those that have the management of the force or natural power of the society, how and to what ends to use it, by which commission the ends of societies are known and distinguished. So that all societies wherein those who are intrusted with the management of the force or natural power of the society, have commission and authority to use the force or natural power of the society to attain the same benefits, are instituted for the same end. And therefore, if in all societies those who have the management of the force or natural power of the society, are commissioned or authorized to use that force to attain all the benefits attainable by it, all societies are instituted to the same end: and so what I said will still be true, viz. “That a family and an army, a commonwealth and a church, have all the same end. And if your hypothesis hold good, one of the ends of a family must be to preach the gospel, and administer the sacraments; and one business of an army to teach languages, and propagate religion, because these are benefits some way or

other attainable by those societies; unless you take want of commission and authority to be a sufficient impediment: and that will be so too in other cases.” To which you have said nothing but what does confirm it, which you will a little better see, when you have considered that any benefit attainable by force or natural power of a society, does not prove the society to be instituted for that end; till you also show, that those to whom the management of the force of the society is intrusted, are commissioned to use it to that end.

And therefore to your next paragraph I shall think it answer enough to print here, side by side with it, that paragraph of mine to which you intended it as an answer.

L. II. P. 389.

“It is a benefit to have true knowledge and philosophy embraced and assented to, in any civil society or government. But will you say, therefore, that it is a benefit to the society, or one of the ends of government, that all who are not peripatetics should be punished, to make men find out the truth, and profess it? This indeed might be thought a fit way to make some men embrace the peripatetic philosophy, but not a proper way to find the truth. For perhaps the peripatetic philosophy may not be true; perhaps a great many have not time, nor parts to study it; perhaps a great many who have studied it, cannot be convinced of the truth of it: and therefore it cannot be a benefit to the commonwealth, nor one of the ends of it, that these members of the society should be disturbed, and diseased to no purpose, when they are guilty of no fault. For just the same reason, it cannot be a benefit to civil society, that men should be punished in Denmark for not being lutherans, in Geneva for not being calvinists, and in Vienna for not being papists, as a means to make them find out the true religion. For so, upon your grounds, men must be treated in those places, as well as in England, for not being of the church of England. And then, I beseech you, consider the great benefit will accrue to men in society by this method; and I suppose it will be a hard thing for you to prove, That ever civil governments were instituted to punish men for not being of this or that sect in religion; however by accident, indirectly and at a distance, it may be an occasion to one perhaps of a thousand, or an hundred, to study that controversy, which is all you expect from it. If it be a benefit, pray tell me what benefit it is. A civil

benefit it cannot be. For men's civil interests are disturbed, injured, and impaired by it. And what spiritual benefit that can be to any multitude of men to be punished for dissenting from a false or erroneous profession, I would have you find out; unless it be a spiritual benefit to be in danger to be driven into a wrong way. For if in all differing sects one is in the wrong, it is a hundred to one but that from which any one dissents, and is punished for dissenting from, is the wrong."

L. III. P. 58. —

To your next paragraph, after what has already been said, I think it may suffice to say as follows. Though perhaps the peripatetic philosophy may not be true, (and perhaps it is no great matter, if it be not,) yet the true religion is undoubtedly true. And though perhaps a great many have not time, nor parts to study that philosophy, (and perhaps it may be no great matter neither, if they have not,) yet all that have the true religion duly tendered them, have time, and all, but idiots and madmen, have parts likewise to study it, as much as it is necessary for them to study it. And though perhaps a great many who have studied that philosophy cannot be convinced of the truth of it, (which perhaps is no great wonder,) yet no man ever studied the true religion with such care and diligence as he might and ought to use, and with an honest mind, but he was convinced of the truth of it. And that those who cannot otherwise be brought to do this, shall be a little disturbed and diseased to bring them to it, I take to be the interest, not only of those particular persons who by this means may be brought into the way of salvation, but of the commonwealth likewise, upon these two accounts.

Because the true religion, which this method propagates, makes good men; and good men are always the best subjects, or members of the commonwealth; not only as they do more sincerely and zealously promote the public good than other men; but likewise in regard of the favour of God, which they often procure to the societies of which they are members. And,

Because this care in any commonwealth, of God's honour and men's salvation, entitles it to his special protection and blessing. So that where this method is used, it proves both a spiritual and a civil benefit to the commonwealth.

You tell us, “the true religion is undoubtedly true.” If you had told us too, who is undoubtedly judge of it, you had put all past doubt: but till you will be pleased to determine that, it would be undoubtedly true, that the king of Denmark is as undoubtedly judge of it at Copenhagen, and the emperor at Vienna, as the king of England in this island: I do not say they judge as right, but they are by as much right judges, and therefore have as much right to punish those who dissent from lutheranism and popery in those countries, as any other civil magistrate has to punish any dissenters from the national religion any-where else. And who can deny but these briars and thorns laid in their way by the penal laws of those countries, may do some service indirectly and at a distance, to bring men there severely and impartially to examine matters of religion, and so to embrace the truth that must save them, which the bare outward profession of any religion in the world will not do?

“This true religion, which is undoubtedly true, you tell us too, never any body studied with such care and diligence as he might and ought to use, and with an honest mind, but he was convinced of the truth of it.”

If you will resolve it in your short circular way, and tell me such diligence as one ought to use, is such diligence as brings one to be convinced, it is a question too easy to be asked. If I should desire to know plainly what is to be understood by it, it would be a question too hard for you to answer, and therefore I shall not trouble you with demanding what this diligence which a man may and ought to use, is; nor what you mean by an honest mind. I only ask you, whether force, your way applied, be able to produce them? that so the commonwealth may have the benefits you propose from men’s being convinced of, and consequently embracing, the true religion, which you say nobody can miss, who is brought to that diligence, and that honest mind.

The benefits to the commonwealth are, 1. “That the true religion that this method propagates, makes good men, and good men are always the best subjects, and often procure the favour of God to the society they are members of.” Being forward enough to grant that nothing contributes so much to the benefit of a society, as that it be made up of good men, I began presently to give into your method, which promises so sure a way to make men so study the true religion, that they cannot miss the being convinced of the truth of it, and so hardly avoid being really of the true religion, and consequently good men. But, that I might not mistake in a thing of that

consequence, I began to look about in those countries where force has been made use of to propagate what you allowed to be the true religion, and found complaints of as great a scarcity of good men there, as in other places. A friend whom I discoursed on this point, said, It might possibly be that the world had not yet had the benefit of your method: because law-makers had not yet been able to find that just temper of penalties on which your propagation of the true religion was built; and that therefore it was great pity you had not yet discovered this great secret, but it was to be hoped you would. Another, who stood by, said he did not see how your method could make men it wrought on, and brought to conformity, better than others, unless corrupt nature with impunity were like to produce better men in one outward profession than in another. To which I replied, That we did not look on conformists through a due medium; for if we did, with you, allow it presumable that all who conformed did it upon conviction, there could be no just complaint of the scarcity of good men: and so we got over that difficulty.

The second benefit you say your use of force brings to the commonwealth, is, “That this care in any commonwealth, of God’s honour and men’s salvation, entitles it to his special protection and blessing.” — Then certainly all commonwealths, that have any regard to the protection and blessing of God, will not neglect to entitle themselves to it, by using of force to promote that religion they believe to be true. But I beseech you what care is this of the honour of God and men’s salvation you speak of? Is it, as you have owned it, a care by penalties to make men outwardly conform, and without any farther care or inquiry to presume that they do it upon conviction, and with a sincere embracing of, and obedience to the truth? But if the honour of God, and men’s salvation, consists not in an outward conformity to any religion, but in something farther; what blessing they may expect whose care goes so far, and then presume the rest, which is the hardest part, and therefore least to be presumed, the prophet Jeremiah, chap. xlviii. 10, will tell you, who says, “Cursed be he that does the work of the Lord negligently:” which those who think it is the magistrate’s business to use force to bring men heartily to embrace the truth that must save them, were best seriously to consider.

Your next paragraph containing nothing but positions of yours, which you suppose elsewhere proved, and I elsewhere examined, it is not fit the reader should be troubled any farther about them.

I once knew a gentleman, who having cracked himself with an ungovernable ambition, could never afterwards hear the place he aimed at mentioned without showing marks of his distemper. I know not what the matter is, that when there comes in your way but the mention of secular power in your or ecclesiastics hands, you cannot contain yourself: we have instances of it in other parts of your letter; and here again you fall into a fit, which since it produces rather marks of your breeding, than arguments for your cause, I shall leave them as they are to the reader, if you can make them go down with him for reasons from a grave man, or for a sober answer to what I say in that and the following paragraph.

Much-what of the same size is your ingenious reply to what I say in the next paragraph, viz. “That commonwealths, or civil societies and governments, if you will believe the judicious Mr. Hooker, are, as St. Peter calls them, 1 Pet. ii. 13, ἀνθρωπίνη κτίσις, the contrivance and institution of man.” To which you smartly reply, for your choler was up, “it is well for St. Peter that he had the judicious Mr. Hooker on his side.” And it would have been well for you too to have seen that Mr. Hooker’s authority was made use of not to confirm the authority of St. Peter, but to confirm that sense I gave of St. Peter’s words, which is not so clear in our translation, but that there are those who, as I doubt not but you know, do not allow of it. But this being said when passion it seems rather employed your wit than your judgment, though nothing to the purpose, may yet perhaps indirectly and at a distance do some service.

And now, sir, if you can but imagine that men in the corrupt state of nature might be authorized and required by reason, the law of nature, to avoid the inconveniencies of that state, and to that purpose to put the power of governing them into some one or more men’s hands, in such forms, and under such agreements as they should think fit; (which governors so set over them for a good end by their own choice, though they received all their power from those, who by the law of nature had a power to confer it on them, may very fitly be called powers ordained of God, being chosen and appointed by those who had authority from God so to do: for he that receives commission, limited according to the discretion of him that gives it, from another who had authority from his prince so to do, may truly be said, so far as his commission reaches, to be appointed or ordained by the prince himself;) it may serve as an answer to your two next paragraphs, and to show that there is no opposition or difficulty in all that St. Peter, St. Paul,

or the judicious Mr. Hooker, says; nor any thing, in what either of them says, to your purpose. And though it be true, those powers that are, are ordained of God; yet it may nevertheless be true, that the power any one has, and the ends for which he has it, may be by the contrivance and appointment of men.

To my saying, “the ends of commonwealths appointed by the institutors of them, could not be their spiritual and eternal interest, because they could not stipulate about those one with another, nor submit this interest to the power of the society, or any sovereign they should set over them.” You reply, “very true, sir; but they can submit to be punished in their temporal interest, if they despise or neglect those greater interests.” How they can submit to be punished by any men in their temporal interest, for that which they cannot submit to be judged by any man, when you can show, I shall admire your politics. Besides, if the compact about matters of religion be, that those should be punished in their temporal, who neglect or despise their eternal interest; who I beseech you is by this agreement rather to be punished, a sober dissenter, who appears concerned for religion and his salvation, or an irreligious profane or debauched conformist? By such as despise or neglect those greater interests, you here mean only dissenters from the national religion; for those only you punish, though you represent them under such a description as belongs not peculiarly to them; but that matters not, so long as it best suits your occasion.

In your next paragraph you wonder at my news from the West-Indies; I suppose because you found it not in your books of Europe or Asia. But whatever you may think, I assure you all the world is not Mile-end. But that you may be no more surprised with news, let me ask you, whether it be not possible that men, to whom the rivers and woods afforded the spontaneous provisions of life, and so with no private possessions of land had no enlarged desires after riches or power; should live together in society, make one people of one language under one chieftain, who shall have no other power but to command them in time of common war against their common enemies, without any municipal laws, judges, or any person with superiority established amongst them, but ended all their private differences, if any arose, by the extemporary determination of their neighbours, or of arbitrators chosen by the parties: I ask you, whether in such a commonwealth the chieftain who was the only man of authority amongst them, had any power to use the force of the commonwealth to any other end

but the defence of it against an enemy, though other benefits were attainable by it?

The paragraph of mine to which you mean your next for an answer, shall answer for itself.

L. II. P. 392.

“You quote the author’s argument, which he brings to prove that the care of souls is not committed to the magistrate in these words: It is not committed to him by God, because it appears not that God has ever given any such authority to one man over another, as to compel any one to his religion. This, when first I read it, I confess I thought a good argument. But you say, this is quite beside the business; and the reason you give, is, for the authority of the magistrate is not authority to compel any one to his religion, but only an authority to procure all his subjects the means of discovering the way of salvation, and to procure withal, as much as in him lies, that none remain ignorant of it, &c. I fear, Sir, you forget yourself. The author was not writing against your new hypothesis, before it was known in the world. He may be excused, if he had not the gift of prophecy, to argue against a notion which was not yet started. He had in view only the laws hitherto made, and the punishments, in matters of religion, in use in the world. The penalties, as I take it, are laid on men for being of different ways of religion: which, what is it other but to compel them to relinquish their own, and to conform themselves to that from which they differ? If this be not to compel them to the magistrate’s religion, pray tell us what is? This must be necessarily so understood; unless it can be supposed that the law intends not to have that done, which with penalties it commands to be done; or that punishments are not compulsion, not that compulsion the author complains of. The law says, Do this, and live; embrace this doctrine, conform to this way of worship, and be at ease and free; or else be fined, imprisoned, banished, burned. If you can show among the laws that have been made in England concerning religion, (and I think I may say anywhere else,) any one that punishes man for not having impartially examined the religion they have embraced or refused, I think I may yield you the cause. Law-makers have been generally wiser than to make laws that could not be executed: and therefore their laws were against nonconformists, which could be known; and not for impartial examination, which could not.

It was not then beside the author's business, to bring an argument against the persecutions here in fashion. He did not know that any one, who was so free as to acknowledge that the magistrate has not an authority to compel any one to his religion, and thereby at once, as you have done, give up all the laws now in force against the dissenters; had yet rods in store for them, and by a new trick would bring them under the lash of the law, when the old pretences were too much exploded to serve any longer. Have you never heard of such a thing as the religion established by law? which is it seems the lawful religion of a country, and to be complied with as such. There being such things, such notions yet in the world, it was not quite beside the author's business to allege, that God never gave such authority to one man over another, as to compel any one to his religion. I will grant, if you please, religion established by law is a pretty odd way of speaking in the mouth of a christian, and yet it is much in fashion, as if the magistrate's authority could add any force or sanction to any religion, whether true or false. I am glad to find you have so far considered the magistrate's authority, that you agree with the author, that he hath none to compel men to his religion. Much less can he, by any establishment of law, add any thing to the truth or validity of his own, or any religion whatsoever."

L. III. P. 63.

As to your next paragraph, I think I might now wholly pass it over. I shall only tell you, that as I have often heard, so I hope I shall always hear of "religion established by law." For though the magistrate's authority can "add no force or sanction to any religion, whether true or false, nor any thing to the truth or validity of his own, or any religion whatsoever;" yet I think it may do much toward the upholding and preserving the true religion, within his jurisdiction; and in that respect may properly enough be said to establish it.

That above annexed is all the answer you think this paragraph of mine deserves. But yet in that little you say, you must give me leave to take notice, "that if, as you say, the magistrate's authority may do much towards the upholding and preserving the true religion within his jurisdiction;" so also may do much towards the upholding and preserving of a false religion, and in that respect, if you say true, may be said to establish it. For I think I

need not mind you here again, that it must unavoidably depend upon his opinion what shall be established for true, or rejected as false.

And thus you have my thoughts concerning the most material of what you say touching the magistrate's commission to use force in matters of religion, together with some incident places in your answer, which I have taken notice of as they have come in my way.

CHAPTER III. WHO ARE TO BE PUNISHED BY YOUR SCHEME.

To justify the largeness of the author's toleration, who would not have jews, mahometans, and pagans excluded from the civil rights of the commonwealth, because of their religion; I said, "I feared it will hardly be believed, that we pray in earnest for their conversion, if we exclude them from the ordinary and profitable means of it, either by driving them from, or persecuting them when they are amongst us." You reply: "now I confess I thought men might live quietly enough among us, and enjoy the protection of the government against all violence and injuries, without being endenized, or made members of the commonwealth; which alone can entitle them to the civil rights and privileges of it. But as to jews, mahometans, and pagans, if any of them do not care to live among us, unless they may be admitted to the rights and privileges of the commonwealth; the refusing them that favour is not, I suppose, to be looked upon as driving them from us, or excluding them from the ordinary and probable means of conversion; but as a just and necessary caution in a christian commonwealth, in respect to the members of it: who, if such as profess judaism, or mahometanism, or paganism, were permitted to enjoy the same rights with them, would be much the more in danger to be seduced by them; seeing they would lose no worldly advantage by such a change of their religion: whereas if they could not turn to any of those religions, without forfeiting the civil rights of the commonwealth by doing it, it is likely they would consider well before they did it, what ground there was to expect that they should get any thing by the exchange, which would countervail the loss they should sustain by it." I thought protection and impunity of men, not offending in civil things, might have been accounted the civil rights of the commonwealth, which the author meant: but you to make it seem more, add the word privileges. Let it be so. Live amongst you then jews, mahometans, and pagans may; but endenized they must not be. But why? Are there not those who are members of your commonwealth, who do not embrace the truth that must save them, any more than they? What think you of socinians, papists, anabaptists, quakers, presbyterians? If they do not reject the truth necessary to salvation, why do you punish them?

Or if some that are in the way to perdition, may be members of the commonwealth, why must these be excluded upon the account of religion? For I think there is no great odds, as to saving of souls, which is the only end for which they are punished, amongst those religions, each whereof will make those who are of it miss salvation. Only if there be any fear of seducing those who are of the national church, the danger is most from that religion which comes nearest to it, and most resembles it. However, this you think, “but a just and necessary caution in a christian commonwealth in respect of the members of it.” I suppose, for you love to speak doubtfully, these members of a christian commonwealth you take such care of, are members also of the national church, whose religion is the true; and therefore you call them in the next paragraph, subjects of Christ’s kingdom, to whom he has a special regard. For dissenters, who are punished to be made good christians, to whom force is used “to bring them to the true religion, and to the communion of the church of God,” it is plain are not in your opinion good christians, or of the true religion; unless you punish them to make them what they are already. The dissenters therefore who are already perverted, and reject the truth that must save them, you are not I suppose so careful of, lest they should be seduced. Those who have already the plague, need not be guarded from infection: nor can you fear that men so desperately perverse, that penalties and punishments, joined to the light and strength of the truth, have not been able to bring from the opinions they have espoused into the communion of the church, should be seduced to judaism, mahometism, or paganism, neither of which has the advantage of truth or interest to prevail by. It has therefore those of the national church, as I conclude also from the close of this paragraph, where you speak of God’s own peculiar people, whom you think would be much the more in danger to be seduced by them, if they were endenized, since they would lose no worldly advantage by such a change of their religion, i. e. by quitting the national church, to turn jews, mahometans, or pagans.

This shows, whatever you say of the sufficient means of instruction provided by the law, how well you think the members of the national church are instructed in the true religion. It shows also, whatever you say of its being presumable that they embrace it upon conviction, how much you are satisfied that the members of the national church are convinced of the truth of the religion they profess, or rather herd with; since you think them in great danger to change it for judaism, mahometanism, or paganism itself

upon equal terms, and because they shall lose no worldly advantage by such a change. But if the forfeiting the civil rights of the commonwealth be the proper remedy to keep men in the communion of the church, why is it used to keep men from judaism or paganism, and not from fanaticism? Upon this account why might not jews, pagans, and mahometans be admitted to the rights of the commonwealth, as far as papists, independents, and quakers? But you distribute to every one according to your good pleasure; and doubtless are fully justified by these following words: “And whether this be not a reasonable and necessary caution, any man may judge who does but consider within how few ages after the flood, superstition and idolatry prevailed over the world, and how apt even God’s own peculiar people were to receive that mortal infection, notwithstanding all that he did to keep them from it.”

What the state of religion was in the first ages after the flood, is so imperfectly known now, that, as I have showed you in another place, you can make little advantage to your cause from thence. And since it was the same corruption then, which, as you own, withdraws men now from the true religion, and hinders it from prevailing by its own light, without the assistance of force; and it is the same corruption that keeps dissenters, as well as jews, mahometans, and pagans, from embracing of the truth; why different degrees of punishments should be used to them, till there be found in them different degrees of obstinacy, would need some better reason. Why this common pravity of human nature should make judaism, mahometism, or paganism more catching than any sort of nonconformity, which hinders men from embracing the true religion; so that jews, mahometans, and pagans must, for fear of infecting others, be shut out from the commonwealth, when others are not; I would fain know? Whatever it was that so disposed the jews to idolatry before the captivity, sure it is, they firmly resisted it, and refused to change, not only where they might have done it on equal terms, but have had great advantage to boot; and therefore it is possible that there is something in this matter, which neither you nor I do fully comprehend, and may with a becoming humility sit down and confess, that in this, as well as other parts of his providence, God’s ways are past finding out. But of this we may be certain from this instance of the jews, that it is not reasonable to conclude, that because they were once inclined to idolatry, that therefore they, or any other people, are in danger to turn pagans, whenever they shall lose no worldly advantage by such a

change. But if we may oppose nearer and known instances to more remote and uncertain, look into the world, and tell me, since Jesus Christ brought life and immortality to light through the gospel, where the christian religion meeting judaism, mahometism, or paganism upon equal terms, lost so plainly by it, that you have reason to suspect the members of a christian commonwealth would be in danger to be seduced to either of them, if they should lose no worldly advantage by such a change of their religion, rather than likely to increase among them? Till you can find them some better reason for excluding jews, &c. from the rights of the commonwealth, you must give us leave to look on this as a bare pretence. Besides, I think you are under a mistake, which shows your pretence against admitting jews, mahometans, and pagans to the civil rights of the commonwealth, is ill grounded; for what law I pray is there in England, that they who turn to any of those religions, forfeit the civil rights of the commonwealth by doing it? Such a law I desire you to show me; and if you cannot, all this pretence is out of doors, and men of your church, since on that account they would lose no worldly advantage by the change, are in as much danger to be seduced, whether jews, mahometans, and pagans are endenized or no.

But that you may not be thought too gracious, you tell us, “That as to pagans particularly, you are so far from thinking that they ought not to be excluded from the civil rights of the commonwealth, because of their religion, that you cannot see how their religion can be suffered by any commonwealth that knows and worships the only true God, if they would be thought to retain any jealousy for his honour, or even for that of human nature.” Thus then you order the matter; jews and mahometans may be permitted to live in a christian commonwealth with the exercise of their religion, but not be endenized: pagans may also be permitted to live there, but not to have the exercise of their religion, nor be endenized.

This according to the best of my apprehension is the sense of your words; for the clearness of your thoughts, or your cause, does not always suffer you to speak plainly and directly; as here, having been speaking a whole page before what usage the persons of jews, mahometans, and pagans, were to have, you on a sudden tell us their religion is not to be suffered, but say not what must be done with their persons. For do you think it reasonable that men who have any religion, should live amongst you without the exercise of that religion, in order to their conversion? which is no other but to make them downright irreligious, and render the very notion

of a deity insignificant, and of no influence to them in order to their conversion. It being less dangerous to religion in general to have men ignorant of a deity, and so without any religion; than to have them acknowledge a superiour Being, but yet to teach or allow them to neglect or refuse worshipping him in that way, that they believe he requires, to render them acceptable to him: it being a great deal less fault (and that which we were every one of us once guilty of) to be ignorant of him, than acknowledging a God, not to pay him the honour which we think due to him. I do not see therefore how those who retain any jealousy for the honour of God, can permit men to live amongst them in order to their conversion, and require of them not to honour God, according to the best of their knowledge: unless you think it a preparation to your true religion, to require men sensibly and knowingly to affront the Deity; and to persuade them that the religion you would bring them to, can allow men to make bold with the sense they have of him, and to refuse him the honour which in their consciences they are persuaded is due to him, and which must to them and every body else appear inconsistent with all religion. Since therefore to admit their persons without the exercise of their religion, cannot be reasonable, nor conducing to their conversion; if the exercise of their religion, as you say, be not to be suffered amongst us, till they are converted, I do not see how their persons can be suffered amongst us, if that exception must be added, till they are converted; and whether then they are not excluded from the ordinary means of conversion, I leave you to consider.

I wonder this necessity had not made you think on another way of their having the ordinary means of conversion, without their living amongst us, that way by which in the beginning of christianity it was brought to the heathen world by the travels and preaching of the apostles. But the successors of the apostles are not, it seems, successors to this part of the commission, Go and teach all nations. And indeed it is one thing to be an ambassador from God to people that are already converted, and have provided good benefices; another to be an ambassador from heaven in a country where you have neither the countenance of the magistrate, nor the devout obedience of the people. And who sees not how one is bound to be zealous for the propagating of the true religion, and the convincing, converting, and saving of souls in a country where it is established by law? who can doubt but that there those who talk so much of it are in earnest?

Though yet some men will hardly forbear doubting, that those men, however they pray for it, are not much concerned for the conversion of pagans, who will neither go to them to instruct them, nor suffer them to come to us for the means of conversion.

It is true what you say, “what pagans call religion is abomination to the Almighty.” But if that requires any thing from those who retain any jealousy for the honour of God, it is something more than barely about the place where those abominations shall be committed. The true concern for the honour of God is not, that idolatry should be shut out of England, but that it should be lessened every-where, and by the light and preaching of the gospel be banished out of the world. If pagans and idolaters are, as you say, the “greatest dishonour conceivable to God almighty,” they are as much so on the other side of Tweed, or the sea, as on this; for he from his throne equally beholds all the dwellers upon earth. Those therefore who are truly jealous for the honour of God, will not, upon the account of his honour, be concerned for their being in this or that place, while there are idolaters in the world; but that the number of those who are such a dishonour to him, should every day be as much as possible diminished, and they be brought to give him his due tribute of honour and praise in a right way of worship. It is in this that a jealousy, which is in earnest for God’s honour, truly shows itself, in wishing and endeavouring to abate the abomination, and drive idolatry out of the world; not in driving idolaters out of any one country, or sending them away to places and company, where they shall find more encouragement to it. It is a strange jealousy for the honour of God, that looks not beyond such a mountain or river as divides a christian and pagan country. Wherever idolatry is committed, there God’s honour is concerned; and thither men’s jealousy for his honour, if it be sincere indeed, will extend, and be in pain to lessen and take away the provocation. But the place God is provoked and dishonoured in, which is a narrow consideration in respect of the Lord of all the earth, will no otherwise employ their zeal, who are in earnest, than as it may more or less conduce to their conversion of the offenders.

But if your jealousy for the honour of God engages you so far against men’s committing idolatry in certain places, that you think those ought to be excluded from the rights of the commonwealth, and not to be suffered to be denizens, who, according to that place in the Romans brought by you, are “without excuse, because when they knew God, they glorified him not as

God, but became vain in their imagination, and changed the glory of the incorruptible God into an image made like to corruptible man.” I shall only change some of the words in the text you cite of Isaiah, “I have baked part thereof on the coals, and eaten it, and shall I make the residue thereof a God? shall I fall down to that which comes of a plant?” and so leave them with you to consider whether your jealousy in earnest carries you so far as you talk of; and whether when you have looked about you, you are still of the mind, that those who do such things shall be disfranchised and sent away, and the exercise of no such religion be any-where permitted amongst us? for those things are no less an abomination to God under a christian than pagan name. One word more I have to say to your jealousy for the honour of God, that if it be any thing more than in talk, it will set itself no less earnestly against other abominations, and the practisers of them, than against that of idolatry.

As to that in Job xxxi. 26, 27, 28, where he says “idolatry is to be punished by the judge;” this place alone were there no other, is sufficient to confirm their opinion, who conclude that book writ by a jew. And how little the punishing of idolatry in that commonwealth concerns our present case, I refer you for information to the author’s letter. But how does your jealousy for the honour of God carry you to an exclusion of the pagan religion from amongst you, but yet admit of the jewish and mahometan? Or is not the honour of God concerned in their denying our Saviour?

If we are to look upon Job to have been writ before the time of Moses, as the author would have it, , and so by a stranger to the commonwealth of Israel; it is plain the general apostacy he lays so much stress on, was not spread so far, but that there was a government by his own confession, established out of Judea, free from, nay zealous against idolatry: and why there might not be many more as well as this, which we hear of but by chance, it will concern him to show.

You go on, “But as to the converting jews, mahometans, and pagans to christianity, I fear there will be no great progress made in it, till christians come to a better agreement and union among themselves. I am sure our Saviour prayed that all that should believe in him, might be one in the Father and him.” (i. e. I suppose in that holy religion which he taught them from the Father) that the world might believe that the Father had sent him: “and therefore when he comes to make inquisition, why no more jews, mahometans, and pagans have been converted to his religion; I very much

fear, that a great part of the blame will be found to lie upon the authors and promoters of sects and divisions among the professors of it: which therefore, I think, all that are guilty, and all that would not be guilty, ought well to consider.”

I easily grant that “our Saviour prayed that all might be one in that holy religion which he taught them;” and in that very prayer teaches what that religion is, “This is life eternal, that they might know thee the only true God, and Jesus Christ whom thou hast sent.” John xvii. 3. But must it be expected, that therefore they should all be of one mind in things not necessary to salvation? for whatever unity it was our Saviour prayed for here, it is certain the apostles themselves did not all of them agree in every thing: but even the chief of them have had differences amongst them in matters of religion, as appears, Gal. ii. 11.

An agreement in truths necessary to salvation, and the maintaining of charity and brotherly kindness with the diversity of opinions in other things, is that which will very well consist with christian unity, and is all possibly to be had in this world, in such an incurable weakness and difference of men’s understandings. This probably would contribute more to the conversion of jews, mahometans, and pagans, if there were proposed to them and others, for their admittance into the church, only the plain simple truths of the gospel necessary to salvation, than all the fruitless pudder and talk about uniting christians in matters of less moment, according to the draught and prescription of a certain set of men any-where.

“What blame will lie on the authors and promoters of sects and divisions,” and, let me add, animosities amongst christians, “when Christ comes to make inquisition why no more jews, mahometans, and pagans were converted, they who are concerned ought certainly well to consider.” And to abate in great measure this mischief for the future, they who talk so much of sects and divisions, would do well to consider too, whether those are not most authors and promoters of sects and divisions, who impose creeds, and ceremonies and articles of men’s making; and make things not necessary to salvation, the necessary terms of communion, excluding and driving from them such as out of conscience and persuasion cannot assent and submit to them; and treating them as if they were utter aliens from the church of God, and such as were deservedly shut out as unfit to be members of it: who narrow christianity within bounds of their own making, which the gospel knows nothing of; and often, for things by themselves confessed

indifferent, thrust men out of their communion, and then punish them for not being of it.

Who sees not, but the bond of unity might be preserved, in the different persuasions of men concerning things not necessary to salvation, if they were not made necessary to church communion? What two thinking men of the church of England are there, who differ not one from the other in several material points of religion, who nevertheless are members of the same church, and in unity one with another? Make but one of those points the shibboleth of a party, and erect it into an article of the national church, and they are presently divided; and he of the two, whose judgment happens not to agree with national orthodoxy, is immediately cut off from communion. Who I beseech you is it in this case that makes the sect? Is it not those who contract the church of Christ within limits of their own contrivance? who, by articles and ceremonies of their own forming, separate from their communion all that have not persuasions which just jump with their model?

It is frivolous here to pretend authority. No man has or can have authority to shut any one out of the church of Christ, for that for which Christ himself will not shut him out of heaven. Whosoever does so, is truly the author and promoter of schism and division, sets up a sect, and tears in pieces the church of Christ, of which every one who believes, and practises what is necessary to salvation, is a part and member; and cannot, without the guilt of schism, be separated from, or kept out of its external communion. In this “lording it over the heritage of God,” 1 Pet. v. 2, 3, and thus over-seeing by imposition on the unwilling, and not consenting, (which seems to be the meaning of St. Peter,) most of the lasting sects which so mangle christianity, had their original, and continue to have their support: and were it not for these established sects under the specious names of national churches, which, by their contracted and arbitrary limits of communion, justify against themselves the separation and like narrowness of others; the difference of opinions which do not so much begin to be, as to appear and be owned under toleration, would either make no select nor division; or else, if they were so extravagant as to be opposite to what is necessary to salvation, and so necessitate a separation, the clear light of the gospel, joined with a strict discipline of manners, would quickly chase them out of the world. But whilst needless impositions and moot points in divinity are established by the penal laws of kingdoms, and the specious pretences of authority; what hope is there, that there should be such an

union amongst christians anywhere, as might invite a rational Turk or infidel to embrace a religion, whereof he is told they have a revelation from God, which yet in some places he is not suffered to read, and in no place shall he be permitted to understand for himself, or to follow according to the best of his understanding, when it shall at all thwart (though in things confessed not necessary to salvation) any of those select points of doctrine, discipline, or outward worship, whereof the national church has been pleased to make up its articles, polity, and ceremonies? And I ask, what a sober sensible heathen must think of the divisions amongst christians not owing to toleration, if he should find in an island, where christianity seems to be in its greatest purity, the south and north parts establishing churches upon the differences of only whether fewer or more, thus and thus chosen, should govern; though the revelation they both pretend to be their rule, say nothing directly one way or the other: each contending with so much eagerness, that they deny each other to be churches of Christ, that is, in effect, to be true christians? To which if one should add transubstantiation, consubstantiation, real presence, articles and distinctions set up by men without authority from scripture; and other less differences, which good christians may dissent about without endangering their salvation, established by law in the several parts of Christendom: I ask, whether the magistrates interposing in matters of religion, and establishing national churches by the force and penalties of civil laws, with their distinct (and at home reputed necessary) confessions and ceremonies, do not by law and power authorize and perpetuate sects among christians, to the great prejudice of christianity, and scandal to infidels, more than any thing that can arise from a mutual toleration, with charity and a good life?

Those who have so much in their mouths, “the authors of sects and divisions,” with so little advantage to their cause, I shall desire to consider, whether national churches established as now they are, are not as much sects and divisions in christianity, as smaller collections, under the name of distinct churches, are in respect of the national? Only with this difference, that these subdivisions and discountenanced sects, wanting power to enforce their peculiar doctrines and discipline, usually live more friendly like christians, and seem only to demand christian liberty; whereby there is less appearance of unchristian division among them; whereas those national sects, being backed by the civil power, which they never fail to make use of, at least as a pretence of authority over their brethren, usually breathe out

nothing but force and persecution, to the great reproach, shame, and dishonour of the christian religion.

I said, “that if the magistrates would severely and impartially set themselves against vice in whomsoever it is found, and leave men to their own consciences in their articles of faith, and ways of worship, true religion would spread wider, and be more fruitful in the lives of its professors than ever hitherto it has done by the imposing of creeds and ceremonies.” Here I call only immorality of manners, vice; you on the contrary, in your answer, give the name of vice to errors in opinion, and difference in ways of worship from the national church: for this is the matter in question between us, express it as you please. This being a contest only about the signification of a short syllable in the English tongue, we must leave to the masters of that language to judge which of these two is the proper use of it. But yet, from my using the word vice, you conclude presently, taking it in your sense, not mine, that the magistrate has a power in England, for England we are speaking of, to punish dissenters from the national religion, because it is a vice. I will, if you please, in what I said, change the word vice into that I meant by it, and say thus, if the magistrates will severely and impartially set themselves against the dishonesty and debauchery of men’s lives, and such immoralities as I contra-distinguish from errors in speculative opinions of religion, and ways of worship; and then pray see how your answer will look, for thus it runs: “It seems then with you the rejecting the true religion, and refusing to worship God in decent ways prescribed by those to whom God has left the ordering of those matters, are not comprehended in the name vice.” But you tell me, “If I except these things, and will not allow them to be called by the name of vice, perhaps other men may think it as reasonable to except some other things [i. e. from being called vices] which they have a kindness for: for instance, some may perhaps except arbitrary divorce, polygamy, concubinage, simple fornication, or marrying within degress thought forbidden.” Let them except these, and if you will, drunkenness, theft and murder too, from the name of vice; nay, call them virtues: will they, by their calling them so, be exempt from the magistrate’s power of punishing them? Or can they claim an impunity by what I have said? Will these immoralities by the names any one shall give, or forbear to give them, “become articles of faith, or ways of worship?” Which is all, as I expressly say in the words you here cite of mine, that I would have the magistrates leave men to their own consciences in. But, sir, you have, for

me, liberty of conscience to use words in what sense you please: only I think, where another is concerned, it savours more of ingenuity and love of truth, rather to mind the sense of him that speaks, than to make a dust and noise with a mistaken word, if any such advantage were given you.

You say, “that some men would through carelessness never acquaint themselves with the truths which must save them, without being forced to do it, which (you suppose) may be very true, notwithstanding that (as I say) some are called at the third hour, some at the ninth, and some at the eleventh hour; and whenever they are called, they embrace all the truths necessary to salvation. At least I do not show why it may not: and therefore this may be no slip, for any thing I have said to prove it to be one.” This I take not to be an answer to my argument, which was, that, since some are not called till the eleventh hour, nobody can know who those are, “who would never acquaint themselves with those truths that must save them, without force,” which is therefore necessary, and may indirectly and at a distance do them some service. Whether that was my argument or no, I leave the reader to judge: but that you may not mistake it now again, I tell you here it is so, and needs another answer.

Your way of using punishments in short is this, that all that conform not to the national church, where it is true, as in England, should be punished; what for? “to make them consider.” This I told you had something of impracticable. To which you reply, that you used the word only in another sense, which I mistook. Whether I mistook your meaning in the use of that word or no, or whether it was natural so to take it, or whether that opinion which I charged on you by that mistake, when you tell us, “that not examining, is indeed the next end for which they are punished,” be not your opinion, let us leave to the reader; for when you have that word in what sense you please, what I said will be nevertheless true, viz. “That to punish dissenters, as dissenters, to make them consider, has something impracticable in it, unless not to be of the national religion, and not to consider, be the same thing.” These words you answer nothing to, having as you thought a great advantage of talking about my mistake of your word only. But unless you will suppose, not to be of the national church, and not to consider, be the same thing, it will follow, that to punish dissenters, as dissenters, to make them consider, has something of impracticable in it.

The law punishes all dissenters: for what? To make them all conform, that’s evident; to what end? To make them all consider, say you: that cannot

be, for it says nothing of it; nor is it certain that all dissenters have not considered; nor is there any care taken by the law to inquire whether they have considered, when they do conform; yet this was the end intended by the magistrate. So then with you it is practicable and allowable in making laws, for the legislator to lay punishments by law on men, for an end which they may be ignorant of, for he says nothing of it; on men, whom he never takes care to inquire, whether they have done it or no, before he relax the punishment, which had no other next end but to make them do it. But though he says nothing of considering, in laying on the penalties, nor asks any thing about it, when he takes them off; yet every body must understand that he so meant it. Sir, Sancho Pancha, in the government of his island, did not expect that men should understand his meaning by his gaping: but in another island it seems, if you had the management, you would not think it to have any thing of impracticable or impolitic in it: for how far the provision of means of instruction takes this off, we shall see in another place. And, lastly, to lay punishments on men for an end which is already attained, for some among the dissenters may have considered, is what other law-makers look on as impracticable, or at least unjust. But to this you answer, in your usual way of circle, That “if” I “suppose you are for punishing dissenters whether they consider or no,” I “am in a great mistake; for the dissenters (which is my word, not yours) whom” you “are for punishing, are only such as reject the true religion proposed to them, with reasons and arguments sufficient to convince them of the truth of it, who therefore can never be supposed to consider those reasons and arguments as they ought, whilst they persist in rejecting that religion, or (in my language) continue dissenters; for if they did so consider them, they would not continue dissenters.” Of the fault for which men were to be punished, distinguished from the end for which they were to be punished, we heard nothing, as I remember, in the first draught of your scheme, which we had in “the argument considered,” &c. But I doubt not but in your general terms you will be able to find it, or what else you please: for now having spoken out, that men, who are of a different religion from the true which has been tendered them with sufficient evidence, (and who are they whom the wise and benign disposer and governor of all things has not furnished with competent means of salvation?) are criminal, and are by the magistrate to be punished as such, it is necessary your scheme should be completed; and whither that will carry you, it is easy to see.

But pray, sir, are there no conformists that so reject the true religion? and would you have them punished too, as you here profess? Make that practicable by your scheme, and you have done something to persuade us that your end in earnest, in the use of force, is to make men consider, understand, and be of the true religion; and that the rejecting the true religion tendered with sufficient evidence, is the crime which *bonâ fide* you would have punished; and till you do this, all that you may say concerning punishing men “to make them consider as they ought, to make them receive the true religion, to make them embrace the truth that must save them,” &c. will, with all sober, judicious, and unbiassed readers, pass only for the mark of great zeal, if it scape amongst men as warm and as sagacious as you are, a harsher name: whilst those conformists, who neglect matters of religion, who reject the saving truths of the gospel, as visibly and as certainly as any dissenters, have yet no penalties laid upon them.

You talk much “of considering and not considering as one ought; of embracing and rejecting the true religion,” and abundance more to this purpose; which all, however very good and savoury words, that look very well, when you come to the application of force to procure that end expressed in them, amount to no more but conformity and non-conformity. If you see not this, I pity you; for I would fain think you a fair man, who means well, though you have not light upon the right way to the end you propose: but if you see it, and persist in your use of these good expressions to lead men into a mistake in this matter; consider what my pagans and mahometans could do worse to serve a bad cause.

Whatever you may imagine, I write so in this argument, as I have before my eyes the account I shall one day render for my intention and regard to truth in the management of it. I look on myself as liable to errour as others; but this I am sure of, I would neither impose on you, myself, nor any-body; and should be very glad to have the truth in this point clearly established: and therefore it is, I desire you again to examine, whether all the ends you name to be intended by your use of force, do in effect, when force is to be your way put in practice, reach any farther than bare outward conformity? Pray consider whether it be not that which makes you so shy of the term dissenters, which you tell me is mine, not your word. Since none are by your scheme to be punished, but those who do not conform to the national religion, dissenters, I think, is the proper name to call them by; and I can see no reason you have to boggle at it, unless your opinion has something in it

you are unwilling should be spoke out, and called by its right name: but whether you like it or no, persecution and persecution of dissenters, are names that belong to it as it stands now.

And now I think I may leave you your question, wherein you ask, “But cannot dissenters be punished for not being of the national religion, as the fault, and yet only to make them consider, as the end for which they are punished?” to be answered by yourself, or to be used again, where you think there is any need of so nice a distinction, as between the fault for which men are punished by laws, and the end for which they are punished. For to me I confess it is hard to find any other immediate end of punishment in the intention of human laws, but the amendment of the fault punished: though it may be subordinate to other and remoter ends. If the law be only to punish non-conformity, one may truly say, to cure that fault, or to produce conformity, is the end of that law: and there is nothing else immediately aimed at by that law, but conformity; and whatever else it tends to as an end, must be only as a consequence of conformity, whether it be edification, increase of charity, or saving of souls, or whatever else may be thought a consequence of conformity. So that in a law, which with penalties requires conformity, and nothing else; one cannot say, properly I think, that consideration is the end of that law; unless consideration be a consequence of conformity, to which conformity is subordinate, and does naturally conduce, or else is necessary to it.

To my arguing that it is unjust as well as impracticable, you reply, “Where the national church is the true church of God, to which all men ought to join themselves, and sufficient evidence is offered to convince men that it is so: there it is a fault to be out of the national church, because it is a fault not to be convinced that the national church is that true church of God. And therefore since there men’s not being so convinced, can only be imputed to their not considering as they ought, the evidence which is offered to convince them; it cannot be unjust to punish them to make them so to consider it.” Pray tell me which is a man’s duty, to be of the national church first; or to be convinced first, that its religion is true, and then to be of it? If it be his duty to be convinced first, why then do you punish him for not being of it, when it is his duty to be convinced of the truth of its religion, before it is his duty to be of it? If you say it is his duty to be of it first; why then is not force used to him afterwards, though he be still ignorant and unconvinced? But you answer, “It is his fault not to be

convinced.” What, every one’s fault every-where? No, you limit it to places where “sufficient evidence is offered to convince men that the national church is the true church of God.” To which pray let me add, the national church is so the true church of God, that nobody out of its communion can embrace the truth that must save him, or be in the way to salvation. For if a man may be in the way to salvation out of the national church, he is enough in the true church, and needs no force to bring him into any other: for when a man is in the way to salvation, there is no necessity of force to bring him into any church of any denomination, in order to his salvation. So that not to be of the national church, though true, will not be a fault which the magistrate has a right to punish, until sufficient evidence is offered to prove that a man cannot be saved out of it. Now since you tell us, that by sufficient evidence you mean such as will certainly win assent; when you have offered such evidence to convince men that the national church, anywhere, is so the true church, that men cannot be saved out of its communion, I think I may allow them to be so faulty as to deserve what punishment you shall think fit. If you hope to mend the matter by the following words, where you say, that where such “evidence is offered, there men’s not being convinced can only be imputed to men’s not considering as they ought,” they will not help you. For “to consider as they ought,” being, by your own interpretation, “to consider so as not to reject;” then your answer amounts to just thus much, “That it is a fault not to be convinced that the national church is the true church of God, where sufficient evidence is offered to convince men that it is so. Sufficient evidence is such as will certainly gain assent with those who consider as they ought, i. e. who consider so as not to reject, or to be moved heartily to embrace,” which I think is to be convinced. Who can have the heart now to deny any of this? Can there be any thing surer, than that men’s not being convinced, is to be imputed to them if they are not convinced, where such evidence is offered to them as does convince them? And to punish all such, you have my free consent.

Whether all you say have any thing more in it than this, I appeal to my readers: and should willingly do it to you, did not I fear, that the jumbling of those good and plausible words in your head, “of sufficient evidence, consider as one ought,” &c. might a little jargogle your thoughts, and lead you hoodwinked the round of your own beaten circle. This is a danger those are much exposed to, who accustom themselves to relative and doubtful

terms, and so put together, that, though asunder they signify something, yet, when their meaning comes to be cast up as they are placed, it amounts to just nothing.

You go on, “What justice it would be for the magistrate to punish one for not being a cartesian, it will be time enough to consider when I have proved it to be as necessary for men to be cartesians, as it is to be christians, or members of God’s church.” This will be a much better answer to what I said, when you have proved that to be a christian or a member of God’s church, it is necessary for a dissenter to be of the church of England. If it be not justice to punish a man for not being a cartesian, because it is not as necessary to be a cartesian, as to be a christian; I fear the same argument will hold against punishing a man for not using the cross in baptism, or not kneeling at the Lord’s Supper; and it will lie on you to prove, that it is as necessary to use the cross in baptism, or kneeling at the Lord’s Supper, as it is to be a christian: for if they are not as necessary as it is to be a christian, you cannot by your own rule, without injustice, punish men for not conforming to a church wherein they are made an indispensable part of conformity; and by this rule it will be injustice to punish any man for not being of that church wherein any thing is required not necessary to salvation; for that, I think, is the necessity of being a christian.

To show the unreasonableness of punishing dissenters to make them examine, I said, “that so they were punished for not having offended against a law; for there is no law of the land that requires them to examine.” Your reply is, That “you think the contrary is plain enough: for where the laws provide sufficient means of instruction in the true religion, and then require all men to embrace that religion; you think the most natural construction of those laws is, that they require men to embrace it upon instruction and conviction, as it cannot be expected they should do without examining the grounds upon which it stands.” Your answer were very true, if they could not embrace without examining and conviction. But since there is a shorter way to embracing, which costs no more pains than walking as far as the church, your answer no more proves that the law requires examining, than if a man at Harwich being subpœnaed to appear in Westminster-Hall next term, you should say the subpœna required him to come by sea, because there was sufficient means provided for his passage in the ordinary boat that by appointment goes constantly from Harwich to London: but he taking it to be more for his ease and dispatch, goes the shorter way by land, and finds

that having made his appearance in court as was required, the law is satisfied, and there is no inquiry made, what way he came thither.

If therefore men can embrace so as to satisfy the law without examining, and it be true that they so “fly from the means of right information, are so negligent in, and averse to examining,” that there is need of penalties to make them do it, as you tell us at large; how is it a natural construction of those laws, that they require men to examine, which having provided sufficient means of instruction, require men only to conform, without saying any thing of examining? especially when the cause assigned by you of men’s neglecting to examine, is not want of “means of instruction, but want of penalties to over-balance their aversion” to the using those means; which you yourself confess, where you say, “When the best provision is made that can be, for the instruction of the people, you fear a great part of them will still need penalties to bring them to hear and receive instruction:” and therefore perhaps the remainder of that paragraph, when you have considered it again, will not appear so impertinent a declamation as you are pleased to think it: for it charged your method, as it then stood, of punishing men for not considering and examining, with these absurdities, that it punished men for not doing that which the law did not require of them, nor declare the neglect of to be a fault; contrary to the ends of all laws, contrary to the common sense of mankind, and the practice of all law-makers; who always first declared the fault, and then denounced penalties against those who after a time set should be found guilty of it. It charged your method, that it allows not impunity to the innocent, but punishes whole tribes together, the innocent with the guilty; and that the thing designed in the law was not mentioned in it, but left to the people, whose fault was want of consideration, to be by consideration found out.

To avoid these absurdities, you have reformed your scheme, and now in your reply own with the frankest persecutors, that you punish men downright for their religion, and that to be a dissenter from the true religion is a fault to be punished by the magistrate. This indeed is plain dealing, and clears your method from these absurdities as long as you keep to it: but wherever you tell us, that your laws are to make men hear, to make men consider, to make men examine; whilst the laws themselves say nothing of hearing, considering, and examining; there you are still chargeable with all these absurdities: nor will the distinction, which without any difference you would set up, between the fault for which men were to be punished, and the

end for which they are to be punished, do you any service herein, as I have showed you in another place.

To what I said L. II. from to , concerning those who by your scheme are to be punished, you having thought fit not to answer any thing, I shall here again offer it to your consideration:

“Let us inquire, first, Who it is you would have be punished. In the place above cited, they are those who are got into a wrong way, and are deaf to all persuasions. If these are the men to be punished, let a law be made against them: you have my consent; and that is the proper course to have offenders punished. For you do not, I hope, intend to punish any fault by a law, which you do not name in the law; nor make a law against any fault you would not have punished. And now, if you are sincere, and in earnest, and are, as a fair man should be, for what your words plainly signify, and nothing else; what will such a law serve for? Men in the wrong way are to be punished: but who are in the wrong way, is the question. You have no more reason to determine it against one, who differs from you, than he has to conclude against you, who differ from him: no, not though you have the magistrate and the national church on your side. For if to differ from them be to be in the wrong way; you who are in the right way in England, will be in the wrong way in France. Every one here must be judge for himself: and your law will reach nobody, till you have convinced him he is in the wrong way: and then there will be no need of punishment to make him consider: unless you will affirm again what you have denied, and have men punished for embracing the religion they believe to be true, when it differs from yours or the public.

“Besides being in the wrong way, those who you would have punished, must be such as are deaf to all persuasions. But any such, I suppose, you will hardly find, who hearken to nobody, not to those of their own way. If you mean by deaf to all persuasions, all persuasions of a contrary party, or of a different church; such, I suppose, you may abundantly find in your own church, as well as elsewhere; and I presume to them you are so charitable, that you would not have them punished for not lending an ear to seducers. For constancy in the truth, and perseverance in the faith, is, I hope, rather to be encouraged, than by any penalties checked in the orthodox. And your church, doubtless, as well as all others, is orthodox to itself in all its tenets. If you mean by all persuasion, all your persuasion, or all persuasion of those

of your communion; you do but beg the question, and suppose you have a right to punish those who differ from, and will not comply with you.

“Your next words are, — When men fly from the means of a right information, and will not so much as consider how reasonable it is thoroughly and impartially to examine a religion, which they embraced upon such inducements as ought to have no sway at all in the matter, and therefore with little or no examination of the proper grounds of it; what human method can be used to bring them to act like men, in an affair of such consequence, and to make a wiser and more rational choice, but that of laying such penalties upon them, as may balance the weight of those prejudices which inclined them to prefer a false way before the true, and recover them to so much sobriety and reflection, as seriously to put the question to themselves, Whether it be really worth the while to undergo such inconveniences for adhering to a religion, which, for any thing they know, may be false, or for rejecting another (if that be the case) which, for any thing they know, may be true, till they have brought it to the bar of reason, and given it fair trial there? — Here you again bring in such as prefer a false way before a true: to which having answered already, I shall here say no more, but that, since our church will not allow those to be in a false way who are out of the church of Rome, because the church of Rome, which pretends infallibility, declares hers to be the only true way; certainly no one of our church, nor any other, which claims not infallibility, can require any one to take the testimony of any church, as a sufficient proof of the truth of her own doctrine. So that true and false, as it commonly happens, when we suppose them for ourselves, or our party, in effect, signify just nothing, or nothing to the purpose; unless we can think that true or false in England, which will not be so at Rome or Geneva; and vice versâ. As for the rest of the description of those, on whom you are here laying penalties; I beseech you consider whether it will not belong to any of your church, let it be what it will. Consider, I say, if there be none in your church who have embraced her religion upon such inducements as ought to have no sway at all in the matter, and therefore with little or no examination of the proper grounds of it; who have not been inclined by prejudices; who do not adhere to a religion which for any thing they know may be false; and who have rejected another, which for any thing they know may be true. If you have any such in your communion, and it will be an admirable, though I fear but a little flock, that has none such in it, consider well what you have

done. You have prepared rods for them, for which I imagine they will con-
you no thanks. For to make any tolerable sense of what you here propose, it
must be understood that you would have men of all religions punished, to
make them consider whether it be really worth the while to undergo such
inconveniences for adhering to a religion, which for any thing they know
may be false. If you hope to avoid that, by what you have said of true and
false; and pretend that the supposed preference of the true way in your
church ought to preserve its members from your punishment; you
manifestly trifle. For every church's testimony, that it has chosen in the true
way, must be taken for itself; and then none will be liable; and your new
invention of punishment is come to nothing; or else the differing churches
testimonies must be taken one for another; and then they will be all out of
the true way, and your church need penalties as well as the rest. So that
upon your principles, they must all or none be punished. Choose which you
please; one of them, I think, you cannot escape.

“What you say in the next words: Where instruction if stiffly refused,
and all admonitions and persuasions prove vain and ineffectual; differs
nothing, but in the way of expressing, from deaf to all persuasions: and so
that is answered already.

“In another place, you give us another description of those you think
ought to be punished, in these words: Those who refuse to embrace the
doctrine, and submit to the spiritual government of the proper ministers of
religion, who by special designation are appointed to exhort, admonish,
reprove, &c. Here then, those to be punished, are such who refuse to
embrace the doctrine, and submit to the government of the proper ministers
of religion. Whereby we are as much still at uncertainty as we were before,
who those are who, by your scheme, and laws suitable to it, are to be
punished; since every church has, as it thinks, its proper ministers of
religion: and if you mean those that refuse to embrace the doctrine, and
submit to the government of the ministers of another church; then all men
will be guilty, and must be punished, even those of your own church as well
as others. If you mean those who refuse, &c. the ministers of their own
church, very few will incur your penalties: but if by these proper ministers
of religion, the ministers of some particular church are intended, why do
you not name it? Why are you so reserved in a matter, wherein, if you speak
not out, all the rest that you say will be to no purpose? Are men to be
punished for refusing to embrace the doctrine, and submit to the

government of the proper ministers of the church of Geneva? For this time, since you have declared nothing to the contrary, let me suppose you of that church; and then I am sure, that is it that you would name: for of whatever church you are, if you think the ministers of any one church ought to be hearkened to, and obeyed, it must be those of your own. There are persons to be punished, you say; this you contend for all through your book, and lay so much stress on it, that you make the preservation and propagation of religion, and the salvation of souls, to depend on it: and yet you describe them by so general and equivocal marks, that, unless it be upon suppositions which nobody will grant you, I dare say, neither you nor anybody else will be able to find one guilty. Pray find me if you can, a man whom you can judicially prove (for he that is to be punished by law, must be fairly tried) is in a wrong way, in respect of his faith; I mean who is deaf to all persuasions, who flies from all means of a right information, who refuses to embrace the doctrine, and submit to the government of the spiritual pastors. And when you have done that, I think I may allow you what power you please to punish him, without any prejudice to the toleration the author of the letter proposes.

“But why, I pray, all this boggling, all this loose talking, as if you knew not what you meant, or durst not speak it out? Would you be for punishing somebody, you know not whom? I do not think so ill of you. Let me then speak out for you. The evidence of the argument has convinced you that men ought not to be persecuted for their religion: That the severities in use amongst christians cannot be defended: That the magistrate has not authority to compel any one to his religion. This you are forced to yield. But you would fain retain some power in the magistrate’s hands to punish dissenters, upon a new pretence, viz. not for having embraced the doctrine and worship they believe to be true and right, but for not having well considered their own and the magistrate’s religion. To show you that I do not speak wholly without book, give me leave to mind you of one passage of yours: the words are, — Penalties to put them upon a serious and impartial examination of the controversy between the magistrates and them. Though these words be not intended to tell us who you would have punished, yet it may be plainly inferred from them. And they more clearly point out whom you aim at, than all the foregoing places, where you seem to, and should, describe them. For they are such as between whom and the magistrate there is a controversy; that is, in short, who differ from the

magistrate in religion. And now indeed you have given us a note by which these you would have punished, may be known. We have with much ado found at last whom it is we may presume you would have punished. Which in other cases is usually not very difficult: because there the faults to be amended easily design the persons to be corrected. But yours is a new method, and unlike all that ever went before it.

“In the next place, let us see for what you would have them punished. You tell us, and it will easily be granted you, that not to examine and weigh impartially, and without prejudice or passion, all which, for shortness sake, we will express by this one word consider, the religion one embraces or refuses, is a fault very common, and very prejudicial to true religion, and the salvation of men’s souls. But penalties and punishments are very necessary, say you, to remedy this evil.

“Let us see now how you apply this remedy. Therefore, say you, let all dissenters be punished. Why? Have no dissenters considered of religion? Or have all conformists considered? That you yourself will not say. Your project therefore is just as reasonable as if a lethargy growing epidemical in England, you should propose to have a law made to blister and scarify, and shave the heads of all who wear gowns; though it be certain that neither all who wear gowns are lethargic, nor all who are lethargic wear gowns:

— “Dii te, Damasippe, Deæque Verum ob consilium donent tonsore.

“For there could not be certainly a more learned advice, than that one man should be pulled by the ears, because another is asleep. This, when you have considered of it again, (for I find, according to your principle, all men have now and then need to be jogged,) you will, I guess, be convinced is not like a fair physician, to apply a remedy to a disease; but, like an enraged enemy, to vent one’s spleen upon a party. Common sense, as well as common justice, requires, that the remedies of laws and penalties, should be directed against the evil that is to be removed, wherever it be found. And if the punishment you think so necessary be, as you pretend, to cure the mischief you complain of, you must let it pursue, and fall on the guilty, and those only, in what company soever they are; and not, as you here propose, and is the highest injustice, punish the innocent considering dissenter, with the guilty; and on the other side, let the inconsiderate guilty conformist escape, with the innocent. For one may rationally presume that the national church has some, nay, more, in proportion, of those who little consider or concern themselves about religion, than any congregation of dissenters. For

conscience, or the care of their souls, being once laid aside; interest, of course, leads men into that society, where the protection and countenance of the government, and hopes of preferment, bid fairest to all their remaining desires. So that if careless, negligent, inconsiderate men in matters of religion, who, without being forced, would not consider, are to be roused into a care of their souls, and a search after truth, by punishments; the national religion, in all countries, will certainly have a right to the greatest share of those punishments, at least, not to be wholly exempt from them.

“This is that which the author of the letter, as I remember, complains of, and that justly, viz. That the pretended care of men’s souls always expresses itself, in those who would have force any way made use of to that end, in very unequal methods; some persons being to be treated with severity, whilst others guilty of the same faults, are not to be so much as touched. Though you are got pretty well out of the deep mud, and renounce punishments directly for religion; yet you stick still in this part of the mire; whilst you would have dissenters punished to make them consider, but would not have any thing done to conformists, though ever so negligent in this point of considering. The author’s letter pleased me, because it is equal to all mankind, is direct, and will, I think, hold every where; which I take to be a good mark of truth. For I shall always suspect that neither to comport with the truth of religion, or the design of the gospel, which is suited to only some one country or party. What is true and good in England, will be true and good at Rome too, in China or Geneva. But whether your great and only method for the propagating of truth, by bringing the inconsiderate by punishments to consider, would, according to your way of applying your punishments only to dissenters from the national religion, be of use in those countries, or any-where but where you suppose the magistrate to be in the right; judge you. Pray, sir, consider a little, whether prejudice has not some share in your way of arguing, for this is your position: Men are generally negligent in examining the grounds of their religion. This I grant. But could there be a more wild and incoherent consequence drawn from it, than this; therefore dissenters must be punished?” —

All this you are pleased to pass over without the least notice: but perhaps you think you have made me full satisfaction in your answer to my demand, who are to be punished? We will here therefore consider that as it stands, where you tell us, “Those who are to be punished according to the whole tenour of your answer, are no other but such, as having sufficient evidence

tendered them of the true religion, do yet reject it: whether utterly refusing to consider that evidence, or not considering as they ought, viz. with such care and diligence as the matter deserves and requires, and with honest and unbiassed minds; and what difficulty there is in this, you say, you cannot imagine.” You promised you would tell the world who they were, plainly and directly, And though you tell us, you cannot imagine what difficulty there is in this your account of who are to be punished, yet there are some things in it, that make it to my apprehension not very plain and direct. For first they must be only those who have the true religion tendered them with sufficient evidence; wherein there appears some difficulty to me, who shall be judge what is the true religion: and for that, in every country it is most probable the magistrate will be. If you think of any other, pray tell us. Next there seems some difficulty to know, who shall be judge what is sufficient evidence. For where a man is to be punished by law, he must be convicted of being guilty; which since in this case he cannot be, unless it be proved he has had the true religion tendered to him with sufficient evidence, it is necessary that somebody there must be judge what is the true religion, and what is sufficient evidence; and others to prove it has been so tendered. If you were to be of the jury, we know what would be your verdict concerning sufficient evidence, by these words of yours, “To say that a man who has the true religion proposed to him with sufficient evidence of its truth, may consider it as he ought, or do his utmost in considering, and yet not perceive the truth of it, is neither more nor less, than to say that sufficient evidence is not sufficient: for what does any man mean by sufficient evidence, but such as will certainly win assent, wherever it is duly considered?” Upon which his conforming or not conforming, would without any farther questions determine the point. But whether the rest of the jury could upon this be able ever to bring in any man guilty, and so liable to punishment, is a question. For if sufficient evidence be only that which certainly wins assent, wherever a man does his utmost in considering; it will be very hard to prove that a man who rejects the true religion has had it tendered with sufficient evidence, because it will be very hard to prove he has not done his utmost in considering it. So that, notwithstanding all you have here said, to punish any man by your method is not yet so very practicable.

But you clear all in your following words, which say, “there is nothing more evident than that those who reject the true religion, are culpable, and deserve to be punished.” By whom? By men: that is so far from being

evident, as you talk, that it will require better proofs than I have yet seen for it. Next you say, "It is easy enough to know when men reject the true religion." Yes, when the true religion is known, and agreed on what shall be taken to be so in judicial proceedings, which can scarce be till it is agreed who shall determine what is true religion, and what not. Suppose a penalty should in the university be laid on those who rejected the true peripatetic doctrine, could that law be executed on any one, unless it were agreed who should be judge what was the true peripatetic doctrine? If you say it may be known out of Aristotle's writings: then I answer, that it would be a more reasonable law to lay the penalty on any one, who rejected the doctrine contained in the books allowed to be Aristotle's, and printed under his name. You may apply this to the true religion, and the books of the scripture, if you please: though, after all, there must be a judge agreed on, to determine what doctrines are contained in either of those writings, before the law can be practicable.

But you go on to prove, that "it is easy to know when men reject the true religion: for, say you, that requires no more than that we know that that religion was tendered to them with sufficient evidence of the truth of it. And that it may be tendered to men with such evidence, and that it may be known when it is so tendered, these things, you say, you take leave here to suppose." You suppose then more than can be allowed you. For that it can be judicially known that the true religion has been tendered to any one with sufficient evidence, is, what I deny, and that for reasons above-mentioned, which, were there no other difficulty in it, were sufficient to show the impracticableness of your method.

You conclude this paragraph thus, "which is all that needs be said upon this head to show the consistency and practicableness of this method: and what do you any-where say against this?" Whether I say any thing or no against it, I will bring a friend of yours that will say that dissenters ought to be punished for being out of the communion of the church of England. I will ask you now, how it can be proved that such an one is guilty of rejecting the one only true religion? Perhaps it is because he scruples the cross in baptism, or godfathers and godmothers as they are used, or kneeling at the Lord's Supper; perhaps it is because he cannot pronounce all damned that believe not all Athanasius's Creed; or cannot join with some of those repetitions in our Common-prayer; thinking them to come within the prohibition of our Saviour; each of which shuts a man out from the

communion of the church of England, as much as if he denied Jesus Christ to be the Son of God. Now, sir, I beseech you, how can it be known, that every sufficient evidence was tendered to such a dissenter to prove, that what he rejects is a part of that one only true religion, which unless he be of, he cannot be saved? Or indeed how can it be known, that any dissenter rejects that one only true religion, when being punished barely for not conforming, he is never asked, what part it is he dissents from or rejects? And so it may be some of those things which I imagine will always want sufficient evidence to prove them to be parts of that only one true religion, without the hearty embracing whereof no man can be saved.

CHAPTER IV. WHAT DEGREES OF PUNISHMENT.

How much soever you have endeavoured to reform the doctrine of persecution to make it serve your turn, and give it the colour of care and zeal for the true religion in the country where alone you are concerned it should be made use of; yet you have laboured in vain, and done no more, but given the old engine a new varnish to set it off the better, and make it look less frightful: for, by what has been said in the foregoing chapters, I think it will appear, that if any magistrate have power to punish men in matters of religion, all have; and that dissenters from the national religion must be punished every-where or no-where. The horrid cruelties that in all ages, and of late in our view, have been committed under the name, and upon the account of religion, give so just an offence and abhorrence to all who have any remains, not only of religion, but humanity left, that the world is ashamed to own it. This objection therefore, as much as words or professions can do, you have laboured to fence against; and to exempt your design from the suspicion of any severities, you take care in every page almost to let us hear of moderate force, moderate penalties; but all in vain: and I doubt not but when this part too is examined, it will appear, that as you neither have, nor can limit the power of punishing to any distinct sort of magistrates, nor exempt from punishment the dissenters from any national religion; so neither have, nor can you, limit the punishment to any degree short of the highest, if you will use punishments at all in matters of religion. What you have done in this point besides giving us good words, I will now examine.

You tell me, “I have taken a liberty which will need pardon,” because I say, “You have plainly yielded the question by owning those greater severities to be improper and unfit.” But if I shall make it out, that those are as proper and fit as your moderate penalties; and that if you will use one, you must come to the other, as will appear from what you yourself say; whatever you may think, I shall not imagine other readers will conclude I have taken too great liberty, or shall much need pardon. For if, as you say in the next page, “authority may reasonably and justly use some degrees of force where it is needful;” I say they may also use any degree of force

where it is needful. Now upon your grounds, fire and sword, tormenting and undoing, and those other punishments which you condemn, will be needful, even to torments of the highest severity, and be as necessary as those moderate penalties which you will not name. For I ask you, to what purpose do you use any degrees of force? Is it to prevail with men to do something that is in their power, or that is not? The latter I suppose you will not say, till your love of force is so increased, that you shall think it necessary to be made use of to produce impossibilities: if force then be to be used only to bring men to do what is in their power, what is the necessity you assign of it? only this, as I remember, viz. That “when gentle admonitions and earnest entreaties will not prevail, what other means is there left but force?” And I upon the same ground reply: If lesser degrees of force will not prevail, what other means is there left but greater? If the lowest degree of force be necessary where gentler means will not prevail, because there is no other means left; higher degrees of force are necessary, where lower will not prevail, for the same reason. Unless you will say all degrees of force work alike; and that lower penalties prevail as much on men as greater, and will equally bring them to do what is in their power. If so, a philip on the forehead, or a farthing mulct, may be penalty enough to bring men to what you propose. But if you shall laugh at these, as being for their smallness insufficient, and therefore will think it necessary to increase them; I say, wherever experience shows any degree of force to be insufficient to prevail, there will be still the same necessity to increase it. For wherever the end is necessary, and force is the means, the only means left to procure it, both which you suppose in our case; there it will be found always necessary to increase the degrees of force, where the lower prove ineffectual, as well till you come to the highest as when you begin with the lowest. So that in your present case I do not wonder you use so many shifts, as I shall show by and by you do, to decline naming the highest degree of what you call moderate. If any degree be necessary, you cannot assign any one, condemn it in words as much as you please, which may not be so, and which you must not come to the use of. If there be no such necessity of force as will justify those higher degrees of it, which are severities you condemn; neither will it justify the use of your lower degrees.

If, as you tell us, “false religions prevail against the true, merely by the advantage they have in the corruption and pravity of human nature left to itself unbridled by authority;” if the not receiving the true religion be a

mark and effect merely of the prevalency of the corruption of human nature; may not, nay, must not the magistrate, if less will not do, use his utmost force to bring men to the true religion? his force being given him to suppress that corruption; especially since you give it for a measure of the force to be used, that it must be “so much, as without which ordinarily they will not embrace the truth that must save them.” What ordinarily signifies here to make any determinate measure, is hard to guess; but signify it what it will, so much force must be used, as “without which men will not embrace the truth;” which, if it signify any thing intelligible, requires, that where lower degrees will not do, greater must be used, till you come to what will ordinarily do; but what that ordinarily is, no man can tell. If one man will not be wrought on by as little force as another, must not greater degrees of force be used to him? Shall the magistrate who is obliged to do what lies in him, be excused, for letting him be damned, without the use of all the means that were in his power? And will it be sufficient for him to plead, that though he did not all that lay in him, yet he did what ordinarily prevailed, or what prevailed on several others? Force, if that be the remedy, must be proportioned to the opposition. If the dose that has frequently wrought on others, will not purge a man whose life lies on it; must it not therefore be made sufficient and effectual, because it will be more than what is called ordinary? Or can any one say the physician has done his duty, who lets his patient in an extraordinary case perish in the use of only moderate remedies, and pronounces him incurable, before he has tried the utmost he can with the powerfullest remedies which are in his reach?

Having renounced loss of estate, corporal punishments, imprisonment, and such sort of severities, as unfit to be used in matters of religion; you ask, “Will it follow from hence that the magistrate has no right to use any force at all?” Yes, it will follow, till you give some answer to what I say in that place, viz. “That if you give up punishments of a man in his person, liberty and estate, I think we need not stand with you, for any punishments may be made use of.” But this you pass by without any notice. I doubt not but you will here think you have a ready answer, by telling me, you mean only “depriving men of their estates, maiming them with corporal punishments, starving and tormenting them in noisome prisons,” and other such severities which you have by name excepted; but lower penalties may yet be used: for penalties is the word you carefully use, and disclaim that of punishment, as if you disowned the thing. I wish you would tell us too by

name what those lower penalties are you would have used, as well as by name you tell us those severities you disallow. They may not maim a man with corporal punishments; may they use any corporal punishments at all? They may not starve and torment them in noisome prisons for religion; that you condemn as much as I. May they put them in any prison at all? They may not deprive men of their estates; I suppose you mean their whole estates: May they take away half, or a quarter, or an hundredth part? It is strange you should be able to name the degrees of severity that will hinder more than promote the progress of religion, and cannot name those degrees that will promote rather than hinder it; that those who would take their measures by you, and follow your scheme, might know how to proceed so, as not to do more harm than good: for since you are so certain, that there are degrees of punishments or penalties that will do good, and other degrees of them that will do harm; ought you not to have told us, what that true degree is, or how it may be known, without which all your goodly scheme is of no use? For allowing all you have said to be as true as you would have it, no good can be done without showing the just measure of punishment to be used.

If the degree be too great, it will, you confess, do harm: can one then not err on the other hand, by using too little? If you say so, we are agreed, and I desire no better toleration. If therefore too great will do harm, and too little, in your opinion, will do no good; you ought to tell us the just mean. This I pressed upon you; whereof that the reader may be judge, I shall here trouble him with the repetition:

“There is a third thing, that you are as tender and reserved in, as either naming the criminals to be punished, or positively telling us the end for which they should be punished: and that is, with what sort of penalties, what degree of punishment, they should be forced. You are indeed so gracious to them, that you renounce the severities and penalties hitherto made use of. You tell us, they should be but moderate penalties. But if we ask you what are moderate penalties, you confess you cannot tell us: so that by moderate here, you yet mean nothing. You tell us, the outward force to be applied, should be duly tempered. But what that due temper is, you do not, or cannot say; and so, in effect, it signifies just nothing. Yet if in this you are not plain and direct, all the rest of your design will signify nothing. For it being to have some men, and to some end punished; yet if it cannot be found what punishment is to be used, it is, notwithstanding all you have

said, utterly useless. You tell us modestly, That to determine precisely the just measure of the punishment, will require some consideration. If the faults were precisely determined, and could be proved, it would require no more consideration to determine the measure of the punishment in this, than it would in any other case, where those were known. But where the fault is undefined, and the guilt not to be proved, as I suppose it will be found in this present business of examining; it will without doubt require consideration to proportion the force to the design: just so much consideration as it will require to fit a coat to the moon, or proportion a shoe to the feet of those who inhabit her. For to proportion a punishment to a fault that you do not name, and so we in charity ought to think you do not yet know, and a fault that when you have named it, it will be impossible to be proved who are or are not guilty of it, will, I suppose, require as much consideration as to fit a shoe to feet whose size and shape are not known.

“However, you offer some measures whereby to regulate your punishments; which when they are looked into, will be found to be just as good as none, they being impossible to be any rule in the case. The first is, So much force, or such penalties as are ordinarily sufficient to prevail with men of common discretion, and not desperately perverse and obstinate, to weigh matters of religion carefully and impartially, and without which ordinarily they will not do this. Where it is to be observed:

“First, That who are these men of common discretion, is as hard to know, as to know what is a fit degree of punishment in the case; and so you do but regulate one uncertainty by another. Some men will be apt to think, that he who will not weigh matters of religion, which are of infinite concernment to him, without punishment, cannot in reason be thought a man of common discretion. Many women of common discretion enough to manage the ordinary affairs of their families, are not able to read a page in an ordinary author, or to understand and give an account what it means, when read to them. Many men of common discretion in their callings, are not able to judge when an argument is conclusive or no; much less to trace it through a long train of consequences. What penalties shall be sufficient to prevail with such, who upon examination, I fear, will not be found to make the least part of mankind, to examine and weigh matters of religion carefully and impartially? The law allows all to have common discretion, for whom it has not provided guardians or Bedlam. So that, in effect, your men of common discretion, are all men not judged idiots or madmen: and penalties sufficient

to prevail with men of common discretion, are penalties sufficient to prevail with all men but idiots and madmen; which what a measure it is to regulate penalties by, let all men of common discretion judge.

“Secondly, you may be pleased to consider, that all men of the same degree of discretion, are not apt to be moved by the same degree of penalties. Some are of a more yielding, some of a more stiff temper; and what is sufficient to prevail on one, is not half enough to move the other; though both men of common discretion. So that common discretion will be here of no use to determine the measure of punishment; especially, when in the same clause you except men desperately perverse and obstinate; who are as hard to be known, as what you seek, viz. the just proportions of punishments necessary to prevail with men to consider, examine, and weigh matters of religion: wherein, if a man tells you he has considered, he has weighed, he has examined, and so goes on in his former course, it is impossible for you ever to know whether he has done his duty, or whether he be desperately perverse and obstinate. So that this exception signifies just nothing.

“There are many things in your use of force and penalties, different from any I ever met with elsewhere. One of them, this clause of yours concerning the measure of punishments, now under consideration, offers me: wherein you proportion your punishments only to the yielding and corrigible, not to the perverse and obstinate; contrary to the common discretion which has hitherto made laws in other cases, which levels the punishments against refractory offenders, and never spares them because they are obstinate. This however I will not blame as an oversight in you. Your new method, which aims at such impracticable and inconsistent things as laws cannot bear, nor penalties be useful to, forced you to it. The uselessness, absurdity, and unreasonableness of great severities, you had acknowledged in the foregoing paragraphs: Dissenters you would have brought to consider by moderate penalties. They lie under them; but whether they have considered or no, for that you cannot tell, they still continue dissenters. What is to be done now? Why, the incurable are to be left to God, as you tell us. Your punishments were not meant to prevail on the desperately perverse and obstinate, as you tell us here. And so whatever be the success, your punishments are however justified.”

The fulness of your answer to my question, “With what punishments?” made you possibly pass by these two or three pages without making any

particular reply to any thing I said in them: we will therefore examine that answer of yours, where you tell us, "That having in your answer declared that you take the severities so often mentioned (which either destroy men, or make them miserable) to be utterly unapt and improper (for reasons there given) to bring men to embrace the truth that must save them: but just how far within those bounds that force extends itself, which is really serviceable to that end, you do not presume to determine." To determine how far moderate force reaches, when it is necessary to your business that it should be determined, is not presuming: you might with more reason have called it presuming to talk of moderate penalties, and not to be able to determine what you mean by them; or to promise, as you do, that you will tell plainly and directly, with what punishments; and here to tell us, you do not presume to determine. But you give a reason for this modesty of yours, in what follows, where you tell me, I have not shown any cause why you should. And yet you may find in what is above repeated to you, these words, "If in this you are not plain and direct, all the rest of your design will signify nothing." But had I failed in showing any cause why you should; and your charity would not enlighten us, unless driven by my reasons; I dare say yet, if I have not shown any cause why you should determine in this point, I can show a cause why you should not. For I will be answerable to you, that you cannot name any degree of punishment, which will not be either so great, as to come among those you condemn, and show what your moderation, what your aversion to persecution is; or else too little to attain those ends for which you propose it. But whatever you tell me, that I have shown no cause why you should determine, I thought it might have passed for a cause why you should determine more particularly, that, as you will find in those pages, I had proved that the measures you offer, whereby to regulate your punishments, are just as good as none.

Your measures in your "argument considered," and which you repeat here again, are in these words: "so much force, or such penalties as are ordinarily sufficient to prevail with men of common discretion, and not desperately perverse, to weigh matters of religion carefully and impartially, and without which ordinarily they will not do this: so much force or such penalties may fitly and reasonably be used for the promoting true religion in the world, and the salvation of souls. And what just exception this is liable to, you do not understand." Some of the exceptions it is liable to, you might have seen in what I have here again caused to be reprinted, if you had

thought them worth your notice. But you go on to tell us here, “that when you speak of men of common discretion, and not desperately perverse and obstinate, you think it is plain enough, that by common discretion you exclude not idiots only, and such as we usually call madmen, but likewise the desperately perverse and obstinate, who perhaps may well enough deserve that name, though they be not wont to be sent to Bedlam.”

Whether by this you have at all taken off the difficulty, and shown your measure to be any at all in the use of force, I leave the reader to judge. I asked, since great ones are unfit, what degrees of punishment or force are to be used? You answer, “So much force, and such penalties as are ordinarily sufficient to prevail with men of ordinary discretion.” I tell you it is as hard to know who those men of common discretion are, as what degree of punishment you would have used; unless we will take the “determination of the law, which allows all to have common discretion, for whom it has not provided guardians or Bedlam:” so that in effect, your men of common discretion are all men not judged idiots or madmen. To clear this, you tell us, “when you speak of men of common discretion, and not desperately perverse and obstinate, you think it is plain enough, by common discretion you exclude not idiots only, and such as are usually called madmen, but likewise the desperately perverse and obstinate.” It may be you did, for you best know what you meant in writing; but if by men of common discretion, you excluded the desperately perverse and obstinate, let us put what you meant by the words, men of common discretion, in the place of those words themselves, and then, according to your meaning, your rule stands thus: penalties ordinarily sufficient to prevail with men not desperately perverse and obstinate, and with men not desperately perverse and obstinate: so that at last, by men of common discretion, either you excluded only idiots and madmen; or if we must take your word for it, that by them you excluded likewise the desperately perverse and obstinate, and so meant something else; it is plain, you meant only a very useless and insignificant tautology.

You go on, and tell us, “If the penalties you speak of, be intended for the curing men’s unreasonable prejudices and refractoriness against the true religion, then the reason why the desperately perverse and obstinate are not to be regarded in measuring these penalties, is very apparent. For as remedies are not provided for the incurable, so in the preparing and tempering them, regard is to be had only to those for whom they are designed.” Which, true or false, is nothing to the purpose, in a place where

you profess to inform us, what punishments are to be used. We are inquiring who are the desperately perverse and obstinate, and not whether they are to be punished or no. You pretend to give us a rule to know what degrees of force are to be used, and tell us, "it is so much as is ordinarily sufficient to prevail with men of common discretion, and not desperately perverse and obstinate." We again ask, who are your men of common discretion? You tell us, "such as are not madmen or idiots, or desperately perverse and obstinate." Very well, but who are those desperately perverse and obstinate, how shall we know them? and to this you tell us, "they are not to be regarded in measuring these penalties." Whereby certainly we have got a plain measure of your moderate penalties. No, not yet; you go on in your next paragraph to perfect it, where you say, "To prevent a little cavil, it may be needful to note that there are degrees of perverseness and obstinacy, and that men may be perverse and obstinate without being desperately so." So then now we have your measure complete; and to determine the just degrees of punishments, and to clear up the doubt, who are the desperately perverse and obstinate, we need but be told that "there are degrees of perverseness and obstinacy;" and that men may be perverse and obstinate without being desperately so: and that therefore "some perverse and obstinate persons may be thought curable, though such as are desperately so, cannot." But does all this tell us, who are the desperately perverse and obstinate? which is the thing we want to be informed in; nor till you have told us that, have you removed the objection.

But if by desperately perverse and obstinate, you will tell us, you meant those, that are not wrought upon by your moderate penalties, as you seem to intimate in your reason why the desperately perverse and obstinate are not to be regarded in measuring these penalties: "for, say you, as remedies are not provided for the incurable; so in preparing and tempering them, regard is to be had only to those for whom they are designed." So that by the desperately perverse and obstinate, you will perhaps say, it was plain you meant the incurable; for you ordinarily shift off the doubtfulness of one place, by appealing to as doubtful an expression in another. If you say then, that by desperately perverse and obstinate, you mean incurable; I ask you again by what incurable? by your lower degrees of force? For I hope where force is proper to work, those who are not wrought on by lower degrees, may yet be by higher. If you mean so, then your answer will amount to thus much: moderate penalties are such as are sufficient to prevail on those who

are not desperately perverse and obstinate. The desperately perverse and obstinate are those who are incurable, and the incurable are those on whom moderate penalties are not sufficient to prevail: whereby at last we have got a sure measure of what are moderate penalties; just such an one, as if having a sovereign universal medicine put into your hand, which will never fail if you can hit the right dose, which the inventor tells you must be moderate: you should ask him what was the moderate quantity it is to be given in; and he should answer, in such a quantity as was ordinarily sufficient to work on common constitutions, and not desperately perverse and obstinate. And to your asking again, who were of desperately perverse and obstinate constitutions? it should be answered, those that were incurable. And who were incurable? Those whom a moderate quantity would not work on. And thus to your satisfaction you know the moderate dose by the desperately perverse and obstinate; and the desperately perverse and obstinate by being incurable; and the incurable by the moderate dose. For if, as you say, remedies are not provided for the incurable, and none but moderate penalties are to be provided, is it not plain, that you mean, that all that will not be wrought on by your moderate penalties, are in your sense incurable!

To ease you, sir, of justifying yourself, and showing that I have mistaken you, do but tell us positively what in penalties is the highest degree of moderate; who are desperately perverse and obstinate; or who are incurable; without this relative and circular way of defining one by the other; and I will yield myself to have mistaken you, as much as you please.

If by incurable, you mean such as no penalties, no punishments, no force is sufficient to work on; then your measure of moderate penalties will be this, that they are such as are sufficient to prevail with men not incurable, i. e. who cannot be prevailed on by any punishments, any force whatsoever; which will be a measure of moderate punishments, which (whatsoever you do) some will be very apt to approve of.

But let us suppose by these marks, since you will afford us no better, that we can find who are desperately perverse and obstinate, we are yet as far as ever from finding the measures of your moderate punishments, till it can be known, what degree of force it is, that is ordinarily sufficient to prevail with all that are men of common discretion, and not desperately perverse and obstinate; for you are told, that all men of the same degree of discretion are not apt to be moved with the same degree of penalties: but to this too you

answer nothing, and so we are still without any rule or means of knowing how to adjust your punishments, that being ordinarily sufficient to prevail upon one, the double whereof is not ordinarily sufficient to prevail on another.

I tell you in the same place, “that you have given us in another place, something like another boundary to your moderate penalties: but when examined, it proves just like the rest, amusing us only with good words, so put together as to have no direct meaning; an art very much in use amongst some sort of learned men: the words are these: such penalties as may not tempt persons who have any concern for their eternal salvation (and those who have none, ought not to be considered) to renounce a religion which they believe to be true, or profess one which they do not believe to be so. If by any concern, you mean such as men ought to have for their eternal salvation; by this rule you may make your punishments as great as you please; and all the severities you have disclaimed may be brought in play again: for none of those will be able to make a man, who is truly concerned for his eternal salvation, renounce a religion he believes to be true, or profess one he does not believe to be so. If by those who have any concern, you mean such, who have some faint wishes for happiness hereafter, and would be glad to have things go well with them in the other world, but will venture nothing in this world for it; these the moderatest punishments you can imagine, will make to change their religion. If by any concern, you mean whatever may be between these two; the degrees are so infinite, that to proportion your punishments by that, is to have no measure of them at all.” To which all the reply I can find is only this, “that there are degrees of carelessness in men of their salvation, as well as of concern for it. So that such as have some concern for their salvation may yet be careless of it to a great degree. And therefore if those who have any concern for their salvation, deserve regard and pity; then so may some careless persons: though those who have no concern for their salvation, deserve not to be considered, which spoils a little harangue you give us.” P. 382. If you think this to be an answer to what I said, or that it can satisfy one concerning the way of knowing what degrees of punishment are to be used, pray tell us so. The inquiry is “what degrees of punishment will tempt a man who has any concern for his eternal salvation, to renounce a religion he believes to be true?” And it is answered, “There are degrees of carelessness in men of their salvation, as well as concern for it.” A happy discovery: what is the

use of it? “So that such as have some concern for their salvation, may yet be careless of it to a great degree.” Very true: by this we may know what degree of force is to be used. No, not a word of that, but the inference is, “and therefore if those who have any concern for their salvation, deserve regard and pity, then so may some careless persons; though those who have no concern for their salvation, deserve not to be considered.” And by this time we know what degree of force will make a man, who has any concern for his salvation, renounce a religion he believes true, and profess one he does not believe to be so. This might do well at cross questions: but you are satisfied with what you have done, and what that is, you tell me in the next words, “which spoils a little harangue of yours given us,” P. 382. The harangue I suppose is contained in these words:

“One thing I cannot but take notice of in this passage before I leave it: and that is that you say here, those who have no concern for their salvation, deserve not to be considered. In other parts of your letter you pretend to have compassion on the careless, and provide remedies for them: but here of a sudden your charity fails you, and you give them up to eternal perdition, without the least regard, the least pity, and say, they deserve not to be considered. Our Saviour’s rule was, the sick and not the whole need a physician: your rule here is, those that are careless are not to be considered, but are to be left to themselves. This would seem strange, if one did not observe what drew you to it. You perceived that if the magistrate was to use no punishments, but such as would make nobody change their religion, he was to use none at all: for the careless would be brought to the national church with any slight punishments; and when they are once there, you are it seems satisfied, and look no farther after them. So that by your own measures, if the careless, and those who have no concern for their eternal salvation, are to be regarded and taken care of, if the salvation of their souls is to be promoted, there are to be no punishments to be used at all; and therefore you leave them out as not to be considered.”

What you have said, is so far from spoiling that harangue, as you are pleased to call it, that you having nothing else to say to it, allow what is laid to your charge in it.

You wind up all concerning the measures of your force in these words: “And as those medicines are thought safe and adviseable, which do ordinarily cure, though not always (as none do); so those penalties or punishments, which are ordinarily found sufficient (as well as necessary)

for the ends for which they are designed, may fitly and reasonably be used for the compassing these ends.” Here your ordinarily comes to your help again; and here one would think that you meant such as cure sometimes, not always; some, though not all: and in this sense will not the utmost severities come within your rule? For can you say, if punishments are to be used to prevail on any, that the greater will, where lower fail, prevail on none? At least can you be sure of it till they have been tried for the compassing these ends? which, as we shall see in another place, you have assigned various enough. I shall only take notice of two or three often repeated by you, and those are to make men hear, to make men consider, to make men consider as they ought, i. e. as you explain it, to make men consider so, as not to reject. The greatness of the force then according to this measure, must be sufficient to make men hear, sufficient to make men consider, and sufficient to make men embrace the true religion.

And now the magistrate has all your rules about the measures of punishments to be used, and may, confidently and safely, go to work to establish it by a law; for he having these marks to guide him, that they must be great enough ordinarily to prevail with those who are not idiots or madmen, nor desperately perverse and obstinate; great enough ordinarily to prevail with men to hear, consider, and embrace the true religion, and yet not so great as might tempt persons, who have any concern for their eternal salvation, to renounce a religion which they believe to be true, or profess one which they do not believe to be so: do you not think you have sufficiently instructed him in your meaning, and enabled him to find the just temper of his punishments according to your scheme, neither too much, nor too little? But however you may be satisfied with them, I suppose others, when it comes to be put in practice, will by these measures, which are all I can find in your scheme, be scarce able to find, what are the punishments you would have used.

In Eutopia there is a medicine called *hiera picra*, which it is supposed would cure a troublesome disease of that country: but it is not to be given, but in the dose prescribed by the law, and in adjusting the dose lies all the skill: for, if you give too much, it heightens the distemper, and spreads the mortal contagion; and if too little it does no good at all. With this difficulty the law-makers have been perplexed these many ages, and could not light on the right dose, that would work the cure, till lately there came an undertaker, who would show them how they could not mistake. He bid

them then prescribe so much, as would ordinarily be effectual upon all that were not idiots or madmen, or in whom the humour was not desperately perverse and obstinate, to produce the end for which it was designed; but not so much as would make a man in health, who had any concern for his life, fall into a mortal disease. These were good words, and he was rewarded for them: but when by them they came to fix the dose, they could not tell whether it ought to be a grain, a dram, or an ounce, or an whole pound, any more than before; and so the dose of their hiera picra, notwithstanding this gentleman's pains, is as uncertain, and that sovereign remedy as useless as ever it was.

In the next paragraph you tell us, "You do not see what more can be required to justify the rule here given." So quick a sight needs no spectacles. "For if I demand that it should express what penalties particularly are such as it says may fitly and reasonably be used; this I must give you leave to tell me is a very unreasonable demand." It is an unreasonable demand, if your rule be such, that by it I may know without any more ado the particular penalties that are fit; otherwise it is not unreasonable to demand them by name, if your marks be not sufficient to know them by. But let us hear your reason, "For what rule is there that expresses the particulars that agree with it?" And it is an admirable rule with which one can find no particulars that agree; for I challenge you to instance in one; "a rule, you say, is intended for a common measure by which particulars are to be examined, and therefore must necessarily be general." So general, loose, and inconsistent, that no particulars can be examined by it: for again I challenge you, or any man living, to measure out any punishment by this your common measure, and establish it by a law. You go on; "And those to whom it is given are supposed to be able to apply it, and to judge of particulars by it. Nay it is often seen that they are better able to do this than those who give it: and so it is in the present case; the rule hereby laid down is that by which you suppose governors and law-givers ought to examine the penalties they use for the promoting the true religion, and the salvation of souls." Such a rule it ought to be I grant, and such an one is desired: but that yours is such a rule as magistrates can take any measure by, for the punishments they are to settle by law, is denied, and you are again desired to show. You proceed: "But certainly no man doubts but their prudence and experience enables them to use and apply it better than other men, and to judge more exactly what penalties do agree with it,

and what do not; and therefore you think I must excuse you if you do not take upon you to teach them what it becomes you rather to learn from them.” If we are not to doubt but their prudence and experience enables magistrates to judge best what penalties are fit, you have indeed given us at last a way to know the measure of punishments to be used: but it is such an one as puts an end to your distinction of moderate penalties: for no magistrates that I know, when they once began to use force to bring men to their religion, ever stopped till they came to some of those severities you condemn; and if you pretend to teach them moderation for the future, with hopes to succeed; you ought to have showed them the just bounds, beyond which they ought not to go, in a model so wholly new, and besides all experience. But if it be to be determined by their prudence and experience, whatever degrees of force they shall use, will always be the right.

Law-makers and governors however beholden to you for your good opinion of their prudence and experience, yet have no reason to thank you for your compliment, by giving such an exercise to their prudence and experience as to put it upon them to find out the just measures of punishments, by rules you give them; which are such, that neither yourself, nor any-body else, can find out any measures by. The other part of your compliment will be suspected not to be so much out of your abundant respect to law-makers and governors, as out of the great regard you have to yourself; for you in vain pretend you forbear to name any particular punishments, because you will not take upon you to teach governors and law-makers; when you yourself own in the same breath, that you are laying down rules by which they are to proceed in the use of penalties for promoting religion; which is little different from teaching: and your whole book is nothing else but about the magistrate’s power and duty. I excuse you therefore for your own sake from naming any particular punishments by your rules: for you have a right to it, as all men have a right to be excused from doing what is impossible to be done.

Since therefore you grant that those severities you have named, “are more apt to hinder than promote true religion;” and you cannot assign any measures of punishment, short of those great ones you have condemned, which are fit to promote it; I think it argument enough to prove against you, that no punishments are fit; till you have showed some others, either by name, or such marks as they may be certainly known by, which are fit to promote the true religion: and therefore nothing you have said there, or any-

where else, will serve to show that “it is with little reason, as you tell me, that I say, that if your indirect and at a distance serviceableness may authorize the magistrate to use force in religion, all the cruelties used by the heathens against christians, by papists against protestants, and all the persecuting of christians one amongst another, are all justifiable.” To which you add, “Not to take notice at present how oddly it sounds, that that which authorizes the magistrates to use moderate penalties to promote the true religion, should justify all the cruelties that ever were used to promote heathenism or popery.”

As oddly as it sounds to you, it will be evidently true, as long as that which authorizes one, authorizes all magistrates of any religion which they believe to be true, to use force to promote it: and as long as you cannot assign any bounds to your moderate punishments, short of those great ones; which you therefore are not able to do, because your principles, whatever your words deny, will carry you to those degrees of severity, which in profession you condemn: and this, whatever you do, I dare say every considering reader besides you will plainly see. So that this imputation is not so unreasonable; since it is evident, that you must either renounce all punishments whatsoever in religion, or make use of those you condemn: for in the next page you tell us, “That all who have sufficient means of instruction provided for them, may justly be punished for not being of the national religion, where the true is the national religion; because it is a fault in all such not to be of the national religion.” In England then, for example, not to be of the national religion is a fault, and a fault to be punished by the magistrate. The magistrate to cure this fault lays, on those who dissent, a lower degree of penalties, a fine of 1d. per month. This proving insufficient, what is the magistrate to do? If he be obliged, as you say, to amend this fault by penalties, and that low one of 1d. per month be not sufficient to procure its amendment, is he not to increase the penalty? He therefore doubles the fine to 2d. per month. This too proves ineffectual, and therefore it is still for the same reason doubled, till it comes to 1s. 5s. 10l. 100l. 1000l. None of these penalties working, but yet by being constantly levied, leaving the delinquents no longer able to pay; imprisonment and other corporal punishments follow to enforce an obedience; till at last this gradual increase of penalties and force, each degree whereof wrought on some few, rises to the highest severities against those who stand out. For the magistrate, who is obliged to correct this vice, as you call it, and to do what

in him lies to cure this fault, which opposes their salvation; and who, (if I mistake not, you tell us,) is answerable for all that may follow from his neglect; had no reason to raise the fine from 1d. to 2d. but because the first was ineffectual: and if that were a sufficient reason for raising from the first to the second degree; why is it not as sufficient to proceed from the second to the third, and so gradually on? I would fain have any one show me where, and upon what ground, such a gradual increase of force can stop, till it come to the utmost extremities. If therefore dissenting from the church of England be a fault to be punished by the magistrate, I desire you to tell me, where he shall hold his hand; to name the sort or degree of punishment, beyond which he ought not to go in the use of force, to cure them of that fault, and bring them to conformity. Till you have done that, you might have spared that paragraph, where you say, "With what ingenuity I draw you in to condemn force in general, only because you acknowledge the ill effects of prosecuting men with fire and sword, &c. you may leave every man to judge." And I leave whom you will to judge, whether from your own principles it does not unavoidably follow, that if you condemn any penalties you must condemn all, as I have shown; if you will retain any, you must retain all: you must either take or leave all together. For, as I have said, and you deny not, "Where there is no fault, there no punishment is moderate;" so I add, Where there is a fault to be corrected by the magistrate's force, there no degree of force, which is ineffectual, and not sufficient to amend it, can be immoderate; especially if it be a fault of great moment in its consequences, as certainly that must be, which draws after it the loss of men's eternal happiness.

You will, it is likely, be ready to say here again, (for a good subterfuge is never to be forsaken) that you except the "desperately perverse and obstinate." I desire to know for what reason you except them? Is it because they cease to be faulty? Next I ask you, who are in your sense the desperately perverse and obstinate? Those that 1s. or 5s. or 5l. or 100l. or no fine will work upon? Those who can bear loss of estate, but not loss of liberty? or loss of liberty and estate, but not corporal pains and torments? or all this but not loss of life? For to these degrees do men differently stand out. And since there are men wrought on by the approaches of fire and faggot, which other degrees of severity could not prevail with; where will you bound your desperately perverse and obstinate? The king of France, though you will allow him not to have truth of his side, yet when he came to

dragooning, found few so desperately perverse and obstinate, as not to be wrought on. And why should truth, which in your opinion wants force, and nothing but force, to help it, not have the assistance of those degrees of force, when less will not do to make it prevail, which are able to bring men over to false religions, which have no light and strength of their own to help them? You will do well therefore to consider whether your name of severities, in opposition to the moderate punishments you speak of, has or can do you any service; whether the distinction between compelling and coactive power, be of any use or difference at all. For you deny the magistrate to have power to compel; and you contend for his use of his coactive power; which will then be a good distinction, when you can find a way to use coactive, or, which is the same, compelling power, without compulsion. I desire you also to consider, if in matters of religion punishments are to be employed, because they may be useful; whether you can stop at any degree that is ineffectual to the end which you propose, let that end be what it will. If it be barely to gain a hearing, as in some places you seem to say; I think for that small punishments will generally prevail, and you do well to put that and moderate penalties together. If it be to make men consider, as in other places you speak; you cannot tell when you have obtained that end. But if your end be, which you seem most to insist on, to make men consider as they ought, i. e. till they embrace; there are many on whom all your moderate penalties, all under those severities you condemn, are too weak to prevail. So that you must either confess, not considering so as to “embrace the true religion, i. e. not considering as one ought,” is no fault to be punished by the coactive force of the magistrate; or else you must resume those severities which you have renounced; choose you whether of the two you please.

Therefore it was not so much at random that I said, “That thither at last persecution must come.” Indeed from what you had said of falling under the stroke of the sword, which was nothing to the purpose; I added, “That if by that you meant any thing to the business in hand, you seem to have a reserve for greater punishments, when less are not sufficient to bring men to be convinced.” Which hath produced this warm reply of yours: “And will you ever pretend to conscience or modesty after this? For I beseech you, sir, what words could I have used more express or effectual to signify, that in my opinion no dissenters from the true religion ought to be punished with the sword, but such as choose rather to rebel against the magistrate, than to

submit to lesser penalties? (For how any should refuse to submit to those penalties, but by rebelling against the magistrate, I suppose you will not undertake to tell me.) It was for this very purpose that I used those words to prevent cavils; (as I was then so simple as to think I might:) and I dare appeal to any man of common sense and common honesty, whether they are capable of any other meaning. And yet the very thing which I so plainly disclaim in them you pretend (without so much as offering to show how) to collect from them. Thither, you say, at last, viz. to the taking away men's lives for the saving of their souls, persecution must come: as you fear, notwithstanding my talk of moderate punishments, I myself intimate in those words: and if I mean any thing in them to the business in hand, I seem to have a reserve for greater punishments, when lesser are not sufficient to bring men to be convinced. Sir, I should expect fairer dealing from one of your pagans or mahometans. But I shall only add, that I would never wish that any man who has undertaken a bad cause should more plainly confess it than by serving it, as here (and not here only) you serve yours." Good sir, be not so angry, lest to observing men you increase the suspicion. One may, without forfeiture of modesty or conscience, fear what men's principles threaten, though their words disclaim it. Nonconformity to the national, when it is the true religion, as in England, is a fault, a vice, say you, to be corrected by the coercive power of the magistrate. If so, and force be the proper remedy, he must increase it, till it be strong enough to work the cure; and must not neglect his duty; for so you make it, when he has force enough in his hand to make this remedy more powerful. For wherever force is proper to work on men, and bring them to a compliance, its not producing that effect can only be imputed to its being too little: and if so, whither at last must it come, but to the late methods of procuring conformity, and as his most christian majesty called it, saving of souls, in France, or severities like them, when more moderate ones cannot produce it? For to continue inefficacious penalties, insufficient upon trial to master the fault they are applied to, is unjustifiable cruelty; and that which nobody can have a right to use, it serving only to disease and harm people, without amending them: for you tell us, they should be such penalties as should make them uneasy.

He that should vex and pain a sore you had, with frequent dressing it with some moderate, painful, but inefficacious plaister, that promoted not the cure; would justly be thought, not only an ignorant, but a dishonest surgeon. If you are in the surgeon's hands, and his help is requisite, and the

cure that way to be wrought; corrosives and fire are the most merciful, as well as only justifiable way of cure, when the case needs them. And therefore I hope I may still pretend to modesty and conscience, though I should have thought you so rational a man, as to be led by your own principles; and so honest, charitable, and zealous for the salvation of men's souls, as not to vex and disease them with inefficacious remedies to no purpose, and let them miss of salvation, for want of more vigorous prosecutions. For if conformity to the church of England be necessary to salvation; for else what necessity can you pretend of punishing men at all to bring them to it? it is cruelty to their souls (if you have authority for any such means) to use some, and not to use sufficient force to bring them to conform. And I dare say you are satisfied that the French discipline of dragooning would have made many in England conformists, whom your lower penalties will not prevail on to be so.

But to inform you that my apprehensions were not so wholly out of the way, I beseech you to read here what you have writ in these words; "For how confidently soever you tell me here, that it is more than I can say for my political punishments, that they were ever useful for the promoting true religion; I appeal to all observing persons, whether wherever true religion or sound christianity has been nationally received and established by moderate penal laws, it has not always lost ground by the relaxation of those laws: whether sects and heresies, (even the wildest and most absurd) and even epicurism and atheism, have not continually thereupon spread themselves; and whether the very spirit and life of christianity has not sensibly decayed, as well as the number of sound professors of it been daily lessened upon it: not to speak of what at this time our eyes cannot but see, for fear of giving offence; though I hope it will be none to any, that have a just concern for truth and piety, to take notice of the books and pamphlets which now fly so thick about this kingdom, manifestly tending to the multiplying of sects and divisions, and even to the promoting of scepticism in religion among us." Here you bemoan the decaying state of religion amongst us at present, by reason of taking off the penalties from protestant dissenters: and I beseech you what penalties were they? Such whereby many have been ruined in their fortunes; such whereby many have lost their liberties, and some their lives in prisons; such as have sent some into banishment, stripped of all they had. These were the penal laws by which the national religion was established in England; and these you call moderate: for you say,

“Wherever true religion or sound christianity has been nationally received and established by moderate penal laws;” and I hope you do not here exclude England from having its religion so established by law, which we so often hear of; or if to serve the present occasion you should, would you also deny, that in the following words you speak of the present relaxation in England? where after your appeal to all observing people for the dismal consequences, which you suppose to have every-where followed from such relaxations, you add these pathetic words, “Not to speak of what at this time our eyes cannot but see, for fear of giving offence:” so heavy does the present relaxation sit on your mind; which since it is of penal laws you call moderate, I shall show you what they are.

In the first year of queen Elizabeth, there was a penalty of 1s. a Sunday and holy-day laid upon every one who came not to the common prayer then established. This penalty of 1s. a time not prevailing, as was desired, in the twenty-third year of her reign was increased to 20l. a month, and imprisonment for nonpayment within three months after judgment given. In the twenty-ninth year of Elizabeth, to draw this yet closer, and make it more forcible, it was enacted, That whoever upon one conviction did not continue to pay on the 20l. per month, without any other conviction or proceedings against him till he submitted and conformed, should forfeit all his goods, and two-thirds of his land for his life. But this being not yet thought sufficient, it was in the thirty-fifth year of that queen completed, and the moderate penal laws, upon which our national religion was established, and whose relaxation you cannot bear, but from thence date the decay of the very spirit and life of christianity, were brought to perfection. For then going to conventicles, or a month’s absence from church, was to be punished with imprisonment, till the offender conformed; and if he conformed not within three months, then he was to abjure the realm, and forfeit all his goods and chattels for ever, and his lands and tenements during his life: and if he would not abjure, or, abjuring, did not depart the realm within a time prefixed, or returned again, he was to suffer death as a felon. And thus your moderate penal laws stood for the established religion, till their penalties were, in respect of protestant dissenters, lately taken off. And now let the reader judge whether your pretence to moderate punishments, or my suspicion of what a man of your principles might have in store for dissenters, have more of modesty or conscience in it; since you openly declare your regret for the taking away such an establishment, as by

the gradual increase of penalties reached men's estates, liberties, and lives; and which you must be presumed to allow and approve of, till you tell us plainly, where, according to your measures, those penalties should, or, according to your principles, they could, have stopped.

You tell us, That where this only true religion, viz. of the church of England, is received, other religions ought "to be discouraged in some measure." A pretty expression for undoing, imprisonment, banishment; for those have been some of the discouragements given to dissenters here in England. You will again, no doubt, cry aloud, that you tell me you condemn these as much as I do. If you heartily condemn them, I wonder you should say so little to discourage them; I wonder you are so silent in representing to the magistrate the unlawfulness and danger of using them, in a discourse where you are treating of the magistrate's power and duty in matters of religion; especially this being the side on which, as far as we may guess by experience, their prudence is aptest to err: but your modesty, you know, leaves all to the magistrates prudence and experience on that side, though you over and over again encourage them not to neglect their duty in the use of force, to which you set no bounds.

You tell us, "Certainly no man doubts but the prudence and experience of governors and law-givers enables them to use and apply it," viz. your rule for the measure of punishments, which I have showed to be no rule at all: "And to judge more exactly what penalties do agree with it; and therefore you must be excused if you do not take upon you to teach them what it becomes you rather to learn from them." If your modesty be such, and you then did what became you, you could not but learn from your governors and law-givers, and so be satisfied till within this year or two, that those penalties which they measured out for the establishment of the true religion, though they reached to men's estates, liberties, and lives, were such as were fit. But what you have learned of your lawmakers and governors since the relaxation, or what opinion you have of their experience and prudence now, is not so easy to say.

Perhaps you will say again, that you have in express words declared against "fire and sword, loss of estate, maiming with corporal punishments, starving and tormenting in noisome prisons;" and one cannot either in modesty or conscience disbelieve you: yet in the same letter you with sorrow and regret speak of the relaxation of such penalties laid on nonconformity, by which men have lost their estates, liberties, and lives too,

in noisome prisons, and in this too must we not believe you? I dare say, there are very few who read that passage of yours, so feelingly it is penned, who want modesty or conscience to believe you therein to be in earnest; and the rather, because what drops from men by chance, when they are not upon their guard, is always thought the best interpretation of their thoughts.

You name “loss of estate, of liberty, and tormenting, which is corporal punishment, as if you were against them:” certainly you know what you meant by these words, when you said, you condemned them; was it any degree of loss of liberty or estate, any degree of corporal punishment that you condemned, or only the utmost, or some degree between these? unless you had then some meaning, and unless you please to tell us, what that meaning was; where it is, that in your opinion the magistrate ought to stop; who can believe you are in earnest? This I think you may and ought to do for our information in your system, without any apprehension that governors and law-givers will deem themselves much taught by you, which your modesty makes you so cautious of. Whilst you refuse to do this, and keep yourself under the mask of moderate, convenient, and sufficient force and penalties, and other such-like uncertain and undetermined punishments, I think a conscientious and sober dissenter might expect fairer dealing from one of my pagans or mahometans, as you please to call them, than from one, who so professes moderation, that what degrees of force, what kind of punishments will satisfy him, he either knows not, or will not declare. For your moderate and convenient may, when you come to interpret them, signify what punishments you please: for the cure being to be wrought by force, that will be convenient, which the stubbornness of the evil requires; and that moderate, which is but enough to work the cure. And therefore I shall return your own compliment. “That I would never wish that any man who has undertaken a bad cause, should more plainly confess it than by serving it, as here (and not here only) you serve yours.” I should beg your pardon for this sort of language, were it not your own. And what right you have to it, the skill you show in the management of general and doubtful words and expressions, of uncertain and undetermined signification, will, I doubt not, abundantly convince the reader. An instance we have in the argument before us; for I appeal to any sober man, who shall carefully read what you write, where you pretend to tell the world plainly and directly what punishments are to be used by your scheme, whether, after having weighed all you say concerning that matter, he can tell, what a

nonconformist is to expect from you, or find any thing but such acuteness and strength as lie in the uncertainty and reserve of your way of talking; which whether it be any way suited to your modesty and conscience, where you have undertaken to tell us what the punishments are, whereby you would have men brought to embrace the true religion, I leave you to consider.

If having said, “Whether true religion or sound christianity has been nationally received and established by moderate penal laws;” you shall for your defence of the establishment of the religion in England by law, say, which is all is left you to say, that though such severe laws were made, yet it was only by the execution of moderate penal laws, that it was established and supported: but that those severe laws that touched men’s estates, liberties, and lives, were never put in execution. Why then do you so seriously bemoan the loss of them? But I advise you not to make use of that plea, for there are examples in the memory of hundreds now living, of every one of those laws of queen Elizabeth being put in execution; and pray remember, if by denying it you require this truth to be made good, it is you that force the publishing of a catalogue of men that have lost their estates, liberties, and lives in prison, which it would be more for the advantage of the religion established by law, should be forgotten.

But to conclude this great accusation of yours: if you were not conscious to yourself of some tendency that way, why such an outcry? Why were modesty and conscience called in question? Why was it less fair dealing than you could have expected from a pagan or mahometan, for me to say, if in those words “you meant any thing to the business in hand, you seemed to have a reserve for greater punishments?” Your business there being to prove, that there was a power vested in the magistrate to use force in matters of religion, what could be more beside the business in hand, than to tell us, as you interpret your meaning here, that the magistrate had a power to use force against those who rebelled; for whoever denied that, whether dissenters or not dissenters? Where was it questioned by the author or me, that “whoever rebelled, were to fall under the stroke of the magistrate’s sword?” And therefore, without breach of modesty or conscience, I might say, what I again here repeat, “That if in those words you meant any thing to the business in hand, you seemed to have a reserve for greater punishments.”

One thing more give me leave to add in defence of my modesty and conscience, or rather to justify myself from having guessed so wholly beside the matter, if I should have said, which I did not, “that I feared you had a reserve for greater punishments.” For I having brought the instances of Ananias and Sapphira, to show that the apostles wanted not power to punish, if they found it necessary to use it; you infer, that therefore “punishment may be sometimes necessary.” What punishments I beseech you, for theirs cost them their lives? He that, as you do, concludes from thence, that therefore “punishments may be sometimes necessary,” will hardly avoid, whatever he says, to conclude capital punishments necessary: and when they are necessary, it is you know the magistrate’s duty to use them. You see how natural it is for men to go whither their principles lead them, though at first sight perhaps they thought it too far.

If to avoid this, you now say you meant it of the punishment of the incestuous Corinthian, whom I also mentioned in the same place; I think, supposing your self to lie under the imputation of a reserve of greater punishments, you ought in prudence to have said so there. Next you know not what punishment it was the incestuous Corinthian underwent; but it being “for the destruction of the flesh,” it seems to be no very light one: and if you will take your friend St. Austin’s word for it, as he in the very epistle you quote tells us, it was a very severe one, making as much difference between it, and the severities men usually suffer in prison, as there is between the cruelty of the devil and that of the most barbarous jailor: so that if your moderate punishments will reach to that laid on the incestuous Corinthian for the destruction of the flesh, we may presume them to be what other people call severities.

CHAPTER V. HOW LONG YOUR PUNISHMENTS ARE TO CONTINUE.

The measure of punishments being to be estimated as well by the length of their duration, as the intenseness of their degrees, it is fit we take a view also of your scheme in this part:

“I told you, that moderate punishments that are continued, that men find no end of, know no way out of, sit heavy, and become immoderately uneasy. Dissenters you would have punished to make them consider. Your penalties have had the effect on them you intended; they have made them consider; and they have done their utmost in considering. What now must be done with them? They must be punished on, for they are still dissenters. If it were just, and you had reason at first to punish a dissenter, to make him consider, when you did not know but that he had considered already; it is as just, and you have as much reason to punish him on, even when he has performed what your punishment was designed for, and has considered, but yet remains a dissenter. For I may justly suppose, and you must grant, that a man may remain a dissenter after all the consideration your moderate penalties can bring him to: when we see great punishments, even those severities you disown as too great, are not able to make men consider so far as to be convinced, and brought over to the national church. If your punishments may not be inflicted on men, to make them consider, who have or may have considered already, for ought you know; then dissenters are never to be once punished, no more than any other sort of men. If dissenters are to be punished, to make them consider, whether they have considered or no; then their punishments, though they do consider, must never cease as long as they are dissenters; which whether it be to punish them only to bring them to consider, let all men judge. This I am sure; punishments in your method must either never begin upon dissenters, or never cease. And so pretend moderation if you please, the punishments which your method requires, must be either very immoderate, or none at all.” But to this you say nothing, only for the adjusting of the length of your punishments, and therein vindicating the consistency and practicableness of your scheme, you tell us, “that as long as men reject the true religion duly proposed to them, so long they offend and deserve punishment, and therefore it is but just that

so long they should be left liable to it." You promised to answer to this question, amongst others, "plainly and directly." The question is, how long they are to be punished? And your answer is, "It is but just that so long they should be liable to punishment." This extraordinary caution in speaking out, if it were not very natural to you, would be apt to make one suspect it was accommodated more to some difficulties of your scheme, than to your promise of answering plainly and directly; or possibly you thought it would not agree to that character of moderation you assume, to own, that all the penal laws which were lately here in force, and whose relaxation you bemoan, should be constantly put in execution. But your moderation in this point comes too late. For as your charity, as you tell us in the next paragraph, "requires that they be kept subject to penalties;" so the watchful charity of others in this age hath found out ways to encourage informers, and put it out of the magistrate's moderation to stop the execution of the law against dissenters, if he should be inclined to it.

We will therefore take it for granted, that if penal laws be made concerning religion, (for more zeal usually animates them than others,) they will be put in execution: and indeed I have heard it argued to be very absurd to make or continue laws, that are not constantly put in execution. And now to show you how well your answer consists with other parts of your scheme, I shall need only to mind you, that if men must be punished as long as they reject the true religion; those who punish them must be judges what is the true religion. But this objection, with some others, to which this part of your answer is obnoxious, having been made to you more at large elsewhere, I shall here omit, and proceed to other parts of your answer.

You begin with your reason for the answer you afterwards give us in the words I last quoted: your reason runs thus: "For certainly nothing is more reasonable than that men should be subject to punishment as long as they continue to offend. And as long as men reject the true religion tendered them with sufficient evidence of the truth of it, so long it is certain they offend." It is certainly very reasonable, that men should be subject to punishment from those they offend as long as they continue to offend: but it will not from hence follow, that those who offend God, are always subject to punishment from men. For if they be, why does not the magistrate punish envy, hatred, and malice, and all uncharitableness? If you answer, because they are not capable of judicial proofs: I think I may say it is as easy to prove a man guilty of envy, hatred, or uncharitableness, as it is to prove him

guilty of “rejecting the true religion tendered him with sufficient evidence of the truth of it.” But if it be his duty to punish all offences against God; why does the magistrate never punish lying, which is an offence against God, and is an offence capable of being judicially proved? It is plain therefore that it is not the sense of all mankind, that it is the magistrate’s duty to punish all offences against God; and where it is not his duty to use force, you will grant the magistrate is not to use it in matters of religion; because where it is necessary, it is his duty to use it: but where it is not necessary, you yourself say, it is not lawful. It would be convenient therefore for you to reform your proposition from that loose generality it now is in, and then prove it, before it can be allowed you to be to your purpose; though it be ever so true, that “you know not a greater crime a man can be guilty of, than rejecting the true religion.”

You go on with your proof, that so long as men reject the true religion, &c. so long they offend, and consequently may justly be punished: “Because, say you, it is impossible for any man innocently to reject the true religion so tendered to him. For whoever rejects that religion so tendered, does either apprehend and perceive the truth of it, or he does not. If he does, I know not what greater crime any man can be guilty of. If he does not perceive the truth of it, there is no account to be given of that, but either that he shuts his eyes against the evidence which is offered him, and will not at all consider it; or that he does not consider it as he ought, viz. with such care as is requisite, and with a sincere desire to learn the truth; either of which does manifestly involve him in guilt. To say here that a man who has the true religion proposed to him with sufficient evidence of its truth, may consider it as he ought,” or do his utmost in considering, “and yet not perceive the truth of it; is neither more nor less, than to say, that sufficient evidence is not sufficient evidence. For what does any man mean by sufficient evidence, but such as will certainly win assent wherever it is duly considered?”

I shall not trouble myself here to examine when requisite care, duly considered, and such other words, which bring one back to the same place from whence one set out, are cast up, whether all this fine reasoning will amount to any thing, but begging what is in the question: but shall only tell you, that what you say here and in other places about sufficient evidence, is built upon this, that the evidence wherewith a man proposes the true religion, he may know to be such, as will not fail to gain the assent of

whosoever does what lies in him in considering it. This is the supposition, without which all your talk of sufficient evidence will do you no service, try it where you will. But it is a supposition that is far enough from carrying with it sufficient evidence to make it be admitted without proof.

Whatever gains any man's assent, one may be sure had sufficient evidence in respect of that man: but that is far enough from proving it evidence sufficient to prevail on another, let him consider it as long and as much as he can. The tempers of men's minds; the principles settled there by time and education, beyond the power of the man himself to alter them; the different capacities of men's understandings, and the strange ideas they are often filled with; are so various and uncertain, that it is impossible to find that evidence, especially in things of a mixed disquisition, depending on so long a train of consequences, as some points of the true religion may, which one can confidently say will be sufficient for all men. It is demonstration that 31876 is the product of 9467172 divided by 297, and yet I challenge you to find one man of a thousand, to whom you can tender this proposition with demonstrative or sufficient evidence to convince him of the truth of it in a dark room; or ever to make this evidence appear to a man, that cannot write and read, so as to make him embrace it as a truth, if another, whom he hath more confidence in, tells him it is not so. All the demonstrative evidence the thing has, all the tender you can make of it, all the consideration he can employ about it, will never be able to discover to him that evidence which shall convince him it is true, unless you will at threescore and ten, for that may be the case, have him neglect his calling, go to school, and learn to write and read, and cast accounts, which he may never be able to attain to.

You speak more than once of men's being brought to lay aside their prejudices to make them consider as they ought, and judge right of matters in religion; and I grant without doing so they cannot: but it is impossible for force to make them do it, unless it could show them which are prejudices in their minds, and distinguish them from the truths there. Who is there almost that has not prejudices, that he does not know to be so; and what can force do in that case? It can no more remove them, to make way for truth, than it can remove one truth to make way for another; or rather remove an established truth, or that which is looked on as an unquestionable principle, (for so are often men's prejudices,) to make way for a truth not yet known, nor appearing to be one. It is not every one knows, or can bring himself to

Des Cartes's way of doubting, and strip his thoughts of all opinions, till he brings them to self-evident principles, and then upon them builds all his future tenets.

Do not think all the world, who are not of your church, abandon themselves to an utter carelessness of their future state. You cannot but allow there are many Turks who sincerely seek truth, to whom yet you could never bring evidence sufficient to convince them of the truth of the christian religion, whilst they looked on it as a principle not to be questioned, that the Koran was of divine revelation. This possibly you will tell me is a prejudice, and so it is; but yet if this man shall tell you it is no more a prejudice in him, than it is a prejudice in any one amongst christians, who having not examined it, lays it down as an unquestionable principle of his religion, that the scripture is the word of God; what will you answer to him? And yet it would shake a great many christians in their religion if they should lay by that prejudice, and suspend their judgment of it, until they had made it out to themselves with evidence sufficient to convince one who is not prejudiced in favour of it: and it would require more time, books, languages, learning and skill, than falls to most men's share to establish them therein; if you will not allow them, in this so distinguishing and fundamental a point, to rely on the learning, knowledge, and judgment of some persons whom they have in reverence or admiration. This though you blame it as an ill way, yet you can allow in one of your own religion, even to that degree, that he may be ignorant of the grounds of his religion. And why then may you not allow it to a Turk, not as a good way, or as having led him to the truth; but as a way as fit for him, as for one of your church to acquiesce in; and as fit to exempt him from your force, as to exempt any one of your church from it?

To prevent your commenting on this, in which you have shown so much dexterity, give me leave to tell you, that for all this I do not think all religions equally true or equally certain. But this, I say, is impossible for you, or me, or any man, to know, whether another has done his duty in examining the evidence on both sides, when he embraces that side of the question, which we, perhaps upon other views, judge false: and therefore we can have no right to punish or persecute him for it. In this, whether and how far any one is faulty, must be left to the Searcher of hearts, the great and righteous Judge of all men, who knows all their circumstances, all the powers and workings of their minds; where it is they sincerely follow, and

by what default they at any time miss truth: and he, we are sure, will judge uprightly.

But when one man shall think himself a competent judge, that the true religion is proposed with evidence sufficient for another; and thence shall take upon him to punish him as an offender, because he embraces not, upon evidence that he the proposer judges sufficient, the religion that he judges true; he had need be able to look into the thoughts of men, and know their several abilities; unless he will make his own understanding and faculties to be the measure of those of all mankind; which if they be no higher elevated, no larger in their comprehension, no more discerning, than those of some men, he will not only be unfit to be a judge in that, but in almost any case whatsoever.

But since, 1. You make it a condition to the making a man an offender in not being of the true religion, that it has been tendered him with sufficient evidence. 2. Since you think it so easy for men to determine when the true religion has been tendered to any one with sufficient evidence. And 3. Since you pronounce "it impiety to say that God hath not furnished mankind with competent means for the promoting his own honour in the world, and the good of souls." Give me leave to ask you a question or two. 1. Can any one be saved without embracing the one only true religion? 2. Were any of the Americans of that one only true religion, when the Europeans first came amongst them? 3. Whether any of the Americans, before the christians came amongst them, had offended in rejecting the true religion tendered with sufficient evidence? When you have thought upon, and fairly answered these questions, you will be fitter to determine, how competent a judge man is, what is sufficient evidence; who do offend in not being of the true religion; and what punishments they are liable to for it.

But methinks here, where you spend almost a whole page upon the crime of rejecting the true religion duly tendered, and the punishment that is justly due to it from the magistrate, you forget yourself, and the foundation of your plea for force; which is, that it is necessary: when you are so far from proving it to be so in this case of punishing the offence of rejecting the true religion, that in this very page you distinguished it from what is necessary, where you tell us, "your design does rather oblige you to consider how long men may need punishment, than how long it may be just to punish them." So that though they offend, yet if they do not need punishment, the magistrate cannot use it, if you ground, as you say you do, the lawfulness of

force for promoting the true religion upon the necessity of it. Nor can you say, that by his commission from the law of nature, of doing good, the magistrate, besides reducing his wandering subjects out of the wrong into the right way, is appointed also to be the avenger of God's wrath on unbelievers, or those that err in matters of religion. This at least you thought not fit to own in the first draught of your scheme; for I do not remember, in all your "Argument considered," one word of crime or punishment: nay, in writing this second treatise, you were so shy of owning any thing of punishment, that to my remembrance, you scrupulously avoided the use of that word, till you came to this place; and always where the repeating my words did not oblige you to it, carefully used the term of penalties for it, as any one may observe, who reads the preceding part of this letter of yours, which I am now examining. And you were so nice in the point, that three or four leaves backwards, where I say, By your rule dissenters must be punished, you mend it, and say, "or if I please, subjected to moderate penalties." But here when the inquiry, how long force was to be continued on men, showed the absurdity of that pretence, that they were to be punished on without end, to make them consider; rather than part with your beloved force, you open the matter a little farther, and profess directly the punishing men for their religion. For though you do all you can to cover it under the name of rejecting the true religion duly proposed; yet it is in truth no more but being of a religion different from yours, that you would have them punished for: for all that the author pleads for, and you can oppose in writing against him, is toleration of religion. Your scheme therefore being thus mended, your hypothesis enlarged, being of a different religion from the national found criminal, and punishments found justly to belong to it; it is to be hoped, that in good time your punishments may grow too, and be advanced to all those degrees you in the beginning condemned; when having considered a little farther, you cannot miss finding, that the obstinacy of the criminals does not lessen their crime, and therefore justice will require severer execution to be done upon them.

But you tell us here, "Because your design does rather oblige you to consider how long men may need punishment, than how long it may be just to punish them; therefore you shall add, that as long as men refuse to embrace the true religion, so long penalties are necessary for them to dispose them to consider and embrace it; and that therefore as justice allows, so charity requires, that they be kept subject to penalties, till they

embrace the true religion.” Let us therefore see the consistency of this with other parts of your hypothesis, and examine it a little by them.

Your doctrine is, that where intreaties and admonitions upon trial do not prevail, punishments are to be used; but they must be moderate. Moderate punishments have been tried, and they prevail not; what now is to be done? Are not greater to be used? No. For what reason? Because those whom moderate penalties will not prevail on, being desperately perverse and obstinate, remedies are not to be provided for the incurable, as you tell us in the page immediately preceding.

Moderate punishments have been tried upon a man once, and again, and a third time, but prevail not at all, make no impression; they are repeated as many times more, but are still found ineffectual: pray tell me a reason why such a man is concluded so desperately perverse and obstinate, that greater degrees will not work upon him; but yet not so desperately perverse and obstinate, but that the same degrees repeated may work upon him? I will not urge here, that this is to pretend to know the just degree of punishment that will or will not work on any one; which I should imagine a pretty intricate business: but this I have to say, that if you can think it reasonable and useful to continue a man several years, nay his whole life, under the same repeated punishments, without going any higher, though they work not at all; because it is possible some time or other they may work on him; why is it not as reasonable and useful, I am sure it is much more justifiable and charitable, to leave him all his life under the means, which all agree God has appointed, without going any higher; because it is not impossible that some time or other preaching, and a word spoken in due season, may work upon him? For why you should despair of the success of preaching and persuasion upon a fruitless trial, and thereupon think yourself authorized to use force; and yet not so despair of the success of moderate force, as after years of fruitless trial to continue it on, and not to proceed to higher degrees of punishment; you are concerned for the vindication of your system to show a reason.

I mention the trial of preaching and persuasion, to show the unreasonableness of your hypothesis, supposing such a trial made: not that in yours, or the common method, there is or can be a fair trial made what preaching and persuasion can do. For care is taken by punishments and ill treatment to indispose and turn away men’s minds, and to add aversion to their scruples; an excellent way to soften men’s inclinations, and temper

them for the impression of arguments and intreaties; though these too are only talked of: for I cannot but wonder to find you mention, as you do, giving ear to admonitions, intreaties, and persuasions, when these are seldom, if ever made use of, but in places, where those, who are to be wrought on by them, are known to be out of hearing; nor can be expected to come there, till by such means they have been wrought on.

It is not without reason therefore you cannot part with your penalties, and would have no end put to your punishments, but continue them on; since you leave so much to their operation, and make so little use of other means to work upon dissenters.

CHAPTER VI. OF THE END FOR WHICH FORCE IS TO BE USED.

He that should read the beginning of your “Argument considered,” would think it in earnest to be your design to have force employed to make men seriously consider, and nothing else: but he that shall look a little farther into it, and to that add also your defence of it, will find by the variety of ends you design your force for, that either you know not well what you would have it for; or else, whatever it was you aimed at, you called it still by that name which best fitted the occasion, and would serve best in that place to recommend the use of it.

You ask me, “Whether the mildness and gentleness of the gospel destroys the coactive power of the magistrate?” I answer, as you supposed, No: upon which you infer, “Then it seems the magistrate may use his coactive power, without offending against the mildness and gentleness of the gospel.” Yes, where he has commission and authority to use it. “And so, say you, it will consist well enough with the mildness and gentleness of the gospel for the magistrate to use his coactive power to procure them” [I suppose you mean the ministers and preachers of the national religion] “a hearing where their prayers and intreaties will not do it.” No, it will not consist with the gentle and mild method of the gospel, unless the gospel has directed it, or something else to supply its want, till it could be had. As for miracles, which you pretend to have supplied the want of force in the first ages of christianity, you will find that considered in another place. But, sir, show me a country where the ministers and teachers of the national and true religion go about with prayers and intreaties to procure a hearing, and cannot obtain it; and there I think I need not stand with you for the magistrate to use force to procure it them; but that I fear will not serve your turn.

To show the inconsistency and impracticableness of your method, I had said, “Let us now see to what end they must be punished: sometimes it is, To bring them to consider those reasons and arguments which are proper and sufficient to convince them: of what? That it is not easy to set Grantham steeple upon Paul’s church? Whatever it be you would have them convinced of, you are not willing to tell us; and so it may be any thing.

Sometimes it is, To incline them to lend an ear to those who tell them they have mistaken their way, and offer to show them the right. Which is, to lend an ear to all who differ from them in religion, as well crafty seducers, as others. Whether this be for the procuring the salvation of their souls, the end for which you say this force is to be used, judge you. But this I am sure, whoever will lend an ear to all who will tell them they are out of the way, will not have much time for any other business.

“Sometimes it is, To recover men to so much sobriety and reflection, as seriously to put the question to themselves, whether it be really worth their while to undergo such inconveniencies, for adhering to a religion which, for any thing they know, may be false; or for rejecting another (if that be the case) which, for aught they know, may be true; till they have brought it to the bar of reason, and given it a fair trial there. Which in short amounts to thus much, viz. To make them examine whether their religion be true, and so worth the holding, under those penalties that are annexed to it. Dissenters are indebted to you for your great care of their souls. But what, I beseech you, shall become of those of the national church, everywhere, which make far the greater part of mankind, who have no such punishments to make them consider; who have not this only remedy provided for them, but are left in that deplorable condition, you mention, of being suffered quietly, and without molestation, to take no care at all of their souls, or in doing of it to follow their own prejudices, humours, or some crafty seducers? Need not those of the national church, as well as others, bring their religion to the bar of reason, and give it a fair trial there? And if they need to do so, as they must, if all national religions cannot be supposed true; they will always need that which you say is the only means to make them do so. So that if you are sure, as you tell us, that there is need of your method; I am sure, there is as much need of it in national churches as any other. And so, for aught I can see, you must either punish them, or let others alone: unless you think it reasonable that the far greater part of mankind should constantly be without that sovereign and only remedy, which they stand in need of equally with other people.

“Sometimes the end for which men must be punished is, to dispose them to submit to instruction, and to give a fair hearing to the reasons offered for the enlightening their minds, and discovering the truth to them. If their own words may be taken for it, there are as few dissenters as conformists, in any country, who will not profess they have done, and do this. And if their own

words may not be taken, who, I pray, must be judge? You and your magistrates? If so, then it is plain you punish them not to dispose them to submit to instruction, but to your instruction; not to dispose them to give a fair hearing to reasons offered for the enlightening their minds, but to give an obedient hearing to your reasons. If you mean this, it had been fairer and shorter to have spoken out plainly, than thus in fair words, of indefinite signification, to say that which amounts to nothing. For what sense is it to punish a man to dispose him to submit to instruction, and give a fair hearing to reasons offered for the enlightening his mind, and discovering truth to him, who goes two or three times a week several miles on purpose to do it, and that with the hazard of his liberty or purse; unless you mean your instructions, your reasons, your truth? Which brings us but back to what you have disclaimed, plain persecution for differing in religion.

“Sometimes this is to be done, To prevail with men to weigh matters of religion carefully and impartially. Discountenance and punishment put into one scale, with impunity and hopes of preferment put into the other, is as sure a way to make a man weigh impartially, as it would be for a prince to bribe and threaten a judge to make him judge uprightly.

“Sometimes it is, To make men bethink themselves, and put it out of the power of any foolish humour, or unreasonable prejudice, to alienate them from truth and their own happiness. Add but this, to put it out of the power of any humour or prejudice of their own, or other men’s; and I grant the end is good, if you can find the means to procure it. But why it should not be put out of the power of other men’s humour or prejudice, as well as their own, wants, and will always want, a reason to prove. Would it not, I beseech you, to an indifferent by-stander, appear humour or prejudice, or something as bad; to see men who profess a religion revealed from heaven, and which they own contains all in it necessary to salvation, exclude men from their communion, and persecute them with the penalties of the civil law, for not joining in the use of ceremonies, which are no-where to be found in that revealed religion? Would it not appear humour or prejudice, or some such thing, to a sober impartial heathen, to see christians exclude and persecute one of the same faith, for things which they themselves confess to be indifferent, and not worth the contending for? Prejudice, humour, passion, lusts, impressions of education, reverence and admiration of persons, worldly respects, love of their own choice, and the like; to which you justly impute many men’s taking up and persisting in their religion; are

indeed good words; and so, on the other side, are these following, truth, the right way, enlightening, reason, sound judgment; but they signify nothing at all to your purpose, till you can evidently and unquestionably show the world, that the latter, truth, and the right way, etc. are always, and in all countries, to be found only in the national church: and the former, viz. passion and prejudice, etc. only amongst the dissenters. But to go on:

“Sometimes it is, To bring men to take such care as they ought of their salvation. What care is such as men ought to take, whilst they are out of your church, will be hard for you to tell me. But you endeavour to explain yourself in the following words: that they may not blindly leave it to the choice neither of any other person, nor yet of their own lusts and passions, to prescribe to them what faith or worship they shall embrace. You do well to make use of punishment to shut passion out of the choice; because you know fear of suffering is no passion. But let that pass. You would have men punished, to bring them to take such care of their salvation, that they may not blindly leave it to the choice of any other person to prescribe to them. Are you sincere? Are you in earnest? Tell me then truly: did the magistrate or the national church, any-where, or yours in particular, ever punish any man, to bring him to have this care, which, you say, he ought to take of his salvation? Did you ever punish any man, that he might not blindly leave it to the choice of his parishpriest, or bishop, or the convocation, what faith or worship he should embrace? It will be suspected, care of a party, or any thing else, rather than care of the salvation of men’s souls; if, having found out so useful, so necessary a remedy, the only method there is room left for, you will apply it but partially, and make trial of it only on those whom you have truly least kindness for. This will unavoidably give one reason to imagine, you do not think so well of your remedy as you pretend, who are so sparing of it to your friends; but are very free of it to strangers, who in other things are used very much like enemies. But your remedy is like the helleboraster, that grew in the woman’s garden, for the cure of worms in her neighbours children: for truly it wrought too roughly to give it to any of her own. Methinks your charity, in your present persecution, is much-what as prudent, as justifiable, as that good woman’s. I hope I have done you no injury, that I here suppose you of the church of England; if I have I beg your pardon. It is no offence of malice, I assure you: for I suppose no worse of you, than I confess of myself.

“Sometimes this punishment that you contend for, is, to bring men to act according to reason and sound judgment:

Tertius è cœlo cecidit Cato.

“This is reformation indeed. If you can help us to it, you will deserve statues to be erected to you, as to the restorer of decayed religion. But if all men have not reason and sound judgment, will punishment put it into them? Besides, concerning this matter mankind is so divided, that he acts according to reason and sound judgment at Augsburg, who would be judged to do quite the contrary at Edinburgh. Will punishment make men know what is reason and sound judgment? If it will not, it is impossible it should make them act according to it. Reason and sound judgment are the elixir itself, the universal remedy: and you may as reasonably punish men to bring them to have the philosopher’s stone, as to bring them to act according to reason and sound judgment.

“Sometimes it is, To put men upon a serious and impartial examination of the controversy between the magistrate and them, which is the way for them to come to the knowledge of the truth. But what if the truth be on neither side, as I am apt to imagine you will think it is not; where neither the magistrate nor the dissenter is either of them of your church; how will the examining the controversy between the magistrate and him be the way to come to the knowledge of the truth? Suppose the controversy between a lutheran and a papist; or, if you please, between a presbyterian magistrate and a quaker subject; will the examining the controversy between the magistrate and the dissenting subject, in this case, bring him to the knowledge of the truth? If you say, Yes, then you grant one of these to have the truth on his side. For the examining the controversy between a presbyterian and a quaker, leaves the controversy either of them has with the church of England, or any other church, untouched. And so one, at least, of those being already come to the knowledge of the truth, ought not to be put under your discipline of punishment; which is only to bring him to the truth. If you say, No, and that the examining the controversy between the magistrate and the dissenter, in this case, will not bring him to the knowledge of the truth; you confess your rule to be false, and your method to no purpose.

“To conclude, your system is, in short, this: You would have all men, laying aside prejudice, humour, passion, etc. examine the grounds of their religion, and search for the truth. This, I confess, is heartily to be wished.

The means that you propose to make men to do this, is, that dissenters should be punished to make them do so. It is as if you had said, men generally are guilty of a fault; therefore let one sect, who have the ill luck to be of an opinion different from the magistrate, be punished. This, at first sight, shocks any one who has the least spark of sense, reason, or justice. But having spoken of this already, and concluding that, upon second thoughts, you yourself will be ashamed of it; let us consider it put so as to be consistent with common sense, and with all the advantage it can bear, and then let us see what you can make of it. Men are negligent in examining the religions they embrace, refuse, or persist in; therefore it is fit they should be punished to make them do it. This is a consequence indeed which may, without defiance to common sense, be drawn from it. This is the use, the only use, which you think punishment can indirectly and at a distance have in matters of religion. You would have men by punishments driven to examine. What? Religion. To what end? To bring them to the knowledge of the truth. But I answer,

“First, Every one has not the ability to do this.

“Secondly, Every one has not the opportunity to do it.

“Would you have every poor protestant, for example, in the palatinate, examine thoroughly whether the pope be infallible, or head of the church; whether there be a purgatory; whether saints are to be prayed to, or the dead prayed for; whether the scripture be the only rule of faith; whether there be no salvation out of the church; and whether there be no church without bishops; and an hundred other things in controversy between the papists and those protestants: and when he had mastered these, go on to fortify himself against the opinions and objections of other churches he differs from? This, which is no small task, must be done, before a man can have brought his religion to the bar of reason, and given it a fair trial there. And if you will punish men till this be done, the countryman must leave off plowing and sowing, and betake himself to the study of Greek and Latin; and the artisan must sell his tools, to buy fathers and schoolmen, and leave his family to starve. If something less than this will satisfy you, pray tell me what is enough. Have they considered and examined enough, if they are satisfied themselves where the truth lies? If this be the limits of their examination, you will find few to punish; unless you will punish them to make them do what they have done already. For, however he came by his religion, there is scarce any one to be found who does not own himself satisfied that he is in

the right. Or, else, must they be punished to make them consider and examine, till they embrace that which you choose for truth? If this be so, what do you but in effect choose for them? when yet you would have men punished, to bring them to such a care of their souls that no other person might choose for them? If it be truth in general you would have them by punishments driven to seek; that is to offer matter of dispute, and not a rule of discipline. For to punish any one to make him seek till he find truth, without a judge of truth, is to punish for you know not what; and is all one as if you should whip a scholar to make him find out the square root of a number you do not know. I wonder not therefore that you could not resolve with yourself what degree of severity you would have used, nor how long continued; when you dare not speak out directly whom you would have punished, and are far from being clear to what end they should be under penalties.

“Consonant to this uncertainty, of whom, or what, to be punished; you tell us, that there is no question of the success of this method. Force will certainly do, if duly proportioned to the design of it.

“What, I pray, is the design of it? I challenge you, or any man living, out of what you have said in your book, to tell me directly what it is. In all other punishments that ever I heard of yet, till now that you have taught the world a new method, the design of them has been to cure the crime they are denounced against; and so I think it ought to be here. What, I beseech you, is the crime here? Dissenting? That you say not, any-where, is a fault. Besides you tell us, that the magistrate hath not an authority to compel any one to his religion. And that you do not require that men should have no rule but the religion of the country. And the power you ascribe to the magistrate is given him to bring men, not to his own, but to the true religion. If dissenting be not the fault; is it that a man does not examine his own religion, and the grounds of it? Is that the crime your punishments are designed to cure? Neither that dare you say, lest you displease more than you satisfy with your new discipline. And then again, as I said before, you must tell us how far you would have them examine, before you punish them for not doing it. And I imagine, if that were all we required of you, it would be long enough before you would trouble us with a law, that should prescribe to every one how far he was to examine matters of religion: wherein if he failed, and came short, he was to be punished; if he performed, and went in his examination to the bounds set by the law, he was

acquitted and free. Sir, when you consider it again, you will perhaps think this a case reserved to the great day, when the secrets of all hearts shall be laid open. For I imagine it is beyond the power or judgment of man, in that variety of circumstances, in respect of parts, tempers, opportunities, helps, etc. men are in, in this world, to determine what is every one's duty in this great business of search, inquiry, examination; or to know when any one has done it. That which makes me believe you will be of this mind, is, that where you undertake for the success of this method, if rightly used, it is with a limitation, upon such as are not altogether incurable. So that when your remedy is prepared according to art, (which art is yet unknown,) and rightly applied, and given in a due dose, (all which are secrets,) it will then infallibly cure. Whom? All that are not incurable by it. And so will a pippin-posset, eating fish in lent, or a presbyterian lecture, certainly cure all that are not incurable by them. For I am sure you do not mean it will cure all, but those who are absolutely incurable; because you yourself allow one means left of cure, when yours will not do, viz. The grace of God. Your words are, what means is there left (except the grace of God) to reduce them, but to lay thorns and briars in their way? And here also in the place we were considering, you tell us, the incurable are to be left to God. Whereby, if you mean they are to be left to those means he has ordained for men's conversion and salvation, yours must never be made use of: for he indeed has prescribed preaching and hearing of his word; but as for those who will not hear, I do not find any-where that he has commanded that they should be compelled or beaten to it."

I must beg my reader's pardon for so long a repetition, which I was forced to, that he might be judge whether what I there said either deserves no answer, or be fully answered in that paragraph, where you undertake to vindicate your method from all impracticableness and inconsistency chargeable upon it, in reference to the end for which you would have men punished. Your words are: For what? By which, you say, "you perceive I mean two things: for sometimes I speak of the fault, and sometimes of the end for which men are to be punished; (and sometimes I plainly confound them.) Now if it be inquired, for what fault men are to be punished? you answer, for rejecting the true religion, after sufficient evidence tendered them of the truth of it: which certainly is a fault, and deserves punishment. But if I inquire for what end such as do reject the true religion, are to be punished; you say, to bring them to embrace the true religion; and in order

to that to bring them to consider, and that carefully and impartially, the evidence which is offered to convince them of the truth of it, which are undeniably just and excellent ends; and which, through God's blessing, have often been procured, and may yet be procured by convenient penalties inflicted for that purpose. Nor do you know of any thing I say against any part of this, which is not already answered." Whether I in this confound two things distinct, or you distinguish where there is no difference, the reader may judge by what I have said elsewhere. I shall here only consider the ends of punishing, you here again in your reply to me assign; and those, as I find them scattered, are these:

Sometimes you speak of this end, as if it were "barely to gain a hearing to those who by prayers and intreaty cannot:" And those may be the preachers of any religion. But I suppose you mean the preachers of the true religion. And who I beseech you must be judge of that?

"Where the law provides sufficient means of instruction for all, as well as punishment for dissenters, it is plain to all concerned, that the punishment is intended to make them consider." What? The means the law provides for their instruction. Who then is judge of what they are to be instructed in, and the means of instruction, but the law-maker?

"It is to bring men to hearken to instruction:" From whom? From any body? "And to consider and examine matters of religion as they ought to do, and to bring those who are out of the right way to hear, consider, and embrace the truth." When is this end attained, and the penalties which are the means to this end taken off? When a man conforms to the national church. And who then is judge of what is the truth, to be embraced, but the magistrate?

"It is to bring men to consider those reasons and arguments which are proper and sufficient to convince them; but which, without being forced, they would not consider." And when have they done this? When they have once conformed: for after that there is no force used to make them consider farther.

"It is to make men consider as they ought;" and that, you tell us, is so to consider, "as to be moved heartily to embrace, and not to reject truth necessary to salvation." And when is the magistrate, that has the care of men's souls, and does all this for their salvation, satisfied that they have so considered? As soon as they outwardly join in communion with the national church.

“It is to bring men to consider and examine those controversies which they are bound to consider and examine, i. e. those wherein they cannot err without dishonouring God, and endangering their own and other men’s salvations. And to study the true religion with such care and diligence as they might and ought to use, and with an honest mind.” And when, in your opinion, is it presumable that any man has done all this? Even when he is in the communion of your church.

“It is to cure men’s unreasonable prejudices and refractoriness against, and aversion to, the true religion.” Whereof none retain the least tincture or suspicion, who are once got within the pale of your church.

“It is to bring men into the right way, into the way of salvation,” which force does, when it has conducted them within the church porch, and there leaves them.

“It is to bring men to embrace the truth that must save them.” And here in the paragraph wherein you pretend to tell us for what force is to be used, you say, “It is to bring men to embrace the true religion, and in order to that to bring them to consider, and that carefully and impartially, the evidence which is offered to convince them of the truth of it, which, as you say, are undeniably just and excellent ends;” but yet such as force in your method can never practically be made a means to, without supposing what you say you have no need to suppose, viz. That your religion is the true; unless you had rather every-where leave it to the magistrate to judge which is the right way, what is the true religion; which supposition, I imagine, will less accommodate you than the other. But take which of them you will you must add this other opposition to it, harder to be granted you than either of the former, viz. that those who conform to your church here, if you make yourself the judge, or to the national church any-where, if you make the magistrate judge of the truth that must save men, and those only, have attained these ends.

The magistrate, you say, is obliged to do what in him lies to bring all his subjects “to examine carefully and impartially matters of religion, and to consider them as they ought, i. e. so as to embrace the truth that must save them.” The proper and necessary means, you say, to attain these ends is force. And your method of using this force is to punish all the dissenters from the national religion, and none of those who outwardly conform to it. Make this practicable now in any country in the world, without allowing the magistrate to be judge what is the truth that must save them, and without

supposing also, that whoever do embrace the outward profession of the national religion, do in their hearts embrace, i. e. believe and obey, the truth that must save them; and then I think nothing in government can be too hard for your undertaking.

You conclude this paragraph in telling me, “You do not know of any thing I say against any part of this, which is not already answered.” Pray tell me where it is you have answered those objections I made to those several ends which you assigned in your “Argument considered,” and for which you would have force used, and which I have here reprinted again, because I do not find you so much as take notice of them: and therefore the reader must judge whether they needed any answer or no.

But to show that you have not here, where you promise and pretend to do it clearly and directly, told us for what force and penalties are to be used, I shall in the next chapter examine what you mean, “by bringing men to embrace the true religion.”

CHAPTER VII. OF YOUR BRINGING MEN TO THE TRUE RELIGION.

True religion is on all hands acknowledged to be so much the concern and interest of all mankind, that nothing can be named, which so much effectually bespeaks the approbation and favour of the public. The very entitling one's self to that sets a man on the right side. Who dares question such a cause, or oppose what is offered for the promoting the true religion? This advantage you have secured to yourself from inattentive readers as much as by the often repeated mention of the true religion is possible, there being scarce a page wherein the true religion does not appear, as if you had nothing else in your thoughts, but the bringing men to it for the salvation of their souls. Whether it be so in earnest, we will now see.

You tell us, "Whatever hardships some false religions may impose, it will however always be easier to carnal and worldly-minded men, to give even their first-born for their transgressions, than to mortify the lusts from which they spring, which no religion but the true requires of them." Upon this you ground the necessity of force to bring men to the true religion, and charge it on the magistrate as his duty to use it to that end. What now in appearance can express greater care to bring men to the true religion? But let us see what you say in , and we shall find that in your scheme nothing less is meant; there you tell us, "The magistrate inflicts the penalties only upon them that break the laws:" and that law requiring nothing but conformity to the national religion, none but nonconformists are punished. So that unless an outward profession of the national religion be by the mortification of men's lusts harder than their giving their first-born for their transgressions, all the penalties you contend for concern not, nor can be intended to bring men effectually to the true religion: since they leave them before they come to the difficulty, which is to mortify their lusts, as the true religion requires. So that your bringing men to the true religion being to bring them to conformity to the national, for then you have done with force; how far that outward conformity is from being heartily of the true religion, may be known by the distance there is between the easiest and the hardest thing in the world. For there is nothing easier than to profess in words; nothing harder, than to subdue the heart, and bring thoughts and deeds into

obedience of the truth: the latter is what is required to be of the true religion; the other all that is required by penalties your way applied. If you say, conformists to the national religion are required by the law civil and ecclesiastical to lead good lives, which is the difficult part of the true religion: I answer, these are not the laws we are here speaking of, nor those which the defenders of toleration complain of; but the laws that put a distinction between outward conformists and non-conformists: and those they say, whatever may be talked of the true religion, can never be meant to bring men really to the true religion, as long as the true religion is, and is confessed to be, a thing of so much greater difficulty than outward conformity.

Miracles, say you, supplied the want of force in the beginning of christianity; and therefore so far as they supplied that want, they must be subservient to the same end. The end then was to bring men into the christian church, into which they were admitted and received as brethren, when they acknowledged that Jesus was the Christ, the son of God. Will that serve the turn? No: force must be used to make men embrace creeds and ceremonies, i. e. outwardly conform to the doctrine and worship of your church. Nothing more than that is required by your penalties; nothing less than that will excuse from punishment: that, and nothing but that, will serve the turn; that therefore, and only that, is what you mean by the true religion you would have force used to bring men to.

When I tell you, “You have a very ill opinion of the religion of the church of England, and must own it can only be propagated and supported by force, if you do not think it would be a gainer by a general toleration all the world over:” You ask, “Why you may not have as good an opinion of the church of England’s, as you have of Noah’s religion, notwithstanding you think it cannot now be propagated or supported without using some kinds or degrees of force.” When you have proved that Noah’s religion, that from eight persons spread and continued in the world till the apostles times, as I have proved in another place, was propagated and supported all that while by your kinds or degrees of force, you may have some reason to think as well of the religion of the church of England, as you have of Noah’s religion; though you think it cannot be propagated and supported without some kinds or degrees of force. But till you can prove that, you cannot upon that ground say you have reason to have so good an opinion of it.

You tell me, “If I will take your word for it, you assure me you think there are many other countries in the world besides England, where my toleration would be as little useful to truth as in England.” If you will name those countries, which will be no great pains, I will take your word for it, that you believe toleration there would be prejudicial to truth: but if you will not do that, neither I nor any-body else can believe you. I will give you a reason why I say so, and that is, because nobody can believe that, upon your principles, you can allow any national religion, differing from that of the church of England, to be true; and where the national religion is not true, we have already your consent, as in Spain and Italy, &c. for toleration. Now that you cannot, without renouncing your own principles, allow any national religion, differing from that established here by law, to be true, is evident: For why do you punish non-conformists here? “To bring them, say you, to the true religion.” But what if they hold nothing, but what that other differing national church does, shall they be nevertheless punished if they conform not? You will certainly say, yes: and if so, then you must either say, they are not of the true religion; or else you must own you punish those, to bring them to the true religion, whom you allow to be of the true religion already.

You tell me, “If I own with our author, that there is but one true religion, and I owning myself to be of the church of England, you cannot see how I can avoid supposing, that the national religion now in England, backed by the public authority of the law, is the only true religion.” If I own, as I do, all that you here expect from me, yet it will not serve to draw that conclusion from it, which you do, viz. That the national religion now in England is the only true religion; taking the true religion in the sense that I do, and you ought to take it. I grant that there is but one true religion in the world, which is that whose doctrine and worship are necessary to salvation. I grant too that the true religion, necessary to salvation, is taught and professed in the church of England: and yet it will not follow from hence, that the religion of the church of England, as established by law, is the only true religion; if there be any thing established in the church of England by law, and made part of its religion, which is not necessary to salvation, and which any other church, teaching and professing all that is necessary to salvation, does not receive.

If the national religion now in England, backed by the authority of the law, be, as you would have it, the only true religion; so the only true

religion, that a man cannot be saved without being of it; pray reconcile this with what you say in the immediately preceding paragraph, viz. "That there are many other countries in the world where my toleration would be as little useful as in England." For if there be other national religions differing from that of England, which you allow to be true, and wherein men may be saved, the national religion of England, as now established by law, is not the only true religion, and men may be saved without being of it. And then the magistrate can upon your principles have no authority to use force to bring men to be of it. For you tell us, force is not lawful, unless it be necessary; and therefore the magistrate can never lawfully use it, but to bring men to believe and practise what is necessary to salvation. You must therefore either hold, that there is nothing in the doctrine, discipline, and ceremonies of the church of England, as it is established by law, but what is necessary to salvation: or else you must reform your terms of communion, before the magistrate upon your principles can use penalties to make men consider till they conform; or you can say that the national religion of England is the only true religion, though it contain the only true religion in it; as possibly most, if not all, the differing christian churches now in the world do.

You tell us farther in the next paragraph, "That wherever this only true religion, i. e. the national religion now in England, is received, all other religions ought to be discouraged." Why I beseech you discouraged, if they be true any of them? For if they be true, what pretence is there for force to bring men who are of them to the true religion? If you say all other religions, varying at all from that of the church of England, are false; we know then your measure of the one only true religion. But that your care is only of conformity to the church of England, and that by the true religion you mean nothing else, appears too from your way of expressing yourself in this passage, where you own that you suppose that as this only true religion, to wit, the national religion now in England, backed with the public authority of law, "ought to be received wherever it is preached; so wherever it is received, all other religions ought to be discouraged in some measure by the civil powers." If the religion established by law in England, be the only true religion, ought it not to be preached and received every-where, and all other religions discouraged throughout the world? and ought not the magistrates of all countries to take care that it should be so? But you only say, wherever it is preached it ought to be received; and wherever it is received, other religions ought to be discouraged, which is well suited to

your scheme for enforcing conformity in England, but could scarce drop from a man whose thoughts were on the true religion, and the promoting of it in other parts of the world.

Force then must be used in England, and penalties laid on dissenters there. For what? “to bring them to the true religion,” whereby it is plain you mean not only the doctrine but discipline and ceremonies of the church of England, and make them a part of the only true religion: why else do you punish all dissenters for rejecting the true religion, and use force to bring them to it? When yet a great, if not the greatest, part of dissenters in England own and profess the doctrine of the church of England, as firmly as those in the communion of the church of England. They therefore, though they believe the same religion with you, are excluded from the true church of God, that you would have men brought to, and are amongst those who reject the true religion.

I ask whether they are not in your opinion out of the way of salvation, who are not joined in communion with the true church? and whether there can be any true church without bishops? If so, all but conformists in England that are of any church in Europe, beside the lutherans and papists, are out of the way of salvation; and so according to your system have need of force to be brought into it: and these too, one for their doctrine of transubstantiation, the other for that of consubstantiation, to omit other things vastly differing from the church of England, you will not, I suppose, allow to be of the true religion: and who then are left of the true religion but the church of England? For the Abyssines have too wide a difference in many points for me to imagine, that is one of those places you mean where toleration would do harm as well as in England. And I think the religion of the Greek church can scarce be supposed by you to be the true. For if it should, it would be a strong instance against your assertion, that the true religion cannot subsist, but would quickly be effectually extirpated without the assistance of authority; since this has subsisted without any such assistance now above two hundred years. I take it then for granted, and others with me cannot but do the same; till you tell us what other religion there is of any church, but that of England, which you allow to be the true religion; that all you say of bringing men to the true religion, is only bringing them to the religion of the church of England. If I do you an injury in this, it will be capable of a very easy vindication: for it is but naming that other church differing from that of England, which you allow to have the

true religion, and I shall yield myself convinced, and shall allow these words, viz. “The national religion now in England, backed by the public authority of law, being the only true religion,” only as a little hasty sally of your zeal. In the mean time I shall argue with you about the use of force to bring men to the religion of the church of England, as established by law; since it is more easy to know what that is, than what you mean by the true religion, if you mean any thing else.

To proceed therefore; in the next place I tell you, by using force your way to bring men to the religion of the church of England, you mean only to bring them to an outward profession of that religion; and that, as I have told you elsewhere, because force used your way, being applied only to dissenters, and ceasing as soon as they conform, (whether it be intended by the lawmaker for any thing more or no, which we have examined in another place;) cannot be to bring men to any thing more than outward conformity. For if force be used to dissenters, and them only, to bring men to the true religion, and always, as soon as it has brought men to conformity, it be taken off, and laid aside as having done all is expected from it; it is plain, that by bringing men to the true religion, and bringing them to outward conformity, you mean the same thing. You use and continue force upon dissenters, because you expect some effect from it: when you take it off, it has wrought that effect, or else being in your power, why do you not continue it on? The effect then that you talk of, being the embracing the true religion, and the thing you are satisfied with, without any further punishment, expectation, or enquiry, being outward conformity, it is plain embracing the true religion and outward conformity, with you, are the same things.

Neither can you say it is presumable that those who outwardly conform do really understand, and inwardly in their hearts embrace with a lively faith and a sincere obedience, the truth that must save them. 1. Because it being, as you tell us, the magistrate’s duty to do all that in him lies for the salvation of all his subjects, and it being in his power to examine, whether they know and live suitable to the truth that must save them, as well as conform; he can or ought no more to presume that they do so, without taking an account of their knowledge and lives, than he can or ought to presume that they conform, without taking any account of their coming to church. Would you think that physician discharged his duty, and had, as was pretended, a care of men’s lives; who having got them into his hands, and

knowing no more of them, but that they come once or twice a week to the apothecary's shop, to hear what is prescribed them, and sit there a while; should say it was presumable they were recovered, without ever examining whether his prescriptions had any effect, or what estate their health was in?

It cannot be presumable, where there are so many visible instances to the contrary. He must pass for an admirable presumer, who will seriously affirm that it is presumable that all those who conform to the national religion where it is true, do so understand, believe, and practise it, as to be in the way of salvation.

It cannot be presumable, that men have parted with their corruption and lusts to avoid force, when they fly to conformity, which can shelter them from force without quitting their lusts. That which is dearer to men than their first-born, is, you tell us, their lusts; that which is harder than the hardships of false religions, is the mortifying those lusts: here lies the difficulty of the true religion, that it requires the mortifying of those lusts; and till that be done, men are not of the true religion, nor in the way of salvation: and it is upon this account only that you pretend force to be needful. Force is used to make them hear; it prevails, men hear: but that is not enough, because the difficulty lies not in that; they may hear arguments for the truth, and yet retain their corruption. They must do more, they must consider those arguments. Who requires it of them? The law that inflicts the punishment, does not; but this we may be sure their love of their lusts, and their hatred of punishment, requires of them, and will bring them to, viz. to consider how to retain their beloved lusts, and yet to avoid the uneasiness of the punishment they lie under; this is presumable they do; therefore they go one easy step farther, they conform, and then they are safe from force, and may still retain their corruption. Is it therefore presumable they have parted with their corruption, because force has driven them to take sanctuary against punishment in conformity, where force is no longer to molest them, or pull them from their darling inclinations? The difficulty in religion is, you say, for men to part with their lusts; this makes force necessary: men find out a way by conforming to avoid force without parting with their lusts; therefore it is presumable when they conform, that force which they can avoid without quitting their lusts, has made them part with them: which is indeed not to part with their lusts because of force, but to part with them gratis; which if you can say is presumable, the foundation of your need of force, which you place in the prevalency of corruption, and men's adhering

to their lusts, will be gone, and so there will be no need of force at all. If the great difficulty in religion be for men to part with or mortify their lusts, and the only counter-balance in the other scale, to assist the true religion, to prevail against their lusts, be force; which, I beseech you is presumable, if they can avoid force, and retain their lusts, that they should quit their lusts, and heartily embrace the true religion, which is incompatible with them; or else that they should avoid the force, and retain their lusts? To say the former of these, is to say that it is presumable, that they will quit their lusts, and heartily embrace the true religion for its own sake: for he that heartily embraces the true religion, because of a force which he knows he can avoid at pleasure, without quitting his lusts, cannot be said so to embrace it, because of that force: since a force he can avoid without quitting his lusts, cannot be said to assist truth in making him quit them: for in this truth has no assistance from it at all. So that this is to say there is no need of force at all in the case.

Take a covetous wretch, whose heart is so set upon money, that he would give his first-born to save his bags; who is pursued by the force of the magistrate to an arrest, and compelled to hear what is alleged against him; and the prosecution of the law threatening imprisonment or other punishment, if he do not pay the just debt which is demanded of him: if he enters himself in the King's-bench, where he can enjoy his freedom without paying the debt, and parting with his money; will you say that it is presumable he did it to pay the debt, and not to avoid the force of the law? The lust of the flesh and pride of life are as strong and prevalent as the lust of the eye: and if you will deliberately say again, that it is presumable, that men are driven by force to consider, so as to part with their lusts, when no more is known of them, but that they do what discharges them from the force, without any necessity of parting with their lusts; I think I shall have occasion to send you to my pagans and mahometans, but shall have no need to say any thing more to you of this matter myself.

I agree with you, that there is but one only true religion; I agree too that that one only true religion is professed and held in the church of England; and yet I deny, if force may be used to bring men to that true religion, that upon your principles it can lawfully be used to bring men to the national religion in England, as established by law: because force according to your own rule, being only lawful because it is necessary, and therefore unfit to be used where not necessary, i. e. necessary to bring men to salvation; it can

never be lawfully used to bring a man to any thing that is not necessary to salvation, as I have more fully shown in another place. If therefore in the national religion of England, there be any thing put in as necessary to communion, that is, though true, yet not necessary to salvation; force cannot be lawfully used to bring men to that communion, though the thing so required in itself may perhaps be true.

There be a great many truths contained in scripture, which a man may be ignorant of, and consequently not believe, without any danger to his salvation, or else very few would be capable of salvation; for I think I may truly say, there was never any one, but he that was the wisdom of the Father, who was not ignorant of some, and mistaken in others of them. To bring men therefore to embrace such truths, the use of force by your own rule cannot be lawful: because the belief or knowledge of those truths themselves not being necessary to salvation, there can be no necessity men should be brought to embrace them, and so no necessity to use force to bring men to embrace them.

The only true religion which is necessary to salvation, may in one national church have that joined with it, which in itself is manifestly false and repugnant to salvation; in such a communion no man can join without quitting the way to salvation. In another national church, with this only true religion may be joined what is neither repugnant nor necessary to salvation: and of such there may be several churches differing from one another in confession, ceremonies, and discipline, which are usually called different religions; with either or each of which a good man, if satisfied in his own mind, may communicate without danger, whilst another, not satisfied in conscience concerning something in the doctrine, discipline, or worship, cannot safely, nor without sin, communicate with this or that of them. Nor can force be lawfully used, on your principles, to bring any man to either of them; because such things are required to their communion, which not being requisite to salvation, men may seriously and conscientiously differ, and be in doubt about, without endangering their souls.

That which here raises a noise, and gives credit to it, whereby many are misled into an unwarrantable zeal, is, that these are called different religions; and every one thinking his own the true, the only true, condemns all the rest as false religions. Whereas those who hold all things necessary to salvation, and add not thereto any thing in doctrine, discipline, or worship, inconsistent with salvation, are of one and the same religion,

though divided into different societies or churches, under different forms: which whether the passion and polity of designing; or the sober and pious intention of well-meaning men, set up: they are no other than the contrivances of men, and such they ought to be esteemed in whatsoever is required in them, which God has not made necessary to salvation, however in its own nature it may be indifferent, lawful, or true. For none of the articles, or confessions of any church, that I know, containing in them all the truths of religion, though they contain some that are not necessary to salvation; to garble thus the truths of religion, and by their own authority take some not necessary to salvation, and make them the terms of communion, and leave out others as necessary to be known and believed; is purely the contrivance of men; God never having appointed any such distinguishing system: nor, as I have showed, can force, upon your principles, lawfully be used to bring men to embrace it.

Concerning ceremonies, I shall here only ask you whether you think kneeling at the Lord's Supper, or the cross in baptism, are necessary to salvation? I mention these as having been matter of great scruple: if you will not say they are, how can you say that force can be lawfully used to bring men into a communion, to which these are made necessary? If you say, Kneeling is necessary to a decent uniformity, (for of the cross in baptism I have spoken elsewhere,) though that should be true, yet it is an argument you cannot use for it, if you are of the church of England: for if a decent uniformity may be well enough preversed without kneeling at prayer, where decency requires it at least as much as at receiving the sacrament, why may it not well enough be preserved without kneeling at the sacrament? Now that uniformity is thought sufficiently preserved without kneeling at prayer, is evident by the various postures men are at liberty to use, and may be generally observed, in all our congregations, during the minister's prayer in the pulpit, before and after his sermon, which it seems can consist well enough with decency and uniformity; though it be a prayer addressed to the great God of heaven and earth; to whose majesty it is that the reverence to be expressed in our gestures is due, when we put up petitions to him, who is invariably the same, in what or whose words soever we address ourselves to him.

The preface to the Book of Common-Prayer tells us, "That the rites and ceremonies appointed to be used in divine worship, are things in their own nature indifferent and alterable." Here I ask you, whether any human power

can make any thing, in its own nature indifferent, necessary to salvation? If it cannot, then neither can any human power be justified in the use of force, to bring men to conformity in the use of such things. If you think men have authority to make any thing, in itself indifferent, a necessary part of God's worship, I shall desire you to consider what our author says of this matter, which has not yet deserved your notice.

"The misapplying his power, you say, is a sin in the magistrate, and lays him open to divine vengeance." And is it not a misapplying of his power, and a sin in him, to use force to bring men to such a compliance in an indifferent thing, which in religious worship may be a sin to them? Force, you say, may be used to punish those who dissent from the communion of the church of England. Let us suppose now all its doctrines not only true, but necessary to salvation; but that there is put into the terms of its communion some indifferent action which God has not enjoined, nor made a part of his worship, which any man is persuaded in his conscience not to be lawful? suppose kneeling at the sacrament, which having been superstitiously used in adoration of the bread, as the real body of Christ, may give occasion of scruple to some now, as well as eating of flesh offered to idols did to others in the apostles time; which though lawful in itself, yet the apostle said, "he would eat no flesh while the world standeth, rather than to make his weak brother offend," 1 Cor. viii. 13. And if to lead, by example, the scrupulous into any action, in itself indifferent, which they thought unlawful, be a sin, as appears at large, Rom. xiv. how much more is it to add force to our example, and to compel men by punishments to that, which, though indifferent in itself, they cannot join in without sinning? I desire you to show me how force can be necessary in such a case, without which you acknowledge it not to be lawful. Not to kneel at the Lord's Supper, God not having ordained it, is not a sin; and the apostles receiving it in the posture of sitting or lying, which was then used at meat, is an evidence it may be received not kneeling. But to him that thinks kneeling is unlawful, it is certainly a sin. And for this you may take the authority of a very judicious and reverend prelate of our church, in these words: "Where a man is mistaken in his judgment, even in that case, it is always a sin to act against it; by so doing, he wilfully acts against the best light which at present he has for the direction of his actions." Disc. of Conscience, . I need not here repeat his reasons, having already quoted him above more at large; though the whole passage, writ, as he uses, with great strength and

clearness, deserves to be read and considered. If therefore the magistrate enjoins such an unnecessary ceremony, and uses force to bring any man to a sinful communion with our church in it, let me ask you, doth he sin or misapply his power or no?

True and false religions are names that easily engage men's affections on the hearing of them: the one being the aversion, the other the desire, at least as they persuade themselves, of all mankind. This makes men forwardly give in to these names, wherever they meet with them; and when mention is made of bringing men from a false to the true religion, very often without knowing what is meant by those names, they think nothing can be done too much in such a business, to which they entitle God's honour, and the salvation of men's souls.

I shall therefore desire of you, if you are that fair and sincere lover of truth you profess, when you write again, to tell us what you mean by true, and what by a false religion, that we may know which in your sense are so: for, as you now have used these words in your treatise, one of them seems to stand only for the religion of the church of England, and the other for that of all other churches. I expect here you should make the same outcries against me, as you have in your former letter, for imposing a sense upon your words contrary to your meaning; and for this you will appeal to your own words in some other places: but of this I shall leave the reader to judge, and tell him, this is a way very easy and very usual for men, who having not clear and consistent notions, keep themselves as much as they can under the shelter of general and variously applicable terms; that they may save themselves from the absurdities or consequences of one place, by a help from some general or contrary expression in another: whether it be a desire of victory, or a little too warm zeal for a cause you have been hitherto persuaded of, which hath led you into this way of writing; I shall only mind you, that the cause of God requires nothing, but what may be spoken out plainly in a clear determined sense, without any reserve or cover. In the mean time this I shall leave with you as evident, that force upon your ground cannot be lawfully used to bring men to the communion of the church of England; (that being all that I can find you clearly mean by the true religion;) till you have proved that all that is required of one in that communion, is necessary to salvation.

However therefore you tell us, "That convenient force used to bring men to the true religion, is all that you contend for, and all that you allow." That

it is for “promoting the true religion.” That it is to “bring men to consider, so as not to reject the truth necessary to salvation. To bring men to embrace the truth that must save them.” And abundance more to this purpose. Yet all this talk of the true religion amounting to no more but the national religion established by law in England; and your bringing men to it, to no more than bringing them to an outward profession of it; it would better have suited that condition, viz. without prejudice, and with an honest mind, which you require in others, to have spoke plainly what you aimed at, rather than prepossess men’s minds in favour of your cause, by the impressions of a name that in truth did not properly belong to it.

It was not therefore without ground that I said, “I suspected you built all on this lurking supposition, that the national religion now in England, backed by the public authority of the law, is the only true religion, and therefore no other is to be tolerated; which being a supposition equally unavoidable, and equally just in other countries; unless we can imagine, that, every-where but in England, men believe what at the same time they think to be a lye,” &c. Here you erect your plumes, and to this your triumphant logic gives you not patience to answer, without an air of victory in the entrance: “How, sir, is this supposition equally unavoidable, and equally just in other countries, where false religions are the national? (for that you must mean, or nothing to the purpose.)” Hold, sir, you go too fast; take your own system with you, and you will perceive it will be enough to my purpose, if I mean those religions which you take to be false: for if there be any other national churches, which agreeing with the church of England in what is necessary to salvation, yet have established ceremonies different from those of the church of England; should not any one who dissented here from the church of England upon that account, as preferring that to our way of worship, be justly punished? If so, then punishment in matters of religion being only to bring men to the true religion; you must suppose him not to be yet of it: and so the national church he approves of not to be of the true religion. And yet is it not equally unavoidable, and equally just, that that church should suppose its religion the only true religion, as it is that yours should do so; it agreeing with yours in things necessary to salvation, and having made some things, in their own nature indifferent, requisite to conformity for decency and order, as you have done? So that my saying, It is equally unavoidable, and equally just in other countries; will hold good,

without meaning what you charge on me, that that supposition is equally unavoidable, and equally just where the national religion is absolutely false.

But in that large sense too, what I said will hold good; and you would have spared your useless subtilties against it, if you had been as willing to take my meaning, and answer my argument, as you were to turn what I said to a sense which the words themselves show I never intended. My argument in short was this, That granting force to be useful to propagate and support religion, yet it would be no advantage to the true religion, that you, a member of the church of England, supposing yours to be the true religion, should thereby claim a right to use force; since such a supposition to those who were members of other churches, and believed other religions, was equally unavoidable, and equally just. And the reason I annexed, shows both this to be my meaning, and my assertion to be true: my words are, “Unless we can imagine that, every-where but in England, men believe what at the same time they think to be a lye.” Having therefore never said, nor thought that it is equally unavoidable, or equally just, that men in every country should believe the national religion of the country: but that it is equally unavoidable, and equally just, that men believing the national religion of their country, be it true or false, should suppose it to be true; and let me here add also, should endeavour to propagate it; however you go on thus to reply: “If so, then I fear it will be equally true too, and equally rational: for otherwise I see not how it can be equally unavoidable, or equally just: for if it be not equally true, it cannot be equally just; and if it be not equally rational, it cannot be equally unavoidable. But if it be equally true, and equally rational, then either all religions are true, or none is true: for if they be all equally true, and one of them be not true, then none of them can be true.” I challenge any one to put these four good words, unavoidable, just, rational, and true, more equally together, or to make a better-wrought deduction; but after all, my argument will nevertheless be good, that it is no advantage to your cause, for you or any one of it, to suppose yours to be the only true religion; since it is equally unavoidable, and equally just for any one, who believes any other religion, to suppose the same thing. And this will always be so, till you can show, that men cannot receive false religions upon arguments that appear to them to be good; or that having received falsehood under the appearance of truth, they can, whilst it so appears, do otherwise than value it, and be acted by it, as if it were true. For the equality that is here the question, depends not upon the

truth of the opinion embraced; but on this, that the light and persuasion a man has at present, is the guide which he ought to follow, and which in his judgment of truth he cannot avoid to be governed by. And therefore the terrible consequences you dilate on in the following part of that page I leave you for your private use on some fitter occasion.

You therefore who are so apt, without cause, to complain of want of ingenuity in others; will do well hereafter to consult your own, and another time change your style; and not under the undefined name of the true religion, because that is of more advantage to your argument, mean only the religion established by law in England, shutting out all other religions now professed in the world. Though when you have defined what is the true religion, which you would have supported and propagated by force; and have told us it is to be found in the liturgy and thirty-nine articles of the church of England; and it be agreed to you, that that is the only true religion; your argument of force, as necessary to men's salvation, from the want of light and strength enough in the true religion to prevail against men's lusts, and the corruption of their nature, will not hold; because your bringing men by force, your way applied, to the true religion, be it what you will, is but bringing them to an outward conformity to the national church. But the bringing them so far, and no farther, having no opposition to their lusts, no inconsistency with their corrupt nature, is not on that account at all necessary, nor does at all help, where only, on your grounds, you say, there is need of the assistance of force towards their salvation.

CHAPTER VIII. OF SALVATION TO BE PROCURED BY FORCE, YOUR WAY.

There cannot be imagined a more laudable design than the promoting the salvation of men's souls, by any one who shall undertake it. But if it be a pretence made use of to cover some other by-interest; nothing can be more odious to men, nothing more provoking to the great God of heaven and earth, nothing more misbecoming the name and character of a christian. With what intention you took your pen in hand to defend and encourage the use of force in the business of men's salvation, it is fit in charity we take your word; but what your scheme, as you have delivered it, is guilty of, it is my business to take notice of, and represent to you.

To my saying, that "if persecution, as is pretended, were for the salvation of men's souls, bare conformity would not serve the turn, but men should be examined whether they do it upon reason and conviction;" you answer, "Who they be that pretend that persecution is for the salvation of men's souls, you know not." Whatever you know not, I know one, who in the letter under consideration pleads for force, as useful for the promoting "the salvation of men's souls; and that the use of force is no other means for the salvation of men's souls, than what the author and finisher of our faith has directed. That so far is the magistrate, when he gives his helping hand to the furtherance of the gospel, by laying convenient penalties upon such as reject it, or any part of it, from using any other means for the salvation of men's souls than what the author and finisher of our faith has directed, that he does no more than his duty for the promoting the salvation of souls. And as the means by which men may be brought into the way of salvation." Ay, but where do you say that persecution is for the salvation of souls? I thought you had been arguing against my meaning, and against the things I say, and not against my words in your meaning, which is not against me. That I used the word persecution for what you call force and penalties, you know: for in , that immediately precedes this, you take notice of it, with some little kind of wonder, in these words, "persecution, so it seems you call all punishments for religion." That I do so then, whether properly or improperly, you could not be ignorant; and then, I beseech you, apply your answer here to what I say: my words are, "If persecution, as is pretended,

were for the salvation of men's souls, men that conform would be examined whether they did so upon reason and conviction." Change my word persecution into punishment for religion, and then consider the truth or ingenuity of your answer: for, in that sense of the word persecution, do you know nobody that pretends persecution is for the salvation of men's souls? So much for your ingenuity, and the arts you allow yourself to serve a good cause. What do you think of one of my pagans or mahometans? Could he have done better? For I shall often have occasion to mind you of them. Now to your argument. I said, "That I thought those who make laws, and use force, to bring men to church-conformity in religion, seek only the compliance, but concern themselves not for the conviction of those they punish, and so never use force to convince. For pray tell me, when any dissenter conforms, and enters into the church communion, is he ever examined to see whether he does it upon reason and conviction, and such grounds as would become a christian concerned for religion? If persecution, as is pretended, were for the salvation of men's souls, this would be done, and men not driven to take the sacrament to keep their places, or obtain licences to sell ale: for so low have these holy things been prostituted." To this you here reply, "As to those magistrates, who having provided sufficiently for the instruction of all under their care, in the true religion, do make laws, and use moderate penalties, to bring men to the communion of the church of God, and conformity to the rules and orders of it; I think their behaviour does plainly enough speak them to seek and concern themselves for the conviction of those whom they punish, and for their compliance only as the fruit of their conviction." If means of instruction were all that is necessary to convince people, the providing sufficiently for instruction would be an evidence, that those that did so, did seek and concern themselves for men's conviction: but if there be something as necessary for conviction as the means of instruction, and without which those means will signify nothing, and that be severe and impartial examination; and if force be, as you say, so necessary to make men thus examine, that they can by no other way but force be brought to do it: if magistrates do not lay their penalties on non-examination, as well as provide means of instruction; whatever you may say you think, few people will find reason to believe you think those magistrates seek and concern themselves much for the conviction of those they punish, when that punishment is not levelled at that, which is a hindrance to their conviction, i. e. against their aversion to

severe and impartial examination. To that aversion no punishment can be pretended to be a remedy, which does not reach and combat the aversion; which it is plain no punishment does, which may be avoided without parting with, or abating the prevalency of that aversion. This is the case, where men undergo punishments for not conforming, which they may be rid of, without severely and impartially examining matters of religion.

To show that what I mentioned was no sign of unconcernedness in the magistrate for men's conviction; you add, "Nor does the contrary appear from the not examining dissenters when they conform, to see whether they do it upon reason and conviction: for where sufficient instruction is provided, it is ordinarily presumable that when dissenters conform, they do it upon reason and conviction." Here if ordinarily signifies any thing, (for it is a word you make much use of, whether to express or cover your sense, let the reader judge,) then you suppose there are cases wherein it is not presumable; and I ask you, whether in those, or any cases, it be examined whether dissenters, when they conform, do it upon reason and conviction? At best that it is ordinarily presumable, is but gratis dictum; especially since you suppose, that it is the corruption of their nature that hinders them from considering as they ought, so as upon reason and conviction to embrace the truth: which corruption of nature, that they may retain with conformity, I think is very presumable. But be that as it will, this I am sure is ordinarily and always presumable, that if those who use force were as intent upon men's conviction, as they are on their conformity, they would not wholly content themselves with the one, without ever examining and looking into the other.

Another excuse you make for this neglect, is, "That as to irreligious persons who only seek their secular advantage, how easy it is for them to pretend conviction, and to offer such grounds (if that were required) as would become a christian concerned for religion; that is what no care of man can certainly prevent." This is an admirable justification of your hypothesis. Men are to be punished: to what end? To make them severely and impartially consider matters of religion, that they may be convinced, and thereupon sincerely embrace the truth. But what need of force or punishment for this? Because their lusts and corruption will otherwise keep them both from considering as they ought, and embracing the true religion; and therefore they must lie under penalties till they have considered as they ought, which is when they have upon conviction embraced. But how shall

the magistrate know when they upon conviction embrace, that he may then take off their penalties? That indeed cannot be known, and ought not to be inquired after, because irreligious persons who only seek their secular advantage; or, in other words, all those who desire at their ease to retain their beloved lusts and corruption; may “easily pretend conviction, and offer such grounds (if it were required) as would become a christian concerned for religion: this is what no care of man can certainly prevent.” Which is reason enough, why no busy forwardness in man to disease his brother, should use force upon pretence of prevailing against men’s corruptions, that hinder their considering and embracing the truth upon conviction, when it is confessed, it cannot be known, whether they have considered, are convinced, or have really embraced the true religion or no. And thus you have shown us your admirable remedy, which is not it seems for the irreligious, (for it is easy, you say, for them to pretend to conviction, and so avoid punishment,) but for those who would be religious without it.

But here, in this case, as to the intention of the magistrate, how can it be said, that the force he uses is designed, by subduing men’s corruptions, to make way for considering and embracing the truth; when it is so applied, that it is confessed here, that a man may get rid of the penalties without parting with the corruptions they are pretended to be used against? But you have a ready answer, “This is what no care of man can certainly prevent;” which is but in other words to proclaim the ridiculousness of your use of force, and to avow that your method can do nothing. If by not certainly you mean, it may any way or to any degree prevent; why is it not so done? If not, why is a word that signifies nothing put in, unless it be for a shelter on occasion? a benefit you know how to draw from this way of writing: but this here, taken how you please, will only serve to lay blame on the magistrate, or your hypothesis, choose you whether. I for my part have a better opinion of the ability and management of the magistrate: what he aimed at in his laws, that I believe he mentions in them; and, as wise men do in business, spoke out plainly what he had a mind should be done. But certainly there cannot a more ridiculous character be put on law-makers, than to tell the world they intended to make men consider, examine, &c. but yet neither required nor named any thing in their laws but conformity. Though yet when men are certainly to be punished for not really embracing the true religion, there ought to be certain matters of fact, whereby those that do and those that do not so embrace the truth, should be distinguished;

and for that you have, it is true, a clear and established criterion, i. e. conformity and non-conformity: which do very certainly distinguish the innocent from the guilty; those that really and sincerely do embrace the truth that must save them from those that do not.

But, sir, to resolve the question, whether the conviction of men's understandings, and the salvation of their souls, be the business and aim of those who use force to bring men into the profession of the national religion; I ask, whether if that were so, there could be so many as there are, not only in most country parishes, but, I think I may say, may be found in all parts of England, grossly ignorant in the doctrines and principles of the christian religion, if a strict inquiry were made into it? If force be necessary to be used to bring men to salvation, certainly some part of it would find out some of the ignorant and unconsidering that are in the national church, as well as it does so diligently all the nonconformists out of it, whether they have considered, or are knowing or no. But to this you give a very ready answer: "Would you have the magistrate punish all indifferently, those who obey the law as well as them that do not?" What is the obedience the law requires? That you tell us in these words, "If the magistrate provides sufficiently for the instruction of all his subjects in the true religion, and then requires them all under convenient penalties to hearken to the teachers and ministers of it, and to profess and exercise it with one accord under their direction in public assemblies:" which in other words is but conformity; which here you express a little plainer in these words: "But as to those magistrates who, having provided sufficiently for the instruction of all under their care in the true religion, do make laws, and use moderate penalties to bring men to the communion of the church of God, and to conform to the rules and orders of it." You add, "Is there any pretence to say that in so doing, he [the magistrate] applies force only to a part of his subjects, when the law is general, and excepts none?" There is no pretence, I confess, to say that in so doing he applies force only to a part of his subjects, to make them conformists; from that it is plain the law excepts none. But if conformists may be ignorant, grossly ignorant of the principles and doctrines of christianity; if there be no penalties used to make them consider as they ought, so as to understand, be convinced of, believe and obey the truths of the gospel; are not they exempt from that force which you say "is to make men consider and examine matters of religion as they ought to do?" Force is applied to all indeed to make them conformists; but if being

conformists once, and frequenting the places of public worship, and there showing an outward compliance with the ceremonies prescribed; (for that is all the law requires of all, call it how you please;) they are exempt from all force and penalties, though they are ever so ignorant, ever so far from understanding, believing, receiving the truth of the gospel; I think it is evident that then force is not applied to all “to procure the conviction of the understanding. — To bring men to consider those reasons and arguments which are proper to convince the mind, and which without being forced they would not consider. — To bring men to that consideration, which nothing else but force (besides the extraordinary grace of God) would bring them to. — To make men good christians. — To make men receive instruction. — To cure their aversion to the true religion. — To bring men to consider and examine the controversies which they are bound to consider and examine, i. e. those wherein they cannot err without dishonouring God, and endangering their own and other men’s eternal salvation. — To weigh matters of religion carefully and impartially. — To bring men to the true religion and to salvation.” — That then force is not applied to all the subjects for these ends, I think you will not deny. These are the ends for which you tell us in the places quoted, that force is to be used in matters of religion: it is by its usefulness and necessity to these ends, that you tell us the magistrate is authorized and obliged to use force in matters of religion. Now if all these ends be not attained by a bare conformity, and yet if by a bare conformity men are wholly exempt from all force and penalties in matters of religion; will you say that for these ends force is applied to all the magistrate’s subjects? If you will, I must send you to my pagans and mahometans for a little conscience and modesty. If you confess force is not applied to all for these ends, notwithstanding any laws obliging all to conformity; you must also confess, that what you say concerning the laws being general, is nothing to the purpose; since all that are under penalties for not conforming, are not under any penalties for ignorance, irreligion, or the want of those ends for which you say penalties are useful and necessary.

You go on, “And therefore if such persons profane the sacrament to keep their places, or to obtain licences to sell ale, this is an horrible wickedness.” I excuse them not. “But it is their own, and they alone must answer for it.” Yes, and those who threatened poor ignorant and irreligious ale-sellers, whose livelihood it was, to take away their licences, if they did not conform and receive the sacrament; may be thought perhaps to have something to

answer for. You add, “But it is very unjust to impute it to those who make such laws, and use such force, or to say that they prostitute holy things, and drive men to profane them.” Nor is it just to insinuate in your answer, as if that had been said which was not. But if it be true, that a poor ignorant, loose, irreligious wretch should be threatened to be turned out of his calling and livelihood, if he would not take the sacrament: may it not be said these holy things have been so low prostituted? And if this be not profaning them, pray tell me what is?

This I think may be said without injustice to any body, that it does not appear, that those who make strict laws for conformity, and take no care to have it examined upon what grounds men conform; are not very much concerned, that men’s understandings should be convinced: and though you go on to say, that “they design by their laws to do what lies in them to make men good christians:” that will scarce be believed, if what you say be true, that force is necessary to bring “those who cannot be otherwise brought to it, to study the true religion, with such care and diligence as they might and ought to use, and with an honest mind.” And yet we see a great part, or any of those who are ignorant in the true religion, have no such force applied to them; especially since you tell us, in the same place, that “no man ever studied the true religion with such care and diligence as he might and ought to use and with an honest mind, but he was convinced of the truth of it.” If then force and penalties can produce that study, care, diligence, and honest mind, which will produce knowledge and conviction; and that (as you say in the following words) make good men; I ask you, if there be found in the communion of the church, exempt from force upon the account of religion, ignorant, irreligious, ill men; and that to speak moderately, not in great disproportion fewer than amongst the nonconformists; will you believe yourself, when you say “the magistrates do by their laws all that in them lies to make them good christians;” when they use not that force to them which you, not I, say is necessary: and that they are, where it is necessary, obliged to use? And therefore I give you leave to repeat again the words you subjoin here, “But if after all they (i. e. the magistrates) can do, wicked and godless men will still resolve to be so; they will be so, and I know not who but God Almighty can help it.” But this being spoken of conformists, on whom the magistrates lay no penalties, use no force for religion, give me leave to mind you of the ingenuity of one of my pagans or mahometans.

You tell us, That the usefulness of force to make scholars learn, authorizes schoolmasters to use it. And would you not think a schoolmaster discharged his duty well, and had a great care of their learning, who used his rod only to bring boys to school; but if they come there once a week, whether they slept or only minded their play, never examined what proficiency they made, or used the rod to make them study and learn, though they would not apply themselves without it?

But to show you how much you yourself are in earnest for the salvation of souls in this your method, I shall set down what I said, , of my letter on that subject, and what you answer, , of yours.

L. II. P. 129.

“You speak of it here as the most deplorable condition imaginable, that men should be left to themselves, and not be forced to consider and examine the grounds of their religion, and search impartially and diligently after the truth. This you make the great miscarriage of mankind; and for this you seem solicitous, all through your treatise, to find out a remedy; and there is scarce a leaf wherein you do not offer yours. But what if after all, now you should be found to prevaricate? Men have contrived to themselves, say you, a great variety of religions. It is granted. They seek not the truth in this matter with that application of mind, and freedom of judgment which is requisite; it is confessed. All the false religions now on foot in the world, have taken their rise from the slight and partial consideration, which men have contented themselves with in searching after the true; and men take them up, and persist in them for want of due examination: be it so. There is need of a remedy for this; and I have found one whose success cannot be questioned: very well. What is it? Let us hear it. Why, dissenters must be punished. Can any body that hears you say so, believe you in earnest; and that want of examination is the thing you would have amended, when want of examination is not the thing you would have punished? If want of examination be the fault, want of examination must be punished; if you are, as you pretend, fully satisfied that punishment is the proper and only means to remedy it. But if in all your treatise you can show me one place where you say that the ignorant, the careless, the inconsiderate, the negligent in examining thoroughly the truth of their own and others’ religion, &c. are to be punished, I will allow your remedy for a good one. But you have not said

any thing like this; and which is more, I tell you before-hand, you dare not say it. And whilst you do not, the world has reason to judge, that however want of examination be a general fault, which you with great vehemency have exaggerated; yet you use it only for a pretence to punish dissenters; and either distrust your remedy, that it will not cure this evil, or else care not to have it generally cured. This evidently appears, from your whole management of the argument. And he that reads your treatise with attention, will be more confirmed in this opinion, when he shall find that you, who are so earnest to have men punished, to bring them to consider and examine, that so they may discover the way of salvation, have not said one word of considering, searching, and hearkening to the scripture: which had been as good a rule for a christian to have sent them to, as to reasons and arguments proper to convince them of you know not what; as to the instruction and government of the proper ministers of religion, which who they are, men are yet far from being agreed; or as to the information of those, who tell them they have mistaken their way, and offer to show them the right; and to the like uncertain and dangerous guides; which were not those that our Saviour and the apostles sent men to, but to the scriptures: Search the scriptures, for in them you think you have eternal life, says our Saviour to the unbelieving persecuting Jews, John, v. 39. And it is the scriptures which, St. Paul says, are able to make wise unto salvation, 2 Tim. iii. 15.

“Talk no more therefore, if you have any care of your reputation, how much it is every man’s interest not to be left to himself, without molestation, without punishment in matters of religion. Talk not of bringing men to embrace the truth that must save them, by putting them upon examination. Talk no more of force and punishment, as the only way left to bring men to examine. It is evident you mean nothing less: for though want of examination be the only fault you complain of, and punishment be in your opinion the only way to bring men to it; and this the whole design of your book; yet you have not once proposed in it, that those who do not impartially examine, should be forced to it. And that you may not think I talk at random, when I say you dare not; I will, if you please, give you some reasons for my saying so.

“First, Because if you propose that all should be punished, who are ignorant, who have not used such consideration as is apt and proper to manifest the truth; but have been determined in the choice of their religion by impressions of education, admiration of persons, worldly respects,

prejudices, and the like incompetent motives; and have taken up their religion, without examining it as they ought; you will propose to have several of your own church, be it what it will, punished; which would be a proposition too apt to offend too many of it, for you to venture on. For whatever need there be of reformation, every one will not thank you for proposing such an one as must begin at, or at least reach to, the house of God.

“Secondly, Because if you should propose that all those who are ignorant, careless, and negligent in examining, should be punished, you would have little to say in this question of toleration: for if the laws of the state were made as they ought to be, equal to all the subjects, without distinction of men of different professions in religion; and the faults to be amended by punishments, were impartially punished in all who are guilty of them; this would immediately produce a perfect toleration, or show the uselessness of force in matters of religion. If therefore you think it so necessary, as you say, for the promoting of true religion, and the salvation of souls, that men should be punished to make them examine, do but find a way to apply force to all that have not thoroughly and impartially examined, and you have my consent. For though force be not the proper means of promoting religion; yet there is no better way to show the usefulness of it, than the applying it equally to miscarriages, in whomsoever found, and not to distinct parties or persuasions of men for the reformation of them alone, when others are equally faulty.

“Thirdly, Because without being for as large a toleration as the author proposes, you cannot be truly and sincerely for a free and impartial examination. For whoever examines, must have the liberty to judge, and follow his judgment; or else you put him upon examination to no purpose. And whether that will not as well lead men from as to your church, is so much a venture, that by your way of writing, it is evident enough you are loth to hazard it; and if you are of the national church, it is plain your brethren will not bear with you in the allowance of such a liberty. You must therefore either change your method; and if the want of examination be that great and dangerous fault you would have corrected, you must equally punish all that are equally guilty of any neglect in this matter; and then take your only means, your beloved force, and make the best of it; or else you must put off your mask, and confess that you design not your punishments

to bring men to examination, but to conformity. For the fallacy you have used, is too gross to pass upon this age.”

L. III. P. 68.

Your next paragraph runs high, and charges me with nothing less than prevarication. For whereas, as you tell me, I speak of it here as the most deplorable condition imaginable, that men should be left to themselves, and not be forced to consider and examine the grounds of their religion, and search impartially and diligently after the truth, &c. It seems all the remedy I offer, is no more than this, “Dissenters must be punished.” Upon which thus you insult: “Can anybody that hears you say so, believe you in earnest,” &c. Now here I acknowledge, that though want or neglect of examination be a general fault, yet the method I propose for curing it, does not reach to all that are guilty of it, but is limited to those who reject the true religion, proposed to them with sufficient evidence. But then to let you see how little ground you have to say that I prevaricate in this matter, I shall only desire you to consider, what it is that the author and myself were inquiring after: for it is not, what course is to be taken to confirm and establish those in the truth, who have already embraced it; nor, how they may be enabled to propagate it to others; (for both which purposes I have already acknowledged it very useful, and a thing much to be desired, that all such persons should as far as they are able, search into the grounds upon which their religion stands, and challenges their belief;) but the subject of our inquiry is only, what method is to be used, to bring men to the true religion. Now if this be the only thing we were enquiring after, (as you cannot deny it to be,) then every one sees that in speaking to this point, I had nothing to do with any who have already embraced the true religion; because they are not to be brought to that religion, but only to be confirmed and edified in it; but was only to consider how those who reject it, may be brought to embrace it. So that how much soever any of those who own the true religion, may be guilty of neglect of examination: it is evident, I was only concerned to show how it may be cured in those who, by reason of it, reject the true religion, duly proposed or tendered to them. And certainly to confine myself to this, is not to prevaricate, unless to keep within the bounds which the question under debate prescribes me, be to prevaricate.

In telling me therefore that “I dare not say that the ignorant, the careless, the inconsiderate, the negligent in examining, &c. (i. e. all that are such) are to be punished,” you only tell me that I dare not be impertinent. And therefore I hope you will excuse me, if I take no notice of the three reasons you offer in your next page for your saying so. And yet if I had a mind to talk impertinently, I know not why I might not have dared to do so, as well as other men.

There is one thing more in this paragraph, which though nothing more pertinent than the rest, I shall not wholly pass over. It lies in these words: “He that reads your treatise with attention, will be more confirmed in this opinion,” (viz. That I use want of examination only for a pretence to punish dissenters, &c.) “when he shall find that you, who are so earnest to have men punished, to bring them to consider and examine, that so they may discover the way of salvation, have not said one word of considering, searching, and hearkening to the scripture; which had been as good a rule for a christian to have sent them to, as to reasons and arguments proper to convince them of you know not what, &c.” How this confirms that opinion, I do not see; nor have you thought fit to instruct me. But as to the thing itself, viz. “my not saying one word of considering, searching and hearkening to the scripture;” whatever advantage a captious adversary may imagine he has in it, I hope it will not seem strange to any indifferent and judicious person, who shall but consider that throughout my treatise I speak of the true religion only in general, i. e. not as limited to any particular dispensation, or to the times of the scriptures; but as reaching from the fall of Adam to the end of the world, and so comprehending the times which preceded the scriptures; wherein yet God left not himself without witness, but furnished mankind with sufficient means of knowing him and his will, in order to their eternal salvation. For I appeal to all men of art, whether, speaking of the true religion under this generality, I could be allowed to descend to any such rules of it, as belong only to some particular times, or dispensations; such as you cannot but acknowledge the Old and New Testaments to be.

In this your answer, you say, “the subject of our inquiry is only what method is to be used to bring men to the true religion.” He that reads what you say, again and again, “That the magistrate is impowered and obliged to procure as much as in him lies, i. e. as far as by penalties it can be procured, that no man neglect his soul,” and shall remember how many pages you

employ, A. , &c. And here, , &c. to show that it is the corruption of human nature which hinders men from doing what they may and ought for the salvation of their souls; and that therefore penalties, no other means being left, and force were necessary to be used by the magistrate to remove these great obstacles of lusts and corruptions, that “none of his subjects might remain ignorant of the way of salvation, or refuse to embrace it.” One would think “your inquiry had been after the means of curing men’s aversion to the true religion, (which,” you tell us, , “if not cured, is certainly destructive of men’s eternal salvation,”) that so they might heartily embrace it for their salvation. But here you tell us, “your inquiry is only what method is to be used to bring men to the true religion:” whereby you evidently mean nothing but outward conformity to that which you think the true church, as appears by the next following words: “Now if this be the only thing we were inquiring after, then every one sees that in speaking to this point I had nothing to do with any who have already embraced the true religion.” And also every one sees that since amongst those with whom (having already embraced the true religion) you and your penalties having nothing to do; there are those who have not considered and examined matters of religion as they ought, whose lusts and corrupt natures keep them as far alienated from believing, and as averse to a real obeying the truth that must save them, as any other men: it is manifest that embracing the true religion in your sense is only embracing the outward profession of it, which is nothing but outward conformity. And that being the farthest you would have your penalties pursue men, and there leave them with as much of their ignorance of the truth, and carelessness of their souls, as they please: who can deny but that it would be impertinent in you to consider how want of impartial examination, or aversion to the true religion, should in them be cured? Because they are none of those subjects of the commonwealth, whose spiritual and eternal interests are by political government to be procured or advanced; none of those subjects whose salvation the magistrate is to take care of.

And therefore I excuse you, as you desire, for not taking notice of my three reasons; but whether the reader will do so or no, is more than I can undertake. I hope you too will excuse me for having used so harsh a word as prevaricate, and impute it to my want of skill in the English tongue. But when I find a man pretend to a great concern for the salvation of men’s souls, and make it one of the great ends of civil government, that the

magistrate should make use of force to bring all his subjects to consider, study, and examine, believe and embrace the truth that must save them; when I shall have to do with a man, who to this purpose hath writ two books to find out and defend the proper remedies for that general backwardness and aversion, which depraved human nature keeps men in, to an impartial search after, and hearty embracing the true religion; and who talks of nothing less than obligations on sovereigns, both from their particular duty, as well as from common charity, to take care that none of their subjects should want the assistance of this only means left for their salvation; nay, who has made it so necessary to men's salvation, that he talks as if the wisdom and goodness of God would be brought in question, if those who needed it should be destitute of it; and yet, notwithstanding all this show of concern for men's salvation, contrives the application of this sole remedy so, that a great many who lie under the disease, should be out of the reach and benefit of his cure, and never have this only remedy applied to them: when this I say is so manifestly in his thoughts all the while, that he is forced to confess "that, though want or neglect of examination be a general fault, yet the method he proposes for curing it does not reach to all that are guilty of it;" but frankly owns, that he was not concerned to show how the neglect of examination might be cured in those who conform, but only in those who by reason of it reject the true religion duly proposed to them: which rejecting the true religion will require a man of art to show to be here any thing but nonconformity to the national religion: when, I say, I meet with a man another time that does this, who is so much a man of art, as to talk of all, and mean but some; talk of hearty embracing the true religion, and mean nothing but conformity to the national; pretend one thing, and mean another; if you please to tell me what name I shall give it, I shall not fail: for who knows how soon again I may have an occasion for it?

If I would punish men for nonconformity without owning of it, I could not use a better pretence than to say it was to make them hearken to reasons and arguments proper to convince them, or to make them submit to the instruction and government of the proper ministers of religion, without any thing else; supposing still at the bottom the arguments for, and the ministers of my religion to be these, that till they outwardly complied with, they were to be punished. But if, instead of outward conformity to my religion covered under these indefinite terms, I should tell them, they were to

examine the scripture, which was the fixed rule for them and me; not examining could not give me a pretence to punish them, unless I would also punish conformists, as ignorant and unversed in scripture as they, which would not do my business.

But what need I use arguments to show, that your punishing to make men examine, is designed only against dissenters, when in your answer to this very paragraph of mine, you in plain words “acknowledge, that though want of examination be a general fault, yet the method you propose for curing does not reach to all that are guilty of it?” To which if you please to add what you tell us, That when dissenters conform, the magistrate cannot know, and therefore never examines whether they do it upon reason and conviction or no; though it be certain that, upon conforming, penalties, the necessary means, cease, it will be obvious that, whatever be talked, conformity is all that is aimed at, and that want of examination is but the pretence to punish dissenters.

And this I told you, any one must be convinced of, who observes that you, who are so earnest to have men punished to bring them to consider and examine, that so they may discover the way of salvation, have not said one word of considering, searching, and hearkening to the scripture, which, you were told, was as good a rule for a christian to have sent men to, as to “the instruction and government of the proper ministers of religion, or to the information of those who tell them they have mistaken their way, and offer to show them the right.” For this passing by the scripture you give us this reason, that, “throughout your treatise you speak of the true religion only in general, i. e. not as limited to any particular dispensation, or to the times of the scriptures, but as reaching from the fall of Adam to the end of the world, &c. And then you appeal to all men of art, whether speaking of the true religion, under this generality, you could be allowed to descend to any such rules of it as belong only to some particular times or dispensations, such as I cannot but acknowledge the Old and New Testaments to be.”

The author that you write against, making it his business, as nobody can doubt who reads but the first page of his letter, to show that it is the duty of christians to tolerate both christians and others who differ from them in religion; it is pretty strange, in asserting against him that the magistrate might and ought to use force to bring men to the true religion, you should mean any other magistrate than the christian magistrate, or any other religion than the christian religion. But it seems you took so little notice of

the design of your adversary, which was to prove, that christians were not to use force to bring any one to the christian religion; that you would prove, that christians were now to use force, not only to bring men to the christian, but also to the jewish religion; or that of the true church before the law, or to some true religion so general that it is none of these. “For, say you, throughout your treatise you speak of the true religion only in general, i. e. not as limited to any particular dispensation:” though one that were not a man of art would suspect you to be of another mind yourself, when you told us, the shutting out of the jews from the rights of the commonwealth “is a just and necessary caution in a christian commonwealth;” which you say to justify your exception in the beginning of your “argument,” against the largeness of the author’s toleration, who would not have jews excluded. But speak of the true religion only in general as much as you please, if your true religion be that by which men must be saved, can you send a man to any better guide to that true religion now than the scripture?

If when you were in your altitudes, writing the first book, your men of art could not allow you to descend to any such rule as the scripture, (though even there you acknowledge the severities spoken against are such as are used to make men christians;) because there, (by an art proper to yourself,) you were to speak of true religion under a generality, which had nothing to do with the duty of christians, in reference to toleration. Yet when here in your second book, where you condescend all along to speak of the christian religion, and tell us, “that the magistrates have authority to make laws for promoting the christian religion; and do by their laws design to contribute what in them lies to make men good christians;” and complain of toleration as the very bane of the life and spirit of christianity, &c. and have vouchsafed particularly to mention the gospel; why here, having been called upon for it, you could not send men to the scriptures, and tell them directly, that those they were to study diligently, those they were impartially and carefully to examine, to bring them to the true religion, and into the way of salvation; rather than talk to them as you do, of receiving instruction, and considering reasons and arguments proper and sufficient to convince them; rather than propose, as you do all along, such objects of examination and inquiry in general terms, as are as hard to be found, as the thing itself for which they are to be examined: why, I say, you have here again avoided sending men to examine the scriptures; is just matter of inquiry. And for this

you must apply yourself again to your men of art, to furnish you with some other reason.

If you will but cast your eyes back to your next page, you will there find that you build upon this, that the subject of your and the author's inquiry "is only what method is to be used to bring men to the true religion." If this be so, your men of art, who cannot allow you to descend to any such rule as the scriptures, because you speak of the true religion in general, i. e. not as limited to any particular dispensation, or to the times of the scriptures, must allow, that you deserve to be head of their college; since you are so strict an observer of their rules, that though your inquiry be, "What method is to be used to bring men to the true religion," now under the particular dispensation of the gospel, and under scripture-times; you think it an unpardonable fault to recede so far from your generality, as to admit the study and examination of the scripture into your method; for fear, it is like, your method would be too particular, if it would not now serve to bring men to the true religion, who lived before the flood. But had you had as good a memory, as is generally thought needful to a man of art, it is believed you would have spared this reason, for your being so backward in putting men upon examination of the scripture. And any one, but a man of art, who shall read what you tell us the magistrate's duty is; and will but consider how convenient it would be, that men should receive no instruction but from the ministry, that you there tell us the magistrate assists; examine no arguments, hear nothing of the gospel, receive no other sense of the scripture, but what that ministry proposes; (who, if they had but the coactive power, you think them as capable of as other men,) might assist themselves; he, I say, who reflects but on these things, may perhaps find a reason that may better satisfy the ignorant and unlearned, who have not had the good luck to arrive at being of the number of these men of art, why you cannot descend to propose to men the studying of the scripture.

Let me for once suppose you in holy orders, (for we that are not of the adepts, may be allowed to be ignorant of the punctilios in writing observed by the men of art,) and let me then ask what art is this, whose rules are of that authority, that one, who has received commission from heaven to preach the gospel in season and out of season for the salvation of souls, may not allow himself to propose the reading, studying, examining, of the scripture, which has for at least these sixteen hundred years contained the only true religion in the world, for fear such a proposal should offend

against the rules of this art, by being too particular, and confined to the gospel-dispensation; and therefore could not pass muster, nor find admittance, in a treatise wherein the author professes it his only business to “inquire what method is to be used to bring men to the true religion?” Do you expect any other dispensation; that you are so afraid of being too particular, if you should recommend the use and study of the scripture, to bring men to the true religion now in the times of the gospel? Why might you not as well send them to the scriptures, as to the ministers and teachers of the true religion? Have those ministers any other religion to teach, than what is contained in the scriptures? But perhaps you do this out of kindness and care, because possibly the scriptures could not be found; but who were the ministers of the true religion, men could not possibly miss. Indeed you have allowed yourself to descend to what belongs only to some particular times and dispensations, for their sake, when you speak of the ministers of the gospel. But whether it be as fully agreed on amongst christians, who are the ministers of the gospel that men must hearken to, and be guided by; as which are the writings of the apostles and evangelists, that, if studied, will instruct them in the way to heaven; is more than you or your men of art can be positive in. Where are the canons of this over-ruling art to be found, to which you pay such reverence? May a man of no distinguishing character be admitted to the privilege of them? For I see it may be of notable use at a dead-lift, and bring a man off with flying colours, when truth and reason can do him but little service. The strong guard you have in the powers you write for; and when you have engaged a little too far, the safe retreat you have always at hand in an appeal to these men of art; made me almost at a stand, whether I were not best make a truce with one who had such auxiliaries. A friend of mine finding me talk thus, replied briskly, it is a matter of religion, which requires not men of art; and the assistance of such art as savours so little of the simplicity of the gospel, both shows and makes the cause the weaker. And so I went on to your two next paragraphs.

In them, to vindicate a pretty strange argument for the magistrate’s use of force, you think it convenient to repeat it out of your A. ; and so, in compliance with you, shall I do here again. There you tell us, “The power you ascribe to the magistrate is given him to bring men, not to his own, but to the true religion: and though (as our author puts us in mind) the religion of every prince is orthodox to himself; yet if this power keep within its bounds, it can serve the interest of no other religion but the true, among

such as have any concern for their eternal salvation; (and those that have none deserve not to be considered;) because the penalties it enables him that has it to inflict, are not such as may tempt such persons either to renounce a religion which they believe to be true, or to profess one which they do not believe to be so; but only such as are apt to put them upon a serious and impartial examination of the controversy between the magistrate and them, which is the way for them to come to the knowledge of the truth. And if, upon such examination of the matter, they chance to find that the truth does not lie on the magistrate's side, they have gained thus much however, even by the magistrate's misapplying his power; that they know better than they did before, where the truth doth lie; and all the hurt that comes to them by it, is only the suffering some tolerable inconveniencies for their following the light of their own reason, and the dictates of their own consciences; which certainly is no such mischief to mankind as to make it more eligible that there should be no such power vested in the magistrate, but the care of every man's soul should be left to himself alone, (as this author demands it)."

To this I tell you, "That here, out of abundant kindness, when dissenters have their heads, without any cause, broken, you provide them a plaister." For, say you, "if upon such examination of the matter, (i. e. brought to it by the magistrate's punishment,) they chance to find that the truth doth not lie on the magistrate's side, they have gained thus much however, even by the magistrate's misapplying his power, that they know better than they did before, where the truth does lie. Which is as true as if you should say: Upon examination I find such an one is out of the way to York, therefore I know better than I did before that I am in the right. For neither of you may be in the right. This were true indeed, if there were but two ways in all, a right and a wrong." To this you reply here: "That whoever shall consider the penalties, will, you persuade yourself, find no heads broken, and so but little need of a plaister. The penalties, as you say, are to be such as will not tempt such as have any concern for their eternal salvation, either to renounce a religion which they believe to be true, or profess one which they believe not to be so; but only such as, being weighed in gold scales, are just enough, or, as you express it, are apt to put them upon a serious and impartial examination of the controversy between the magistrate and them." If you had been pleased to have told us what penalties those were, we might have been able to guess whether there would have been broken heads or no. But

since you have not vouch-safed to do it, and, if I mistake not, will again appeal to your men of art for another dispensation rather than ever do it; I fear nobody can be sure these penalties will not reach to something worse than a broken head: especially if the magistrate shall observe that you impute the rise and growth of false religions (which it is the magistrate's duty to hinder) to the pravity of human nature, unbridled by authority; which by what follows he may have reason to think is to use force sufficient to counterbalance the folly, perverseness, and wickedness of men: and whether then he may not lay on penalties sufficient, if not to break men's heads, yet to ruin them in their estates and liberties, will be more than you can undertake. And since you acknowledge here, that the magistrate may err so far in the use of this his power, as to mistake the persons that he lays his penalties on; will you be security that he shall not also mistake in the proportion of them, and not lay on such as men would willingly exchange for a broken head? All the assurance you give us of this is, "If this power keep within its bounds, i. e. as you here explain it, If the penalties the magistrate makes use of to promote a false religion, do not exceed the measure of those which he may warrantably use for the promoting the true." The magistrate may, notwithstanding any thing you have said, or can say, use any sort of penalties, any degree of punishment; you having neither showed the measure of them, nor will be ever able to show the utmost measure which may not be exceeded, if any may be used.

But what is this I find here? "If the penalties the magistrate make use of to promote a false religion." Is it possible that the magistrate can make use of penalties to promote a false religion; of whom you told us but three pages back, "That may always be said of him (what St. Paul said of himself), That he can do nothing against the truth but for the truth?" By that one would have thought you had undertaken to us, that the magistrate could no more use force to promote a false religion, than St. Paul could preach to promote a false religion. If you say, the magistrate has no commission to promote a false religion, and therefore it may always be said of him what St. Paul said of himself, &c. I say, no minister was ever commissioned to preach falsehood; and therefore "it may always be said of every minister (what St. Paul said of himself) that he can do nothing against the truth, but for the truth:" whereby we shall very commodiously have an infallible guide in every parish, as well as one in every commonwealth. But if you thus use scripture, I imagine you will have reason to appeal again to your men of art,

whether, though you may not be allowed to recommend to others the examination and use of scripture, to find the true religion, yet you yourself may not use the scripture to what purpose, and in what sense you please, for the defence of your cause.

To the remainder of what I said in that paragraph, your answer is nothing but an exception to an inference I made. The argument you were upon, was to justify the magistrate's inflicting penalties to bring men to a false religion, by the gain those that suffered them would receive.

Their gain was this: "That they would know better than they did before, where the truth does lie." To which I replied, "Which is as true, as if you should say, upon examination I find such an one is out of the way to York; therefore I know better than I did before, that I am in the right." This consequence you find fault with, and say it should be thus: "Therefore I know better than I did before, where the right way lies." This, you tell me, "would have been true; which was not for my purpose." These consequences, one or the other, are much-what alike true. For he that of an hundred ways, amongst which there is but one right, shuts out one that he discovers certainly to be wrong, knows as much better than he did before, that he is in the right, as he knows better than before, where the right way lies. For before it was ninety-nine to one that he was not in the right; and now he knows it is but ninety-eight to one that he is not in the right; and therefore knows so much better than before, that he is in the right, just as much as he knows better than he did before, where the right way lies. For let him upon your supposition proceed on and every day, upon examination of a controversy with some one in one of the remaining ways, discover him to be in the wrong; he will every day know better than he did before, equally, where the right way lies, and that he is in it; till at last he will come to discover the right way itself, and himself in it. And therefore your inference, whatever you think, is as much as the other for my purpose; which was to show what a no-table gain a man made in the variety of false opinions and religions in the world, by discovering that the magistrate had not the truth on his side; and what thanks he owed the magistrate, for inflicting penalties upon him so much for his improvement, and for affording him so much knowledge at so cheap a rate. And should not a man have reason to boast of his purchase, if he should by penalties be driven to hear and examine all the arguments that can be proposed by those in power for all their foolish and false religions? And yet this gain is what you

propose, as a justification of magistrates inflicting penalties for promoting their false religions. And an “impartial examination of the controversy between them and the magistrate, you tell us here, is the way for such as have any concern for their eternal salvation to come to the knowledge of the truth.”

To my saying, “He that is punished may have examined before, and then I am sure he gains nothing:” You reply, “But neither does he lose much, if it be true, which you there add, that all the hurt that befalls him, is only the suffering some tolerable inconvenience for his following the light of his own reason, and the dictates of his conscience.” So it is therefore you would have a man rewarded for being an honest man; (for so is he who follows the light of his own reason, and the dictates of his conscience;) only with the suffering some tolerable inconveniencies. And yet those tolerable inconveniencies are such as are to counterbalance men’s lusts, and the corruption of depraved nature; which you know any slight penalty is sufficient to master. But that the magistrate’s discipline shall stop at those your tolerable inconveniencies, is what you are loth to be guarantee for: for all the security you dare give of it, is, “If it be true which you there add.” But if it should be otherwise, the hurt may be more I see than you are willing to answer.

L. II. P. 133.

“However, you think you do well to encourage the magistrate in punishing, and comfort the man who has suffered unjustly, by showing what he shall gain by it. Whereas, on the contrary, in a discourse of this nature, where the bounds of right and wrong are inquired into, and should be established, the magistrate was to be showed the bounds of his authority, and warned of the injury he did when he misapplied his power, and punished any man who deserved it not; and not be soothed into injustice, by consideration of gain that might thence accrue to the sufferer. Shall we do evil, that good may come of it? There are a sort of people who are very wary of touching upon the magistrate’s duty, and tender of showing the bounds of his power, and the injustice and ill consequences of his misapplying it; at least, so long as it is misapplied in favour of them, and their party. I know not whether you are of their number; but this I am sure, you have the misfortune here to fall into their mistake. The magistrate, you confess, may in this case misapply his

power: and instead of representing to him the injustice of it, and the account he must give to his sovereign one day of this great trust put into his hands, for the equal protection of all his subjects; you pretend advantages which the sufferer may receive from it: and so instead of disheartening from, you give encouragement to the mischief. Which, upon your principle, joined to the natural thirst in man after arbitrary power, may be carried to all manner of exorbitancy, with some pretence of right.”

L. III. P. 71.

As to what you say here of the nature of my discourse, I shall only put you in mind that the question there debated is: Whether the magistrate has any right or authority to use force for the promoting the true religion. Which plainly supposes the unlawfulness and injustice of using force to promote a false religion, as granted on both sides. So that I could no way be obliged to take notice of it in my discourse, but only as occasion should be offered.

And whether I have not showed the bounds of the magistrate’s authority, as far as I was any way obliged to do it, let any indifferent person judge. But to talk here of a “sort of people who are very wary of touching upon the magistrate’s duty, and tender of showing the bounds of his power,” where I tell the magistrate that the power I ascribe to him, in reference to religion, is given him to bring men, “not to his own, but to the true religion;” and that he misapplies it, when he endeavours to promote a false religion by it; is, methinks, at least a little unseasonable.

Nor am I any more concerned in what you say of the magistrate’s misapplying his power in favour of a party. For as you have not yet proved that his applying his power to the promoting the true religion (which is all that I contend for) is misapplying it; so much less can you prove it to be misapplying it in favour of a party.

But that “I encourage the magistrate in punishing men to bring them to a false religion, (for that is the punishing we here speak of,) and sooth him into injustice, by showing what those who suffer unjustly shall gain by it,” when in the very same breath I tell him that by so punishing he misapplies his power; is a discovery which I believe none but yourself could have made. When I say that the magistrate misapplies his power by so punishing; I suppose all other men understand me to say, that he sins in doing it, and lays himself open to divine vengeance by it. And can he be encouraged to

this, by hearing what others may gain, by what (without repentance) must cost him so dear?

Here your men of art will do well to be at hand again. For it may be seasonable for you to appeal to them, whether the nature of your discourse will allow you to descend to show “the magistrate the bounds of his authority, and warn him of the injury he does, if he misapplies his power.”

You say, “the question there debated, is, whether the magistrate has any right or authority to use force for promoting the true religion; which plainly supposes the unlawfulness and injustice of using force to promote a false religion, as granted on both sides.” Neither is that the question in debate; nor, if it were, does it suppose what you pretend. But the question in debate is, as you put it, Whether any body has a right to use force in matters of religion? You say, indeed, “The magistrate has, to bring men to the true “religion.” If thereupon you think the magistrate has none to bring men to a false religion, whatever your men of art may think, it is probable other men would not have thought it to have been beside the nature of your discourse, to have warned the magistrate, that he should consider well, and impartially examine the grounds of his religion before he use any force to bring men to it. This is of such moment to men’s temporal and eternal interests, that it might well deserve some particular caution addressed to the magistrate; who might as much need to be put in mind of impartial examination as other people. And it might, whatever your men of art may allow, be justly expected from you: who think it no deviation from the rules of art, to tell the subjects that they must submit to the penalties laid on them, or else fall under the sword of the magistrate; which, how true soever, will hardly by any body be found to be much more to your purpose in this discourse, than it would have been to have told the magistrate of what ill consequence it would be to him and his people, if he misused his power, and warned him to be cautious in the use of it. But not a word that way. Nay even where you mention the account he shall give for so doing, it is still to satisfy the subjects that they are well provided for, and not left unfurnished of the means of salvation, by the right God has put into the magistrate’s hands to use his power to bring them to the true religion; and therefore they ought to be well content; because if the magistrate misapply it, the Great Judge will punish him for it. Look, sir, and see whether what you say, any-where, of the magistrate’s misuse of his power, have any other tendency: and then I appeal to the sober reader, whether if you had been as much concerned for

the bounding, as for the exercise, of force in the magistrate's hands, you would not have spoke of it after another manner.

The next thing you say, is "that the question (being, whether the magistrate has any right to use force to bring men to the true religion,) supposes the unlawfulness of using force to promote a false religion as granted on both sides;" which is so far from true, that I suppose quite the contrary, viz. That if the magistrate has a right to use force to promote the true, he must have a right to use force to promote his own religion; and that for reasons I have given you elsewhere. But the supposition of a supposition serves to excuse you from speaking any thing directly of setting bounds to the magistrate's power, or telling him his duty in that point; though you are very frequent in mentioning the obligation he is under, that men should not want the assistance of his force; and how answerable he is if any body miscarry for want of it; though there be not the least whisper of any care to be taken, that nobody be misled by it. And now I recollect myself I think your method would not allow it: for if you should have put the magistrate upon examining, it would have supposed him as liable to errour as other men; whereas, to secure the magistrate's acting right, upon your foundation of never using force but for the true religion, I see no help for it, but either he or you (who are to license him) must be got past the state of examination into that of certain knowledge and infallibility.

Indeed, as you say, "you tell the magistrate that the power you ascribe to him in reference to religion, is given him to bring men not to his own, but to the true religion." But do you put him upon a severe and impartial examination which, amongst the many false, is the only true religion he must use force to bring his subjects to; that he may not mistake and misapply his power in a business of that consequence? Not a syllable of this. Do you then tell him which it is he must take, without examination, and promote with force; whether that of England, France, or Denmark? This, methinks, is as much as the pope, with all his infallibility, could require of princes. And yet what is it less than this you do, when you suppose the religion of the church of England to be the only true; and upon this your supposition, tell the magistrate it is his duty, by force, to bring men to it, without ever putting him upon examining, or suffering him or any body else to question, whether it be the only true religion or no? For if you will stick to what you in another place say: "That it is enough to suppose that there is one true religion, and but one, and that that religion may be

known by those who profess it;" what authority will this knowableness of the true religion give to the king of England, more than to the king of France, to use force, if he does not actually know the religion he professes to be the true; or to the magistrate more than the subject, if he has not examined the grounds of his religion? But if he believes you when you tell him your religion is the true, all is well; he has authority enough to use force, and he need not examine any farther. If this were not the case; why you should not be careful to prepare a little advice to make the magistrate examine, as well as you are solicitous to provide force to make the subject examine, will require the skill of a man of art to discover.

Whether you are not of the number of those men I there mentioned, (for that there have been such men in the world, instances might be given;) one may doubt from your principles. For if, upon a supposition that yours is the true religion, you can give authority to the magistrate to inflict penalties on all his subjects that dissent from the communion of the national church, without examining whether theirs too may not be that only true religion which is necessary to salvation; is not this to demand, that the magistrate's power should be applied only in favour of a party? And can any one avoid being confirmed in this suspicion, when he reads that broad insinuation of yours, , as if our magistrates were not concerned for truth or piety, because they granted a relaxation of those penalties, which you would have employed in favour of your party: for so it must be called, and not the church of God, exclusive of others: unless you will say men cannot be saved out of the communion of your particular church, let it be national where you please.

You do not, you say, encourage the magistrate to misapply his power; because "in the very same breath you tell him he misapplies his power." I answer, let all men understand you, as much as you please, to say that he sins in doing it; that will not excuse you from encouraging him there; unless it be impossible that a man may be encouraged to sin. If your telling the magistrate that his subjects gain by his misapplying of force, be not an encouragement to him to misapply it, the doing good to others must cease to be an encouragement to any action. And whether it be not a great encouragement in this case to the magistrate, to go on in the use of force, without impartially examining whether his or his subjects be the true religion; when he is told that, be his religion true or false, his subjects, who suffer, will be sure to be gainers by it; let any one judge. For the

encouragement is not, as you put it, to the magistrate to use force to bring men to what he thinks a false religion; but it is an encouragement to the magistrate, who presumes his to be the true religion, to punish his dissenting subjects, without due and impartial examination on which side the truth lies. For having never told the magistrate, that neglect of examination is a sin in him; if you should tell him a thousand times, that he who uses his power to bring men to a false religion misapplies it; he would not understand by it that he sinned, whilst he thought his the true; and so it would be no restraint to the misapplying his power.

And thus we have some prospect of this admirable machine you have set up for the salvation of souls.

The magistrate is to use force to bring men to the true religion. But what if he misapplies it to bring men to a false religion? It is well still for his subjects: they are gainers by it. But this may encourage him to a misapplication of it. No; you tell him that he that uses it to bring men to a false religion, misapplies it; and therefore he cannot but understand that you say “his sins, and lays himself open to divine vengeance.” No; he believes himself in the right; and thinks as St. Paul, whilst a persecutor, that he does God good service. And you assure him here, he makes his suffering subjects gainers; and so he goes on as comfortably as St. Paul did. Is there no remedy for this? Yes, a very ready one, and that is, that the “one only true religion may be known by those who profess it to be the only true religion.”

To which, if we add how you moderate as well as direct the magistrate’s hand in punishing; by making the last regulation of your convenient penalties to lie in the prudence and experience of magistrates themselves; we shall find the advantages of your method. For are not your necessary means of salvation, which lie in moderate penalties used to bring men to the true religion, brought to an happy state; when that which is to guide the magistrate in the knowledge of the true religion, is, “that the true religion may be known by those who profess it to be the only true religion;” and the convenient penalties to be used for the promoting of it, are such as the magistrate shall in his prudence think fit; and that whether the magistrate applies it right or wrong, the subject will be a gainer by it? If in either of your discourses, you have given the magistrate any better direction than this to know the true religion by, which he is by force to promote; or any other intelligible measure to moderate his penalties by; or any other caution to restrain the misuse of his power; I desire you to show it me: and then I shall

think I have reason to believe, that in this debate you have had more care of the true religion, and the salvation of souls, than to encourage the magistrate to use the power he has, by your direction, and without examination; and to what degree he shall think fit, in favour of a party. For the matter thus stated, if I mistake not, will serve any magistrate to use any degree of force against any that dissent from his national religion.

Having recommended to the subjects the magistrate's persecution by a show of gain, which will accrue to them by it; you do well to bring in the example of Julian; who whatever he did to the christians, would, no more than you, own that it was persecution; but for their advantage in the other world. But whether his pretending gain to them, upon grounds which he did not believe; or your pretending gain to them, which nobody can believe to be one; be a greater mockery, you were best look. This seems reasonable, that his talk of philanthropy, and yours of moderation, should be bound up together. For till you speak and tell them plainly what they may trust to, the advantage the persecuted are to receive from your clemency, may, I imagine, make a second part to what the christians of that age received from his. But you are solicitous for the salvation of souls, and dissenters shall find the benefit of it.

CHAPTER IX. OF THE USEFULNESS OF FORCE IN MATTERS OF RELIGION.

You having granted that in all pleas for any thing, because of its usefulness, it is not enough to say that it may be serviceable; but it must be considered, not only what it may, but what it is likely to produce; and the greater good or harm likely to come from it ought to determine the use of it; I think there need nothing more to be said to show the usefulness of force in the magistrate's hands for promoting the true religion, after it has been proved that, if any, then all magistrates, who believe their religion to be true, are under an obligation to use it. But since the usefulness and necessity of force is the main foundation on which you build your hypothesis, we will in the two remaining chapters examine particularly what you say for them.

To the author's saying, "That truth seldom hath received, and he fears never will receive much assistance from the power of great men, to whom she is but rarely known, and more rarely welcome;" you answer, "And yet God himself foretold and promised that kings should be nursing fathers, and queens nursing mothers to his church." If we may judge of this prophecy by what is past or present, we shall have reason to think it concerns not our days; or if it does, that God intended not that the church should have many such nursing fathers and nursing mothers, that were to nurse them up with moderate penalties, if those were to be the swaddling-clouts of this nursery. Perhaps, if you read that chapter, you will think you have little reason to build much on this promise, till the restoring of Israel: and when you see the gentiles bring thy (i. e. as the style of the chapter seems to import, the sons of the Israelites) "sons in their arms, and thy daughters be carried upon their shoulders," as is promised in the immediately preceding words; you may conclude that then "kings shall be thy (i. e. Israel's) nursing fathers, and queens thy nursing mothers." This seems to me to be the time designed by that prophecy; and I guess to a great many others, upon an attentive reading that chapter in Isaiah. And to all such this text will do you little service, till you make out the meaning of it better than by barely quoting of it; which will scarce ever prove, that God hath promised that so many princes shall be friends to the true religion, that it will be better for the true religion that princes should use force for the imposing or propagating of their religions,

than not. For unless it prove that, it answers not the author's argument; as an indifferent reader must needs see. For he says not "truth never, but she seldom hath received, and he fears never will receive (not any, but) much assistance from the power of great men, to whom she is but rarely known, and more rarely welcome." And therefore to this of Isaiah pray join that of St. Paul, 1 Cor. i. 26, "Not many wise, not many mighty, not many noble."

But supposing many kings were to be nursing fathers to the church, and that this prophecy were to be fulfilled in this age, and the church were now to be their nursery; it is I think more proper to understand this figurative promise, that their pains and discipline were to be employed on those in the church, and that they should feed and cherish them, rather than that these words meant that they should whip those that were out of it. And therefore this text will, I suppose, upon a just consideration of it, signify very little against the known matter of fact, which the author urges; unless you can find a country where the cudgel and the scourge are more the badges and instruments of a good nurse, than the breast and the bib; and that she is counted a good nurse of her own child, who busies herself in whipping children not hers, nor belonging to her nursery.

"The fruits which give you no encouragement to hope for any advantage from the author's toleration, which almost all but the church of England enjoyed in the times of the blessed reformation, as it was called, you tell us, were sects and heresies." Here your zeal hangs a little in your light. It is not the author's toleration which here you accuse. That, you know, is universal: and the universality of it is that which a little before you wondered at, and complained of. Had it been the author's toleration, it could not have been almost all but the church of England; but it had been the church of England and all others. But let us take it, that sects and heresies were, or will be the fruits of a free toleration; i. e. men are divided in their opinions and ways of worship. Differences in ways of worship, wherein there is nothing mixed inconsistent with the true religion, will not hinder men from salvation, who sincerely follow the best light they have; which they are as likely to do under toleration as force. And as for difference of opinions, speculative opinions in religion; I think I may safely say, that there are scarce anywhere three considering men (for it is want of consideration you would punish) who are in their opinions throughout of the same mind. Thus far then, if charity be preserved (which it is likelier to be where there is

toleration, than where there is persecution), though without uniformity, I see no great reason to complain of those ill fruits of toleration.

But men will run, as they did in the late times, into “dangerous and destructive errors, and extravagant ways of worship.” As to errors in opinion, if men upon toleration be so apt to vary in opinions, and run so wide one from another, it is evident they are not so averse to thinking as you complain. For it is hard for men, not under force, to quit one opinion and embrace another, without thinking of them. But if there be danger of that, it is most likely the national religion should sweep and draw to itself the loose and unthinking part of men, who without thought, as well as without any contest with their corrupt nature, may embrace the profession of the countenanced religion, and join in outward communion with the great and ruling men of the nation. For he that troubles not his head at all about religion, what other can so well suit him as the national, with which the cry and preferments go; and where, it being, as you say, presumable that he makes that his profession upon conviction, and that he is in earnest; he is sure to be orthodox, without the pains of examining, and has the law and government on his side to make it good that he is in the right.

But seducers, if they be tolerated, will be ready at hand, and diligent; and men will hearken to them. Seducers have surely no force on their side, to make people hearken. And if this be so, there is a remedy at hand, better than force; if you and your friends will use it, which cannot but prevail; and that is, let the ministers of truth be as diligent; and they bringing truth with them, truth obvious and easy to be understood, as you say what is necessary to salvation is, cannot but prevail.

But seducers are hearkened to, because they teach opinions favourable to men’s lusts. Let the magistrate, as is his duty, hinder the practices which their lusts would carry them to, and the advantage will be still on the side of truth.

After all, sir, if, as the apostle tells the Corinthians, 1 Cor. xi. 19, “There must be heresies amongst you, that they which are approved may be made manifest;” which, I beseech you, is best for the salvation of men’s souls; that they should enquire, hear, examine, consider, and then have the liberty to profess what they are persuaded of; or that, having considered, they should be forced not to own or follow their persuasions; or else that, being of the national religion, they should go ignorantly on without any consideration at all? In one case, if your penalties prevail, men are forced to

act contrary to their consciences, which is not the way to salvation; and if the penalties prevail not, you have the same fruits, sects and heresies, as under toleration: in the other, it is true, those ignorant, loose, unthinking conformists do not break company with those who embrace the truth that will save them; but I fear can no more be said to have any share in it, than those who openly dissent from it. For it is not being in the company, but having on the wedding-garment, that keeps men from being bound hand and foot, and cast into the dreadful and eternal prison.

You tell us, “Force has a proper efficacy to procure the enlightening of the understanding, and the production of belief,” viz. by making men consider. But your ascribing men’s aversion to examine matters of religion to the corruption of their nature; force, your way applied (i. e. so that men avoid the penalties by an outward conformity), cannot have any proper efficacy to procure consideration; since men may outwardly conform, and retain their corruption and aversion to consideration; and upon this account force your way applied is absolutely impertinent.

But further; if force has such a proper efficacy to procure the production of belief, it will do more harm than good, employed by any but orthodox magistrates. But how to put it only into orthodox hands is the difficulty. For I think I have proved, that if orthodox magistrates may, and ought to use force, for the promoting their religion; all that think themselves orthodox are obliged to use it too. And this may serve for an answer to all that you have said, .

I having said, “Whatever indirect efficacy there be in force applied by the magistrate your way, it makes against you; force used by the magistrate to bring men to consider those reasons and arguments which are proper and sufficient to convince them, but which, without being forced, they would not consider; may, say you, be serviceable indirectly and at a distance to make men embrace the truth which must save them. And thus, say I, it may be serviceable to bring men to receive and embrace falsehood, which will destroy them.” To this you, with great triumph, reply,— “How, sir, may force be used by the magistrate, to bring men to consider those reasons and arguments which are proper and sufficient to convince them, be serviceable to bring men to embrace falsehood, such falsehood as will destroy them? It seems then there are reasons and arguments which are proper and sufficient to convince men of the truth of falsehood, which will destroy. Which is

certainly a very extraordinary discovery, though such as no man can have any reason to thank you for.”

In the first place let me ask you, Where did you find, or from what words of mine do you infer that notable proposition, “That there are reasons and arguments proper and sufficient to convince men of the truth of falsehood?” If a magistrate of the true religion may use force to make men consider reasons and arguments proper to convince men of the truth of his religion, may not a prince of a false religion use force to make men consider reasons and arguments proper and sufficient to convince them of what he believes to be true? And may not force thus be serviceable to bring men to receive and embrace falsehood?

In the next place, did you, who argue with so much school-subtlety, as if you drank it in at the very fountain; never hear of such an ill way of arguing as “*a conjunctis ad divisa*?” There are no arguments proper and sufficient to bring a man into the belief of what is in itself false, whilst he knows or believes it to be false; therefore there are no arguments proper and sufficient to bring a man into the belief of what is in itself false, which he neither knows nor believes to be so. A senior sophister would be laughed at for such logic. And yet this is all you say in that sentence you erect for a trophy, “to convince men of the truth of falsehood;” which, though not my words, but such as you in your way supply from what I said, you are exceedingly pleased with, and think their very repeating a triumph. But though there are no arguments proper and sufficient to convince men of the truth of falsehood, as falsehood; yet I hope you will allow that there are arguments proper and sufficient to make men receive falsehoods for truths; why else do you complain of seducers? And those who embrace falsehoods for truths, do it under the appearance of truth, misled by those arguments which make it appear so, and so convince them. And that magistrates, who take their religion to be true, though it be not so, may with force use such arguments, you will, I think, grant.

But you talk, as if nobody could have arguments proper and sufficient to convince another, but he that was of your way, or your church. This indeed is a new and very extraordinary discovery, and such as your brethren, if you can convince them of it, will have reason to thank you for. For if any one was ever by arguments and reasons brought off, or seduced from your church, to be a dissenter; there were then, I think, reasons and arguments proper and sufficient to convince him. I will not name to you again Mr.

Reynolds, because you have charity enough to question his sincerity. Though his leaving his country, friends, and acquaintance, may be presumed as great a mark of his being convinced and in earnest, as it is for one to write for a national religion in a country where it is uppermost. I will not yet deny, but that, in you, it may be pure zeal for the true religion, which you would have assisted with the magistrate's force. And since you seem so much concerned for your sincerity in the argument, it must be granted you deserve the character of a well-meaning man, who own your sincerity in a way so little advantageous to your judgment.

But if Mr. Reynolds, in your opinion, was misled by corrupt ends, or secular interest; what do you think of a prince [James II.] now living? Will you doubt his sincerity? or that he was convinced of the truth of the religion he professed, who ventured three crowns for it? What do you think of Mr. Chillingworth, when he left the church of England for the Romish profession? Did he do it without being convinced that that was right? Or was he convinced with reasons and arguments, not proper or sufficient to convince him?

But certainly this could not be true, because, as you say, , the scripture does not teach any thing of it. Or perhaps those that leave your communion do it always without being convinced, and only think they are convinced when they are not: or are convinced with arguments not proper and sufficient to convince them. If nobody can convince another, but he that has truth on his side, you do more honour to the "first and second letter concerning toleration," than is for the advantage of your cause, when you impute to them the increase of sects and heresies amongst us. And there are some, even of the church of England, have professed themselves so fully satisfied by the reasons and arguments in the first of them, that though I dare not be positive to you, whose privilege it is to convince men that they are convinced; yet I may say it is as presumable they are convinced, having owned it, as it is presumable that all that are conformists are made so upon reason and conviction.

This I suppose, may serve for an answer to your next words, "That God in his just judgment will send such as receive not the love of truth, that they may be saved, but reject it for the pleasure they have in unrighteousness, ἐνέργειαν πλάνης, strong delusion, i. e. such reasons and arguments as will prevail with men, so disposed, to believe a lie, that they may be damned; this you confess the scripture plainly teaches us. But that there are any such

reasons or arguments as are proper and sufficient to convince or satisfy any but such resolute and obdurate sinners, of the truth of such falsehood as will destroy them, is a position which you are sure the scripture doth not teach us; and which, you tell me, when I have better considered it, you hope I will not undertake to maintain. And yet if it be not maintainable, what I say here is to no purpose: for if there be no such reasons and arguments as here we speak of, it is in vain to talk of the magistrate's using force to make men consider them."

But if you are still of the mind, that no magistrate but those who are of the true religion, can have arguments backed with force, proper and sufficient to convince; and that in England none but resolute obdurate sinners ever forsook or forbore the communion of the church of England, upon reasons and arguments that satisfy or convince them, I shall leave you to enjoy so charitable an opinion.

But as to the usefulness of force, your way applied, I shall lay you down again the same argument I used before; though in words lest fitted for your way of reasoning on them, now I know your talent. If there be any efficacy in force to bring men to any persuasion, it will, your way applied, bring more men to error than to truth. Your way of using it is only to punish men for not being of the national religion; which is the only way you do, or can apply force, without a toleration. Nonconformity is the fault that is punished; which fault, when it ceases, the punishment ceases. But yet to make them consider, is the end for which they are punished; but whether it be or be not intended to make men consider, it alters nothing in the case. Now, I say, that since all magistrates who believe their religion to be true, are as much obliged to use force to bring their subjects to it, as if it were true; and since most of the national religions of the world are erroneous if force made use of to bring men to the national religion, by punishing dissenters, have any efficacy, let it be what it will; indirect and at a distance, if you please; it is like to do twenty times more harm than good; because of the national religions of the world, to speak much within compass, there are above twenty wrong for one that is right.

Indeed, could force be directed to drive all men indifferently, who are negligent and backward in it, to study, examine, and consider seriously matters of religion, and search out the truth; and if men were, upon their study and examination, permitted to follow what appears to them to be right; you might have some pretence for force, as serviceable to truth in

making men consider. But this is impossible, but under a toleration. And I doubt whether, even there, force can be so applied, as to make men consider and impartially examine what is true in the professed religions of the world, and to embrace it. This at least is certain, that where punishments pursue men, like outlying deer, only to the pale of the national church; and, when once they are within that, leave them free there and at ease; it can do no service to the true religion, even in a country where the national is the true. For the penalties ceasing as soon as men are got within the pale and communion of the church, they help not men at all against that which you assign as the great hindrance to the true religion, and which therefore, in your opinion, makes force necessary to assist it.

For there being no necessity that men should leave either their vices or corruption, or so much as their ignorance, to get within the pale of the church; force, your way applied, serves only to bring them, even in the few christian and orthodox countries, to the profession, not to the knowledge, belief, or practice, of the true religion.

You say, corrupt nature inclines men from the true religion to false ones; and moderate force is requisite to make such men consider. But such men as, out of corrupt nature, and for their ease and carnal pleasures, choose an erroneous religion without considering, will again, as soon as they can find their choice incommoded by those penalties, consult the same corrupt nature and carnal appetites, and, without considering any thing further, conform to that religion where they can best enjoy themselves. It is only the conscientious part of dissenters, such as dissent not out of indulgence to corrupt nature, but out of persuasion, who will not conform without considering as they ought. And therefore your argument from corrupt nature, is out of doors. If moderate penalties serve only to work on those who are led by corrupt nature, they are of no use but to fill the church with hypocrites; that is, to make those men worse hypocrites than they were before, by a new act of hypocrisy; and to corrupt the manners of the rest of the church, by their converse with these. And whether this be for the salvation of souls, as is pretended, or for some other end, that the priests of all religions have generally so earnestly contended for it, I leave to be considered. For as for those who dissent out of persuasion, I suspect your moderate penalties will have little effect upon them. For such men being awed by the fear of hell-fire, if that fear will not make them consider better

than they have done, moderate penalties will be too weak to work upon them. It is well if dragooning and martyring can do it.

But you add, “May it not be true, nevertheless, that force your way applied may be serviceable, indirectly and at a distance, to bring men to embrace the truth which may save them? which is all you are concerned here to make good.” So that if it may possibly happen that it should ever bring two men to embrace the truth, you have gained your point, and overthrown toleration, by the usefulness and necessity there is of force. For without being forced these two men would never have considered; which is more yet than you know, unless you are of his private council, who only can tell when the season of grace is past, and the time come that preaching, intreaty, instruction, and persuasion shall never after prevail upon a man. But whatever you are here concerned to make good, are you not also concerned to remember what you say; where declaring against the magistrate’s having a power to use what may any way, at any time, upon any person, by any accident, be useful towards the promoting the true religion, you say, “Who sees not that however such means might chance to hit right in some few cases, yet, upon the whole matter, they would certainly do a great deal more harm than good; and in all pleas (making use of my words) for any thing because of its usefulness, it is not enough to say that it may be serviceable, but it must be considered, not only what it may, but what it is likely to produce; and the greater good or harm like to come from it, ought to determine the use of it?”

You proceed and tell me, that I, “not content to say that force your way applied (i. e. to bring men to embrace the truth which must save them) may be serviceable to bring men to embrace falsehood which will destroy them; and so is proper to do as much harm as good (which seems strange enough;) I add (to increase the wonder), that in your indirect way it is much more proper and likely to make men receive and embrace error, than the truth: and that, 1. Because men out of the right way are apt, and I think I may say apter, to use force than others; which is doubtless an irrefragable demonstration, that force used by the magistrate to bring men to receive and embrace the truth which must save them, is much more proper and likely to make men receive error than the truth.” And then you ask me, “How we come to talk here of what men out of the right way are apt to do, to bring others into their, i. e. a wrong way; where we are only inquiring, what may be done to bring men to the right way. For you must put me in mind, you

say, that this is our question, viz. Whether the magistrate has any right to use force to bring men to the true religion.” Whether the magistrate has a right to use force in matters of religion, as you more truly state it, , is the main question between us, I confess. But the question here between us is about the usefulness of force your way applied; which being to punish dissenters as dissenters, to make them consider, I showed would do more harm than good. And to this you were here answering. Whereby, I suppose, it is plain that the question here is about the usefulness of force, so applied. And I doubt not but my readers, who are not concerned, when the question in debate will not serve your turn, to have another substituted, will take this for a regular and natural way of arguing, viz. “That force, your way applied, is more proper and likely to make men embrace error than the truth; because men out of the right way are as apt, I think I may say apter, to use force than others.” You need not then ask as you do, “How we come to talk here of men out of the “right way.” You see how. If you do not, I know not what help there is for your eyes. And I must content myself that any other reader that has eyes, will not miss it. And I wonder that you should: since you know I have on several occasions argued against the use of force in matters of religion, upon a supposition, that if any one, then all magistrates, have a just pretence and right to use it; which has served you in some places for matter of great reproof, and, in others, of sport and diversion. But because so plain a thing as that was so strange to you, that you thought it a ridiculous paradox to say, “That for all magistrates to suppose the religion they believed to be true, was equally just and reasonable;” and because you took no notice of the words adjoined that proved it, viz. “Unless we can imagine every-where but in England [or where the national religion is the true] men believe what at the same time they think to be a lye;” I have taken the pains to prove it to you more at large in another place, and therefore shall make bold to use it here as an argument against force, viz. That if it have any efficacy, it will do more harm than good: “Because men out of “the right way are as apt, or apter to use it:” and I shall think it a good one till you have answered it.

It is a good and a sure way, and shows a zeal to the cause, still to hold fast the conclusion, and, whatever be in debate, return still to one’s old position. I arguing against what you say for the use of force, viz. “That force used not to convince by its own proper efficacy, but only to make men consider, might indirectly, and at a distance, do some service towards the

bringing men to embrace the truth;" after other arguments against it, I say, that "whatever efficacy there is in force, your way applied, i. e. to punish all, and none but, dissenters from the national church, makes against you:" and the first reason I give for it, is in these words: "Because men out of the right way, are as apt or apter to use force than others." Which is what you are here answering. And what can be done better to answer it, than to the words I have above cited, to subjoin these following? "Now whereas our author says, that penalties of force is absolutely impertinent in this case, because it is not proper to convince the mind; to which you answer, that, though force be not proper to convince the mind, yet it is not absolutely impertinent in this case, because it may, however, do some service towards the bringing men to embrace the truth which must save them, by bringing them to consider those reasons and arguments which are proper to convince the mind; and which, without being forced, they would not consider." Here I tell you, "No; but it is much more proper and likely to make men receive and embrace error than truth; because men out of the right way are as apt, and perhaps apter, to use force than others." Which you tell me, "is as good a proof you believe as the thing would admit; for otherwise, you suppose, I would have given you a better." And thus you have certainly gained the cause. For I having proved that force, your way applied, whatever efficacy it had, would do more harm than good, have not sufficiently proved that it cannot do some service towards the bringing men to embrace the truth; and therefore it is not absolutely impertinent. But since you think this apt enough to prove the use of force in matters of religion impertinent, I shall farther show you that force, applied your way to make people consider, and so to make them embrace the truth, is impertinent.

Your way is to lay penalties on men for nonconformity, as you say, to make men consider: now here let me ask any one but you, whether it be not utterly impertinent so to lay penalties on men, to make them consider, when they can avoid those penalties without considering? But because it is not enough to prove force your way applied, utterly impertinent, I shall show you in the next place, that were a law made to punish not barely nonconformity, but nonconsideration, those penalties, laid on not considering, would be utterly impertinent; because it could never be proved that a man had not considered the arguments offered him. And therefore all law-makers till you, in all their penal laws about religion, laid all their penalties upon not embracing; and it was against that that our author was

arguing, when he said penalties, in this case, are absolutely impertinent; because they are not proper to convince the mind. For in that case, when penalties are laid on men for not embracing, it is plain they are used as a means to make men embrace; which, since those who are careless in matters of religion can do without considering, and those who are conscientious cannot do without conviction; and since penalties can in no wise convince; this use of them is absolutely impertinent, and will always be so till you can show a way how they can be used in religion, not as motives to embrace, but as motives barely to make men consider. For if you punish them on when they tell you they have considered your arguments, but are not convinced by them; and you judge of their having not considered, by nothing but their not embracing; it is plain you use penalties instead of arguments to convince them; since without conviction, those whom our author pleads for, cannot embrace; and those who do embrace without conviction, it is all one as if they did not embrace at all; they being not one jot the more in the way of salvation; and so penalties are absolutely impertinent. But embracing in the sense of the law and yours too, when you say men have not considered as they ought as long as they reject; is nothing but outward conformity, or an outward profession of embracing, wherewith the law is satisfied, and upon which the penalties cease. Now penalties used to make men in this sense embrace, are absolutely impertinent to bring men to embrace in earnest, or as the author calls it, believe: because an outward profession, which in this case is the immediate end to which penalties are directed, and beyond which they do not reach, is no proper means to produce in men consideration, conviction, or believing.

What can be more impertinent than to vex and disease people with the use of force, to no purpose? and that force must needs be to no purpose, which is so applied as to leave the end for which it is pretended to be used, without the means, which is acknowledged necessary for its attainment. That this is so in your way of using force, will easily appear from your hypothesis. You tell us at large in your "Argument considered," that men's lusts hinder them from even impartial consideration and examination of matters in religion: and therefore force is necessary to remove this hindrance. You tell us likewise at large in your letter, that men's corrupt nature and beloved lusts hinder them also from embracing the true religion, and that force is necessary likewise to remove this obstacle. Now in your way of using force, wherein penalties are laid on men till, and no longer

than till, they are made outwardly to conform, force is so applied, that notwithstanding the intention of the law-maker, let it be what it will, neither the obstacle to impartial examination, arising from men's lusts, nor the aversion to the embracing the true religion, arising from men's corrupt nature, can be removed, unless they can be removed without that, which you suppose necessary to their removal. For since a man may conform, without being under the necessity of impartial examining or embracing on the one hand, or suffering the penalties on the other; it is unavoidable, that he should neither impartially examine nor embrace, if penalties are necessary to make him do either; because penalties, which are the necessary remedies to remove those hindrances, were never applied to them; and so those obstacles not being removed for want of their necessary remedy, must continue on to hinder both examining and embracing. For penalties cannot be used as a means to any end, or be applied to the procuring any action to be done, which a man from his lusts, or any other cause, has an aversion to; but by putting them as it were in one scale as a counterbalance to that aversion, and the action in the other scale, and putting a man under the necessity of choosing the one or the other: where that is not done, the penalty may be avoided, the aversion or obstacle hath nothing to remove it, and so the action must remain undone. So that if penalties be necessary to make men impartially examine and really embrace; if penalties are not so laid on men as to make the alternative to be either suffering the penalties or conforming; it is impossible that men who without penalties would not impartially examine, or really embrace, the true religion, should ever do either; and then I beseech you consider whether penalties, your way applied, be impertinent or no.

The necessity of penalties is only where there is some inclination or bias in a man, whencesoever arising, that keeps him from doing something in his power, which he cannot be brought to without the inconveniencies of some penal infliction. The efficacy of penalties lies in this, that the inconvenience to be suffered by the penalties overbalances the bias or inclination which leans the man the other way, and so removes the obstacle; and the application of this remedy lies only in putting a man under the necessary choice either of doing the action, or suffering the penalty: so that in whatever case a man has not been put under that necessity, there penalties have never been applied to the procuring that action: for the obstacle, or aversion to it, has never had its necessary remedy.

Perhaps you will say, it is not absolutely impertinent, because it may possibly “do some service indirectly and at a distance,” and be the occasion that some may consider and embrace. If whatever may by accident contribute to any end, may be used not impertinently as a means to that end, nothing that I know can be impertinent; and a penalty of twelve pence a time laid on them for being drunk, may be said to be a pertinent means, to make men cartesians, or conformists: because it may indirectly and at a distance do some service, by being an occasion to make some men consider their mispending their time; whereby it may happen that one may betake himself to the study of philosophy, where he may meet with arguments proper and fit to convince him of the truth of that philosophy; as another betaking himself to the study of divinity, may consider arguments proper and fit to make him, whether it be in England, Holland, or Denmark, of the national profession, which he was not of before.

Just thus, and no otherwise, does twelve pence a Sunday, or any other penalty laid on nonconformity, make men study and embrace the true religion; and whatever you will call the service it does, direct or indirect, near or at a distance, it is plain it produces that effect, and conduces to that end merely by accident; and therefore must be allowed to be impertinent to be used to that purpose.

That your way of using force in matters of religion, even in a country where the magistrate is of the true religion, is absolutely impertinent; I shall further shew you from your own position.

Here in the entrance give me leave to observe to you, that you confound two things very different, viz. your way of applying force, and the end for which you pretend to use it. And this perhaps may be it which contributes to cast that mist about your eyes, that you always return to the same place, and stick to the same gross mistake. For here you say; “Force, your way applied, i. e. to bring men to embrace the truth which must save them:” but, sir, to bring men to embrace the truth, is not your way of applying force, but the end for which you pretend it is applied. Your way to punish men, as you say, moderately for being dissenters from the national religion; this is your way of using force. Now, if in this way of using it, force does service merely by accident, you will then, I suppose, allow it to be absolutely impertinent. For you say, “If by doing service by accident, I mean, doing it but seldom, and beside the intention of the agent, you assure me that it is not the thing you mean when you say force may, indirectly and at a

distance, do some service.” For in that use of force, which you defend, the effect is both intended by him that uses it, and withal, you “doubt not, so often attained, as abundantly to manifest the usefulness of it.” Whereby it is plain the two marks, whereby you distinguished your indirect and at a distance usefulness, from that which is by accident, are that, that by accident does service but seldom, and beside the intention of the agent, but yours the contrary.

First, as to the intention, you tell us, in the use of force, which you defend, “the effect is intended by him that uses it;” that is, those who made laws to punish nonconformists, designed those penalties to make all men under their power, “consider so as to be convinced of, and embrace the truths that should save them.” If one should ask you how you knew it to be their intention, can you say, they ever told you so? If they did not, then so far you and I know their intentions alike. Did they ever say so in those laws? nor that neither. Those versed then in the interpretation of laws, will tell you nothing can be known to be the intention of the law-makers in any law, of which the law is wholly silent: that way then you cannot know it to have been their intention, if the law says nothing of it. Whatever was the intention of former law-makers, if you had read with attention the last act of uniformity of Car. II. printed before the common-prayer book, I conclude you would have been better satisfied about the intention of the then law-makers in that law; for I think nothing can be plainer to any one who will look into that statute, than that their only end in that law was, what they have expressed in these words: “And to the end that uniformity in the public worship of God (which is so much desired) may be speedily effected;” which was driven with such speed, that if all concerned had opportunity to get and peruse the then established liturgy, it is certain they had not overmuch time seriously and deliberately to consider of all the parts of it before the day set for the use of it.

But you think they ought to have intended, and therefore they did: and I think they neither ought, nor could, in making those laws, intend so impracticable a thing: and therefore they did not. Which being as certain a way of knowledge as yours, if you know it by that way, it is possible you and I may at the same time know contraries.

But you know it, by their “having provided sufficient means of instruction for all under their care, in the true religion;” of this sufficient means, we have something to say in another place. Penalties laid expressly

on one fault, have no evidence that they were designed to mend another, though there are sufficient means provided of mending it, if men would make a sufficient use of them; unless those two faults are so connected, as one cannot be mended without the other. Now if men cannot conform without so considering as to be convinced of, and embrace the truth that must save them; you may know that penalties laid on nonconformity, were intended to make men so consider: but if men may conform, without so considering, one cannot know nor conclude those penalties were intended to make men so consider, whatever provision there is made of means of instruction.

But you will say, it is evident that penalties on nonconformists were intended to make them use these means of instruction, because they are intended for the bringing men to church, the place of instruction. That they are intended to bring men to church, the place of preaching, that I grant; but that those penalties that are laid on men, for not coming to church, can be known thereby to be intended to make men so consider, as to be convinced and embrace the true religion, that I deny: and it is utterly impossible it should be so, if what you say be true, where you tell us, that “the magistrates concern themselves for compliance or conformity, only as the fruit of their conviction.” If therefore the magistrates are concerned for men’s conformity, only as the fruit of their conviction, and coming to church be that conformity; coming to church cannot be intended as a means of their conviction: unless it be intended they should be convinced, before they are convinced.

But to show you, that you cannot pretend the penalty of laws for conformity to proceed from a care of the souls of all under the magistrate’s power, and so to be intended to make them all consider, in any sense: can you, or any one, know, or suppose, that penalties which are laid by the law on nonconformity, are intended to make all men consider; where it is known that a great number, under the magistrate’s power, are dispensed with, and privileged from those penalties? How many, omitting the jews, are there, for example, in the king of England’s dominions, under his care and power, of the Walloon and French church; to whom force is never applied, and they live in security from it? How many pagans are there in the plantations, many whereof born in his dominions, of whom there was never any care taken, that they should so much as come to church, or be in the least instructed in the christian religion? And yet must we believe, or can you

pretend, that the magistrate's use of force, against nonconformists, is to make all his subjects consider, "so as to be convinced of, and embrace the truth that must save them?" If you say, in your way you mean no such indulgence: I answer, the question is not of yours, but the magistrate's intention: though what your intention is, who would have the want of consideration, or knowledge, in conformists, exempt from force, is visible enough.

Again, Those penalties cannot be supposed to be intended to make men consider, which are laid on those who have, or may have already considered; and such you must grant to be the penalties laid in England on nonconformists; unless you will deny, that any nonconformist has, or can consider, so as to be convinced, or believe, and embrace the truth that must save him. So that you cannot vouch the intention of the magistrate where his laws say nothing, much less affirm, that force is intended to produce a certain end in all his subjects, which is not applied to them all, and is applied to some who have attained that end already: unless you have a privilege to affirm, against all appearance, whatsoever may serve your cause. But to learn some moderation in this, I shall send you to my pagans and mahometans. For whatever charitable wishes magistrates may sometimes have in their thoughts, which I meddle not with; nobody can say, that in making the laws, or in the use of force, we are speaking of, they intended to make men consider and examine, so as to "be convinced of, and heartily to embrace the truth that must save them," but he that gives himself the liberty to say any thing.

The service that force does, indirectly and at a distance, you tell us in the following page, is to make people "apply themselves to the use of those means, and helps, which are proper to make them what they are designed to be." In the case before us, What are men designed to be? Holy believers of the gospel in this world, without which no salvation, no seeing of God in the next. Let us see now, whether force, your way applied, can be suited to such a design, and so intended for that end.

You hold, that all out of the national church, where the religion of the national church is true, should be punished, and ought to have force used to them: and again, you grant that those who are in the communion of the national church, ought not to be punished, or be under the stroke of force; nor indeed in your way can they. If now the effect be to prevail with men to consider as they ought, so that they may become what they are designed to

be: how can any one think, that you, and they who use force thus, intend, in the use of it, that men should really be christians, both in persuasion and practice, without which there is no salvation; if they leave off force before they have attained that effect? Or how can it be imagined, that they intend any thing but conformity by their use of force, if they leave off the use of it as soon as men conform? unless you will say that an outward conformity to the national church, whose religion is the true religion, is such an embracing of the truth as is sufficient to salvation: or that an outward profession of the christian religion is the same with being really a christian; which possibly you will not be very forward to do, when you recollect what you meet with in the sermons, and printed discourses, of divines of the church of England, concerning the ignorance and irreligion of conformists themselves: For penalties can never be thought, by any one, but he that can think against common sense, and what he pleases, to be intended for any end; which by that constitution, and law whereby they are imposed, are to cease before that end be attained. And will you say, that all who are conformable, have so well considered, that they believe, and heartily embrace the truths of the gospel, that must save them: when perhaps it will be found that a great many conformists do not so much as understand them? But the ignorance or irreligiousness to be found amongst conformists, which your way of talking forces me in some places to take notice of, let me here tell you once for all, I lay not the blame of upon conformity, but upon your use of force to make men conform. For whatever the religion be, true or false, it is natural for force, and penalty, so applied, to bring the irreligious, and those who are careless and unconcerned for the true, into the national profession: but whether it be fitter for such to be kept out, rather than by force to be driven into, the communion of any church, and owned as members of it; those who have a due care and respect for truly religious and pious conformists, were best consider.

But farther, if, as you say, the opposition to the true religion lies only in men's lusts, it having light and strength enough, were it not for that, to prevail: and it is upon that account only that force is necessary; there is no necessity at all to use force on men, only till they conform, and no farther; since I think you will not deny, but that the corruption of human nature is as great in conformists as in nonconformists; in the professors of, as in the dissenters from, the national religion. And therefore either force was not necessary before, or else it is necessary still, after men are conformists;

unless you will say, that it is harder for a man to be a professor, than a christian indeed: and that the true religion, by its own light and strength, can, without the help of force, prevail over a man's lusts, and the corruption of his nature; but it has need of the help of force, to make him a conformist, and an outward professor. And so much for the effect, which is intended by him that uses it, in that use of force which you defend.

The other argument you bring to show, that your indirect and at a distance usefulness of force, your way applied, is not by accident, is the frequent success of it. Which I think is not the true mark of what is not by accident: for an effect may not be by accident, though it has never been produced but once; and is certainly as little by accident the first time, as when it has been produced a thousand times. That then, by which any thing is excused from being by accident, is not the frequency of the event, but that whereon the frequency of the event depends, when frequent trials are made: and that is the proper, natural, direct efficacy of the cause or means, which produces the effect. As in the case before us, penalties are the cause or means used to produce an end; the proper and immediate effect of penalties, is to produce some pain or inconvenience; and the natural effect of that is to make a man, who naturally flies from all pain or inconvenience, to endeavour to avoid; whereby it naturally and directly works upon the will of man, by proposing to him this unavoidable choice of doing some action, or enduring the pain or inconvenience of the penalty annexed to its omission. When the pain of doing the action is outweighed in the sense of him that lies under the penalty, the pain, that by the law is annexed to the omission, operates upon his will, as naturally, as thirteen ounces in one scale, laid against twelve ounces in the other, incline the balance, and bring it down on that side. And this is by a direct and natural efficacy, wherein there is nothing of chance.

Let us see then, how far this will go in your indirect and at a distance usefulness. In your method, the action you propose to be done, is considering, or a severe and impartial examining matters of religion, which, you tell us, men by their great negligence or aversion are kept from doing. What now is a proper means to produce this? "Penalties, without which, you tell us, it will not be done." How now is it applied in your method? Conformity, and men's neglect or aversion to it, is laid in one scale, and the penalty joined to the omission of it, laid in the other; and in this case, if the inconvenience of the penalty overweighs the pains of, or aversion to

conformity, it does by a direct and natural efficacy produce conformity: but if it produces a severe and impartial examination, that is merely by accident; because the inconvenience of the penalty is not laid against men's aversion or backwardness to examine impartially, as a counterbalance to that, but against their aversion or backwardness to conform; and so whatever it does, indirectly and at a distance, it is certain its making men severely and impartially examine, if ever that happens, is as much by accident, as it would be by accident, if a piece of lead in one scale, as a counterpoise to feathers in the opposite scale, should move or weigh down gold that was put in the scale of another pair of balances, which had no counterpoise laid against it. Unless you will say there is a necessary connexion between conformity, and a severe and impartial examination.

But you will say, perhaps, that though it be not possible that penalties should produce examination but by mere accident, because examination has no necessary connexion with conformity, or the profession of any religion; yet since there are some who will not take up any profession without a severe and impartial examination, penalties for nonconformity will, by a direct and natural efficacy, produce examination in all such. To which I answer, That those are, if we may believe what you say, so very few, that this your remedy, which you put into the magistrate's hands to bring all his subjects to consider and examine, will not work upon one in a thousand; nay, it can work on none at all, to make them severely and impartially examine, but merely by accident. For if they are men, whom a slight and partial examination, which upon your principles you must say, sufficed to make nonconformists, a slight and partial examination will as well serve to make them conformists; and so penalties laid on them to make them conform, can only by accident produce a severe and impartial examination, in such men, who can take up the profession of any religion without a severe and impartial examination; no more than it can otherwise than by accident produce any examination in those who, without any examination, can take up the profession of any religion.

And in those very few, who take not up the profession of any religion without a severe and impartial examination, that penalties can do any service, to bring them either to the truth that must save them, or so much as to outward conformity, but merely by accident; that is also evident. Because all such in a country where they dissent from the national religion, must necessarily have severely and impartially examined already, or else you

destroy the supposition this argument is built on, viz. that they are men who do severely and impartially examine before they choose. And if you lay, or continue your penalties on men, that have so examined; it is plain you use them instead of reasons and arguments; in which use of them, you confess they have no proper efficacy, and therefore if they do any service, is merely by accident.

But now let us see the success you boast of, and for that you tell us, that you doubt not but it is “so often attained, as abundantly to manifest the usefulness of it.” You speak here of it as a thing tried, and so known, that you doubt not. Pray tell us where your moderate (for great ones you acknowledge to do harm, and to be useless) penalties have been used, with such success, that we may be past doubt too. If you can show no such place; do you not vouch experience where you have none? and show a willingness not to doubt, where you have no assurance? In all countries, where any force is used to bring men to the profession of the national religion, and to outward conformity, it is not to be doubted, but that force joining with their natural corruption, in bringing them into the way of preferment, countenance, protection, ease, and impunity, should easily draw in all the loose and careless in matters of religion, which are every-where the far greater number: but is it those you count upon, and will you produce them as examples of what force has done to make men consider, study, and embrace the true religion? Did the penalties laid on nonconformity make you “consider, so as to study, be convinced, and embrace the true religion?” Or can you give an instance of any one, in whom it produced this effect? If you cannot, you will have some reason to doubt of what you have said, and not to be so confident that the effect you talk of is so often attained. Not that I deny, but that God may sometimes have made these punishments the occasions to men of setting themselves seriously on considering religion; and thence they may have come into the national religion upon a real conviction: but the instances of it I believe to be so few, that you will have reason to remember your own words, where you speak of such things as “Any way, at any time, upon any person by any accident, may be useful towards the promoting of true religion: if men should thence take occasion to apply such things generally: who sees not, that however they might chance to hit right in some few cases, yet, upon the whole matter, they would certainly do a great deal more harm than good.” You and I know a country wherein, not long since, greater severities were used than you

pretend to approve of. Were there not, for all that, great numbers of several professions stood out, who, by your rule, ought now to have your moderate penalties tried upon them? And can you think less degrees of force can work, and often, as you say, prevail, where greater could not? But perhaps they might prevail on many of those to return, who having been brought into the communion of the church by former penal laws, have now upon the relaxation left it again. A manifest demonstration, is it not? that “their compliance was the fruit of their conviction; and that the magistrate was concerned for their compliance only as the fruit of their conviction:” when they, as soon as any relaxation of those laws took off the penalties, left again the communion of the national church? For the lessening the number of conformists, is, I suppose, one of those things which you say your “eyes cannot but see at this time;” and which you, with concern, impute to the late relaxation. A plain evidence how presumable it is, even in your own opinion, that those who conform, do it upon real conviction.

To conclude, these proofs, though I do not pretend to bring as good as the thing will admit, will serve my turn to show, that force is impertinent; since by your own confession it has no direct efficacy to convince men, and, by its being indirect and at a distance useful, is not at all distinguished from being barely so by accident: since you can neither prove it to be intended for that end, nor frequently to succeed; which are the two marks whereby you put a difference between indirect and at a distance, and by accident: this I say, is enough to show what the author said is true, that the use of force is wholly impertinent. Which, whatever others do, you upon another reason must be forced to allow.

You profess yourself of the church of England, and if I may guess, are so far of it as to have subscribed the XXXIX Articles; which if you have done, and assented to what you subscribed, you must necessarily allow that all force, used for the bringing men to the true religion, is “absolutely impertinent;” for that must be absolutely impertinent to be used as a means, which can contribute nothing at all to the end for which it is used. The end here is to make a man a true christian, that he may be saved; and he is then, and then only, a true christian, and in the way of salvation, when he believes, and with sincerity obeys the gospel. By the thirteenth article of the church of England, you hold, that works done before the grace of Christ, and the inspiration of his Spirit, are not pleasing to God; for as much as they spring not of faith in Jesus Christ; neither do they make men meet to receive

grace, or, as the school-authors say, deserve grace or congruity; yea rather, for that they are not done, as God has willed and commanded them to be done, we doubt not but they have the nature of sin. Now if it be impertinent to use force to make a man do more than he can, and a man can do nothing to procure grace, unless sin can procure it; and without grace, a man cannot believe, or live so as to be a true christian; it is certainly wholly impertinent to use force to bring a man to be truly a christian. To hear and consider, is in men's power, you will say, and to that force may be pertinent: I grant to make men hear, but not to make them consider in your sense, which you tell us, is to "consider so as to embrace;" if you mean by embracing any thing but outward conformity: and that according to your article contributes nothing to the attaining of grace; because without grace, your article says, it is a sin; and to conform to, and outwardly profess a religion which a man does not understand and heartily believe, every one, I think, judges to be a sin, and no fit means to procure the grace of God.

But you tell us, "That God denies his grace to none who seriously ask it." If that be so, methinks force should most properly and pertinently be used to make men seriously pray to God for grace. But how, I beseech you, will this stand with your thirteenth article? For if you mean by seriously, so as will make his seeking acceptable to God; that cannot be, because he is supposed yet to want grace, which alone can make it acceptable: and if his asking has the nature of sin, as in the article you do not doubt but it has, can you expect that sinning should procure the grace of God? You will I fear here, without some great help in a very nice distinction from the school-authors, be forced either to renounce your article in the plain sense of it, and so become a dissenter from the church of England; or else acknowledge force to be wholly impertinent to the business of true religion and salvation.

Another reason I gave against the usefulness of force in matters of religion, was, "Because the magistrates of the world, being few of them in the right way; not one of ten, take which side you will, perhaps not one of a hundred, being of the true religion; it is likely your indirect way of using force would do a hundred, or at least ten times as much harm as good." To which you reply, "Which would have been to the purpose if you had asserted that every magistrate may use force, your indirect way (or any way) to bring men to his own religion, whatever that be. But if you assert no such thing, (as no man you think but an atheist will assert it,) then this is quite beside the business." I think I have proved, that if magistrates of the

true religion may use force to bring men to their religion, every magistrate may use force to bring men to his own religion, when he thinks it the true, and then do you look where the atheism will light.

In the next paragraph, having quoted these following words of mine, where I say, “Under another pretence, you put into the magistrate’s hands as much force to bring them to his religion, as any the openest persecutors can pretend to. I ask what difference is there between punishing them to bring them to mass, and punishing them to make them consider those reasons and arguments which are proper and sufficient to convince them that they ought to go to mass?” You reply: “A question which you shall then think yourself obliged to answer, when I have produced those reasons and arguments which are proper and sufficient to convince men that they ought to go to mass.” But if you had not omitted the three or four immediately preceding lines, (an art to serve a good cause, which puts me in mind of my pagans and mahometans,) the reader would have seen that your reply was nothing at all to my argument. My words were these:

“Especially, if you consider, that as the magistrate will certainly use it [force] to force men to hearken to the proper ministers of his religion, let it be what it will; so you having set no time nor bounds to this consideration of arguments and reasons short of being convinced, you under another,” &c. My argument is to show of what advantage force, your way applied, is like to be to the true religion, since it puts as much force into the magistrate’s hands as the openest persecutors can pretend to, which the magistrates of wrong persuasions may and will use as well as those of the true; because your way sets no other bounds to considering, short of complying. And then I ask, “What difference there is between punishing you to bring you to mass, or punishing you to consider those reasons and arguments which are proper and sufficient to convince you that you ought to go to mass?” To which you reply, That it is a “question you shall then think yourself obliged to answer, when I have produced those reasons and arguments that are proper and sufficient to convince men that they ought to go to mass.” Whereas the objection is the same, whether there be, or be not, reasons and arguments proper to convince men, that they ought to go to mass; for men must be punished on till they have so considered as to comply: and what difference is there then between punishing men to bring them to mass, and punishing them to make them consider so as to go to mass? But though I pretend not to produce any reasons and arguments proper and sufficient to

convince you or all men, that they ought to go to mass; yet do you think there are none proper and sufficient to convince any men? And that all the papists in the world go to mass without believing it their duty? And whosoever believes it to be his duty, does it upon reasons and arguments proper and sufficient to convince him (though perhaps not to convince another) that it is so; or else I imagine he would never believe at all. What think you of those great numbers of Japaneses, that resisted all sorts of torments, even to death itself, for the Romish religion? And had you been in France some years since, who knows but the arguments the king of France produced might have been proper and sufficient to have convinced you that you ought to go to mass? I do not by this think you less confident of the truth of your religion, than you profess to be. But arguments set on with force, have a strange efficacy upon human frailty; and he must be well assured of his own strength, who can peremptorily affirm, he is sure he should have stood what above a million of people sunk under: amongst which, it is great confidence to say, there was not one so well persuaded of the truth of his religion, as you are of yours: though some of them gave great proofs of their persuasion in their sufferings for it. But what the necessary method of force may be able to do, to bring any one, in your sense, to any religion, i. e. to an outward profession of it; he that thinks himself secure against, must have a greater assurance of himself, than the weakness of decayed and depraved nature will well allow. If you have any spell against the force of arguments, driven with penalties and punishments, you will do well to teach it the world: for it is the hard luck of well-meaning people to be often misled by them; and even the confident themselves have not seldom fallen under them, and betrayed their weakness.

To my demanding if you meant “reasons and arguments proper and sufficient to convince men of the truth, why did you not say so?” you reply, “As if it were possible for any man that reads your answer to think otherwise.” Whoever reads that passage in your A. . cannot possibly think you meant to speak out, and possibly you found some difficulty to add any thing to your words (which are these, “Force used to bring men to consider reasons and arguments proper and sufficient to convince them”) that might determine their sense. For if you had said, to convince them of truth; then the magistrate must have made laws, and used force to make men search after truth in general, and that would not have served your turn: if you had said to convince them of the truth of the magistrate’s religion, that would

too manifestly have put the power in every magistrate's hands, which, you tell us, "none but an atheist will say." If you had said, to convince them of the truth of your religion, that had looked too ridiculous to be owned, though it were the thing you meant; and therefore in this strait, where nothing you could say would well fit your purpose, you wisely choose to leave the sense imperfect, and name nothing they were to be convinced of; but leave it to be collected by your reader out of your discourse, rather than add three words to make it good grammar, as well as intelligible sense.

To my saying, "That if you pretend it must be arguments to convince men of the truth, it would in this case do you little service; because the mass in France is as much supposed the truth, as the liturgy here." You reply, "So that it seems, that in my opinion, whatsoever is supposed the truth, it is the truth, for otherwise this reason of mine is none at all." If, in my opinion, the supposition of truth authorizes the magistrate to use the same means to bring men to it, as if it were true; my argument will hold good, without taking all to be true which some men suppose true. According to this answer of yours, to suppose or believe his religion the true, is not enough to authorize the magistrate to use force; he must know, i. e. be infallibly certain that his is the true religion. We will for once suppose you our magistrate, with force promoting our national religion. I will not ask you, whether you know that all required of conformists, is necessary to salvation: but will suppose one of my pagans asking you, whether you know christianity to be the true religion? If you say, Yes; he will ask you how you know it? and no doubt but you will give the answer, whereby our Saviour proved his mission, John v. 36, that "the works which our Saviour did, bear witness of him, that the Father sent him." The miracles that Christ did, are a proof of his being sent from God, and so his religion the true religion. But then you will be asked again, whether you know that he did those miracles, as well as those who saw them done? If you answer, Yes; then it is plain that miracles are not yet withdrawn, but do still accompany the christian religion with all the efficacy and evidence that they had upon the eye-witnesses of them; and then, upon your own grounds, there will be no necessity of the magistrate's assistance; miracles still supplying the want of it. If you answer, that matter of fact done out of your sight, at such a distance of time and place, cannot be known to you as certainly, as it was to the eye-witnesses of it, but that you upon very good grounds firmly believe it; you are then come to believing, that yours is the true religion, and if that be

sufficient to authorize you to use force, it will authorize any other magistrate of any other religion, to use force also. For whoever believes any thing, takes it to be true, and as he thinks upon good grounds; and those often who believe on the weakest grounds, have the strongest confidence: and thus all magistrates who believe their religion to be true, will be obliged to use force to promote it, as if it were the true.

To my saying that the usefulness of force, your way applied, amounts to no more but this, that it is not impossible but that it may be useful: you reply, "I leave it to be judged by what has been said;" and I leave it to you yourself to judge: only, that you may not forget, I shall here remind you in short of some of the reasons I have to say so: 1. You grant that force has no direct efficacy to bring men to embrace the truth. 2. You distinguish the indirect and at a distance usefulness of your force, from that which is barely by accident; by these two marks, viz. First, That punishment on dissenters for nonconformity, is, by those that use it, intended to make men consider: and, secondly, That your moderate punishments, by experience, are found often successful; and your having neither of these marks, it must be concluded to be useful only by accident: and such an usefulness, as I said, "One cannot deny to auricular confession, doing of penance, going pilgrimages to saints, and what not? Yet our church does not think fit to use them; though it cannot be denied but they may have some of your indirect and at a distance usefulness; that is, perhaps may do some service indirectly, and by accident." If the intention of those that use them, and the success they will tell you they find in the use of them, be a proof of doing service more than by accident; that cannot be denied to them more than to penalties, your way applied. To which let me add, that the niceness and difficulty there is, to hit that just degree of force, which, according to your hypothesis, must be neither so much as to do harm, nor so little as to be ineffectual; for you yourself cannot determine it; makes its usefulness yet more uncertain and accidental. And after all, let its efficacy to work upon men's minds be what it will, great or little, it being sure to be employed ten, or, possibly, a hundred times to bring men to error, for once that it is employed to bring men to the truth; and where it chances to be employed on the side of truth, it being liable to make a hundred, or perhaps a thousand outward conformists, for one true and sincere convert; I leave it also to be judged, what usefulness it is like to be of.

To show the usefulness of force, your way applied, I said, "Where the law punished dissenters without telling them it is to make them consider, they may through ignorance and oversight neglect to do it." Your answer is, "But where the law provides sufficient means of instruction for all, as well as punishment for dissenters, it is so plain to all concerned, that the punishment is intended to make them consider, that you see no danger of men's neglecting to do it, through ignorance or oversight." I hope you mean by consider, so to consider as not only to embrace in an outward profession, for then all you say is but a poor fallacy, for such a considering amounts to no more but bare outward conformity; but so to consider, study, and examine matters of religion, as really to embrace what one is convinced to be the true, with faith and obedience. If it be so plain and easy to understand, that a law, that speaks nothing of it, should yet be intended to make men consider, search, and study, to find out the truth that must save them; I wish you had showed us this plainness. For I confess many of all degrees, that I have purposely asked about it, did not ever see, or so much as dream, that the act of uniformity, or against conventicles, or the penalties in either of them, were ever intended to make men seriously study religion, and make it their business to find the truth which must save them; but barely to make men conform. But perhaps you have met with handicraftsmen, and country-farmers, maid-servants, and day-labourers, who have quicker understandings, and reason better about the intention of the law; for these as well as others are concerned. If you have not, it is to be feared your saying "it is so plain that you see no danger of men's neglecting to do it, through ignorance or oversight," is more for its serving your purpose, than from any experience you have that it is so.

When you will enquire into this matter, you will, I guess, find the people so ignorant amidst that great plainness you speak of, that not one of twenty of any degree amongst the conformists or nonconformists, ever understood the penalty of twelve pence a Sunday, or any other of our penal laws against nonconformity, to be intended to set men upon studying the true religion, and impartially examining what is necessary to salvation. And if you would come to Hudibras's decision, I believe he would have a good wager of it, who should give you a guinea for each one who had thought so, and receive but a shilling for every one who had not. Indeed you do not say, it is plain every-where, but only "where the law provides sufficient means of instruction for all as well as punishments for dissenters." From whence, I

think it will follow, that that contributes nothing to make it plain; or else that the law has not provided sufficient means of instruction in England, where so very few find this to be so plain. If by this sufficient provision of means of instruction for all, you mean persons maintained at the public charge to preach and officiate in the public exercise of the national religion; I suppose you needed not this restriction, there being few places which have an established national religion, where there is not such means of instruction provided; if you intend any other means of instruction, I know none the law has provided in England but the XXXIX articles, the liturgy, and the scripture; and how either of them by itself, or these altogether, with a national clergy, make it plain, that the penalties laid on nonconformity are intended to make men consider, study, and impartially examine matters of religion, you would do well to show. For magistrates usually know (and therefore make their laws accordingly) that the people seldom carry either their interpretation or practice beyond what the express letter of the law requires of them. You would do well also to show that a sufficient provision of means of instruction cannot but be understood to require an effectual use of them, which the law that makes that provision says nothing of; but, on the contrary, contents itself with something very short of it: for conformity, or coming to church, is at least as far from considering, studying, and impartially examining matters of religion, so as to embrace the truth upon conviction and with an obedient heart; as being present at a discourse concerning mathematics, and studying mathematics, so as to become a knowing mathematician, are different one from the other.

People generally think they have done their duties abundantly, if they have been at church, whether they mind any thing done there or no: this they call serving of God, as if it were their whole duty; so backward are they to understand more, though it be plain the law of God expressly requires more. But that they have fully satisfied the law of the land, nobody doubts; nor is it easy to answer what was replied to me on this occasion, viz. If the magistrate intended any thing more in those laws but conformity, would he not have said it? To which let me add, if the magistrate intended conformity as the fruit of conviction, would he not have taken some care to have them instructed before they conformed and examined when they did? But it is presumable their ignorance, corruption, and lusts, all drop off in the church-porch, and that they become perfectly good christians as soon as they have taken their seats in the church.

If there be any whom your example or writing hath inspired with acuteness enough to find out this; I suspect the vulgar, who have scarce time and thought enough to make inferences from the law, which scarce one of ten of them ever so much as reads, or perhaps understands when read; are still, and will be ignorant of it: and those who have the time and abilities to argue about it, will find reason to think that those penalties were not intended to make men examine the doctrine and ceremonies of religion; since those who should examine, are prohibited by those very laws to follow their own judgments (which is the very end and use of examination), if they at all differ from the religion established by law. Nor can it appear so “plain to all concerned that the punishment is intended to make them consider and examine,” when they see the punishments you say are to make people consider, spare those who consider and examine matters of religion, as little as any of the most ignorant and careless dissenters.

To my saying, Some dissenters may have considered “already, and then force employed upon them must needs be useless; unless you can think it useful to punish a man to make him do that which he has done already:” You reply, “No man who rejects truth necessary to his salvation, has considered already as he ought to consider.” The words “as he ought,” are not, as I take it, in the question: and so your answer is, “No man who rejects the truth necessary to his salvation, hath considered, studied, or examined matters of religion.” But we will let that go: and yet with that allowance, your answer will be nothing to the purpose, unless you will dare to say, that all dissenters reject truth necessary to salvation. For without the supposition, that all dissenters reject the truth necessary to salvation, the argument and answer will stand thus: It may be useless to punish all dissenters to make them consider, because some of them may have considered already. To which the answer is, Yes, some of them may have considered already, but those who reject truth necessary to their salvation have not considered as they ought.

I said, “The greatest part of mankind, being not able to discern betwixt truth and falsehood, that depends upon long and many proofs, and remote consequences; nor having ability enough to discover the false grounds, and resist the captious and fallacious arguments of learned men versed in controversies; are so much more exposed, by the force, which is used to make them hearken to the information and instruction of men appointed to it by the magistrate, or those of his religion, to be led into falsehood and

error, than they are likely this way to be brought to embrace the truth which must save them; by how much the national religions of the world are, beyond comparison, more of them false or erroneous, than such as have God for their author, and truth for their standard.” You reply, “If the first part of this be true, then an infallible guide, and implicit faith, are more necessary than ever you thought them.” Whether you conclude from thence or no, that then there will be a necessity of an infallible guide, and an implicit faith, it is nevertheless true, that the greatest part of men are unable to discern, as I said, between truth and falsehood depending upon long and many proofs, &c. But whether that will make an infallible guide necessary or no, imposition in matters of religion certainly will: since there can be nothing more absurd imaginable, than that a man should take upon him to impose on others in matters of their eternal concernment, without being, or so much as pretending to be infallible: for colour it with the name of considering, as much as you please, as long as it is to make men consider as they ought, and considering as they ought, is so to consider, as to embrace; the using of force to make men consider, and the using of force to make them embrace any doctrine or opinion, is the same thing: and to show a difference betwixt imposing an opinion, and using force to make it be embraced, would require such a piece of subtilty, as I heard lately from a learned man out of the pulpit, who told us, that though two things, he named, were all one, yet for distinction’s sake he would divide them. Your reason for the necessity of an infallible guide, is, “For if the greatest part of mankind be not able to discern betwixt truth and falsehood, in matters concerning their salvation (as I must mean if I speak to the purpose), their condition must needs be very hazardous, if they have not some guide or judge, to whose determination and direction they may securely resign themselves.” And therefore they must resign themselves to the determination and direction of the civil magistrate, or be punished. Here it is like you will have something again to say to my modesty and conscience, for imputing to you what you nowhere say. I grant it, in direct words, but in effect, as plainly as may be. The magistrate may impose sound creeds and decent ceremonies, i.e. such as he thinks fit, for what is sound and decent he I hope must be judge; and if he be judge of what is sound and decent, it amounts to no more but what he thinks fit: and if it be not what he thinks fit, why is one ceremony preferred to another? Why one doctrine of the scripture put into the creed and articles, and another as sound left out? They

are truths necessary to salvation. We shall see that in good time: here only I ask, does the magistrate only believe them to be truths and ceremonies necessary to salvation, or does he certainly know them to be so? If you say he only believes them to be so, and that that is enough to authorize him to impose them, you, by your own confession, authorize magistrates to impose what they think necessary for the salvation of their subjects souls; and so the king of France did what he was obliged to, when he said he would have all his subjects saved, and so fell to dragooning.

If you say the magistrate certainly knows them to be necessary to salvation, we are luckily come to an infallible guide. Well then, the sound creeds are agreed on; the confession and liturgy are framed; the ceremonies pitched on; and the terms of communion thus set up; you have religion established by law; and what now is the subject to do? He is to conform. No; he must first consider. Who bids him consider? Nobody; he may if he pleases; but the law says nothing to him of it: consider or not consider, if he conforms, it is well, and he is approved of and admitted. He does consider the best he can, but finds some things he does not understand, other things he cannot believe, assent or consent to. What now is to be done with him? He must either be punished on, or resign himself up to the determination and direction of the civil magistrate; which, till you can find a better name for it, we will call implicit faith. And thus you have provided a remedy for the hazardous condition of weak understandings, in that which you suppose necessary in the case, viz. an infallible guide and implicit faith, in matters concerning men's salvation.

But you say, "For your part, you know of no such guide of God's appointing." Let that be your rule, and the magistrate with his coactive power will be left out too. You think there is no need of any such; because notwithstanding the long and many proofs and remote consequences, the false grounds and the captious and fallacious arguments of learned men versed in controversies, "with which I (as well as those of the Roman communion) endeavour to amuse you; through the goodness of God the truth which is necessary to salvation, lies so obvious and exposed to all that sincerely and diligently seek it, that no such persons shall ever fail of attaining the knowledge of it." This then is your answer, that "truths necessary to salvation are obvious; so that those who seek them sincerely and diligently, are not in danger to be misled or exposed in those to error, by the weakness of their understandings. This will be a good answer to what

I objected from the danger most are in to be led into error, by the magistrate's adding force to the arguments for their national established religions; when you have shown that nothing is wont to be imposed in national religions, but what is necessary to salvation; or which will a little better accommodate your hypothesis, when you can show that nothing is imposed, or required for communion with the church of England, but what is necessary to salvation; and consequently is very easy and obvious to be known, and distinguished from falsehood. And indeed, besides what you say here, upon your hypothesis, that force is lawful only because it is necessary to bring men to salvation; it cannot be lawful to use it, to bring men to any thing, but what is absolutely necessary to salvation. For if the lawfulness of force be only from the need men have of it to bring them to salvation, it cannot lawfully be used to bring men to that which they do not need, or is not necessary to their salvation; for in such an application of it, it is not needful to their salvation. Can you therefore say that there is nothing required to be believed and professed in the church of England, but what lies "so obvious and exposed to all that sincerely and diligently seek it, that no such person shall ever fail of attaining the knowledge of it?" What think you of St. Athanasius's creed? Is the sense of that so obvious and exposed to every one who seeks it; which so many learned men have explained so different ways, and which yet a great many profess they cannot understand? Or is it necessary to your or my salvation, that you or I should believe and pronounce all those damned who do not believe that creed, i. e. every proposition in it? which I fear would extend to not a few of the church of England; unless we can think that people believe, i. e. assent to the truth of propositions they do not at all understand. If ever you were acquainted with a country parish, you must needs have a strange opinion of them, if you think all the plowmen and milkmaids at church understood all the propositions in Athanasius's creed; it is more, truly, than I should be apt to think of any one of them; and yet I cannot hence believe myself authorized to judge or pronounce them all damned: it is too bold an intrenching on the prerogative of the Almighty; to their own master they stand or fall.

The doctrine of original sin, is that which is professed and must be owned by the members of the church of England, as is evident from the XXXIX articles, and several passages in the liturgy: and yet I ask you, whether this be "so obvious and exposed to all that diligently and sincerely seek the truth," that one who is in the communion of the church of England,

sincerely seeking the truth, may not raise to himself such difficulties, concerning the doctrine of original sin, as may puzzle him though he be a man of study; and whether he may not push his inquiries so far, as to be staggered in his opinion?

If you grant me this, as I am apt to think you will, then I inquire whether it be not true, notwithstanding what you say concerning the plainness and obviousness of truths necessary to salvation, that a great part of mankind may not be able to discern between truth and falsehood, in several points, which are thought so far to concern their salvation, as to be made necessary parts of the national religion?

If you say it may be so, then I have nothing further to inquire; but shall only advise you not to be so severe hereafter in your censure of Mr. Reynolds, as you are, where you tell me, that “famous instance I give of the two Reynolds’s is not of any moment to prove the contrary; unless I can undertake, that he that erred was as sincere in his inquiry after that truth, as I suppose him able to examine and judge.”

You will, I suppose, be more charitable another time, when you have considered, that neither sincerity, nor freedom from error, even in the established doctrines of their own church, is the privilege of those who join themselves in outward profession to any national church whatsoever. And it is not impossible, that one who has subscribed the XXXIX articles, may yet make it a question, “Whether it may be truly said that God imputes the first sin of Adam to his posterity?” &c. But we are apt to be so fond of our own opinions, and almost infallibility, that we will not allow them to be sincere, who quit our communion; whilst at the same time we tell the world, it is presumable, that all who embrace it do it sincerely, and upon conviction; though we cannot but know many of them to be but loose, inconsiderate, and ignorant people. This is all the reason you have, when you speak of the Reynolds’s, to suspect one of the brothers more than the other: and to think that Mr. Chillingworth had not as much sincerity when he quitted, as when he returned to the church of England, is a partiality which nothing can justify without pretending to infallibility.

To show that you do not fancy your force to be useful, but that you “judge so upon just and sufficient grounds, you tell us, the strong probability of its success is grounded upon the consideration of human nature, and the general temper of mankind, apt to be wrought upon by the method you speak of, and upon the indisputable attestation of experience.”

The consideration of human nature, and the general temper of mankind, will teach one this, that men are apt, in things within their power, to be wrought upon by force, and the more wrought upon, the greater the force or punishments are: so that where moderate penalties will not work, great severities will. Which consideration of human nature, if it be a just ground to judge any force useful, will I fear necessarily carry you, in your judgment, to severities beyond the moderate penalties, so often mentioned in your system, upon a strong probability of the success of greater punishments, where less would not prevail.

But if to consider so as you require, i. e. so as to embrace, and believe, be not in their power, then no force at all, great or little, is or can be useful. You must therefore (consider it which way you will) either renounce all force as useful, or pull off your mask, and own all the severities of the cruelest persecutors.

The other reason of your judging force to be useful, you say, is grounded on the indisputable attestation of experience. Pray tell us where you have this attestation of experience for your moderate, which is the only useful, force: name the country where true religion or sound christianity has been nationally received, and established by moderate penal laws, that the observing persons you appeal to, may know where to employ their observation: tell us how long it was tried, and what was the success of it? And where there has been the relaxation of such moderate penal laws, the fruits whereof have continually been epicurism and atheism? Till you do this, I fear, that all the world will think there is a more indisputable attestation of experience for the success of dragooning, and the severities you condemn, than of your moderate method; which we shall compare with the king of France's, and see which is most successful in making proselytes to church conformity: (for yours as well as his reach no farther than that) when you produce your examples: the confident talk whereof is good to countenance a cause, though experience there be none in the case.

But you "appeal, you say, to all observing persons, whether wherever true religion or sound christianity have been nationally received and established by moderate penal laws, it has not always visibly lost ground by the relaxation of those laws?" True or false religions, sound or unsound christianity, wherever established into national religions by penal laws, always have lost, and always will lose ground, i. e. lose several of their conforming professors upon the relaxation of those laws. But this concerns

not the true, more than other religions, nor is any prejudice to it; but only shows that many are, by the penalties of the law, kept in the communion of the national religion, who are not really convinced or persuaded of it: and therefore, as soon as liberty is given, they own the dislike they had many of them before, and out of persuasion, curiosity, &c. seek out and betake themselves to some other profession. This need not startle the magistrates of any religion, much less those of the true; since they will be sure to retain those, who more mind their secular interest than the truth of religion; who are every-where the greater number, by the advantages of countenance and preferment: and if it be the true religion, they will retain those also, who are in earnest about it, by the strong tie of conscience and conviction.

You go on, “Whether sects and heresies (even the wildest and most absurd, and even epicurism and atheism) have not continually thereupon spread themselves, and whether the very life of christianity has not sensibly decayed, as well as the number of sound professors of it been daily lessened upon it.” As to atheism and epicurism, whether they spread more under toleration, or national religions, established by moderate penal laws; when you show us the countries where fair trial hath been made of both, that we may compare them together, we shall better be able to judge.

“Epicurism and atheism, say you, are found constantly to spread themselves upon the relaxation of moderate penal laws.” We will suppose your history to be full of instances of such relaxations, which you will in good time communicate to the world, that wants this assistance from your observation. But were this to be justified out of history, yet would it not be any argument against toleration; unless your history can furnish you with a new sort of religion founded in atheism. However, you do well to charge the spreading of atheism upon toleration in matters of religion, as an argument against those who deny atheism, which takes away all religion, to have any right to toleration at all. But perhaps, as is usual for those who think all the world should see with their eyes, and receive their systems for unquestionable verities, zeal for your own way makes you call all atheism, that agrees not with it. That which makes me doubt of this, are these following words: “Not to speak of what at this time our eyes cannot but see, for fear of giving offence: though I hope it will be none to any, that have a just concern for truth and piety, to take notice of the books and pamphlets which now fly so thick about this kingdom, manifestly tending to the multiplying of sects and divisions, and even to the promoting of scepticism

in religion amongst us. In which number, you say, you shall not much need my pardon, if you reckon the first and second letter concerning toleration.” Wherein, by a broad insinuation, you impute the spreading of atheism amongst us, to the late relaxation made in favour of protestant dissenters: and yet all that you can take notice of as a proof of this, is, “the books and pamphlets which now fly so thick about this kingdom, manifestly tending to the multiplying of sects and divisions, and even to the promoting of scepticism in religion amongst us;” and, for instance, you name the first and second letter concerning toleration. If one may guess at the others by these; the atheism and scepticism you accuse them of will have but little more in it, than an opposition to your hypothesis; on which the whole business of religion must so turn, that whatever agrees not with your system, must presently, by interpretation, be concluded to tend to the promoting of atheism or scepticism in religion. For I challenge you to show, in either of those two letters you mention, one word tending to epicurism, atheism, or scepticism in religion.

But, sir, against the next time you are to give an account of books and pamphlets tending to the promoting scepticism in religion amongst us, I shall mind you of the “Third letter concerning toleration,” to be added to the catalogue, which asserting and building upon this, that “true religion may be known by those who profess it to be the only true religion” does not a little towards betraying the christian religion to sceptics. For what greater advantage can be given them, than to teach, that one may know the true religion? thereby putting into their hands a right to demand it to be demonstrated to them, that the christian religion is true, and bringing on the professors of it a necessity of doing it. I have heard it complained of as one great artifice of sceptics, to require demonstrations where they neither could be had, nor were necessary. But if the true religion may be known to men to be so, a sceptic may require, and you cannot blame him if he does not receive your religion, upon the strongest probable arguments without demonstration.

And if one should demand of you a demonstration of the truths of your religion, which I beseech you, would you do, either renounce your assertion, that it may be known to be true, or else undertake to demonstrate it to him?

And as for the decay of the very life and spirit of christianity, and the spreading of epicurism amongst us: I ask, what can more tend to the

promoting of them than this doctrine, which is to be found in the same letter, viz. That it is presumable that those who conform, do it upon reason and conviction? When you can instance in any thing so much tending to the promoting of scepticism in religion and epicurism, in the first or second letter concerning toleration, we shall have reason to think you have some ground for what you say.

As to epicurism, the spreading whereof you likewise impute to the relaxation of your moderate penal laws; that, so far as it is distinct from atheism, I think regards men's lives more than their religions, i. e. speculative opinions in religion and ways of worship, which is what we mean by religion, as concerned in toleration. And for the toleration of corrupt manners, and the debaucheries of life, neither our author nor I do plead for it; but say it is properly the magistrate's business by punishments to restrain and suppress them. I do not therefore blame your zeal against atheism and epicurism; but you discover a great zeal against something else, in charging them on toleration, when it is in the magistrate's power to restrain and suppress them by more effectual laws than those for church conformity. For there are those who will tell you, that an outward profession of the national religion, even where it is the true religion, is no more opposite to, or inconsistent with atheism or epicurism, than the owning of another religion, especially any christian profession, that differs from it. And therefore you in vain impute atheism or epicurism to the relaxation of penal laws, that require no more than an outward conformity to the national church.

As to the sects and unchristian divisions, (for other divisions there may be without prejudice to christianity,) at whose door they chiefly ought to be laid, I have showed you elsewhere.

One thing I cannot but take notice of here, that having named "sects, heresies, epicurism, atheism, and a decay of the spirit and life of christianity," as the fruits of relaxation, for which you had the attestation of former experience, you add these words, "Not to speak of what our eyes at this time cannot but see, for fear of giving offence." Whom is it, I beseech you, you are so afraid of offending, if you should speak of the "epicurism, atheism, and decay of the spirit and life of christianity," amongst us? But I see, he that is so moderate in one part of his letter, that he will not take upon him to teach law-makers and governors, even what they cannot know without being taught by him, i. e. what he calls moderate penalties or force;

may yet, in another part of the same letter, by broad insinuations, use reproaches, wherein it is a hard matter to think law-makers and governors are not meant. But whoever be meant, it is at least adviseable, in accusations that are easier suggested than made out, to cast abroad the slander in general, and leave others to apply it, for fear those who are named, and so justly offended with a false imputation, should be entitled to ask, as in this case, how it appears, “that sects and heresies have multiplied, epicurism and atheism spread themselves, and that the life and spirit of christianity is decayed” more within these two years, than it was before; and that all this mischief is owing to the late relaxation of the penal laws against protestant dissenters?

You go on, “And if these have always been the fruits of the relaxation of moderate penal laws, made for the preserving and advancing true religion; you think this consideration alone is abundantly sufficient to show the usefulness and benefit of such laws. For if these evils have constantly sprung from the relaxation of those laws, it is evident they were prevented before by those laws.” One would think by your saying, “always been the fruits, and constantly sprung,” that moderate penal laws, for preserving the true religion, had been the constant practice of all christian commonwealths; and that relaxations of them, in favour of a free toleration, had frequently happened; and that there were examples both of the one and the other, as common and known, as of princes that have persecuted for religion, and learned men who have employed their skill to make it good. But till you show us in what ages or countries your moderate establishments were in fashion, and where they were again removed to make way for our author’s toleration; you to as little purpose talk of the fruits of them, as if you should talk of the fruit of a tree which nobody planted, or was no-where suffered to grow till one might see what fruit came from it.

Having laid it down as one of the conditions for a fair debate of this controversy, “That it should be without supposing all along your church in the right, and your religion the true;” I add these words: “Which can no more be allowed to you in this case, whatever your church or religion be, than it can be to a papist or a lutheran, a presbyterian or an anabaptist; nay, no more to you, than it can be allowed to a jew or mahometan.” To which you reply, “No, Sir? Not whatever your church or religion be? That seems somewhat hard. And you think I might have given you some reason for what I say: for certainly it is not so self-evident as to need no proof. But you

think it is no hard matter to guess at my reason, though I did not think fit expressly to own it. For it is obvious enough, there can be no other reason for this assertion of mine, but either the equal truth, or at least the equal certainty (or uncertainty) of all religions. For whoever considers my assertion, must see, that to make it good I shall be obliged to maintain one of these two things: either, 1. That no religion is the true religion, in opposition to other religions: which makes all religions true or false, and so either way indifferent. Or, 2. That though some one religion be the true religion, yet no man can have any more reason than another man of another religion may have, to believe his to be the true religion. Which makes all religions equally certain, (or uncertain, whether I please,) and so renders it vain and idle to inquire after the true religion, and only a piece of good luck if any man be of it; and such good luck as he can never know that he has, till he come into the other world. Whether of these two principles I will own, you know not. But certainly one or other of them lies at the bottom with me, and is the lurking supposition upon which I build all that I say.”

Certainly no, Sir, neither of these reasons you have so ingenuously and friendly found out for me, lies at the bottom; but this, that whatever privilege or power you claim, upon your supposing yours to be the true religion, is equally due to another, who supposes his to be the true religion, upon the same claim: and therefore that is no more to be allowed to you than to him. For whose is really the true religion, yours or his, being the matter in contest betwixt you, your supposing can no more determine it on your side, than his supposing on his; unless you can think you have a right to judge in your own cause. You believe yours to be the true religion, so does he believe his; you say you are certain of it, so says he, he is: you think you have “arguments proper and sufficient” to convince him, if he would consider them; the same thinks he of his. If this claim, which is equally on both sides, be allowed to either, without any proof; it is plain he, in whose favour it is allowed, is allowed to be judge in his own cause, which nobody can have a right to be, who is not at least infallible. If you come to arguments and proofs, which you must do, before it can be determined whose is the true religion, it is plain your supposition is not allowed.

In our present case, in using punishments in religion, your supposing yours to be the true religion, gives you or your magistrate no more advantage over a papist, presbyterian, or mahometan, or more reason to punish either of them for his religion, than the same supposition in a papist,

presbyterian, or mahometan, gives any of them, or a magistrate of their religion, advantage over you, or reason to punish you for your religion: and therefore this supposition, to any purpose or privilege of using force, is no more to be allowed to you, than to any one of any other religion. This the words, in this case, which I there used, would have satisfied any other to have been my meaning: but whether your charity made you not to take notice of them, or the joy of such an advantage as this, not to understand them, this is certain, you were resolved not to lose the opportunity, such a place as this afforded you, of showing your gift, in commenting and guessing shrewdly at a man's reasons, when he does not think fit expressly to own them himself.

I must own you are a very lucky hand at it; and as you do it here upon the same ground, so it is just with the same success, as you in another place have exercised your logic on my saying something to the same purpose, as I do here. But, Sir, if you will add but one more to your plentiful stock of distinctions, and observe the difference there is between the ground of any one's supposing his religion is true, and the privilege he may pretend to by supposing it true, you will never stumble at this again; but you will find, that though upon the former of these accounts, men of all religions cannot be equally allowed to suppose their religions true, yet, in reference to the latter, the supposition may and ought to be allowed, or denied equally to all men. And the reason of it is plain, viz. because the assurance wherewith one man supposes his religion to be true, being no more an argument of its truth to another, than vice versâ; neither of them can claim by the assurance, wherewith he supposes his religion the true, any prerogative or power over the other, which the other has not by the same title an equal claim to over him. If this will not serve to spare you the pains another time of any more such reasonings, as we have twice had on this subject, I think I shall be forced to send you to my mahometans or pagans: and I doubt whether I am not less civil to your parts than I should be, that I do not send you to them now.

You go on, and say, "But as unreasonable as this condition is, you see no need you have to decline it, nor any occasion I had to impose it upon you. For certainly the making what I call your new method consistent and practicable, does no way oblige you to suppose all along your religion the true, as I imagine." And as I imagine it does: for without that supposition, I would fain have you show me, how it is in any one country practicable to

punish men to bring them to the true religion. For if you will argue for force, as necessary to bring men to the true religion, without supposing yours to be it; you will find yourself under some such difficulty as this, that then it must be first determined (and you will require it should be) which is the true religion, before any one can have a right to use force to bring men to it; which, if every one did not determine for himself, by supposing his own the true; nobody, I think, will desire toleration any longer than till that be settled.

You go on: “No, Sir, it is enough for that purpose that there is one true religion, and but one.” Suppose not the national religion established by law in England to be that, and then even upon your principles of its being useful, and that the magistrate has a commission to use force for the promoting the true religion, prove, if you please, that the magistrate has a power to use force to bring men to the national religion in England. For then you must prove the national religion, as established by law in England, to be that one true religion, and so the true religion; that he rejects the true religion who dissents from any part of it; and, so rejecting the true religion, cannot be saved. But of this more in another place.

Your other two suppositions, which you join to the foregoing, are, “That that religion may be known by those who profess it, to be the only true religion; and may also be manifested to be such by them to others, so far at least, as to oblige them to receive it, and to leave them without excuse, if they do not.”

These, you say, are suppositions, “enough for the making your method consistent and practicable.” They are, I guess, more than enough, for you, upon them, to prove any national religion in the world the only true religion. And till you have proved (for you profess here to have quitted the supposition of any one’s being true, as necessary to your hypothesis) some national religion to be that only true religion, I would gladly know how it is any-where practicable to use force to bring men to the true religion.

You suppose “there is one true religion, and but one.” In this we are both agreed: and from hence, I think, it will follow, since whoever is of this true religion shall be saved, and without being of it no man shall be saved, that upon your second and third suppositions it will be hard to show any national religion to be this only true religion. For who is it will say, he knows, or that it is knowable, that any national religion (wherein must be comprehended all that, by the penal laws, he is required to embrace) is that

only true religion; which if men reject, they shall; and which, if they embrace, they shall not; miss salvation? Or can you undertake that any national religion in the world can be manifested to be such, i. e. in short, to contain all things necessary to salvation, and nothing but what is so? For that, and that alone, is the one only true religion, without which nobody can be saved; and which is enough for the salvation of every one who embraces it. And therefore whatever is less or more than this, is not the one only true religion; or that which there is a necessity for their salvation men should be forced to embrace.

I do not hereby deny, that there is any national religion which contains all that is necessary to salvation; for so doth the Romish religion, which is not for all that, so much as a true religion. Nor do I deny, that there are national religions that contain all things necessary to salvation, and nothing inconsistent with it, and so may be called true religions. But since they all of them join with what is necessary to salvation, a great deal that is not so, and make that as necessary to communion, as what is necessary to salvation, not suffering any one to be of their communion, without taking all together; nor to live amongst them free from punishment, out of their communion; will you affirm, that any of the national religions of the world, which are imposed by penal laws, and to which men are driven with force; can be said to be that one only true religion, which if men embrace, they shall be saved; and which, if they embrace not, they shall be damned? And therefore your two suppositions, true or false, are not enough to make it practicable, upon your principles of necessity, to use force upon dissenters from the national religion, though it contain in it nothing but truth; unless that which is required to communion be all necessary to salvation. For whatever is not necessary to salvation, there is no necessity any one should embrace. So that whenever you speak of the true religion, to make it to your purpose, you must speak only of what is necessary to salvation; unless you will say, that in order to the salvation of men's souls, it is necessary to use force to bring them to embrace something, that is not necessary to their salvation. I think that neither you, or any body-else, will affirm, that it is necessary to use force to bring men to receive all the truths of the christian religion, though they are truths God has thought fit to reveal. For then, by your own rule, you who profess the christian religion, must know them all, and must be able to manifest them to others; for it is on that here you ground the necessity and reasonableness of penalties used to bring men to

embrace the truth. But I suspect it is the good word religion (as in other places other words) has misled you, whilst you content yourself with good sounds, and some confused notions, that usually accompany them, without annexing to them any precise determined signification. To convince you that it is not without ground I say this, I shall desire you but to set down what you mean here by true religion; that we may know what in your sense is, and what is not contained in it. Would you but do this fairly, and define your words, or use them in one constant settled sense, I think the controversy between you and me would be at an end, without any further trouble.

Having showed of what advantage they are like to be to you for the making your method practicable; in the next place let us consider your suppositions themselves. As to the first, “there is one true religion, and but one,” we are agreed. But what you say in the next place, that “that one true religion may be known by those who profess it,” will need a little examination. As, first, it will be necessary to inquire, what you mean by known; whether you mean by it knowledge properly so called, as contradistinguished to belief; or only the assurance of a firm belief? If the latter, I leave you your supposition to make your use of it; only with this desire, that to avoid mistakes, when you do make any use of it, you would call it believing. If you mean that the true religion may be known with the certainty of knowledge properly so called; I ask you farther, whether that true religion be to be known by the light of nature, or needed a divine revelation to discover it? If you say, as I suppose you will, the latter; then I ask whether the making out of that to be a divine revelation, depends not upon particular matters of fact, whereof you were no eyewitness; but were done many ages before you were born? and if so, by what principles of science they can be known to any man now living?

The articles of my religion, and of a great many such other short-sighted people as I am, are articles of faith, which we think there are so good grounds to believe, that we are persuaded to venture our eternal happiness on that belief: and hope to be of that number of whom our Saviour said, “Blessed are they that have not seen, and yet have believed.” But we neither think that God requires, nor has given us faculties capable of knowing in this world several of those truths, which are to be believed to salvation. If you have a religion, all whose general truths are either self-evident, or capable of demonstration, (for matters of fact are not capable of being any

way known but to the by-standers,) you will do well to let it be known, for the ending of controversies, and banishing of error, concerning any of those points, out of the world. For whatever may be known, besides matter of fact, is capable of demonstration; and when you have demonstrated to any one any point in religion, you shall have my consent to punish him if he do not assent to it. But yet let me tell you, there are many truths even in mathematics, the evidence whereof one man seeing, is able to demonstrate to himself, and so may know them: which evidence yet he not being able to make another see, (which is to demonstrate to him,) he cannot make known to him, though his scholar be willing, and with all his power applies himself to learn it.

But granting your supposition, “that the one true religion may be known by those who profess it to be the only true religion;” will it follow from hence, that because it is knowable to be the true religion, therefore the magistrate who professes it actually knows it to be so? Without which knowledge, upon your principles, he cannot use force to bring men to it. But if you are but at hand to assure him which is the true religion, for which he ought to use force, he is bound to believe you; and that will do as well as if he examined and knew himself, or perhaps better. For you seem not well satisfied with what the magistrates have lately done, without your leave, concerning religion in England. And I confess the easiest way to remove all difficulties in the case, is for you to be the magistrate’s infallible guide in matters of religion. And therefore you do well here also to keep to your safe style, lest if your sense were clear and determined, it might be more exposed to exceptions; and therefore you tell us the true religion may be known by those who profess it. For not saying by some of those, or by all those, the error of what you say is not so easily observed, and requires the more trouble to come at: which I shall spare myself here, being satisfied that the magistrate, who has so full an employment of his thoughts in the cares of his government, has not an overplus of leisure to attain that knowledge which you require, and so usually contents himself with believing.

Your next supposition is, that “the one true religion may also be manifested to be such, by them, to others; so far, at least, as to oblige them to receive it, and leave them without excuse if they do not.” That it can be manifested to some, so as to oblige, i. e. cause them to receive it, is evident, because it is received. But because this seems to be spoken more in

reference to those who do not receive it, as appears by these following words of yours: “then it is altogether as plain, that it may be very reasonable and necessary for some men to change their religion; and that it may be made appear to them to be so. And then, if such men will not consider what is offered to convince them of the reasonableness and necessity of doing it; it may be very fit and reasonable,” you tell me, “for any thing I have said to the contrary, in order to the bringing them to the consideration, to require them, under convenient penalties, to forsake their false religions, and embrace the true.” You suppose the true religion may be so manifested by a man that is of it, to all men so far as to leave them, if they do not embrace it, without excuse. Without excuse, to whom I beseech you? To God indeed, but not to the magistrate; who can never know whether it has been so manifested to any man, that it has been through his fault that he has not been convinced; and not through the fault of him to whom the magistrate committed the care of convincing him: and it is a sufficient excuse to the magistrate, for any one to say to him, I have not neglected to consider the arguments that have been offered me, by those whom you have employed to manifest it to me; but that yours is the only true religion I am not convinced. Which is so direct and sufficient an excuse to the magistrate, that had he an express commission from heaven to punish all those who did not consider; he could not yet justly punish any one whom he could not convince had not considered. But you endeavour to avoid this, by what you infer from this supposition, viz. “That then it may be very fit and reasonable, for any thing I have said to the contrary, to require men under convenient penalties to forsake their false religions, to embrace the true, in order to the bringing them to consideration.” Whether I have said any thing to the contrary, or no, the readers must judge, and I need not repeat. But now, I say, it is neither just nor reasonable to require men under penalties, to attain one end, in order to bring them to use the means not necessary to that, but to another end. For where is it you can say (unless you will return to your old supposition, of yours being the true religion; which you say is not necessary to your method) that men are by the law “required to forsake their false religions, and embrace the true?” The utmost is this, in all countries where the national religion is imposed by law, men are required under the penalties of those laws outwardly to conform to it; which you say is in order to make them consider. So that your punishments are for the attaining one end, viz. Conformity, in order to make men use consideration, which is a

means not necessary to that, but another end, viz. finding out and embracing the one true religion. For however consideration may be a necessary means to find and embrace the one true religion, it is not at all a necessary means to outward conformity in the communion of any religion.

To manifest the consistency and practicableness of your method to the question, what advantage would it be to the true religion, if magistrates did every-where so punish? You answer, That “by the magistrates punishing, if I speak to the purpose, I must mean their punishing men for rejecting the true religion, (so tendered to them, as has been said,) in order to the bringing them to consider and embrace it. Now before we can suppose magistrates every-where so to punish, we must suppose the true religion to be every-where the national religion. And if this were the case, you think it is evident enough, what advantage to the true religion it would be, if magistrates every-where did so punish. For then we might reasonably hope that all false religions would soon vanish, and the true become once more the only religion in the world; whereas if magistrates should not so punish, it were much to be feared (especially considering what has already happened) that on the contrary false religions and atheism, as more agreeable to the soil, would daily take deeper root, and propagate themselves, till there were no room left for the true religion (which is but a foreign plant) in any corner of the world.”

If you can make it practicable that the magistrate should punish men for rejecting the true religion, without judging which is the true religion; or if true religion could appear in person, take the magistrate’s seat, and there judge all that rejected her, something might be done. But the mischief of it is, it is a man that must condemn, men must punish; and men cannot do this but by judging who is guilty of the crime which they punish. An oracle, or an interpreter of the law of nature, who speaks as clearly, tells the magistrate he may and ought to punish those, “who reject the true religion, tendered with sufficient evidence:” the magistrate is satisfied of his authority, and believes this commission to be good. Now I would know how possibly he can execute it, without making himself the judge first what is the true religion; unless the law of nature at the same time delivered into his hands the XXXIX articles of the one only true religion; and another book wherein all the ceremonies and outward worship of it are contained. But it being certain, that the law of nature has not done this; and as certain, that the articles, ceremonies, and discipline of this one only true religion, have

been often varied in several ages and countries, since the magistrate's commission by the law of nature was first given: there is no remedy left, but that the magistrate must judge what is the true religion, if he must punish them who reject it. Suppose the magistrate be commissioned to punish those who depart from right reason; the magistrate can yet never punish any one, unless he be judge what is right reason; and then judging that murder, theft, adultery, narrow cart-wheels, or want of bows and arrows in a man's house, are against right reason, he may make laws to punish men guilty of those, as rejecting right reason.

So if the magistrate in England or France, having a commission to punish those who reject the one only true religion, judges the religion of his national church to be it; it is possible for him to lay penalties on those who reject it, pursuant to that commission; otherwise, without judging that to be the one only true religion, it is wholly impracticable for him to punish those who embrace it not, as rejecters of the one only true religion.

To provide as good a salvo as the thing will bear, you say, in the following words, "Before we can suppose magistrates every-where so to punish, we must suppose the true religion to be every-where the national." That is true of actual punishment, but not of laying on penalties by law; for that would be to suppose the national religion makes or chooses the magistrate, and not the magistrate the national religion. But we see the contrary; for let the national religion be what it will before, the magistrate doth not always fall into it and embrace that; but if he thinks not that, but some other the true, the first opportunity he has, he changes the national religion into that which he judges the true, and then punishes the dissenters from it; where his judgment, which is the true religion, always necessarily precedes, and is that which ultimately does, and must determine who are rejecters of the true religion, and so obnoxious to punishment. This being so, I would gladly see how your method can be any way practicable to the advantage of the true religion, whereof the magistrate every-where must be judge, or else he can punish nobody at all.

You tell me that whereas I say, that to justify punishment it is requisite that it be directly useful for the procuring some greater good than that which it takes away; you "wish I had told you why it must needs be directly useful for that purpose." However exact you may be in demanding reasons of what is said, I thought here you had no cause to complain; but you let slip out of your memory the foregoing words of this passage, which

together stands thus, "Punishment is some evil, some inconvenience, some suffering, by taking away or abridging some good thing, which he who is punished has otherwise a right to. Now to justify the bringing any such evil upon any man, two things are requisite; 1. That he that does it has a commission so to do. 2. That it be directly useful for the promoting some greater good." It is evident by these words, that punishment brings direct evil upon a man, and therefore it should not be used but where it is directly useful for the promoting some greater good. In this case, the signification of the word directly, carries a manifest reason in it, to any one who understands what directly means. If the taking away any good from a man cannot be justified, but by making it a means to procure a greater; is it not plain it must be so a means as to have, in the operation of causes and effects, a natural tendency to that effect? and then it is called directly useful to such an end: and this may give you a reason, "why punishment must be directly useful for that purpose." I know you are very tender of your indirect and at a distance usefulness of force, which I have in another place showed to be, in your way, only useful by accident; nor will the question you here subjoin excuse it from being so, viz. "Why penalties are not as directly useful for the bringing men to the true religion, as the rod of correction is to drive foolishness from a child, or to work wisdom in him?" Because the rod works on the will of the child, to obey the reason of the father, whilst under his tuition; and thereby makes it supple to the dictates of his own reason afterwards, and disposes him to obey the light of that when being grown to be a man, that is to be his guide, and this is wisdom. If your penalties are so used, I have nothing to say to them.

Your way is charged to be impracticable to those ends you propose which you endeavour to clear, . That there may be fair play on both sides, the reader shall have in the same view what we both say:

L. II. P. 125.

"It remains now to examine, whether the author's argument will not hold good, even against punishments in your way. For if the magistrate's authority be, as you here say, only to procure all his subjects (mark what you say, all his subjects) the means of discovering the way of salvation and to procure withal, as much as in him lies, that none remain ignorant of it, or refuse to embrace it, either for want of using those means or by reason of any such prejudices as may render them ineffectual. If this be the

magistrate's business, in reference to all his subjects; I desire you, or any man else, to tell me how this can be done, by the application of force only to a part of them; unless you will still vainly suppose ignorance, negligence, or prejudice, only amongst that part which anywhere differs from the magistrate. If those of the magistrate's church may be ignorant of the way of salvation; if it be possible there may be amongst them those who refuse to embrace it, either for want of using those means, or by reason of any such prejudices as may render them ineffectual; what in this case becomes of the magistrate's authority to procure all his subjects the means of discovering the way of salvation? Must these of his subjects be neglected, and left without the means he has authority to procure them? Or must he use force upon them too? And then, pray show me how this can be done. Shall the magistrate punish those of his own religion to procure them the means of discovering the way of salvation, and to procure, as much as in him lies, that they remain not ignorant of it, or refuse not to embrace it? These are such contradictions in practice, this is such condemnation of a man's own religion, as no one can expect from the magistrate; and I dare say you desire not of him. And yet this is that he must do, if his authority be to procure all his subjects the means of discovering the way to salvation. And if it be so needful, as you say it is, that he should use it; I am sure force cannot do that till it be applied wider, and punishment be laid upon more than you would have it. For if the magistrate be by force to procure, as much as in him lies, that none remain ignorant of the way of salvation, must he not punish all those who are ignorant of the way of salvation? And pray tell me how is this any way practicable, but by supposing none in the national church ignorant, and all out of it ignorant, of the way of salvation? Which what is it, but to punish men barely for not being of the magistrate's religion; the very thing you deny he has authority to do? So that the magistrate having by your own confession, no authority thus to use force; and it being otherways impracticable for the procuring all his subjects the means of discovering the way of salvation; there is an end of force. And so force being laid aside, either as unlawful, or impracticable, the author's argument holds good against force, even in your way of applying it."

L. III. P. 63.

But how little to the purpose this request of yours is, will quickly appear. For if the magistrate provides sufficiently for the instruction of all his subjects in the true religion; and then requires them all, under convenient penalties, to hearken to the teachers and ministers of it, and to profess and exercise it with one accord, under their direction, in public assemblies: is there any pretence to say, that in so doing he applies force only to a part of his subjects; when the law is general, and excepts none? It is true, the magistrate inflicts the penalties in that case only upon them that break the law. But is that the thing you mean by his “applying force only to a part of his subjects?” Would you have him punish all indifferently? them that obey the law, as well as them that do not?

As to ignorance, negligence, and prejudice, I desire you, or any man else, to tell me what better course can be taken to cure them, than that which I have mentioned. For if after all that God’s ministers and the magistrate can do, some will still remain ignorant, negligent, or prejudiced; I do not take that to be any disparagement to it: for certainly that is a very extraordinary remedy, which infallibly cures all diseased persons to whom it is applied.

The backwardness and lusts that hinder an impartial examination, as you describe it, is general. The corruption of nature which hinders a real embracing the true religion, that also you tell us here, is universal, I ask a remedy for these in your way. You say the law for conformity is general, excepts none. Very likely, none that do not conform; but punishes none who, conforming, do neither impartially examine, nor really embrace the true religion. From whence I conclude there is no corruption of nature in those who are brought up or join in outward communion with the church of England. But as to ignorance, negligence, and prejudice, you say “you desire me, or any man else, to tell what better course can be taken to cure them, than that which you have mentioned.” If your church can find no better way to cure ignorance and prejudice, and the negligence that is in men to examine matters of religion, and heartily embrace the true, than what is impracticable upon conformists; then, of all others, conformists are in the most deplorable state. But, as I remember, you have been told of a better way, which is, the discoursing with men seriously and friendly about matters in religion, by those whose profession is the care of souls; examining what they do understand, and where, either through laziness, prejudice, or difficulty, they do stick; and applying to their several diseases proper cures; which it is as impossible to do by a general harangue, once or

twice a week out of the pulpit, as to fit all men's feet with one shoe, or cure all men's ails with one, though very wholesome, diet-drink. To be thus "instant in season, and out of season," some men have thought a better way of cure than a desire only to have men driven by the whip, either in your, or the magistrate's hand, into the sheepfold: where when they are once, whether they understand, or no, their minister's sermons; whether they are, or can be better for them or no; whether they are ignorant and hypocritical conformists, and in that way like to remain so, rather than to become knowing and sincere converts: some bishops have thought it not sufficiently inquired: but this nobody is to mention, for whoever does so, "makes himself an occasion to show his goodwill to the clergy."

This had not been said by me here, now I see how apt you are to be put out of temper with any thing of this kind, though it be in every serious man's mouth; had not you desired me to show you a better way than force, your way applied. And to use your way of arguing, since bare preaching, as now used, it is plain, will not do, there is no other means left but this to deal with the corrupt nature of conformists; for miracles are now ceased, and penalties they are free from; therefore, by your way of concluding, no other being left, this of visiting at home, conferring and instructing, and admonishing men there, and the like means, proposed by the reverend author of the Pastoral Care, is necessary; and men, whose business is the care of souls, are obliged to use it: for you "cannot prove, that it cannot do some service," I think I need not say, "indirectly and at a distance." And if this be proper and sufficient to bring conformists, notwithstanding the corruption of their nature, "to examine impartially, and really embrace the truth that must save them;" it will remain to show, why it may not do as well on nonconformists, whose, I imagine, is the common corruption of nature, to bring them to examine and embrace the truth that must save them? And though it be not so extraordinary a remedy as will infallibly cure all diseased persons to whom it is applied: yet since the corruption of nature, which is the same disease, and hinders the "impartial examination, and hearty embracing the truth that must save them," is equally in both, conformists and nonconformists; it is reasonable to think it should in both have the same cure, let that be what it will.

CHAPTER X. OF THE NECESSITY OF FORCE, IN MATTERS OF RELIGION.

You tell us “you do not ground the lawfulness of such force, as you take to be useful for the promoting the true religion, upon the bare usefulness of such force, but upon the necessity as well as usefulness of it; and therefore you declare it to be no fit means to be used, either for that purpose or any other, where it is not necessary as well as useful.”

How useful force in the magistrate’s hand for bringing men to the true religion, is like to be, we have shown in the foregoing chapter, in answer to what you have said for it. So that it being proved not useful, it is impossible it should be necessary. However we will examine what you say to prove the necessity of it. The foundation you build on for its necessity we have in your Argument considered, ; where having at large dilated on men’s inconsiderateness in the choice of their religions, and their persisting in those they have once chosen, without due examination, you conclude thus: “Now if this be the case, if men are so averse to a due consideration, if they usually take up their religion, without examining it as they ought, what other means is there left?” Wherein you suppose force necessary, instead of proving it to be so; for preaching and persuasion not prevailing upon all men, you upon your own authority think fit something else should be done; and that being resolved, you readily pitch on force, because you say you can find nothing else; which in effect is only to tell us, if the salvation of men’s souls were only left to your discretion, how you would order the matter.

And in your answer to me, you very confidently tell us, “the true religion cannot prevail without the assistance either of miracles or of authority.” I shall here only observe one or two things, and then go on to examine how you make this good.

The first thing I shall observe is, that in your “argument considered,” &c. you suppose force necessary only to master the aversion there is in men to considering and examination: and here in your answer to me, you make force necessary to conquer the aversion there is in men to embrace and obey the true religion. Which are so very different, that the former justifies the use of force only to make men consider; the other justifies the use of force to make men embrace religion. If you meant the same thing when you writ

your first treatise, it was not very ingenuous to express yourself in such words as were not proper to give your reader your true meaning: it being a far different thing to use force to make men consider; which is an action in their power to do or omit; and to use force to make them embrace, i. e. believe any religion; which is not a thing in any one's power to do or forbear as he pleases. If you say you meant barely considering in your first paper, as the whole current of it would make one believe; then I see your hypothesis may mend, as we have seen in other parts, and, in time, may grow to its full stature.

Another thing I shall remark to you, is, that in your first paper, besides preaching and persuasion, and the grace of God, nothing but force was necessary. Here in your second, it is either miracles or authority, which how you make good, we will now consider.

You having said, you had “no reason from any experiment to expect that the true religion should be any way the gainer by toleration,” I instanced in the prevailing of the gospel, by its own beauty, force, and reasonableness in the first ages of christianity. You reply, that it has not the same beauty, force, and reasonableness now, that it had then, unless “I conclude miracles too, which are now ceased; and, as you tell us, were not withdrawn, till by their help christianity had prevailed to be received for the religion of the empire, and to be encouraged and supported by the laws of it.”

If therefore we will believe you upon your own word, force being necessary, (for prove it necessary you never can,) you have entered into the counsel of God, and tell us, when force could not be had, miracles were employed to supply its want: “I cannot but think, say you, it is highly probable (if we may be allowed to guess at the counsels of infinite wisdom) that God was pleased to continue them till then,” i. e. till the laws of the empire supported christianity, “not so much for any necessity there was of them all that time, for the evincing the truth of the christian religion; as to supply the want of the magistrate's assistance.” You allow yourself to guess very freely, when you will make God use miracles to supply a means he nowhere authorized or appointed. How long miracles continued we shall see anon.

Say you, “If we may be allowed to guess:” this modesty of yours where you confess you guess, is only concerning the time of the continuing of miracles; but as to their supplying the want of coactive force, that you are positive in, both here and where you tell us, “Why penalties were not

necessary at first, to make men to give ear to the gospel, has already been shown;" and a little after, "the great and wonderful things which were to be done for the evidencing the truth of the gospel, were abundantly sufficient to procure attention," &c. How you come to know so undoubtedly that miracles were made use of to supply the magistrate's authority, since God no-where tells you so, you would have done well to show.

But in your opinion force was necessary, and that could not then be had, and so God must use miracles. For, say you, "Our Saviour was no magistrate, and therefore could not inflict political punishments upon any man; so much less could he empower his apostles to do it." Could not our Saviour empower his apostles to denounce or inflict punishments on careless or obstinate unbelievers, to make them hear and consider? You pronounce very boldly methinks of Christ's power, and set very narrow limits to what at another time you would not deny to be infinite: but it was convenient here for your present purpose, that it should be so limited. But, they not being magistrates, "he could not empower his apostles to inflict political punishments." How is it of a sudden, that they must be political punishments? You tell us all that is necessary, is to "lay briars and thorns in men's ways, to trouble and disease them to make them consider." This I hope our Saviour had power to do, if he had found it necessary, without the assistance of the magistrate; he could have always done by his apostles and ministers, if he had so thought fit, what he did once by St. Peter, have dropped briars and thorns into their very minds, that should have pricked, troubled, and diseased them sufficiently. But sometimes it is briars and thorns only, that you want; sometimes it must be human means; and sometimes, as here, nothing will serve your turn but political punishments; just as will best suit your occasion, in the argument you have then before you.

That the apostles could lay on punishments, as troublesome and as great as any political ones when they were necessary, we see in Ananias and Sapphira: and he that had "all power given him in heaven and in earth," could, if he had thought fit, have laid briars and thorns in the way of all that received not his doctrine.

You add, "But as he could not punish men to make them hear him, so neither was there any need that he should. He came as a prophet sent from God to reveal a new doctrine to the world: and therefore to prove his mission, he was to do such things as could only be done by a divine power:

and the works which he did were abundantly sufficient both to gain him a hearing, and to oblige the world to receive his doctrine." Thus the want of force and punishments is supplied. How far? so far as they are supposed necessary to gain a hearing, and so far as to oblige the world to receive Christ's doctrine; whereby, as I suppose, you mean sufficient to lay an obligation on them to receive his doctrine, and render them inexcusable if they did not: but that they were not sufficient to make all that saw them effectually to receive and embrace the gospel, I think is evident; and you will not I imagine say, that all who saw Christ's miracles believed on him. So that miracles were not to supply the want of such force, as was to be continued on men to make them consider as they ought, i. e. till they embraced the truth that must save them. For we have little reason to think that our Saviour, or his apostles, contended with their neglect or refusal by a constant train of miracles, continued on to those who were not wrought upon by the gospel preached to them. St. Matthew tells us, chap. xiii. 58, that he did not many mighty works in his own country, because of their unbelief; much less were miracles to supply the want of force in that use you make of it, where you tell us it is to punish the fault of not being of the true religion: for we do not find any miraculously punished to bring them in to the gospel. So that the want of force to either of these purposes not being supplied by miracles, the gospel it is plain subsisted and spread itself without force so made use of, and without miracles to supply the want of it; and therefore it so far remains true, that the gospel having the same beauty, force, and reasonableness now as it had at the beginning, it wants not force to supply the defect of miracles, to that for which miracles were no-where made use of. And so far, at least, the experiment is good, and this assertion true, that the gospel is able to prevail by its own light and truth, without the continuance of force on the same person, or punishing men for not being of the true religion.

You say, "Our Saviour, being no magistrate, could not inflict political punishments; much less could he empower his apostles to do it." I know not what need there is, that it should be political; so there were so much punishment used, as you say is sufficient to make men consider, it is not necessary it should come from this or that hand: or if there be any odds in that, we should be apt to think it would come best, and most effectually, from those who preached the gospel, and could tell them it was to make them consider; than from the magistrate, who neither doth, nor according to

your scheme can, tell them it is to make them consider. And this power, you will not deny, but our Saviour could have given to the apostles.

But if there were such absolute need of political punishments, Titus or Trajan might as well have been converted as Constantine. For how true it is, that miracles supplied the want of force from those days till Constantine's, and then ceased, we shall see by and by. I say not this to enter boldly into the counsels of God, or to take upon me to censure the conduct of the Almighty, or to call his providence to an account; but to answer your saying, "Our Saviour was no magistrate, and therefore could not inflict political punishments." For he could have had both magistrates and political punishments at his service, if he had thought fit; and needed not to have continued miracles longer "than there was necessity for evincing the truth of the christian religion, as you imagine, to supply the want of the magistrate's assistance, by force, which is necessary."

But how come you to know that force is necessary? Has God revealed it in his word? no-where. Has it been revealed to you in particular? that you will not say. What reason have you for it? none at all but this, That having set down the grounds, upon which men take up and persist in their religion, you conclude, "what means is there left but force?" Force therefore you conclude necessary, because without any authority, but from your own imagination, you are peremptory, that other means, besides preaching and persuasion, is to be used, and therefore it is necessary, because you can think of no other.

When I tell you there is other means, and that by your own confession the grace of God is another means, and therefore force is not necessary; you reply, "Though the grace of God be another means, and you thought fit to mention it, to prevent cavils: yet it is none of the means of which you were speaking, in the place I refer to; which any one who reads that paragraph will find to be only human means: and therefore though the grace of God be both a proper and sufficient means, and such as can work by itself, and without which neither penalties nor any other means can do any thing; yet it may be true however, that when admonitions and intreaties fail, there is no human means left, but penalties, to bring prejudiced persons to hear and consider what may convince them of their errors, and discover the truth to them. And then penalties will be necessary in respect to that end as a human means."

In which words, if you mean an answer to my argument, it is this, that force is necessary, because to bring men into the right way there is other human means necessary, besides admonitions and persuasions. For else what have we to do with human in the case? But it is no small advantage one owes to logic, that where sense and reason fall short, a distinction ready at hand may eke it out. Force, when persuasions will not prevail, is necessary, say you, because it is the only means left. When you are told it is not the only means left, and so cannot be necessary on that account: you reply, that “when admonitions and intreaties fail, there is no human means left, but penalties, to bring prejudiced persons to hear and consider what may convince them of their errors, and discover the truth to them: and then penalties will be necessary in respect to that end, as a human means.”

Suppose it be urged to you, when your moderate lower penalties fail, there is no human means left but dragooning and such other severities; which you say you condemn as much as I, “to bring prejudiced persons to hear and consider what may convince them of their errors, and discover the truth to them.” And then dragooning, imprisonment, scourging, fining, &c. will be necessary in respect to that end, as a human means. What can you say but this? that you are impowered to judge what degrees of human means are necessary, but others are not. For without such a confidence in your own judgment, where God has said how much, nor that any force is necessary; I think this is as good an argument for the highest, as yours is for the lower penalties. When “admonitions and intreaties will not prevail, then penalties, lower penalties, some degrees of force will be necessary, say you, as a human means.” And when your lower penalties, your some degrees of force will not prevail, then higher degrees will be necessary, say I, as a human means. And my reason is the same with yours, because there is no other means, i. e. human means, left. Show me how your argument concludes for lower punishments being necessary, and mine not for higher, even to dragooning, “& eris mihi magnus Apollo.”

But let us apply this to your succedaneum of miracles, and then it will be much more admirable. You tell us, admonitions and intreaties not prevailing to bring men into the right way, “force is necessary, because there is no other means left.” To that it is said, yes, there is other means left, the grace of God. Ay, but, say you, that will not do; because you speak only of human means. So that according to your way of arguing, some other human means is necessary: for you yourself tell us, that the means you were speaking of

where you say, “that when admonitions and intreaties will not do, what other means is there left but force? were human means.” Your words are, “which any one, who reads that paragraph, will find to be only human means.” By this argument then other human means are necessary besides preaching and persuasion, and those human means you have found out to be either force or miracles: the latter are certainly notable human means. And your distinction of human means serves you to very good purpose, having brought miracles to be one of your human means. Preaching and admonitions, say you, are not sufficient to bring men into the right way, something else is necessary; yes, the grace of God; no, say you, that will not do, it is not human means: it is necessary to have other human means; therefore, in the three or four first centuries after christianity, the insufficiency of preaching and admonitions was made up with miracles, and thus the necessity of other human means is made good. But to consider a little farther your miracles as supplying the want of force.

The question between us here is, whether the christian religion did not prevail in the first ages of the church, by its own beauty, force, and reasonableness, without the assistance of force? I say it did, and therefore external force is not necessary. To this you reply, “That it cannot prevail by its own light and strength, without the assistance either of miracles, or of authority; and therefore the christian religion not being still accompanied with miracles, force is now necessary.” So that to make your equivalent of miracles correspond with your necessary means of force, you seem to require an actual application of miracles, or of force, to prevail with men to receive the gospel; i. e. men could not be prevailed with to receive the gospel without actually seeing of miracles. For when you tell us, that “you are sure I cannot say the christian religion is still accompanied with miracles, as it was at its first planting;” I hope you do not mean that the gospel is not still accompanied with an undoubted testimony that miracles were done by the first publishers of it; which was as much of miracles, as I suppose the greatest part of those had, with whom the christian religion prevailed, till it was “supported and encouraged, as you tell us, by the laws of the empire;” for I think you will not say, or if you should, you could not expect to be believed, that all, or the greatest part of those, that embraced the christian religion, before it was supported by the laws of the empire, which was not till the fourth century, had actually miracles done before them, to work upon them. And all those, who were not eye-witnesses of

miracles done in their presence, it is plain had no other miracles than we have; that is, upon report; and it is probable not so many, nor so well attested as we have. The greatest part then, of those who were converted, at least in some of those ages, before christianity was supported by the laws of the empire, I think you must allow, were wrought upon by bare preaching, and such miracles as we still have, miracles at a distance, related miracles. In others, and those the greatest number, prejudice was not so removed, that they were prevailed on to consider, to consider as they ought, i. e. in your language, to consider so as to embrace. If they had not so considered in our day's what, according to your scheme, must have been done to them, that did not consider as they ought? Force must have been applied to them. What therefore in the primitive church was to be done to them? Why! your succedaneum miracles, actual miracles, such as you deny the christian religion to be still accompanied with, must have been done in their presence, to work upon them. Will you say this was so, and make a new church-history for us, and outdo those writers who have been thought pretty liberal of miracles? If you do not, you must confess miracles supplied not the place of force; and so let fall all your fine contrivance about the necessity either of force or miracles; and perhaps you will think it at last a more becoming modesty, not to set the divine power and providence on work by rules, and for the ends of your hypothesis, without having any thing in authentic history, much less in divine and unerring revelation to justify you. But force and power deserve something more than ordinary and allowable arts or arguments, to get and keep them: "*si violandum sit jus, regnandi causa violandum est.*"

If the testimony of miracles having been done were sufficient to make the gospel prevail, without force, on those who were not high eye-witnesses of them; we have that still, and so upon that account need not force to supply the want of it; but if truth must have either the law of the country, or actual miracles to support it; what became of it after the reign of Constantine the great, under all those emperors that were erroneous or heretical? It supported itself in Piedmont, and France, and Turkey, many ages without force or miracles: and is spread itself in divers nations and kingdoms of the north and east, without any force, or other miracles than those that were done many ages before. So that I think you will, upon second thoughts, not deny, but that the true religion is able to prevail now, as it did at first, and has done since in many places, without assistance from

the powers in being; by its own beauty, force, and reasonableness, whereof well-attested miracles are a part.

But the account you give us of miracles will deserve to be a little examined. We have it in these words, Considering that those extraordinary means were not withdrawn, till by their help christianity had prevailed to be received for the religion of the empire, and to be supported and encouraged by the laws of it; you cannot, you say, but think it highly probable (if we may be allowed to guess at the counsels of infinite wisdom) that God was pleased to continue them till then; not so much for any necessity there was of them all that while, for the evincing the truth of the christian religion; as to supply the want of the magistrate's assistance." Miracles then, if what you say be true, were continued till "christianity was received for the religion of the empire, not so much to evince the truth of the christian religion, as to supply the want of the magistrate's assistance." But in this the learned author, whose testimony you quote, fails you. For he tells you that the chief use of miracles in the church, after the truth of the christian religion had been sufficiently confirmed by them in the world, was to oppose the false and pretended miracles of heretics and heathens; and answerable hereunto miracles ceased and returned again, as such oppositions made them more or less necessary. Accordingly miracles, which before had abated, in Trajan's and Hadrian's time, which was in the latter end of the first, or beginning of the second century, did again revive to confound the magical delusions of the heretics of that time. And in the third century the heretics using no such tricks, and the faith being confirmed, they by degrees ceased, of which there then, he says, could be no imaginable necessity. His words are, "Et quidem eo minus necessaria sunt pro veterum principiis recentiora illa miracula, quod hæreticos, quos appellant, nullos adversarios habeant, qui contraria illis dogmata astruant miraculis. Sic enim vidimus, apud veteres, dum nulli ecclesiam exercerent adversarii, seu hæretici, seu Gentiles; aut satis illi præteritis miraculis fuissent refutati; aut nullas ipsi præstigias opponerent quæ veris essent miraculis oppugnandæ; subductam deinde paulatim esse mirificam illam spiritus virtutem. Ortos sub Trajano Hadrianoque hæreticos ostendimus præstigiis magicis fuisse usos, & proinde miraculorum verorum in ecclesia usum una revixisse. Ne dicam præstigiatores etiam Gentiles eodem illo seculo sane frequentissimos, Apuleium in Africa, in Asia Alexandrum Pseudomantim, multosque alios quorum meminit Aristides. Tertio seculo

orto, hæretici Hermogenes, Praxeas, Noetus, Theodotus, Sabellius, Novatianus, Artemas, Samosatenus, nulla, ut videtur, miracula ipsi venditabant, nullis propterea miraculis oppugnandi. Inde vidimus, apud ipsos etiam Catholicos, sensim defecisse miracula. Et quidem, hæreticis nulla in contrarium miracula ostendantibus, quæ tandem fingi potest miraculorum necessitas traditam ab initio fidem, miraculisque adeo jamdudum confirmatam prædicantibus? Nulla certe prorsus pro primævo miraculorum exemplo. Nulla denique consciis vere primævam esse fidem quam novis miraculis suscipiunt confirmandam.” Dodwell, Dissertat. in Iræn. Diss. II. Sect. 65.

The history therefore you have from him, of miracles, serves for his hypothesis, but not at all for yours. For if they were continued to supply the want of force, which was to deal with the corruption of depraved human nature; that being, without any great variation in the world, constantly the same, there could be no reason why they should abate and fail, and then return and revive again. So that there being then, as you suppose, no necessity of miracles for any other end, but to supply the want of the magistrate’s assistance; they must, to suit that end, be constant and regularly the same as you would have force to be, which is steadily and uninterruptedly to be applied, as a constantly necessary remedy to the corrupt nature of mankind.

If you allow the learned Dodwell’s reasons, for the continuation of miracles, till the fourth century, your hypothesis, that they were continued to supply the magistrate’s assistance, will be only precarious. For if there was need of miracles till that time to other purposes; the continuation of them in the church, though you could prove them to be as frequent and certain as those of our Saviour and the apostles; it would not advantage your cause: since it would be no evidence, that they were used for that end; which as long as there were other visible uses of them, you could not, without revelation, assure us were made use of by divine Providence “to supply the want of the magistrate’s assistance.” You must therefore confute his hypothesis, before you can make any advantage of what he says, concerning the continuation of miracles, for the establishing of yours. For till you can show, that that which he assigns was not the end, for which they were continued in the church; the utmost you can say, is, that it may be imagined, that one reason of their continuation was to supply the want of the magistrate’s assistance: but what you can without proof imagine

possible, I hope you do not expect should be received as an unquestionable proof that it was so. I can imagine it possible they were not continued for that end, and one imagination will be as good a proof as another.

To do your modesty right therefore, I must allow, that you do faintly offer at some kind of reason, to prove that miracles were continued to supply the want of the magistrate's assistance: and since God has no-where declared, that it was for that end, you would persuade us in this paragraph, that it was so, by two reasons. One is, that the truth of the christian religion being sufficiently evinced by the miracles done by our Saviour and his apostles, and perhaps their immediate successors; there was no other need of miracles to be continued till the fourth century; and therefore they were used by God to supply the want of the magistrate's assistance. This I take to be the meaning of these words of yours, "I cannot but think it highly probable that God was pleased to continue them till then; not so much for any necessity there was of them all that while for the evincing the truth of the christian religion, as to supply the want of the magistrate's assistance." Whereby I suppose, you do not barely intend to tell the world what is your opinion in the case; but use this as an argument, to make it probable to others, that this was the end for which miracles were continued; which at the best will be but a very doubtful probability to build such a bold assertion on, as this of yours is, viz. That "the christian religion is not able to subsist and prevail in the world, by its own light and strength, without the assistance either of force, or actual miracles." And therefore you must either produce a declaration from heaven that authorizes you to say, that miracles were used to supply the want of force; or show that there was no other use of them but this. For if any other use can be assigned of them, as long they continued in the church, one may safely deny, that they were to supply the want of force: and it will lie upon you to prove it by some other way than by saying you think it highly probable. For I suppose you do not expect that your thinking any thing highly probable, should be a sufficient reason for others to acquiesce in, when perhaps, the history of miracles considered, nobody could bring himself to say he thought it probable, but one whose hypothesis stood in need of such a poor support.

The other reason you seem to build on is this, that when christianity was received for the religion of the empire, miracles ceased; because there was then no longer any need of them: which I take to be the argument insinuated in these words, "Considering that those extraordinary means were not

withdrawn till by their help christianity had prevailed to be received for the religion of the empire.” If then you can make it appear that miracles lasted till christianity was received for the religion of the empire, without any other reason for their continuation, but to supply the want of the magistrate’s assistance; and that they ceased as soon as the magistrates became christians; your argument will have some kind of probability, that within the Roman empire this was the method God used for the propagating the christian religion. But it will not serve to make good your position, “that the christian religion cannot subsist and prevail by its own strength and light, without the assistance of miracles or authority,” unless you can show, that God made use of miracles to introduce and support it in other parts of the world, not subject to the Roman empire, till the magistrates there also became christians. For the corruption of nature being the same without, as within the bounds of the Roman empire: miracles, upon your hypothesis, were as necessary to supply the want of the magistrate’s assistance in other countries as in the Roman empire. For I do not think you will find the civil sovereigns were the first converted in all those countries, where the christian religion was planted after Constantine’s reign: and in all those it will be necessary for you to show us the assistance of miracles.

But let us see how much your hypothesis is favoured by church-history. If the writings of the fathers of greatest name and credit are to be believed, miracles were not withdrawn when christianity had prevailed to be received for the religion of the empire. Athanasius, the great defender of the catholic orthodoxy, writ the life of his contemporary St. Anthony, full of miracles; which though some have questioned, yet the learned Dodwell allows to be writ by Athanasius: and the style evinces it to be his, which is also confirmed by other ecclesiastical writers.

“Palladius tells us, That Ammon did many miracles: but that particularly St. Athanasius related in the life of Anthony, that Ammon, going with some monks Anthony had sent to him, when they came to the river Lycus, which they were to pass, was afraid to strip for fear of seeing himself naked; and whilst he was in dispute of this matter, he was taken up, and in an ecstasy carried over by an angel, the rest of the monks swimming the river. When he came to Anthony, Anthony told him he had sent for him, because God had revealed many things to him concerning him, and particularly his translation. And when Ammon died, in his retirement, Anthony saw his soul carried into heaven by angels.” Palladius in vita Ammonis.

“Socrates tells us, That Anthony saw the soul of Ammon taken up by angels, as Athanasius writes in the life of Anthony.”

And again, says he, “It seems superfluous for me to relate the many miracles Anthony did; how he fought openly with devils, discovering all their tricks and cheats: for Athanasius bishop of Alexandria has prevented me on that subject, having writ a book particularly of his life.”

“Anthony was thought worthy of the vision of God, and led a life perfectly conformable to the laws of Christ. This, whoever reads the book, wherein is contained the history of his life, will easily know; wherein he will also see prophecy shining out: for he prophesied very clearly of those who were infected with the Arian contagion, and foretold what mischief from them was threatened to the churches; God truly revealing all these things to him, which is certainly the principal evidence of the catholic faith, no such man being to be found amongst the heretics. But do not take this upon my word, but read and study the book itself.”

This account you have from St. Chrysostom, whom Mr. Dodwell calls the contemner of fables.

St. Hierom, in his treatise “De viro perfecto,” speaks of the frequency of miracles done in his time, as a thing past question: besides those, not a few which he has left upon record, in the lives of Hilarion and Paul, two monks, whose lives he has writ. And he that has a mind to see the plenty of miracles of this kind, need but read the collection of the lives of the fathers, made by Rosweyde.

Ruffin tells us, That Athanasius lodged the bones of St. John Baptist in the wall of the church, knowing by the spirit of prophecy the good they were to do to the next generation: and of what efficacy and use they were, may be concluded from the church with the golden roof, built to them soon after, in the place of the temple of Serapis.

St. Austin tells us, “That he knew a blind man restored to sight by the bodies of the Milan martyrs, and some other such things; of which kind there were so many done in that time, that many escaped his knowledge; and those which he knew, were more than he could number.” More of this you may see Epist. 137.

He further assure us, that by the single reliques of St. Stephen “a blind woman received her sight. Lucullus was cured of an old fistula; Eucharis of the stone; three gouty men recovered; a lad killed with a cart-wheel going over him, restored to life safe and sound, as if he had received no

hurt: a nun lying at the point of death, they sent her coat to the shrine, but she dying before it was brought back, was restored to life by its being laid on her dead body. The like happened at Hippo to the daughter of Bassus; and two others,” whose names he sets down, were by the same reliques raised from the dead.

After these and other particulars there set down, of miracles done in his time by those reliques of St. Stephen, the holy father goes on thus: “What shall I do? Pressed by my promise of dispatching this work, I cannot here set down all: and without doubt many, when they shall read this, will be troubled that I have omitted so many particles, which they truly know as well as I. For if I should, passing by the rest, write only the miraculous cures which have been wrought by this most glorious martyr Stephen, in the colony of Calama, and this of ours, I should fill many books, and yet should not take in all of them: but only those of which there are collections published, which are read to the people: for this I took care should be done, when I saw that signs of divine power, like those of old, were frequent also in our times. It is not now two years since that shrine has been at Hippo: and many of the books which I certainly knew to be so, not being published, those which are published concerning those miraculous operations, amounted to near fifty when I writ this. But at Calama, where this shrine was before, there are more published, and their number is incomparably greater. At Uzal also a colony, and near Utica, we know many famous things to have been done by the same martyr.”

Two of those books he mentions, are printed in the appendix of the tenth tome of St. Austin’s works of Plantin’s edit. One of them contains two miracles; the other, as I remember, about seventeen. So that at Hippo alone, in two years time, we may count, besides those omitted, there were published above 600 miracles, and, as he says, incomparably more at Calama: besides what were done by other reliques of the same St. Stephen, in other parts of the world, which cannot be supposed to have had less virtue than those sent to this part of Africa. For the reliques of St. Stephen, discovered by the dream of a monk, were divided and sent into distant countries, and there distributed to several churches.

These may suffice to show, that if the fathers of the church of greatest name and authority are to be believed, miracles were not withdrawn, but continued down to the latter end of the fourth century, long after “christianity had prevailed to be received for the religion of the empire.”

But if these testimonies of Athanasius, Chrysostom, Palladius, Ruffin, St. Hierom, and St. Austin, will not serve your turn, you may find much more to this purpose in the same authors; and if you please, you may consult also St. Basil, Gregory Nazianzen, Gregory Nyssen, St. Ambrose, St. Hilary, Theodoret, and others.

This being so, you must either deny the authority of these fathers, or grant that miracles continued in the church after “christianity was received for the religion of the empire: and then they could not be to supply the want of the magistrate’s assistance,” unless they were to supply the want of what was not wanting: and therefore they were continued for some other end. Which end of the continuation of miracles, when you are so far instructed in as to be able to assure us, that it was different from that for which God made use of them in the second and third centuries; when you are so far admitted into the secrets of divine Providence, as to be able to convince the world that the miracles between the apostles’ and Constantine’s time, or any other period you shall pitch on, were to supply the want of the magistrate’s assistance, and those after, for some other purpose, what you say may deserve to be considered. Until you do this, you will only show the liberty you take to assert with great confidence, though without any ground, whatever will suit your system; and that you do not stick to make bold with the counsels of infinite wisdom, to make them subservient to your hypothesis.

And so I leave you to dispose of the credit of ecclesiastical writers, as you shall think fit; and by your authority to establish, or invalidate, theirs as you please. But this, I think, is evident, that he who will build his faith or reasonings upon miracles delivered by church-historians, will find cause to go no farther than the apostles’ time, or else not to stop at Constantine’s: since the writers after that period, whose word we readily take as unquestionable in other things, speak of miracles in their time with no less assurance, than the fathers before the fourth century; and a great part of the miracles of the second and third centuries stand upon the credit of the writers of the fourth. So that that sort of argument which takes and rejects the testimony of the ancients at pleasure, as may best suit with it, will not have much force with those who are not disposed to embrace the hypothesis, without any arguments at all.

You grant, “That the true religion has always light and strength of its own, i. e. without the assistance of force or miracles, sufficient to prevail

with all that considered it seriously, and without prejudice; that therefore, for which the assistance of force is wanting, is to make men consider seriously, and without prejudice.” Now whether the miracles that we have still, miracles done by Christ and his apostles, attested, as they are, by undeniable history, be not fitter to deal with men’s prejudices, than force, and than force which requires nothing but outward conformity, I leave the world to judge. All the assistance the true religion needs from authority, is only a liberty for it to be truly taught; but it has seldom had that, from the powers in being, in its first entry into their dominions, since the withdrawing of miracles: and yet I desire you to tell me, into what country the gospel, accompanied, as now it is, only with past miracles, hath been brought by the preaching of men, who have laboured in it after the example of the apostles, where it did not so prevail over men’s prejudices, that “as many as were ordained to eternal life” considered and believed it. Which, as you may see, Acts xiii. 48, was all the advance it made, even when assisted with the gift of miracles: for neither then were all, or the majority, wrought on to consider and embrace it.

But yet the gospel “cannot prevail by its own light and strength;” and therefore miracles were to supply the place of force. How was force used? A law being made, there was a continued application of punishment to all those whom it brought not to embrace the doctrine proposed. Were miracles so used till force took place? For this we shall want more new church-history, and I think contrary to what we read in that part of it which is unquestionable: I mean in the Acts of the Apostles, where we shall find, that the then promulgators of the gospel, when they had preached, and done what miracles the spirit of God directed, if they prevailed not, they often left them; “Then Paul and Barnabas waxed bold, and said it was necessary that the word of God should first have been spoken to you: but seeing you put it from you, and judge yourselves unworthy, we turn to the gentiles, Acts xiii. 46. They shook off the dust of their feet against them, and came unto Iconium, Acts xiii. 51. But when divers were hardened, and believed not, but spake evil of that way before the multitude, he departed from them, and separated the disciples, Acts xix. 9. Paul was pressed in spirit, and testified to the jews that Jesus was Christ; and when they opposed themselves, and blasphemed, he shook his raiment, and said unto them, Your blood be upon your own heads: I am clean: from henceforth I will go unto the gentiles.” Acts xviii. 6. Did the christian magistrates ever do so,

who thought it necessary to support the christian religion by laws? Did they ever, when they had a while punished those whom persuasions and preaching had not prevailed on, give off, and leave them to themselves, and make trial of their punishment upon others? Or is this your way of force and punishment? If it be not, yours is not what miracles came to supply the room of, and so is not necessary. For you tell us, they are punished to make them consider, and they can never be supposed to consider “as they ought, whilst they persist in rejecting;” and therefore they are justly punished to make them so consider: so that not so considering being the fault for which they are punished, and the amendment of that fault the end which is designed to be attained by punishing, the punishment must continue. But men were not always beat upon with miracles. To this, perhaps, you will reply, that the seeing of a miracle or two, or half a dozen, was sufficient to procure a hearing; but that being punished once or twice, or half a dozen times, is not: for you tell us, “the power of miracles communicated to the apostles, served altogether as well as punishment, to procure them a hearing:” where, if you mean by hearing, only attention; who doubts but punishment may also procure that? If you mean by hearing, receiving and embracing what is proposed; that even miracles themselves did not effect upon all eye-witnesses. Why then, I beseech you, if one be to supply the place of the other, is one to be continued on those who do reject; when the other was never long continued, nor, as I think we may safely say, often repeated to those who persisted in their former persuasions?

After all, therefore, may not one justly doubt, whether miracles supplied the place of punishment? nay, whether you yourself, if you be true to your own principles, can think so? You tell us, that not to join “themselves to the true church, where sufficient evidence is offered to convince men that it is so, is a fault that it cannot be unjust to punish.” Let me ask you now; did the apostles by their preaching and miracles offer sufficient evidence to convince men that the church of Christ was the true church; or, which is, in this case, the same thing, that the doctrine they preached was the true religion? If they did, were not those, who persisted in unbelief, guilty of a fault? And if some of the miracles done in those days should now be repeated, and yet men should not embrace the doctrine, or join themselves to the church which those miracles accompanied; would you not think them guilty of a fault which the magistrate might justly, nay ought to punish? If you would answer truly and sincerely to this question, I doubt you would

think your beloved punishments necessary notwithstanding miracles, “there being no other human means left.” I do not make this judgment of you from any ill opinion I have of your good-nature; but it is consonant to your principles: for if not professing the true religion, where sufficient evidence is offered by bare preaching, be a fault, and a fault justly to be punished by the magistrate, you will certainly think it much more his duty to punish a greater fault, as you must allow it is, to reject truth proposed with arguments and miracles, than with bare arguments: since you tell us, that the magistrate is “obliged to procure, as much as in him lies, that every man take care of his own soul; i. e. consider as he ought; which no man can be supposed to do, whilst he persists in rejecting:” as you tell us, .

Miracles, say you, supplied the want of force, “till by their help christianity had prevailed to be received for the religion of the empire.” Not that the magistrates had not as much commission then, from the law of nature, to use force for promoting the true religion, as since: but because the magistrates then, not being of the true religion, did not afford it the assistance of their political power. If this be so, and there be a necessity either of force or miracles, will there not be the same reason for miracles ever since, even to this day, and so on to the end of the world, in all those countries where the magistrate is not of the true religion? “Unless, as you urge it, you will say (what without impiety cannot be said) that the wise and benign disposer of all things has not furnished mankind with competent means for the promoting his own honour in the world, and the good of souls.”

But to put an end to your pretence to miracles, as supplying the place of force. Let me ask you, whether, since the withdrawing of miracles, your moderate degree of force has been made use of, for the support of the christian religion? If not, then miracles were not made use of to supply the want of force, unless it were for the supply of such force as christianity never had; which is for the supply of just no force at all; or else for the supply of the severities which have been in use amongst christians, which is worse than none at all. Force, you say, is necessary; what force? “not fire and sword, not loss of estates, not maiming with corporal punishments, not starving and tormenting in noisome prisons:” those you condemn. “Not compulsion: these severities, you say, are apter to hinder, than promote the true religion; but moderate lower penalties, tolerable inconveniencies, such as should a little disturb and disease men.” This assistance not being to be

had from the magistrates, in the first ages of christianity, miracles, say you, were continued till “christianity became the religion of the empire, not so much for any necessity there was of them, all that while, for the evincing the truth of the christian religion, as to supply the want of the magistrate’s assistance. For the true religion not being able to support itself by its own light and strength, without the assistance either of miracles, or of authority,” there was a necessity, of the one or the other; and therefore, whilst the powers in being assisted not with necessary force, miracles supplied that want. Miracles then being to supply necessary force, and necessary force being only “lower moderate penalties, some inconveniencies, such as only disturb and disease a little;” if you cannot show that in all countries, where the magistrates have been christian, they have assisted with such force; it is plain that miracles supplied not the want of necessary force; unless to supply the want of your necessary force, for a time, were to supply the want of an assistance, which true religion had not upon the with-drawing of miracles; and I think I may say, was never thought on by any authority, in any age or country, till you now, above thirteen hundred years after, made this happy discovery. Nay, sir, since the true religion, as you tell us, cannot prevail or subsist without miracles or authority, i. e. your moderate force, it must necessarily follow, that the christian religion has, in all ages and countries, been accompanied either with actual miracles, or such force: which, whether it be so or no, I leave you and all sober men to consider. When you can show, that it has been so, we shall have reason to be satisfied with your bold assertion: that the christian religion, as delivered in the New Testament, cannot “prevail by its own light and strength, without the assistance” of your moderate penalties, or of actual miracles accompanying it. But if ever since the withdrawing of miracles in all christian countries, where force has been thought necessary by the magistrate to support the national, or, as every-where it is called, the true religion, those severities have been made use of, which you, for a good reason, “condemn, as apter to hinder than promote the true religion;” it is plain that miracles supplied the want of such an assistance from the magistrate, as was apter to hinder than promote the true religion. And your substituting of miracles to supply the want of moderate force will show nothing, for your cause, but the zeal of a man so fond of force, that he will without any warrant from scripture enter into the counsels of the Almighty; and without authority from history talk of miracles, and political administrations, as may best suit his system.

To my saying, a religion that is from God, wants not the assistance of human authority to make it prevail; you answer, "This is not simply nor always true. Indeed when God takes the matter wholly into his own hands, as he does at his first revealing any religion, there can be no need of any assistance of human authority; but when God has once sufficiently settled his religion in the world, so that if men from thenceforth will do what they may and ought, in their several capacities, to preserve and propagate it, it may subsist and prevail without that extraordinary assistance from him, which was necessary for its first establishment." By this rule of yours, how long was there need of miracles to make christianity subsist and prevail? If you will keep to it, you will find there was no need of miracles, after the promulgation of the gospel by Christ and his apostles: for I ask you, was it not then so "sufficiently settled in the world, that if men would from thenceforth have done what they might and ought, in their several capacities," it would have subsisted and prevailed without that extraordinary assistance of miracles? unless you will on this occasion retract what you say in other places, viz. that it is a fault not to receive the "true religion, where sufficient evidence is offered to convince men that it is so." If then, from the times of the apostles, the christian religion has had sufficient evidence that it is the true religion, and men did their duty, i. e. receive it; it would certainly have subsisted and prevailed, even from the apostles times, without that extraordinary assistance; and then miracles after that were not necessary.

But perhaps you will say, that by men in their several capacities, you mean the magistrates. A pretty way of speaking, proper to you alone: but, even in that sense, it will not serve your turn. For then there will be need of miracles, not only in the time you propose, but in all times after. For if the magistrate, who is as much subject as other men to that corruption of human nature, by which you tell us false religions prevail against the true, should not do what he may and ought, so as to be of the true religion, as it is the odds he will not; what then will become of the true religion, which according to you cannot subsist or prevail without either the assistance of miracles or authority? Subjects cannot have the assistance of authority, where the magistrate is not of the true religion; and the magistrate wanting the assistance of authority to bring him to the true religion, that want must be still supplied with miracles, or else, according to your hypothesis, all must go to wreck; and the true religion, that cannot subsist by its own

strength and light, must be lost in the world. For, I presume, you are scarce yet such an adorer of the powers of the world, as to say, that magistrates are privileged from that common corruption of mankind, whose opposition to the true religion you suppose cannot be overcome, without the assistance of miracles or force. The flock will stray, unless the bell-wether conduct them right; the bell-wether himself will stray, unless the shepherd's crook and staff, which he has as much need of as any sheep of the flock, keep him right: ergo, the whole flock will stray, unless the bell-wether have that assistance which is necessary to conduct him right. The case is the same here. So that by your own rule, either there was no need of miracles to supply the want of force, after the apostles' time, or there is need of them still.

But your answer, when looked into, has something in it more excellent. I say, a religion that is of God, wants not the assistance of human authority to make it prevail. You answer, "True, when God takes the matter into his own hands. But when once he has sufficiently settled religion, so that if men will but do what they may and ought, it may subsist without that extraordinary assistance from heaven; then he leaves it to their care." Where you suppose, if men will do their duties in their several capacities, true religion, being once established, may subsist without miracles. And is it not as true, that if they will, in their several capacities, do what they may and ought, true religion will also subsist without force? But you are sure magistrates will do what they may and ought, to preserve and propagate the true religion, but subjects will not. If you are not, you must bethink yourself how to answer that old question,

— "Sed quis custodiet ipsos Custodes?" —

To my having said, that prevailing without the assistance of force, I thought was made use of as an argument for the truth of the christian religion: You reply that you hope "I am mistaken; for sure this is a very bad argument, That the christian religion, so contrary in the nature of it, as well to flesh and blood, as to the powers of darkness; should prevail as it did, and that not only without any assistance from authority, but even in spite of all the opposition which authority and a wicked world, joined with those infernal powers, could make against it. This, I acknowledge, has deservedly been insisted upon by christians as a very good proof of their religion. But to argue the truth of the christian religion, from its mere prevailing in the world, without any aid from force, or the assistance of the powers in being;

as if whatever religion should so prevail, must needs be the true religion; whatever may be intended, is really not to defend the christian religion, but to betray it." How you have mended the argument by putting in "mere," which is not any where used by me, I will not examine. The question is, whether the christian religion, such as it was then, (for I know not any other christian religion) and is still "contrary to flesh and blood, and to the powers of darkness," prevailed not without the assistance of human force, by those aids it has still? This, I think, you will not deny to be an argument used for its truth by christians, and some of our church. How far any one in the use of this argument pleases, or displeases you, I am not concerned. All the use I made of it was to show, that it is confessed that the christian religion did prevail, without that human means of the coactive power of the magistrate, which you affirmed to be necessary; and this, I think, makes good the experiment I brought. Nor will your seeking, your way, a refuge in miracles, help you to evade it; as I have already shown.

But you give a reason for what you say, in these following words: "for neither does the true religion always prevail without the assistance of the powers in being: nor is that always the true religion, which does so spread and prevail." Those who use the argument of its prevailing without force, for the truth of the christian religion, it is like will tell you, that, if it be true, as you say, that the christian religion, which at other times does, sometimes does not, prevail without the assistance of the powers in being; it is, because when it fails, it wants the due assistance and diligence of the ministers of it: "How shall they hear without a preacher?" How shall the gospel be spread and prevail, if those who take on them to be the ministers and preachers of it, either neglect to teach it others as they ought; or confirm it not by their lives? If therefore you will make this argument of any use to you, you must show, where it was, that the ministers of the gospel, doing their duty by the purity of their lives, and their uninterrupted labour, in being instant in season, and out of season, have not been able to make it prevail. An instance of this, it is believed, you will scarce find: and if this be the case, that it fails not to prevail where those, whose charge it is, neglect not to teach and spread it with that care, assiduity, and application, which they ought; you may hereafter know where to lay the blame; not on the want of sufficient light and strength in the gospel to prevail; (wherein methinks you make very bold with it;) but on the want of what the apostle requires in the ministers of it; some part whereof you may read in these words to Timothy:

“But thou, O man of God, follow after righteousness, godliness, faith, love, patience, meekness: give attendance to reading, to exhortation, to doctrine: preach the word, be instant in season and out of season; reprove, rebuke, exhort, with all long-suffering and doctrine;” and more to this purpose in his epistles to Timothy and Titus.

That the christian religion has prevailed, and supported itself in the world now above these sixteen hundred years, you must grant; and that it has not been by force, is demonstration. For wherever the christian religion prevailed, it did it, as far as we know any thing of the means of its propagation and support, without the help of that force, moderate force, which you say is alone useful and necessary. So that if the severities you condemn be, as you confess, apter to hinder than promote the gospel; and it has no-where had the assistance of your moderate penalties; it must follow, that it prevailed without force, only by its own strength and light, displayed and brought home to the understandings and hearts of the people, by the preachings, intreaties, and exhortations of its ministers. This at least you must grant, that force can be by no means necessary to make the gospel prevail any-where, till the utmost has been tried that can be done by arguments and exhortations, prayers and intreaties, and all the friendly ways of persuasion.

As to the other part of your assertion, “Nor is that always the true religion that does so spread and prevail,” it is like they will demand instances of you, where false religions ever prevailed against the gospel, without the assistance of force on the one side, or the betraying of it by the negligence and carelessness of its teachers on the other? So that if the gospel any-where wants the magistrate’s assistance, it is only to make the ministers of it do their duty. I have heard of those, and possibly there are instances of it now wanting, who by their pious lives, peaceable and friendly carriage, and diligent application to the several conditions and capacities of their parishioners, and screening them as much as they could from the penalties of the law, have in a short time scarce left a dissenter in a parish, where, notwithstanding the force had been before used, they scarce found any other. But how far this has recommended such ministers to those who ought to encourage or follow the example, I wish you would inform yourself, and then tell me. But who sees not that a justice of peace’s warrant is a shorter, and much easier way for the minister, than all this ado of instruction, debates, and particular application? Whether it be also more

christian, or more effectual to make real converts, others may be apt to inquire. This, I am sure, it is not justifiable, even by your very principles, to be used till the other has been thoroughly tried.

How far our Saviour is like to approve of this method in those whom he sends; what reward he is like to bestow on ministers of his word, who are forward to bring their brethren under such correction; those who call themselves successors of the apostles, will do well to consider from what he himself says to them, Luke xii. 42. For that that was spoken particularly to the apostles and preachers of the gospel, is evident not only from the words themselves, but from St. Peter's question. Our Saviour having in the foregoing verses declared in a parable the necessity of being watchful, St. Peter, verse 41, asks him, "Lord, speakest thou this parable unto us, or even to all?" To this demand our Saviour replies in these words: "Who then is that faithful and wise steward whom his lord shall make ruler over his household, to give them their portion of meat in due season? Blessed is that servant whom the Lord, when he cometh, shall find so doing. Of a truth, I say unto you, he will make him ruler over all that he hath. But, and if that servant say in his heart, My lord delayeth his coming; and shall begin to beat the menservants, and maidens, and to eat and drink, and to be drunken: the lord of that servant will come in a day when he looketh not for him, and at an hour when he is not aware; and will cut him in sunder, and will appoint him his portion with unbelievers; or with hypocrites," as it is, Matt. xxiv. 51.

But if there be any thing in the argument for the truth of christianity, (as God forbid there should not,) that it has, and consequently can prevail without force; I think it can scarce be true in matter of fact, that false religions do also prevail against the christian religion, when they come upon equal terms in competition; and as much diligence and industry is used by the teachers of it, as by seducers to false religions, the magistrate using his force on neither side. For if in this case, which is the fair trial, christianity can prevail, and false religions too; it is possible contrarieties may prevail against one another both together. To make good therefore your assertion, you must show us, where ever any other religion so spread and prevailed, as to drive christianity out of any country without force, where the ministers of it did their duty to teach, adorn, and support it.

As to the following words, "Nor is that always the true religion which does so spread and prevail; as I doubt not but you will acknowledge with

me, when you have but considered within how few generations after the flood, the worship of false gods prevailed against that which Noah professed and taught his children, which was undoubtedly the true religion, almost to the utter exclusion of it (though that at first was the only religion in the world), without any aid from force, or assistance from the powers in being." This will need something more than a negative proof, as we shall see by and by.

Where I say, "The inventions of men need the force and help of men: a religion that is from God, wants not the assistance of human authority." The first part of those words you take no notice of; neither grant nor deny it to be so; though perhaps it will prove a great part of the controversy between us.

To my question, "Whether if such a toleration as is proposed by the author of the first letter, were established in France, Spain, Italy, Portugal, &c. the true religion would not be a gainer by it?" You answer, That the "true religion would be a loser by it in those few places where it is now established as the national religion;" and particularly you name England. It is then, it seems, by your way of moderate force and lower penalties, that in all countries where it is national the true religion hath prevailed and subsists. For the controversy is between the author's universal toleration, and your new way of force; for greater degrees of force, you condemn as hurtful. Say then that in England, and wherever the true religion is national, it has been beholden to your force for the advantages and support it has had, and I will yield you the cause. But of national religions, and particularly that of England, I have occasion to speak more in another place.

In the next place you answer, That you suppose I do not hope I shall persuade the world to consent to my toleration. I think by your logic, a proposition is not less true or false, because the world will or will not be persuaded to consent to it. And therefore, though it will not consent to a general toleration, it may nevertheless be true that it would be advantageous to the true religion: and if nobody must speak truth till he thinks all the world will be persuaded by it, you must have a very good opinion of your oratory, or else you will have a very good excuse to turn your parsonage, when you have one, into a sinecure. But though I have not so good an opinion of my gift of persuasion, as perhaps you have of yours; yet I think I may without any great presumption hope, that I may as soon persuade

England, the world, or any government in it, to consent to my toleration, as you persuade it to content itself with moderate penalties.

You farther answer, If such a toleration established there would permit the doctrine of the church of England to be truly preached, and its worship set up in any popish, mahometan, or pagan country, you think true religion would be a “gainer by it for some time; but you think withal, that an universal toleration would ruin it both there and every-where else in the end.” You grant it then possible, notwithstanding the corruption of human nature, that the true religion may gain some-where, and for some time, by toleration: it will gain under a new toleration you think, but decay under an old one; would you had told us the reason why you think so. “But you think there is great reason to fear, that without God’s extraordinary providence, it would in a much shorter time, than any one, who does not well consider the matter, will imagine, be most effectually extirpated by it throughout the world.” If you have considered right, and the matter be really so, it is demonstration that the christian religion, since Constantine’s time, as well as the true religion before Moses’s time, must needs have been totally extinguished out of the world, and have so continued, unless by miracle and immediate revelation restored. For those men, i. e. the magistrates, upon whose being of the true religion, the preservation of it, according to you, depends, living all of them under a free toleration, must needs lose the true religion effectually and speedily from among them; and, they quitting the true religion, the assistance of force, which should support it against a general defection, be utterly lost.

The princes of the world are, I suppose, as well infected with the depraved nature of man, as the rest of their brethren. These, whether a hundred or a thousand, suppose they lived together in one society, wherein with the true religion, there were a free toleration, and no coactive power of the magistrate employed about matters of religion; would the true religion be soon extirpated amongst them? If you say it would not, you must grant toleration not to be so destructive of the true religion, as you say; or you must think them of another race, than the rest of corrupt men, and free from that general taint. If you grant that the true religion would be quickly extirpated amongst them, by toleration, living together in one society; the same will happen to them, living as princes, where they are free from all coactive power of the magistrate in matters of religion, and have as large a toleration as can be imagined. Unless you will say, that depraved human

nature works less in a prince than a subject; and is most tame, most mortified, where it has most liberty and temptation. Must not then, if your maxim be true, toleration quickly deprive the few orthodox princes that are in the world (take it when you will) of the true religion; and with them take away the assistance of authority, which is necessary to support it amongst their subjects? Toleration then does not, whatever your fears are, make that woeful wreck on true religion which you talk of.

I shall give you another evidence of it, and then come to examine your great reason taken from the corruption of human nature, and the instance you so often repeat, and build so much on, the apostacy after the flood. Toleration, you say, would quickly and effectually extirpate the true religion throughout the world. What now is the means to preserve true religion in the world? If you may be believed, it is force; but not all force, great severities, fire, faggot, imprisonment, loss of estate, &c. These will do more harm than good; it is only lower and moderate penalties, some tolerable inconveniencies, can do the business. If then moderate force hath not been all along, no, nor any-where, made use of for the preservation of the true religion; the maintenance and support of the true religion in the world, has not been owing to what you oppose to toleration; and so your argument against toleration is out of doors.

You give us in this and the foregoing pages the grounds of your fear; it is the corruption of human nature which opposes the true religion. You express it thus, "Idolatry prevailing against it [the true religion] not by its own light and strength, for it could have nothing of either, but merely by the advantage it had in the corruption and pravity of human nature, finding out to itself more agreeable religions than the true. For, say you, whatever hardships some false religions may impose, it will however always be easier to carnal worldly-minded men, to give even their first-born for their transgressions, than to mortify their lusts from which they spring; which no religion but the true requires of them." I wonder, saying this, how you could any longer mistake the magistrate's duty, in reference to religion, and not see wherein force truly can and ought to be serviceable to it. What you have said, plainly shows you, that the assistance the magistrate's authority can give to the true religion, is in subduing of lusts; and its being directed against pride, injustice, rapine, luxury, and debauchery, and those other immoralities which come properly under his cognizance, and may be corrected by punishments; and not by the imposing of creeds and

ceremonies, as you tell us. Sound and decent, you might have left out, whereof their fancies, and not the law of God, will always be judge, and consequently the rule.

The case between the true and false religions as you have stated it, in short, stands thus, "True religion has always light and strength of its own, sufficient to prevail with all that seriously consider it, and without prejudice. Idolatry or false religions have nothing of light or strength to prevail with." Why then does not the true religion prevail against the false, having so much the advantage in light and strength? The counterbalance of prejudice hinders. And wherein does that consist? The drunkard must part with his cups and companions, and the voluptuous man with his pleasures. The proud and vain must lay by all excess in apparel, furniture, and attendance; and money (the support of all these) must be got only by the ways of justice, honesty, and fair industry: and every one must live peaceably, uprightly, and friendly with his neighbour. Here then the magistrate's assistance is wanting: here they may and ought to interpose their power, and by severities against drunkenness, lasciviousness, and all sorts of debauchery; by a steady and unrelaxed punishment of all the ways of fraud and injustice; and by their administration, countenance, and example, reduce the irregularities of men's manners into order, and bring sobriety, peaceableness, industry, and honesty into fashion. This is their proper business every-where; and for this they have a commission from God, both by the light of nature and revelation; and by this, removing the great counterpoise, which lies in strictness of life, and is so strong a bias, with the greatest part, against the true religion, they would cast the balance on that side. For if men were forced by the magistrate to live sober, honest and strict lives, whatever their religion were, would not the advantage be on the side of truth, when the gratifying of their lusts were not to be obtained by forsaking her? In men's lives lies the main obstacle to right opinions in religion: and if you will not believe me, yet what a very rational man of the church of England says in the case [Dr. Bentley, in his sermon of the folly of atheism, .] will deserve to be remembered. "Did religion bestow heaven, without any forms and conditions, indifferently upon all; if the crown of life was hereditary, and free to good and bad, and not settled by covenant on the elect of God only, such as live soberly, righteously, and godly in this present world; I believe there would be no such thing as an infidel among us. And without controversy it is the way and means of attaining to heaven, that

makes profane scoffers so willing to let go the expectation of it. It is not the articles of the creed, but their duty to God and their neighbour, that is such an inconsistent incredible legend. They will not practise the rules of religion, and therefore they cannot believe the 'doctrines' of it." The ingenious author will pardon me the change of one word, which I doubt not but suits his opinion, though it did not so well that argument he was then on.

You grant the true religion has always light and strength to prevail; false religions have neither. Take away the satisfaction of men's lusts, and which then, I pray, hath the advantage? Will men, against the light of their reason, do violence to their understandings, and forsake truth, and salvation too, gratis? You tell us here, "No religion but the true requires of men the difficult task of mortifying their lusts." This being granted you, what service will this do you to prove the necessity of force to punish all dissenters in England? Do none of their religions require the mortifying of lusts as well as yours?

And now, let us consider your instance whereon you build so much, that we hear of it over and over again. For you tell us, "Idolatry prevailed, but yet not by the help of force, as has been sufficiently shown." And again, "That truth left to shift for herself will not do well enough, as has been sufficiently shown." What you have done to show this, is to be seen, where you tell us, "Within how few generations after the flood, the worship of false gods prevailed against the religion which Noah professed, and taught his children, (which was undoubtedly the true religion,) almost to the utter exclusion of it, (though that at first was the only religion in the world,) without any aid from force, or the assistance of the powers in being, for any thing we find in the history of those times, as we may reasonably believe, considering that it found an entrance into the world, and entertainment in it when it could have no such aid or assistance. Of which (besides the corruption of human nature) you suppose there can no other cause be assigned, or none more probable than this, that the powers then in being did not do what they might and ought to have done, towards the preventing or checking that horrible apostacy." Here you tell us, that the "worship of false gods, within a very few generations after the flood, prevailed against the true religion, almost to the utter exclusion of it." This you say indeed, but without any proofs, and unless that be showing, you have not, as you pretend, any way shown it. Out of what records, I beseech you, have you it,

that the true religion was almost wholly extirpated out of the world, within a few generations after the flood? The scripture, the largest history we have of those times, says nothing of it; nor does, as I remember, mention any as guilty of idolatry, within two or three hundred years after the flood. In Canaan itself, I do not think that you can out of any credible history show, that there was any idolatry within ten or twelve generations after Noah; much less that it had so overspread the world, and extirpated the true religion, out of that part of it, where the scene lay of those actions recorded in the history of the Bible. In Abraham's time, Melchisedec, who was king of Salem, was also the priest of the most high God. We read that God, with an immediate hand, punished miraculously, first mankind, at the confusion of Babel, and afterwards Sodom, and four other cities; but in neither of these places is there any the least mention of idolatry, by which they provoked God, and drew down vengeance on themselves. So that truly you have shown nothing at all; and what the scripture shows is against you. For besides, that it is plain by Melchisedec the king of Salem, and priest of the most high God, to whom Abraham paid tithes, that all the land of Canaan was not yet overspread with idolatry, though afterwards in the time of Joshua, by the forfeiture was therefore made of it to the Israelites, one may have reason to suspect it were more defiled with it than any part of the world; besides Salem, I say, he that reads the story of Abimelech, Gen. xx. xxi. xxvi. will have reason to think, that he also and his kingdom, though Philistines, were not then infected with idolatry.

You think they, and almost all mankind were idolaters, but you may be mistaken; and that which may serve to show it, is the example of Elijah the prophet, who was at least as infallible a guesser as you, and was as well instructed in the state and history of his own country and time, as you can be in the state of the whole world three or four thousand years ago. Elijah thought that idolatry had wholly extirpated the true religion out of Israel, and complains thus to God: "The children of Israel have forsaken thy covenant, thrown down thy altars, and slain thy prophets with the sword: and I, even I alone, am left, and they seek my life, to take it away," 1 Kings xix. 10. And he is so fully persuaded of it, that he repeats it again, verse 14; and yet God tells him, that he had there yet seven thousand knees that had not bowed to Baal, seven thousand that were not idolaters; though this was in the reign of Ahab, a king zealous for idolatry; and in a kingdom set up in an idolatrous worship, which had continued the national religion,

established and promoted by the continued succession of several idolatrous princes. And though the national religions soon after the flood were false, which you are far enough from proving; how does it thence follow, that the true religion was near extirpated? which it must needs quite have been, before St. Peter's time, if there were so great reason to fear, as you tell us, that the true religion, without the assistance of force, "would in a much shorter time, than any one that does not well consider the matter would imagine, be most effectually extirpated throughout the world." For above two thousand years after Noah's time, St. Peter tells us, "that in every nation, he that feareth God, and worketh righteousness, is accepted by him," Acts x. 35. By which words, and by the occasion on which they were spoken, it is manifest, that in countries where for two thousand years together no force had been used for the support of Noah's true religion, it was not yet wholly extirpated. But that you may not think it was so near, that there was but one left, only Cornelius, if you will look into Acts xvii. 4, you will find a great multitude of them at Thessalonica, "And of the devout Greeks a great multitude believed, and consorted with Paul and Silas." And again, verse 17, more of them in Athens, a city wholly given to idolatry. For that those σε[Editor: illegible character]όμενοι which we translate devout, and whereof many are mentioned in the Acts, were gentiles, who worshipped the true God, and kept the precepts of Noah, Mr. Mede has abundantly proved. So that whatsoever you, "who have well considered the matter," may imagine of the shortness of time, wherein Noah's religion would be "effectually extirpated throughout the world," without the assistance of force; we find it at Athens, at Philippi, at Corinth, amongst the Romans, in Antioch of Pisidia, in Thessalonica, above two thousand years after, and that not so near being extinguished, but that in some of those places the professors of it were numerous; at Thessalonica they are called a great multitude: at Antioch many: and how many of them were in other parts of the world, whereof there was no occasion to make mention in that short history of the Acts of the Apostles, who knows? If they answered, in other places, to what were found in these, as what reason is there to suppose they should not? I think we may imagine them to be as many, as there were effectually of the true religion christians in Europe, a little before the reformation; notwithstanding the assistance the christian religion had from authority, after the withdrawing of miracles.

But you have a salvo, for you write warily, and endeavour to save yourself on all hands; you say, "There is great reason to fear, that without God's extraordinary providence, it would in a much shorter time, than any one, who does not well consider the matter, would imagine, be most effectually extirpated by it throughout the world." It is without doubt the providence of God which governs the affairs both of the world and his church; and to that, whether you call it ordinary or extraordinary, you may trust the preservation of his church, without the use of such means, as he has no-where appointed or authorized. You fancy force necessary to preserve the true religion, and hence you conclude the magistrate authorized, without any farther commission from God, to use it, "if there be no other means left:" and therefore that must be used: if religion should be preserved without it, it is by the extraordinary providence of God; where extraordinary signifies nothing, but beginning the thing in question. The true religion has been preserved many ages, in the church, without force. Ay, say you, that was by the "extraordinary providence of God." His providence, which over-rules all events, we easily grant it: but why extraordinary providence? because force was necessary to preserve it. And why was force necessary? because otherwise, without "extraordinary providence," it cannot be preserved. In such circles, covered under good words, but misapplied, one might show you taking many a turn in your answer, if it were fit to waste other time to trace your wanderings. God has appointed preaching, teaching, persuasion, instruction, as a means to continue and propagate his true religion in the world; and if it were anywhere preserved and propagated without that, we might call it his "extraordinary providence;" but the means he has appointed being used, we may conclude, that men have done their duties, and so may leave it to his providence, however we will call it, to preserve the little flock, which he bids not to fear, till the end of the world.

But let us return again to what you say, to make good this hypothesis of yours, That idolatry entered first into the world by the contrivance, and spread itself by the endeavours of private men, without the assistance of the magistrates, and those in power. To prove this, you tell us, "that it found entrance into the world, and entertainment in it, when it could have no such aid or assistance." When was this, I beseech you, that idolatry found this entrance into the world? Under what king's reign was it, that you are so positive it could have no such aid or assistance? If you had named the time,

the thing, though of no great moment to you, had been sure. But now we may very justly question this bare assertion of yours. For since we find, as far back as we have any history of it, that the great men of the world were always forward to set up and promote idolatry and false religions; you ought to have given us some reason why, without authority from history, you affirm that idolatry, at its entrance into the world, had not the assistance from men in power, which it never failed of afterwards. Who they were that made Israel to sin, the scripture tells us. Their kings were so zealous promoters of idolatry, that there is scarce any one of them, that has not that brand left upon him in holy writ.

One of the first false religions, whose rise and way of propagating we have an account of in sacred history, was by an ambitious usurper, who, having rebelled against his master, with a false title set up a false religion, to secure his power and dominion. Why this might not have been done before Jeroboam's days, and idols set up at other places, as well as at Dan and Bethel, to serve political ends, will need some other proof, than barely saying, it could not be so at first. The devil, unless much more ignorant, was not less busy in those days to engage princes in his favour; and to weave religion into affairs of state; the better to introduce his worship, and support idolatry, by accommodating it to the ambition, vanity, or superstition, of men in power: and therefore you may as well say, that the corruption of human nature, as that the assistance of the powers in being, did not, in those days, help forward false religions; because your reading has furnished you with no particular mention of it out of history. But you need but say, that the "worship of false gods prevailed without any aid from force, or the assistance of the powers in being, for any thing we find in the history of those times," and then you have sufficiently shown, what? even that you have just nothing to show for your assertion.

But whatever that any thing is, which you find in history, you may meet with men, whose reading yet I will not compare with yours, who think they have found in history, that princes and those in power, first corrupted the true religion, by setting up the images and symbols of their predecessors in their temples, which by their influence, and the ready obedience of the priests they appointed, were in succession of time proposed to the people as objects of their worship. Thus they think they find in history that Isis, queen of Egypt, with her counsellor Thoth, instituted the funeral rites of king Osiris, by the honour done to the sacred ox. They think they find also in

history, that the same Thoth, who was also king of Egypt in his turn, invented the figures of the first Egyptian gods, Saturn, Dagon, Jupiter Hammon, and the rest: that is, the figures of their statues or idols: and that he instituted the worship and sacrifices of these gods; and his institutions were so well assisted by those in authority, and observed by the priests they set up, that the worship of those gods soon became the religion of that, and a pattern to other nations. And here we may perhaps, with good reason, place the rise and original of idolatry after the flood, there being nothing of this kind more ancient. So ready was the ambition, vanity, or superstition of princes, to introduce their predecessors into the divine worship of the people; to secure to themselves the greater veneration from their subjects, as descended from the gods; or to erect such a worship, and such a priesthood, as might awe the blinded and seduced people into that obedience they desired. Thus Ham, by the authority of his successors, the rulers of Egypt, is first brought for the honour of his name and memory into their temples; and never left, till he is erected into a god, and made Jupiter Hammon, &c. which fashion took afterwards with the princes of other countries.

Was not the great god of the eastern nations, Baal, or Jupiter Belus, one of the first kings of Assyria? And which, I pray, is the more likely, that courts, by their instruments the priests, should thus advance the honour of kings amongst the people for the ends of ambition and power; or the people find out these refined ways of doing it, and introduce them into courts for the enslaving themselves? What idolatry does your history tell you of among the Greeks, before Phoroneus and Danaus kings of the Argives, and Cecrops and Theseus kings of Attica, and Cadmus king of Thebes, introduced it? An art of rule it is probable they borrowed from the Egyptians. So that if you had not vouched the silence of history, without consulting it, you would possibly have found, that in the first ages princes, by their influence and aid; by the help and artifice of the priests they employed; their fables of their gods, their mysteries and oracles, and all the assistance they could give it by their authority; did so much against the truth before direct force was grown into fashion, and appeared openly; that there would be little reason of putting the guard and propagation of the true religion into their hands now, and arming them with force to promote it.

That this was the original of idolatry in the world, and that it was borrowed by other magistrates from the Egyptians, is farther evident, in that this worship was settled in Egypt, and grown the national religion there,

before the gods of Greece and several other idolatrous countries were born. For though they took their pattern of deifying their deceased princes from the Egyptians, and kept, as near as they could, to the number and genealogies of the Egyptian gods; yet they took the names still of some great men of their own, which they accommodated to the mythology of the Egyptians. Thus, by the assistance of the powers in being, idolatry entered into the world after the flood. Whereof, if there were not so clear footsteps in history, why yet should you not imagine princes and magistrates, engaged in false religions, as ready to employ their power for the maintaining and promoting their false religions in those days, as we find them now? And therefore what you say in the next words, of the entrance of idolatry into the world, and the entertainment it found in it, will not pass for so very evident, without proof; though you tell us ever so confidently, that you “suppose, besides the corruption of human nature, there can no other cause be assigned of it, or none more probable than this, that the powers then in being did not what they might and ought to have done,” i.e. if you mean it to your purpose, use force your way, to make men consider; or to, “impose creeds and ways of worship, towards the preventing that horrible apostasy.”

I grant that the entrance and growth of idolatry might be owing to the negligence of the powers in being, in that they did not do what they might and ought to have done, in using their authority to suppress the enormities of men’s manners, and correct the irregularity of their lives. But this was not all the assistance they gave to that horrible apostasy: they were, as far as history gives us any light, the promoters of it, and leaders in it; and did what they ought not to have done, by setting up false religions, and using their authority to establish them, to serve their corrupt and ambitious designs.

National religions, established by authority, and enforced by the powers in being, we hear of every-where, as far back as we have any account of the rise and growth of the religions of the world. Show me any place, within those few generations, wherein you say the apostasy prevailed after the flood, where the magistrates being of the true religion, the subjects by the liberty of a toleration were led into false religions; and then you will produce something against liberty of conscience. But to talk of that great apostasy, as wholly owing to toleration, when you cannot produce one instance of toleration then in the world, is to say what you please.

That the majority of mankind were then, and always have been, by the corruption and pravity of human nature, led away, and kept from embracing the true religion, is past doubt. But whether this be owing to toleration in matters of religion, is the question. David describes an horrible corruption and apostasy in his time, so as to say, "There is none that doeth good, no not one," Psal. xiv. and yet I do not think you will say a toleration then in that kingdom was the cause of it. If the greatest part cannot be ill without a toleration, I am afraid you must be fain to find out a toleration in every country, and in all ages of the world. For I think it is true, of all times and places, that the broad way that leadeth to destruction, has had most travellers. I would be glad to know where it was that force your way applied, i. e. with punishments only upon nonconformists; ever prevailed to bring the greater number into the narrow way, that leads into life; which our Saviour tells us, there are few that find.

The corruption of human nature, you say, opposes the true religion. I grant it you. There was also, say you, an horrible apostasy after the flood; let this also be granted you: and yet from hence it will not follow, that the true religion cannot subsist and prevail in the world without the assistance of force, your way applied; till you have shown, that the false religions, which were the inventions of men, grew up under toleration, and not by the encouragement and assistance of the powers in being.

How near soever therefore the true religion was to be extinguished within a few generations after the flood; (which whether more in danger then, than in most ages since, is more than you can show:) this will be still the question, whether the liberty of toleration, or the authority of the powers in being, contributed most to it? And whether there can be no other, nor more probable cause assigned, than the want of force your way applied, I shall leave the reader to judge. This I am sure, whatever causes any one else shall assign, are as well proved as yours, if they offer them only as their conjectures.

Not but that I think men could run into false and foolish ways of worship without the instigation or assistance of human authority; but the powers of the world, as far as we have any history, having been always forward enough (true religion as little serving princes as private men's lusts) to take up wrong religions, and as forward to employ their authority to impose the religion, good or bad, which they had once taken up; I can see no reason why the not using of force, by the princes of the world, should be assigned

as the sole, or so much as the most probable cause of propagating the false religions of the world, or extirpating the true; or how you can so positively say, idolatry prevailed without any assistance from the powers in being.

Since therefore history leads us to the magistrates, as the authors and promoters of idolatry in the world; to which we may suppose their not suppressing of vice, joined as another cause of the spreading of false religions; you were best consider, whether you can still suppose there can no other cause be assigned of the prevailing of the worship of false gods, but the magistrate's not interposing his authority in matters of religion. For that that cannot with any probability at all be assigned as any cause, I shall give you this farther reason. You impute the prevailing of false religions to "the corruption and pravity of human nature, left to itself, unbridled by authority." Now if force your way applied, does not at all bridle the corruption and pravity of human nature; the magistrate's not so interposing his authority, cannot be assigned as any cause at all of that apostasy. So that let that apostasy have what rise, and spread as far as you please, it will not make one jot for force, your way applied; or show that that can receive any assistance your way from authority. For your use of authority and force, being only to bring men to an outward conformity to the national religion, it leaves the corruption and pravity of human nature as unbridled as before, as I have shown elsewhere.

You tell us, "that it is not true, that the true religion will prevail by its own light and strength, without miracles, or the assistance of the powers in being, because of the corruption of human nature." And for this you give us an instance in the apostasy presently after the flood. And you tell us, that without the assistance of force it would presently be extirpated out of the world. If the corruption of human nature be so universal, and so strong, that, without the help of force the true religion is too weak to stand it, and cannot at all prevail, without miracles or force; how come men ever to be converted, in countries where the national religion is false? If you say by extraordinary providence; what that amounts to has been shown. If you say this corruption is so potent in all men, as to oppose and prevail against the gospel, not assisted by force or miracles; that is not true. If in most men; so it is still, even where force is used. For I desire you to name me a country, where the greatest part are really and truly christians, such as you confidently believe Christ, at the last day, will own to be so. In England having, as you do, excluded all the dissenters; (or else why would you have

them punished, to bring them to embrace the true religion?) you must, I fear, allow yourself a great latitude in thinking, if you think that the corruption of human nature does not so far prevail, even amongst conformists, as to make the ignorance, and lives, of great numbers amongst them, such as suits not at all with the spirit of true christianity. How great their ignorance may be, in the more spiritual and elevated parts of the christian religion, may be guessed, by what the reverend bishop, before cited, says of it, in reference to a rite of the church, the most easy and obvious to be instructed in, and understood. His words are, “In the common management of that holy rite [confirmation] it is but too visible, that of those multitudes that crowd to it, the far greater part come merely as if they were to receive the bishop’s blessing without any sense of the vow made by them, and of their renewing their baptismal engagements in it,” Past. Care, . And if Origen were now alive, might he not find many in our church, to whom these words of his might be applied, “Whose faith signifies only thus much, and goes no farther than this, viz. that they come duly to the church, and bow their heads to the priest,” &c.? Hom. in Jos. IX. For it seems it was then the fashion to bow to the priest as it is now to the altar. If therefore you say force is necessary, because without it no men will so consider as to embrace the true religion, for the salvation of their souls; that I think is manifestly false. If you say it is necessary to use such means as will make the greatest part so embrace it; you must use some other means than force, your way applied; for that does not so far work on the majority. If you say it is necessary, because possibly it may work on some, which bare preaching and persuasion will not; I answer, if possibly your moderate punishments may work on some, and therefore they are necessary; it is as possible, that greater punishments may work on others, and therefore they are necessary, and so on to the utmost severities.

That the corruption of human nature is every-where spread, and that it works powerfully in the children of disobedience, “who receive not the love of the truth, but have pleasure in unrighteousness;” and therefore God gives them up to believe a lye; nobody, I think, will deny. But that this corruption of human nature works equally in all men, or in all ages; and so, that God will, or ever did, give up all men, not restrained by force, your way modified and applied, to believe a lye, (as all false religions are,) that I yet see no reason to grant. Nor will this instance of Noah’s religion, you so much rely on, ever persuade, till you have proved, that from those eight

men which brought the true religion with them into the new world, there were not eight thousand, or eighty thousand, which retained it in the world in the worst times of the apostasy. And secondly, till you have proved that the false religions of the world prevailed, without any aid from force, or the assistance of the powers in being. And, thirdly, that the decay of the true religion was for want of force, your moderate force; neither of which you have at all proved, as I think it manifest.

One consideration more touching Noah, and his religion, give me leave to suggest, and that is, if force were so necessary for the support of true religion, as you make it; it is strange, God, who gave him precepts about other things should never reveal this to him, nor any-body else, that I know. To this you, who have confessed the “Scripture not to have given the magistrate this commission,” must say, that it is plain enough in the commission that he has from the law of nature, and so needed not any revelation, to instruct the magistrate in the right he has to use force. I confess the magistrates have used force in matters of religion, and have been as confidently and constantly put upon it by their priests, as if they had as clear a commission from heaven, as St. Peter had to preach the gospel to the gentiles. But yet it is plain, notwithstanding that commission from the law of nature, there needs some farther instruction from revelation; since it does not appear, that they have found out the right use of force, such as the true religion requires for its preservation; and though you have, after several thousands of years, at last discovered it; yet it is very imperfectly; you not being able to tell, if a law were now to be made against those who have not considered as they ought, what are those moderate penalties which are to be employed against them; though yet without that all the rest signifies nothing. But however doubtful you are in this, I am glad to find you so direct, in putting men’s rejecting the true religion, upon the difficulty they have to “mortify their lusts, which the true religion requires of them,” and I desire you to remember it in other places, where I have occasion to mind you of it.

To conclude, That we may see the great advantage your cause will receive from that instance, you so much rely on, of the apostasy after the flood, I shall oppose another to it. You say, that “idolatry prevailed in the world in a few generations, almost to the utter exclusion of the true religion, without any aid from force, or assistance of the powers in being, by reason of toleration.” And therefore you think there is great reason to fear, that “the

true religion would by toleration, quickly be most effectually extirpated throughout the world:" And I say, that after christianity was received for the religion of the empire, and whilst political laws, and force, interposed in it, an horrible apostasy prevailed to almost the utter exclusion of true religion, and a general introducing of idolatry. And therefore I think there is great reason to fear more harm than good, from the use of force in religion.

This I think as good an argument against, as yours for force, and something better; since what you build on is only presumed by you, not proved from history: whereas the matter of fact here is well known; nor will you deny it, when you consider the state of religion in christendom under the assistance of that force, which you tell us succeeded and supplied the place of withdrawn miracles, which in your opinion are so necessary in the absence of force, that you make that the reason of their continuance; and tell us they "were continued till force could be had; not so much for evincing the truth of the christian religion, as to supply the want of the magistrate's assistance." So that whenever force failed, there according to your hypothesis, are miracles to supply its want; for, without one of them, the true religion, if we may believe you, will soon be utterly extirpated; and what force, in the absence of miracles, produced in christendom several ages before the reformation, is so well known, that it will be hard to find what service your way of arguing will do any but the Romish religion.

But to take your argument in its full latitude, you say, but you say it without book, that there was once a toleration in the world to the almost utter extirpation of the true religion; and I say to you, that as far as records authorize either opinion, we may say force has been always used in matters of religion, to the great prejudice of the true religion, and the professors of it. And there not being an age wherein you can show me, upon a fair trial of an established national toleration, that the true religion was extirpated, or endangered, so much as you pretend by it: (whereas there is no age, whereof we have sufficient history to judge of this matter, wherein it will not be easy to find that the true religion, and its followers, suffered by force:) you will in vain endeavour, by instances, to prove the ill effects, or uselessness of toleration, such as the author proposed; which I challenge you to show me was ever set up in the world, or that the true religion suffered by it; and it is to the want of it, and the restraints and disadvantages the true religion has laboured under, its so little spreading in the world will

justly be imputed: until, from better experiments, you have something to say against it.

Our Saviour has promised that he will build his church on this fundamental truth, that he is “Christ the son of God; so that the gates of hell shall not prevail against it:” and this I believe, though you tell us the true religion is not able to subsist without the assistance of force, when miracles cease. I do not remember that our Saviour any-where promises any other assistance but that of his Spirit; or gives his little flock any encouragement to expect much countenance or help from the great men of the world; or the coercive power of the magistrates; nor any-where authorizes them to use it for the support of his church; “not many wise men after the flesh, not many mighty, not many noble,” 1 Cor. i. 26, is the style of the gospel; and I believe will be found to belong to all ages of the church militant, past and to come, as well as to the first: for God, as St. Paul tells us, has chosen the “foolish things of the world to confound the wise, and the weak things of the world to confound the mighty;” and this not only till miracles ceased, but ever since. “To be hated for Christ’s name sake, and by much tribulation to enter into the kingdom of heaven,” has been the general and constant lot of the people of God, as well as it seems to be the current strain of the New Testament; which promises nothing of secular power or greatness; says nothing of “kings being nursing fathers, or queens nursing mothers:” which prophecy, whatever meaning it have, it is like our Saviour would not have omitted to support his church with some hopes and assurance of such assistance, if it were to have any accomplishment before his second coming; when Israel shall come in again, and with the gentiles make up the fulness of his glorious kingdom. But the tenour of the New Testament is, “All that will live godly in Jesus Christ, shall suffer persecution,” 2 Tim. iii. 12.

In your “Argument considered,” you tell us, “that no man can fail of finding the way of salvation that seeks it as he ought.” In my answer, I take notice to you, that the places of scripture you cite to prove it, point out this way of seeking as we ought, to be a good life: as particularly that of St. John, “If any one will do his will, he shall know of the doctrine whether it be of God:” upon which I use these words: “So that these places, if they prove what you cite them for, that no man can fail of finding the way of salvation, who seeks it as he ought; they do also prove, that a good life is the only way to seek as we ought; and that therefore the magistrates, if they would put men upon seeking the way of salvation as they ought, should by

their laws and penalties force them to a good life; a good conversation being the surest and readiest way to a right understanding. And that if magistrates will severely and impartially set themselves against vice, in whomsoever it is found, true religion will be spread wider — than ever hitherto it has been by the imposition of creeds and ceremonies.” To this you reply, “Whether the magistrates setting themselves severely and impartially against what you suppose I call vice; or the imposition of sound creeds and decent ceremonies; does more conduce to the spreading the true religion, and rendering it fruitful in the lives of its professors, we need not examine; you confess, you think both together do best; and this, you think, is as much as needs be said to that paragraph.” If it had been put to you, whether a good living, or a good prebend, would more conduce to the enlarging your fortune, I think it would be allowed you as no improper or unlikely answer, what you say here, “I think both together would do best;” but here the case is otherwise: your thinking determines not the point: and other people of equal authority may, and I will answer for it, do think otherwise: but because I pretend to no authority, I will give you a reason, why your thinking is insufficient. You tell us, that “force is not a fit means, where it is not necessary as well as useful;” and you prove it to be necessary, because there is no other means left. Now if the severity of the magistrate, against what I call vice, will, as you will not deny, promote a good life, and that be the right way to seek the truths of religion; here is another means besides imposing of creeds and ceremonies, to promote the true religion; and therefore your argument for its necessity, because of no other means left, being gone, you cannot say “both together are best,” when one of them being not necessary, is therefore, by your own confession, not to be used.

I having said, That if such an indirect and at a distance usefulness were sufficient to justify the use of force, the magistrate might make his subjects eunuchs for the kingdom of heaven: you reply, that you “suppose I will not say castration is necessary, because you hope I acknowledge, that marriage, and that grace which God denies to none, who seriously ask it, are sufficient for that purpose.” And I hope you acknowledge, that preaching, admonitions, and instructions, and that grace which God denies to none, who seriously ask it, are sufficient for salvation. So that by this answer of yours, there being no more necessity of force to make men of the true religion, than there is of castration to make men chaste; it will still remain

that the magistrate, when he thinks fit, may, upon your principles, as well castrate men to make them chaste, as use force to make them embrace the truth that must save them.

If castration be not necessary, “because marriage and the grace of God are sufficient,” without it: nor will force be necessary, because preaching and the grace of God are sufficient without it; and this, I think, by your own rule, where you tell us, “Where there are many useful means, and some of them are sufficient without the rest, there is no necessity of using them all.” So that you must either quit your necessity of force, or take in castration too: which, however it might not go down with the untractable and desperately perverse and obstinate people in these western countries, yet is a doctrine, you may hope, may meet with a better reception in the Ottoman empire, and recommend you to some of my mahometans.

To my saying, “If what we are apt to think useful, were thence to be concluded so, we might be in danger to be obliged to believe the pretended miracles of the church of Rome, by your way of reasoning; unless we will say, that which without impiety cannot be said, that the wise and benign disposer and governor of all things does not use all useful means for promoting his own honour in the world, and the good of souls.” This, I think, will conclude as much for miracles as for force: you reply, “you think it will not; for in the place I intend, you speak not of useful, but of competent, i. e. sufficient means. Now competent or sufficient means are necessary; but you think no man will say that all useful means are so: and therefore though, as you affirm, it cannot be said without impiety, that the wise and benign disposer and governor of all things has not furnished mankind with competent means for the promoting his own honour in the world, and the good of souls; yet it is very agreeable with piety, and with truth too, to say that he does not now use all useful means: because as none of his attributes obliges him to use more than sufficient means; so he may use sufficient means, without using all useful means. For where there are many useful means, and some of them are sufficient without the rest, there is no necessity of them all. So that from God’s not using miracles now, to promote the true religion, I cannot conclude that he does not think them useful now, but only that he does not think them necessary. And therefore, though what we are apt to think useful, were thence to be concluded so; yet if whatever is useful, be not likewise to be concluded necessary, there is no reason to fear that we should be obliged to believe the miracles pretended to

by the church of Rome. For if miracles be not now necessary, there is no inconvenience in thinking the miracles pretended to by the church of Rome to be but pretended miracles.” To which I answer, Put it how you will, for competent means, or useful means, it will conclude for miracles still as much as for force. Your words are these, “If such a degree of outward force, as has been mentioned, be really of great and necessary use for the advancing these ends, as taking the world as we find it, you say, you think it appears to be; then it must be acknowledged there is a right somewhere to use it for the advancing those ends; unless we will say, what without impiety cannot be said, that the wise and benign disposer of all things has not furnished mankind with competent means for the promoting his own honour in the world, and the good of souls.” What, I beseech you, now is the sum of this argument, but this, “force is of great and necessary use; therefore the wise and benign disposer of all things, who will not leave mankind unfurnished (which it would be impiety to say) of competent means for the promoting his honour in the world, and the good of souls, has given somewhere a right to use it?”

Let us try it now, whether it will not do as well for miracles. Miracles “are of great and necessary use, as great and necessary at least as force; therefore the wise and benign disposer of all things, who will not leave mankind unfurnished, which it would be impiety to say, of competent means for the promoting his honour in the world, and the good of souls,” has given somewhere a power of miracles. I ask you, when I in the second letter used your own words, applied to miracles instead of force, would they not conclude then as well for miracles as for force? For you must remember there was not then in all your scheme one word of miracles to supply the place of force. Force alone was mentioned, force alone was necessary, all was laid on force. Nor was it easy to divine, that miracles should be taken in, to mend the defects of your hypothesis; which in your answer to me you now have done, and I easily allow it, without holding you to any thing you have said, and shall always do so. For seeking truth, and not triumph, as you frequently suggest, I shall always take your hypothesis as you please to reform it, and either embrace it, or show you why I do not.

Let us see, therefore, whether this argument will do any better now your scheme is mended, and you make force or miracles necessary. If force or miracles are of “great and necessary use for the promoting true religion, and the salvation of souls; then it must be acknowledged, that there is

somewhere a right to use the one, or a power to do the other, for the advancing those ends; unless we will say, what without impiety cannot be said, that the wise and benign disposer and governor of all things has not furnished mankind with competent means for the promoting his own honour, and the good of souls.” From whence it will follow, if your argument be good, that where men have not a right to use force; there still we are to expect miracles, unless we will say, &c. Now where the magistrates are not of the true religion, there by this part of your scheme there is a right in nobody to use force: for if there were, what need of miracles, as you tell us there was, in the first ages of christianity, to supply that want? Since the magistrates, who were of false religions then, were furnished with as much right, if that were enough, as they are now. So that where the magistrates are of false religions, there you must, upon your principles, affirm miracles are still to supply the want of force; “unless you will say, what without impiety cannot be said, that the wise and benign disposer and governor of all things hath not furnished mankind with competent means for the promoting his own honour in the world, and the good of souls.” Now how far this will favour the pretences of the church of Rome to miracles in the East and West Indies, and other parts not under popish governments, you were best consider. This is evident, that in all countries where the true religion is not received for the religion of the state, and supported and encouraged by the laws of it; you must allow miracles to be as necessary now, as ever they were any-where in the world, for the supply of the want of force, before the magistrates were christians. And then what advantage your doctrine gives to the church of Rome, is very visible. For they, like you, supposing theirs the only true religion, are supplied by you with this argument for it, viz. “That the true religion will not prevail by its own light and strength, without the assistance of miracles or authority. Which are the competent means, which, without impiety, it cannot be said, that the wise and benign disposer and governor of all things has not furnished mankind with.” From whence they will not think it hard to draw this consequence, that therefore the wise and benign governor of all things has continued in their church the power of miracles; (which yours does not so much as pretend to;) to supply the want of the magistrate’s assistance, where that cannot be had to make the true religion prevail. And if a papist should press you with this argument, I would gladly know what you would reply to him.

Though this be enough to make good what I said, yet since I seek truth, more than my own justification, let us examine a little what it is you here say of “competent means. Competent means, you say, are necessary, but you think no man will say, all useful means are so.” If you think you speak plain, clear, determined sense, when you used this good English word competent, I pity you: if you did it with skill, I send you to my pagans and mahometans. But this safe way of talking, though it be not altogether so clear, yet it so often occurs in you, that it is hard to judge, whether it be art or nature. Now pray what do you mean by “mankind’s being furnished with competent means?” If it be such means as many are prevailed on by to embrace the truth that must save them, preaching is a competent means, for by preaching alone, without force, many are prevailed on, and become truly christians; and then your force, by your own confession, is not necessary. If by competent, you understand such means, by which all men are prevailed on, or the majority, to become truly christians, I fear your force is no competent means.

Which way ever you put it, you must acknowledge mankind to be destitute of competent means, or your moderate force not to be that necessary competent means: since whatever right the magistrates may have had any-where to use it, wherever it has not been used, let the cause be what it will that kept this means from being used, there the people have been destitute of that means.

But you will think there is little reason to complain of obscurity, you having abundantly explained what you mean by competent, in saying competent, i. e. sufficient means. So that we have nothing to do but to find out what you mean by sufficient: and the meaning of that word, in your use of it, you happily give us in these following, “What does any man mean by sufficient evidence, but such as will certainly win assent wherever it is duly considered.” Apply this to your means, and then tell me, whether your force be such competent, i. e. sufficient means, that it certainly produced embracing the truth, wherever it was duly, i. e. your way applied; if it did not, it is plain it is not your competent sufficient means, and so the world, without any such imputation to the divine wisdom and benignity, might be without it. If you will say it was sufficient, and did produce that end wherever it was applied, I desire you then to tell me whether mankind hath been always furnished with competent means. You have it now in your choice, either to talk impiously, or renounce force, and disown it to be

competent means; one of the two I do not see how, by your own argument, you can avoid.

But to lay by your competent and sufficient means, and to ease you of the uncertainty and difficulty you will be in to determine what is so, in respect of mankind; I suppose it will be little less “impious to say, that the wise and benign disposer and governor hath not furnished mankind with necessary means, as to say he hath not furnished them with competent means.” Now, sir, if your moderate penalties, and nothing else, be, since the withdrawing of miracles, this necessary means, what will be left you to say, by your argument, of the wisdom and benignity of God in all those countries, where moderate penalties are not made use of? where men are not furnished with this means to bring them to the true religion? For unless you can say, that your moderate penalties have been constantly made use of in the world for the support and encouragement of the true religion, and to bring men to it, ever since the withdrawing of miracles; you must confess that not only some countries (which yet were enough against you,) but mankind in general, have been unfurnished of the “necessary means for the promoting the honour of God in the world, and the salvation of men’s souls.” This argument out of your own mouth, were there no other, is sufficient to show the weakness and unreasonableness of your scheme; and I hope the due consideration of it will make you cautious another time, how you intitle the wisdom and benignity of God to the support of what you once fancy to be of great and necessary use.

I having thereupon said, “Let us not therefore be more wise than our Maker in that stupendous and supernatural work of our salvation. The scripture,” &c.

You reply, “Though the work of our salvation be, as I justly call it, stupendous and supernatural; yet you suppose no sober man doubts, but it both admits and ordinarily requires the use of natural and human means, in subordination to that grace which works it.”

If you had taken notice of these immediately following words of mine, “The scripture that reveals it to us, contains all that we can know or do, in order to it; and where that is silent, it is presumption in us to direct;” you would not have thought what you here say a sufficient answer: for though God does make use of natural and human means in subordination to grace, yet it is not for man to make use of any means, in subordination to his

grace, which God has not appointed; out of a conceit it may do some service indirectly and at a distance.

The whole covenant and work of grace is the contrivance of God's infinite wisdom. What it is, and by what means he will dispense his grace, is known to us by revelation only; which is so little suited to human wisdom, that the apostle calls it "the foolishness of preaching." In the scripture is contained all that revelation, and all things necessary for that work, all the means of grace: there God has declared all that he would have done for the salvation of souls; and if he had thought force necessary to be joined with the foolishness of preaching, no doubt but he would have somewhere or other have revealed it, and not left it to the wisdom of man; which, how disproportioned and opposite it is to the ways and wisdom of God in the gospel, and how unfit to be trusted in the business of salvation, you may see, I Cor. i. from verse 17 to the end.

"The work of grace admits and ordinarily requires the use of natural and human means." I deny it not: let us now hear your inference: "Therefore till I have shown that no penal laws, that can be made, can do any service towards the salvation of men's souls in subordination to God's grace, or that God has forbidden the magistrate" to use force, for so you ought to put it, but you rather choose, according to your ordinary way, to use general and doubtful words; and therefore you say, "to serve him in that great work with the authority which he has given him; there will be no occasion for the caution I have given," not to be wiser than our Maker in that stupendous work of our salvation. By which way of arguing, any thing that I cannot show, cannot possibly, cannot indirectly and at a distance, or by accident, do any service, or God has not forbidden, may be made use of for the salvation of souls. I suppose you mean expressly forbidden, for else I might think these words ["Who has required this at your hands?"] sufficient prohibition of it. The sum of your argument is, "what cannot be showed not to do any service, may be used as a human means in subordination to grace, in the work of salvation." To which I reply, That what may, through the grace of God, sometimes do some service, cannot, without a further warrant from revelation than such usefulness, be required, or made use of as a subordinate means to grace. For if so, then auricular confession, penance, pilgrimages, processions, &c. which nobody can show do not ever do any service, at least indirectly and at a distance, towards the salvation of souls, may all be justified.

It is not enough that it cannot be shown that it cannot do any service to justify its usefulness: for what is there that may not, indirectly and at a distance, or by accident, do some service? To show that it is a human means, that God has no-where appointed, in subordination to grace, in the supernatural work of salvation, is enough to prove it an unwarrantable boldness to use it: and much more so in the present case of force, which, if put into the magistrate's hands with power to use it in matters of religion, will do more harm than good, as I think I have sufficiently shown.

And therefore, since, according to you, the magistrate's commission to use force for the salvation of souls, is from the law of nature; which commission reaches to none, since the revelation of the gospel, but christian magistrates; it is more natural to conclude, were there nothing else in the case but the silence of scripture, that the christian magistrate has no such power, because he has no such commission any-where in the gospel, wherein all things are appointed necessary to salvation; than that there was so clear a commission given to all magistrates by the law of nature, that it is necessary to show a prohibition from revelation, if one will deny christian magistrates to have that power. Since the commission of the law of nature, to magistrates, being only that general one, of doing good according to the best of their judgments: if that extends to the use of force in matters of religion, it will abundantly more oppose than promote the true religion, if force in the case has any efficacy at all, and so do more harm than good: which though it shows not, what you here demand, that it cannot do any service towards the salvation of men's souls, for that cannot be shown of any thing; yet it shows the disservice, it does, is so much more, than any service can be expected from it, that it can never be proved, that God has given power to magistrates to use it by the commission they have of doing good, from the law of nature.

But whilst you tell me, "Till I have shown that force and penalties cannot do any service towards the salvation of souls, there will be no occasion for the caution I gave you," not to be wiser than our Maker in that stupendous and supernatural work; you have forgot your own confession, that it is not enough to authorize the use of force, that it may be useful, if it be not also necessary. And when you can prove such means necessary, which though it cannot be shown, never upon any occasion to do any service; yet may be, and is abundantly shown to do little service, and so uncertainly, that if it be used, it will, if it has any efficacy, do more harm than good: if you can, I

say, prove such a means as that necessary, I think I may yield you the cause. But the use of it has so much certain harm, and so little and uncertain good in it, that it can never be supposed included or intended in the general commission to the magistrates, of doing good; which may serve for an answer to your next paragraph.

Only let me take notice, that you here make this commission of the law of nature to extend the use of force, only to “induce those, who would not otherwise, to hear what may and ought to move them to embrace the truth.” They have heard all that is offered to move them to embrace, i. e. believe, but are not moved: is the magistrate by the law of nature commissioned to punish them for what is not in their power? for faith is the gift of God, and not in a man’s power: or is the magistrate commissioned by the law of nature, which impowers him in general, only to do them good? Is he, I say, commissioned to make them lye, and profess that which they do not believe? And is this for their good? If he punish them till they embrace, i. e. believe, he punishes them for what is not in their power; if till they embrace, i. e. barely profess, he punishes them for what is not for their good: to neither of which can he be commissioned by the law of nature.

To my saying, “Till you can show us a commission in scripture, it will be fit for us to obey that precept of the gospel, Mark iv. 24, which bids us take heed what we hear.” You reply, That this “you suppose is only intended for the vulgar reader; for it ought to be rendered, attend to what you hear;” which you prove out of Grotius. What if I or my readers are not so learned, as to understand either the Greek original, or Grotius’s Latin comment? Or if we did, are we to be blamed for understanding the scripture in that sense, which the national, i. e. as you say, the true religion authorizes, and which you tell us would be a fault in us if we did not believe?

For if, as you suppose, there be sufficient provision made in England for the instructing all men in the truth; we cannot then but take the words in this sense, it being that which the public authority has given them; for if we are not to follow the sense as it is given us in the translation authorized by our governors, and used in our worship established by law; but must seek it elsewhere; it will be hard to find, how there is any other provision made for instructing men in the sense of the scripture, which is the truth that must save them, but to leave them to their own inquiry and judgment, and to themselves, to take whom they think best for interpreters and expounders of scripture, and to quit that of the true church, which she has given in her

translation. This is the liberty you take to differ from the true church, when you think fit, and it will serve your purpose. She says, "Take heed what you hear;" but you say, the true sense is, "Attend to what you hear." Methinks you should not be at such variance with dissenters; for, after all, nothing is so like a nonconformist as a conformist. Though it be certainly every one's right to understand the scripture in that sense which appears truest to him, yet I do not see how you, upon your principles, can depart from that which the church of England has given it: but you, I find, when you think fit, take that liberty; and so much liberty as that, would, I think, satisfy all the dissenters in England.

As to your other place of scripture; if St. Paul, as it seems to me, in that tenth to the Romans, where showing that the gentiles were provided with all things necessary to salvation as well as the jews; and that by having men sent to them to preach the gospel, that provision was made; what you say in the two next paragraphs will show us that you understand, that the Greek word ἀκοή, signifies both hearing and report; but does no more answer the force of those two verses, against you, than if you had spared all you said with your Greek criticism. The words of St. Paul are these: "How then shall they call on him on whom they have not believed? And how shall they believe in him of whom they have not heard? And how shall they hear without a preacher? And how shall they preach, except they be sent? So then faith cometh by hearing, and hearing by the word of God," Rom. x. 14, 15, 17. In this deduction of the means of propagating the gospel, we may well suppose St. Paul would have put in miracles or penalties, if, as you say, one of them had been necessary. But whether or no every reader will think St. Paul set down in that place all necessary means, I know not; but this, I am confident, he will think, that the New Testament does; and then I ask, Whether there be in it one word of force to be used to bring men to be christians, or to hearken to the good tidings of salvation offered in the gospel?

To my asking, "What if God, for reasons best known to himself, would not have men compelled?" You answer, "If he would not have them compelled, now miracles are ceased, as far as moderate penalties compel, (otherwise you are not concerned in the demand,) he would have told us so." Concerning miracles supplying the want of force, I shall need to say nothing more here: but to your answer, that "God would have told us so;" I shall in few words state the matter to you. You first suppose force necessary

to compel men to hear; and thereupon suppose the magistrate invested with a power to compel them to hear; and from thence peremptorily declare, that if God would not have force used, he would have told us so. You suppose also, that, it must be only moderate force. Now may we not ask one, that is so far of the council of the Almighty, that he can positively say what he would or would not have; to tell us, whether it be not as probable that God, who knows the temper of man that he has made, who knows how apt he is not to spare any degree of force when he believes he has a commission to compel men to do any thing in their power; and who knows also how prone man is to think it reasonable to do so: whether, I say, it is not as probable that God, if he would have the magistrate to use none but moderate force to compel men to hear, would also have told us so? Fathers are not more apt than magistrates to strain their power beyond what is convenient for the education of their children; and yet it has pleased God to tell them in the New Testament, of this moderation, by a precept more than once repeated.

To my demanding, "What if God would have men left to their freedom in this point, if they will hear, or if they will forbear; will you constrain them? Thus we are sure he did with his own people," &c. You answer, "But those words, whether they will hear, or whether they will forbear, which we find thrice used in the prophet Ezekiel, are nothing at all to my purpose. For by hearing there, no man understands the bare giving an ear to what was to be preached; nor yet the considering it only; but the complying with it, and obeying it; according to the paraphrase which Grotius gives of the words." Methinks, for this once, you might have allowed me to have hit upon something to the purpose, you having denied me it in so many other places: if it were but for pity; and one other reason; which is, that all you have to say against it is, that "by hearing there, no man understands the bare giving an ear to what was to be preached; nor yet the considering it; but the complying with it, and obeying it." If I misremember not, your hypothesis pretends the use of force to be not barely to make men give an ear, nor yet to consider; but to make them consider as they ought; i. e. so as not to reject; and therefore, though this text out of Ezekiel be nothing to the purpose against bare giving an ear; yet, if you please, let it stand as if it were to the purpose against your hypothesis, till you can find some other answer to it.

If you will give yourself the pains to turn to Acts xxviii. 24, 25, 26, 27, 28, you will read these words, "And some believed the things that were

spoken, and some believed not. And when they agreed not among themselves they departed, after that Paul had spoken one word, Well spake the Holy Ghost by Esaias the prophet, unto our fathers, saying, Go unto this people, and say, hearing, ye shall hear, and shall not understand; and seeing, ye shall see, and not perceive. For the heart of this people is waxed gross, and their ears are dull of hearing, and their eyes have they closed; lest they should see with their eyes, and hear with their ears, and understand with their heart, and should be converted, and I should heal them. Be it known therefore unto you, that the salvation of God is sent unto the gentiles, and that they will hear it.”

If one should come now, and out of your treatise, called “The Argument of the Letter concerning Toleration considered and answered,” reason thus, “It is evident that these jews have not sought the truth in this matter, with that application of mind, and freedom of judgment, which was requisite; whilst they suffered their lusts and passions to sit in judgment, and manage the inquiry. The impressions of education, the reverence and admiration of persons, worldly respects, and the like incompetent motives, have determined them. Now if this be the case; if these men are averse to a due consideration of things, where they are most concerned to use it; what means is there left (besides the grace of God) to reduce them out of the wrong way they are in, but to lay thorns and briars in it?” Would you not think this a good argument to show the necessity of using force and penalties upon these men in the Acts, who refused to be brought to embrace the true religion upon the preaching of St. Paul? “For what other means was left, what human method could be used to bring them to make a wiser and more rational choice, but laying such penalties upon them as might balance the weight of such prejudices, which inclined them to prefer a false way before the true?” Tell me, I beseech you, would you not, had you been a christian magistrate in those days, have thought yourself obliged to try, by force, “to overbalance the weight of those prejudices which inclined them to prefer a false way to the true?” For there was no other human means left; and if that be not enough to prove the necessity of using it, you have no proof of any necessity of force at all.

If you would have laid penalties upon them, I ask you, what if God, for reasons best known to himself, thought it not necessary to use any other human means but preaching and persuasion? You have a ready answer, there is no other human means but force, and some other human means

besides preaching is necessary, i. e. in your opinion: and is it not fit your authority should carry it? For as to miracles, whether you think fit to rank them amongst human means or no; or whether or no there were any showed to these unbelieving jews, to supply the want of force; I guess, in this case, you will not be much helped, whichever you suppose: though to one unbiassed, who reads that chapter, it will, I imagine, appear most probable that St. Paul, when he thus parted with them, had done no miracles amongst them.

But you have, at the close of the paragraph before us, provided a salvo for all, in telling us, “However the penalties you defend, are not such as can any way be pretended to take away men’s freedom in this point.” The question is, whether there be a necessity of using other human means but preaching, for the bringing men to embrace the truth that must save them; and whether force be it? God himself seems, in the places quoted, and others, to teach us, that he would have left men to their freedom from any constraint of force in that point; and you answer, “The penalties you defend are not such as can any ways be pretended to take away men’s freedom in this point.” Tell us what you mean by these words of yours, “take away men’s freedom in this point;” and then apply it. I think it pretty hard to use penalties and force to any man, without taking away his freedom from penalties and force. Farther, the penalties you think necessary, if we may believe you yourself, are to “be such as may balance the weight of those prejudices, which incline men to prefer a false way before a true:” whether these be such as you will defend, is another question. This, I think, is to be made plain, that you must go beyond the lower degrees of force, and moderate penalties, to balance those prejudices.

To my saying, “That the method of the gospel is to pray and beseech, and that if God had thought it necessary to have men punished to make them give ear, he could have called magistrates to be spreaders of the gospel, as well as poor fishermen; or Paul, a persecutor; who yet wanted not power to punish Ananias and Sapphira, and the incestuous Corinthian.” You reply, “Though it be the method of the gospel, for the ministers of it to pray and beseech men; yet it appears from my own words here, both that punishments may be sometimes necessary; and that punishing, and that even by those who are to pray and beseech, is consistent with that method.” I fear, sir, you so greedily lay hold upon any examples of punishment, when on any account they come in your way: that you give yourself not liberty to

consider whether they are for your purpose or no; or else you would scarce infer, as you do from my words, that, in your case, “punishments may be sometimes necessary.” Ananias and Sapphira were punished: “therefore it appears, say you, that punishments may be sometimes necessary.” For what, I beseech you? For the only end, you say, punishments are useful in religion, i. e. to make men consider. So that Ananias and Sapphira were struck dead: for what end? To make them consider. If you had given yourself the leisure to have reflected on this, and the other instance of the incestuous Corinthian; it is possible you would have found neither of them to have served very well to show punishment necessary to bring men to embrace the true religion; for both these were punishments laid on those who had already embraced the true religion, and were in the communion of the true church: and so can only show, if you will infer any thing concerning the necessity of punishments from them, that punishments may be sometimes necessary for those who are in the communion of the true church. And of that you may make your advantage.

As to your other inferences from my words, viz. “That punishing, and that even by those who are, as ambassadors, to pray and beseech; is consistent with that method;” when they can do it as the apostles did, by the immediate direction and assistance of the spirit of God, I shall easily allow it to be consistent with the method of the gospel. If that will not content you, it is plain, you have an itch to be handling the secular sword; and since Christ has not given you the power you desire, you would be executing the magistrate’s pretended commission from the law of nature. One thing more let me remind you of, and that is, that if, from the punishments of Ananias and Sapphira, and the incestuous Corinthian, you can infer a necessity of punishment to make men consider; it will follow that there was a necessity of punishment to make men consider, notwithstanding miracles; which cannot therefore be supposed to supply the want of punishments.

To my asking, “What if God, foreseeing this force would be in the hands of men, as passionate, as humoursome, as liable to prejudice and error, as the rest of their brethren, did not think it a proper means to bring men into the right way?” You reply, “But if there be any thing of an argument in this, it proves that there ought to be no civil government in the world; and so proving too much, proves nothing at all.” This you say; but you being one of those mortals who is liable to error as well as your brethren, you cannot expect it should be received for infallible truth, till you have proved it; and

that you will never do, till you can show, that there is as absolute a necessity of force in the magistrate's hands for the salvation of souls, as there is of force in the magistrate's hand for the preservation of civil society; and next, till you have proved that force, in the hands of men, as passionate and humoursome; or liable to prejudice and error as their brethren: would contribute as much to the bringing men, and keeping them in the right way to salvation, as it does to the support of civil society, and the keeping men at peace in it.

Where men cannot live together without mutual injuries, not to be avoided without force, reason has taught them to seek a remedy in government; which always places power somewhere in the society to restrain and punish such injuries; which power, whether placed in the community itself, or some chosen by the community to govern it, must still be in the hands of men; and where, as in societies of civilized and settled nations, the form of the government places this power out of the community itself, it is unavoidable, that out of men, such as they are, some should be made magistrates, and have coercive power of force put into their hands, to govern and direct the society for the public good; without which force, so placed in the hands of men, there could be no civil society; nor the ends for which it is instituted, to any degree, attained. And thus government is the will of God.

It is the will of God also, that men should be saved; but to this, it is not necessary that force or coercive power should be put into men's hands; because God can and hath provided other means to bring men to salvation: to which, you indeed suppose, but can never prove force necessary.

The passions, humours, liableness to prejudices and errors, common to magistrates with other men, do not render force in their hands so dangerous and unuseful to the ends of society, which is the public peace, as to the ends of religion, which is the salvation of men's souls. For though men of all ranks could be content to have their own humours, passions, and prejudices satisfied; yet when they come to make laws, which are to direct their force in civil matters, they are driven to oppose their laws to the humours, passions, and prejudices of men in general, whereby their own come to be restrained: for if law-makers, in making of laws, did not direct them against the irregular humours, prejudices, and passions of men, which are apt to mislead them; if they did not endeavour, with their best judgment, to bring men from their humours and passions, to the obedience and practice of right

reason; the society could not subsist; and so they themselves would be in danger to lose their station in it, and be exposed to the unrestrained humours, passions, and violence of others. And hence it comes, that be men as humoursome, passionate, and prejudiced, as they will, they are still by their own interest obliged to make use of their best skill, and with their most unprejudiced and sedatest thoughts, take care of the government, and endeavour to preserve the commonwealth; and therefore, notwithstanding their humours and passions, their liableness to error and prejudice; they do provide pretty well for the support of society, and the power in their hands is of use to the maintenance of it.

But in matters of religion it is quite otherwise: you had told us, about the latter end of your “Argument,” , how liable men were in choosing their religion to be misled by humour, passion, and prejudice; and therefore it was not fit that in a business of such concernment they should be left to themselves: and hence, in this matter of religion, you would have them subjected to the coercive power of the magistrate. But this contrivance is visibly of no advantage to the true religion, nor can serve at all to secure men from a wrong choice. For the magistrates, by their humours, prejudices, and passions, which they are born to like other men, being as liable, and likely to be misled in the choice of their religion, as any of their brethren, as constant experience hath always shown; what advantage could it be to mankind, for the salvation of their souls, that the magistrates of the world should have power to use force to bring men to that religion which they, each of them, by whatsoever humour, passion, or prejudice influenced, had chosen to themselves as the true? For whatsoever you did, I think with reverence we may say, that God foresaw, that whatever commission one magistrate had by the law of nature, all magistrates had: and that commission, if there were any such, could be only to use their coercive power to bring men to the religion they believed to be true; whether it were really the true or no; and therefore I shall, without taking away government out of the world, or so much as questioning it, still think this a reasonable question: “What if God, foreseeing this force would be in the hands of men, as passionate, as humoursome, as liable to prejudice and error, as the rest of their brethren; did not think it a proper means, in such hands, to bring men into the right way?” And that it needs a better answer than you have given to it: and therefore you might have spared the pains you have taken in this paragraph, to prove that the magistrate’s being liable as much as other

men to humour, prejudice, passion, and error, makes not force, in his hands, wholly unserviceable to the administration of civil government; which is what nobody denies: and you would have better employed it to prove, that if the magistrate's being as liable to passion, humour, prejudice, and error, as other men, made force, in his hands, improper to bring men to the true religion; this would take away government out of the world: which is a consequence, I think, I may deny.

To which let me now add, what if God foresaw, that if force, of any kind or degree whatsoever, were allowed in behalf of truth, it would be used by erring, passionate, prejudiced men, to the restraint and ruin of truth; as constant experience in all ages has shown; and therefore commanded that the tares should be suffered to grow with the wheat, till the harvest; when the infallible judge shall sever them. That parable of our Saviour's plainly tells us, if force were once permitted, even in favour of the true religion, what mischief it was like to do in the misapplication of it, by forward, busy, mistaken men; and therefore he wholly forbid it; and yet, I hope, this does not take away civil government out of the world.

To my demanding, "What if there be other means?" and saying, "Then yours ceases to be necessary upon that account, that there is no other means left; for the grace of God is another means." You answer, That "though the grace of God is another means, yet it is none of the means of which you were speaking in the place I refer to; which any one, who reads that paragraph, will find to be only human means." In that place you were endeavouring to prove force necessary to bring men to the true religion, as appears; and there having dilated for four or five pages together upon the "carelessness, prejudices, passions, lusts, impressions of education, worldly respects," and other the like causes, which you think mislead and keep men from the true religion; you at last conclude force necessary to bring men to it, because admonitions and intreaties not prevailing, there is no other means left. To this, grace being instanced in as another means, you tell us here you mean no other human means left. So that to prove force necessary, you must prove that God would have other human means used besides praying, preaching, persuasion, and instruction; and for this, you will need to bring a plain direction from revelation for your moderate punishments; unless you will pretend to know, by your own natural wisdom, what means God has made necessary; without which, those whom he hath foreknown and predestinated, and will in his good time call, Romans viii. 29, by such

means as he thinks fit, according to his purpose; cannot be brought into the way of salvation. Perhaps you have some warrant we know not of, to enter thus boldly into the counsel of God; without which, in another man, a modest Christian would be apt to think it presumption.

You say, there are many who are not prevailed on by prayers, intreaties, and exhortations, to embrace the true religion. What then is to be done? “Some degrees of force are necessary” to be used? Why? Because there is no other human means left. Many are not prevailed on by your moderate force; What then is to be done? Greater degrees of force are necessary, because there is no other human means left. No, say you, God has made moderate force necessary, because there is no other human means left where preaching and intreaties will not prevail; but he has not made greater degrees of force necessary, because there is no other human means left where moderate force will not prevail. So that your rule changing, where the reason continues the same, we must conclude you have some way of judging concerning the purposes and ways of the Almighty in the work of salvation, which every one understands not. You would not else, upon so slight ground as you have yet produced for it, which is nothing but your own imagination, make force, your moderate force so necessary, that you bring in question the wisdom and bounty of the Disposer and Governor of all things, as if he “had not furnished mankind with competent means for the promoting his own honour in the world, and the good of souls,” if your moderate force were wanting to bring them to the true religion; whereas you know, that most of the nations of the world always were destitute of this human means to bring them to the true religion. And I imagine you would be put to it, to name me one now, that is furnished with it.

Besides, if you please to remember what you say in the next words: “And therefore, though the grace of God be both a proper and sufficient means, and such as can work by itself, and without which neither penalties nor any other means can do any thing;” and by consequence can make any means effectual: how can you say any human means, in this supernatural work, unless what God has declared to be so, is necessary? Preaching, and instruction, and exhortation, are human means that he has appointed: these, therefore, men may and ought to use; they have a commission from God, and may expect his blessing and the assistance of his grace; but to suppose, when they are used and prevail not, that force is necessary, because these are not sufficient, is to exclude grace, and ascribe this work to human

means; as in effect you do, when you call force competent and sufficient means, as you have done. For if bare preaching, by the assistance of grace, can and will certainly prevail; and moderate penalties, as you confess, or any kind of force, without the assistance of grace, can do nothing; how can you say, that force is in any case a more necessary, or a more competent, or sufficient means, than bare preaching and instruction? unless you can show us, that God hath promised the cooperation and assistance of his grace to force, and not to preaching? The contrary whereof has more of appearance. Preaching and persuasion are not competent means, you say; Why? because, without the co-operation of grace, they can do nothing: but by the assistance of grace they can prevail even without force. Force too, without grace, you acknowledge can do nothing: but, joined with preaching and grace, it can prevail. Why then, I pray, is it a more competent means than preaching; or why necessary, where preaching prevails not? since it can do nothing without that, which, if joined to preaching, can make preaching effectual without it.

You go on, “Yet it may be true however, that when admonitions and intreaties fail, there is no human means left but penalties, to bring prejudiced persons to hear and consider what may convince them of their errors, and discover the truth to them: and then penalties will be necessary in respect to that end, as an human means.” Let it be true or not true, that when treatises, &c. fail, there is no human means left but penalties: your inference I deny, that then penalties will be necessary as an human means. For I ask you, since you lay so much stress to so little purpose on human means, is some human means necessary? if that be your meaning, you have human means in the case, viz. admonitions, intreaties; being instant in season and out of season. I ask you again, Are penalties necessary because the end could not be obtained by preaching, without them? that you cannot say, for grace co-operating with preaching will prevail: are penalties then necessary, as sure to produce that end? nor so are they necessary; for without the assistance of grace, you confess, they can do nothing. So that penalties, neither as human means, nor as any means, are at all necessary. And now you may understand what I intend, by saying that the grace of God is the only means, which is the inquiry of your next paragraph, viz. this I intend, that it is the only efficacious means, without which all human means is ineffectual. You tell me, If by it “I intend that it does either always, or ordinarily exclude all other means; you see no ground I have to say it.”

And I see no ground you have to think I intended, that it excludes any other means that God in his goodness will be pleased to make use of; but this I intend by it, and this, I think, I have ground to say, that it excludes all the human means of force from being necessary, or so much as lawful to be used; unless God hath required it by some more authentic declaration than your bare saying or imagining it is necessary. And you must have more than human confidence, if you continue to mix this poor and human contrivance of yours with the wisdom and counsel of God in the work of salvation; since he having declared the means and methods to be used for the saving men's souls, has in the revelation of the Gospel, by your own confession, prescribed no such human means.

To my saying, "God alone can open the ear that it may hear, and open the heart that it may understand:" You reply, "But, by your favour, this does not prove that he makes use of no means in doing of it." Nor needs it: it is enough for me, if it proves, that if preaching and instruction do not open the ear, or the heart, it is not necessary any one should try his strength with a hammer or an auger. Man is not in this business (where no means can be effectual, without the assistance and co-operation of his grace) to make use of any means which God hath not prescribed. You here set up a way of propagating Christianity according to your fancy, and tell us how you would have the work of the gospel carried on: you commission the magistrate by the argument of congruity: you find an efficacy in punishment towards the converting of men; you limit the force to be used to low and moderate degrees; and to countries where sufficient means of instruction are provided by the law, and where the magistrate's religion is the true, i. e. where it pleases you; and all this without any direction from God, or any authority so much as pretended from the Gospel; and without its being truly for the propagation of Christianity, but only so much of it as you think fit, and what else you are pleased to join to it. Why else, in the religion you are content to have established by law, and promoted by penalties, is any thing more or less required, than is expressly contained in the New Testament?

This indeed is well suited to any one, who would have a power of punishing those that differ from his opinion, and would have men compelled to conformity in England. But in this your fair contrivance, what becomes of the rest of mankind, left to wander in darkness out of this Goshen, who neither have, nor (according to your scheme) can have, your necessary means of force and penalties to bring them to embrace the truth

that must save them? For if that be necessary, they cannot without a miracle, either prince or people, be wrought on without it. If a papist at Rome, a lutheran at Stockholm, or a calvinist at Geneva, should argue thus for his church, would you not say, that such as these looked like the thoughts of a poor prejudiced mind? But they may mistake, and you cannot; they may be prejudiced, but you cannot. Say too, if you please, you are confident you are in the right, but they cannot be confident they are so. This I am sure, God's thoughts are not as man's thoughts, nor his ways as man's ways, Isaiah lv. 8. And it may abate any one's confidence of the necessity or use of punishments, for not receiving our Saviour, or his religion, when those who had the power of miracles were told, that "they knew not what manner of spirit they were of," when they would have commanded down fire from heaven, Luke ix. 55. But you do well to take care to have the church you are of supported by force and penalties, whatever becomes of the propagation of the gospel, or the salvation of men's souls, in other parts of the world, as not coming within your hypothesis.

In your next paragraph, to prove that God does bless the use of force, you say you suppose I mean, by the words you there cite, that "the magistrate has no ground to hope that God will bless any penalties that he may use to bring men to hear and consider the doctrine of salvation; or (which is the same thing) that God does not (at least not ordinarily) afford his grace and assistance to them who are brought by such penalties to hear and consider that doctrine, to enable them to hear and consider it as they ought, i. e. so as to be moved heartily to embrace it." You tell me, "If this be my meaning, then to let me see that it is not true, you shall only desire me to tell you, whether they that are so brought to hear and consider, are bound to believe the gospel or not? If I say they are; (and you suppose I dare not say otherwise;) then it evidently follows, that God does afford them that grace which is requisite to enable them to believe the gospel: because without that grace it is impossible for them to believe it; and they cannot be bound to believe what it is impossible for them to believe." To which, I shall only answer, that by this irrefragable argument it is evident, that wherever due penalties have been used, for those you tell us are sufficient and competent means, to make men hear and consider as they ought: there all men were brought to believe the gospel: which, whether you will resolve with yourself to be true or false, will be to me indifferent, and on either hand equally advantage your cause. Had you appealed to experience for the

success of the use of force by the magistrate, your argument had not shown half so much depth of theological learning: but the mischief is, that if you will not make it all of a piece scholastic; and by arguing that all whom the magistrates use force upon, “are brought to consider as they ought, and to all that are so wrought upon God does afford that grace which is requisite;” and so roundly conclude for a greater success of force, to make men believe the gospel, than ever our Saviour and the apostles had by their preaching and miracles: for that wrought not on all; your unanswerable argument comes to nothing. And in truth, as you have in this paragraph ordered the matter, by being too sparing of your abstract metaphysical reasoning, and employing it by halves, we are fain, after all, to come to the dull way of experience: and must be forced to count, as the parson does his communicants, by his Easter-book, how many those are so brought to hear and consider, to know how far God blesses penalties. Indeed, were it to be measured by conforming, the Easter-book would be a good register to determine it. But since you put it upon believing, that will be of somewhat a harder disquisition.

To my saying, (upon that place out of Isaiah, vi. 10, “Make the heart of this people fat, lest they understand, and convert, and be healed.) will all the force you can use be a means to make such people hear and understand, and be converted?” You reply, “No, sir, it will not. But what then? What if God declares that he will not heal those who have long resisted all his ordinary methods, and made themselves, morally speaking, incurable by them? (which is the utmost, you say, I can make of the words I quote.) Will it follow from thence that no good can be done by penalties upon others, who are not so far gone in wickedness and obstinacy? If it will not, as it is evident it will not, to what purpose is this said?” It is said to this purpose, viz. to show that force ought not to be used at all. Those ordinary methods which, resisted, are punished with a reprobate sense; are the ordinary methods of instruction, without force: as is evident from this place and many others, particularly Romans i. From whence I argue; that what state soever you will suppose men in, either as past or not yet come to the day of grace; nobody can be justified in using force to work upon them. For till the ordinary methods of instruction and persuasion can do no more, force is not necessary; for you cannot say, what other means is there left, and so by your own rule, not lawful. For till God hath pronounced this sentence here, on any one, “make his heart fat,” &c. the ordinary means of instruction and

persuasion may, by the assistance of God's grace, prevail. And when this sentence is once passed upon them, and "God will not afford them his grace to heal them;" (I take it, you confess in this place;) I am sure you must confess, your force to be wholly useless, and so utterly impertinent; unless that can be pertinent to be used, which you own can do nothing. So that whether it will follow or no, from men's being given up to a reprobate mind, for having resisted the preaching of salvation, "that no good can be done by penalties upon others;" this will follow, that not knowing whether preaching may not, by the grace of God, yet work upon them; or whether the day of grace be past with them; neither you nor any body else can say that force is necessary; and if it be not necessary, you yourself tell us it is not to be used.

In your next paragraph, you complain of me, as representing your argument, as you say, "I commonly do, as if you allowed any magistrate, of what religion soever, to lay penalties upon all that dissent from him." Unhappy magistrates that have not your allowance! But to console them, I imagine they will find that they are all under the same obligation, one as another, to propagate the religion they believe to be the true; whether you allow it them or no. For to go no farther than the first words of your argument, which you complain I have misrepresented, and which you tell me runs thus, "When men fly from the means of right information;" I ask you here, who shall be judge of those means of right information; the magistrate who joins force with them to make them be hearkened to, or no? When you have answered that, you will have resolved a great part of the question, what magistrates are to use force?

But that you may not complain again of my misrepresenting, I must beg my readers leave to set down your argument at large in your own words, and all you say upon it: "When men fly from the means of a right information, and will not so much as consider how reasonable it is thoroughly and impartially to examine a religion, which they embraced upon such inducements as ought to have no sway at all in the matter, and therefore with little or no examination of the proper grounds of it; what human method can be used to bring them to act like men in an affair of such consequence, and to make a wiser and more rational choice, but that of laying such penalties upon them as may balance the weight of those prejudices, which inclined them to prefer a false way before the true?" &c. Now this argument, you tell me, I pretend to retort in this manner: "and I

say, I see no other means left, (taking the world as we now find it, wherein the magistrate never lays penalties for matters of religion upon those of his own church, nor is it to be expected they ever should,) to make men of the national church, any-where, thoroughly and impartially examine a religion, which they embraced upon such inducements as ought to have no sway at all in the matter, and therefore with little or no examination of the proper grounds of it; and therefore I conclude the use of force by dissenters upon conformists necessary. I appeal to all the world, whether this be not as just and natural a conclusion as yours?" And you say you are "well content the world should judge. And when it determines, that there is the same reason to say, that to bring those who conform to the national church to examine their religion, it is necessary for dissenters (who cannot possibly have the coercive power, because the national church has that on its side, and cannot be national without it) to use force upon conformists; as there is to say, that where the national church is the true church, there to bring dissenters (as I call them) to examine their religion, it is necessary for the magistrate (who has the coercive power) to lay moderate penalties upon them for dissenting: you say, when the world determines thus, you will never pretend any more to judge what is reasonable, in any case whatsoever. For you doubt not but you may safely presume, that the world will easily admit these two things.

1. That though it be very fit and desirable, that all that are of the true religion, should understand the true grounds of it; that so they may be the better able both to defend themselves against the assaults of seducers, and to reduce such as are out of the way; yet this is not strictly necessary to their salvation: because experience shows (as far as men are capable to judge of such matters) that many do heartily believe and profess the true religion, and conscientiously practice the duties of it, who yet do not understand the true grounds upon which it challenges their belief: and no man doubts, but whosoever does so believe, profess, and practise the true religion, if he perseveres to the end, shall certainly attain salvation by it.
2. That how much soever it concerns those who reject the true religion (whom I may call dissenters if I please) to examine and consider why they do so; and how needful soever penalties may be to bring them to this; it is, however, utterly unreasonable, that such as have not the coercive power should take upon them to inflict penalties for that purpose: because, as that is not consistent with order and government, which cannot stand, where private persons are permitted to usurp the coercive power; so there is nothing more manifest,

than that the prejudice which is done to religion, and to the interest of men's souls, by destroying government, does infinitely outweigh any good that can possibly be done by that which destroys it. And whoever admits and considers these things, you say, you are very secure will be far enough from admitting, that there is any parity of reason in the cases we here speak of, or that mine is as just and natural a conclusion as yours."

The sum of what you say, amounts to thus much: men being apt to take up their religion, upon inducements that ought to have no sway at all in the matter, and so, with little or no examination of the grounds of it; therefore penalties are necessary to be laid on them, to make them thoroughly and impartially examine. But yet penalties need not be laid on conformists, in England, to make them examine; because they, and you, believe yours to be the true religion: though it must be laid on presbyterians and independents, &c. to make them examine, though they believe theirs to be the true religion, because you believe it not to be so. But you give another very substantial reason, why penalties cannot be laid on conformists, to make them examine; and that is, "because the national church has the coactive power on its side," and therefore they have no need of penalties to make them examine. The national church of France, too, has the coactive power on its side, and therefore, they who are of it have no need of penalties, any of them, to make them examine.

If your argument be good, that men take up their religions upon wrong inducements, and without due examination of the proper grounds of it; and that therefore they have need of penalties to be laid on them to make them examine, as they ought, the grounds of their religion; you must confess there are some in the church of England, to whom penalties are necessary: unless you will affirm, that all, who are in the communion of the church of England, have so examined: but that I think you will not do, however you endeavour to palliate their ignorance and negligence in this matter. There being therefore a need of penalties, I say, it is as necessary that presbyterians should lay penalties on the conformists of the church of England to make them examine, as for the church of England to lay penalties on the presbyterians to make them do so: for they each equally believe their religion to be true; and we suppose, on both sides, there are those who have not duly examined. But here you think you have a sure advantage, by saying it is not consistent with the "order of government, and so it is impracticable." I easily grant it. But is yours more practicable?

When you can make your way practicable, for the end for which you pretend it necessary, viz. to make “all, who have taken up their religion upon such inducements as ought to have no sway at all in the matter, to examine thoroughly and impartially the proper grounds of it;” when, I say, you can show your way practicable, to this end, you will have cleared it of one main objection, and convinced the world that yours is a more just and natural conclusion than mine.

If your cause were capable of any other defence, I suppose we should not have had so long and elaborate an answer as you have given us in this paragraph, which at last bottoms only on these two things: 1. That there are in you, or those of your church, some approaches towards infallibility in your belief that your religion is true, which is not to be allowed those of other churches, in the belief of theirs. 2. That it is enough if any one does but conform to it, and remain in the communion of your church: or else one would think there should be as much need for conformists too of your church to examine the grounds of their religion, as for any others.

“To understand the true grounds of the true religion is not, you say, strictly necessary to salvation.” Yet, I think, you will not deny but it is as strictly necessary to salvation, as it is to conform to a national church in all those things it imposes: some whereof are not necessary to salvation; some whereof are acknowledged by all to be indifferent; and some whereof, to some conscientious men, who thereupon decline communion, appear unsound or unlawful. If not being strictly necessary to salvation, will excuse from penalties in the one case, why will it not in the other? And now I shall excuse the world from determining my conclusion to be as natural as yours: for it is pity so reasonable a disputant as you are, should take so desperate a resolution as “never to pretend any more to judge what is reasonable in any case whatsoever.”

Whether you have proved that force, used by the magistrate, be a means prescribed by God to procure the gift of faith from him, which is all you say in the next paragraph, others must judge.

In that following, you quote these words of mine: “If all the means God has appointed to make men hear and consider, be exhortation in season and out of season, &c. together with prayer for them, and the example of meekness, and a good life; this is all ought to be done, whether they will hear, or whether they will forbear.” To which you thus reply, “But if these be not all the means God has appointed, then these things are not all that

ought to be done.” But if I ask you, How do you know that this is not all God has appointed? you have nothing to answer, to bring it to your present purpose, but that you know it by the light of nature. For all you say is but this, that by the light of nature you know force to be useful and necessary to bring men into the way of salvation; by the light of nature you know the magistrate has a commission to use force to that purpose; and by the same light of nature, you know that miracles were appointed to supply the want of force till the magistrates were christians. I imagine, sir, you would scarce have thought this a reasonable answer, if you had taken notice of my words in the same paragraph immediately preceding those you have cited; which, that you may see the scope of my argument, I will here trouble you again; and they are these: “It is not for you and me, out of an imagination that they may be useful, or are necessary, to prescribe means in the great and mysterious work of salvation, other than what God himself has directed. God has appointed force as useful and necessary, and therefore it is to be used; is a way of arguing becoming the ignorance and humility of poor creatures. But I think force useful or necessary, and therefore it is to be used; has methinks a little too much presumption in it. You ask what means else is there left? None, say I, to be used by man, but what God himself has directed in the scriptures, wherein are contained all the means and methods of salvation. Faith is the gift of God. And we are not to use any other means to procure this gift to any one, but what God himself has prescribed. If he has there appointed, that any should be forced to hear those who tell them they have mistaken their way, and offer to show them the right; and that they should be punished by the magistrate, if they did not; it will be past doubt, it is to be made use of. But till that can be done, it will be in vain to say, what other means is there left.”

My argument here lies plainly in this: That all the means and methods of salvation are contained in the scripture: which either you were to have denied, or else have shown where it was in scripture, that force was appointed. But instead of that, you tell us, that God appointed miracles in the beginning of the gospel. And though, when these ceased, the means I mention were all the ministers had left, yet this proves not that the magistrate was not to use force. Your words are, As to the first spreaders of the gospel, it has already been shown, that God appointed other means besides these for them to use, to induce men to hear and consider: and though when those extraordinary means ceased, these means which I

mention (viz. preaching, &c.) were the only means left to the ministers of the gospel; yet that is no proof that the magistrate, when he became christian, could not lawfully use such means as his station enabled him to use, when they became needful." I said, in express words, "no means was to be used by man, but what God himself has directed in the scripture." And you answer, this is no proof that the christian magistrate may not use force. Perhaps when they so peremptorily interpose their decisive decrees in the business of salvation, establish religions by laws and penalties, with what articles, creeds, ceremonies, and discipline, they think fit; (for this we see done almost in all countries;) when they force men to hear those, and those only, who by their authority are chosen and allowed to tell men they have mistaken their way, and offer to show them the right; it may be thought necessary to prove magistrates to be men. If that needs no proof, what I said needs some other answer.

But let us examine a little the parts of what you here say: "As to the first spreaders of the gospel, say you, it has already been shown, that God appointed other means besides exhortation in season and out of season, prayer, and the example of a good life; for them to use to induce men to hear and consider." What were those other means? To that you answer readily, miracles. Ergo, men are directed now by scripture to use miracles. Or else what answer do you make to my argument, which I gave you in these words, "No means is to be used by man, but what God himself has directed in the scriptures, wherein are contained all the means and methods of salvation?" No, they cannot use miracles now as a means, say you, for they have them not. What then? Therefore the magistrate, who has it, must use force to supply the want of those extraordinary means which are now ceased. This indeed is an inference of yours, but not of the scriptures. Does the scripture say any thing of this? Not a word; not so much as the least intimation towards it in all the New Testament. Be it then true or false, that force is a means to be used by men in the absence of miracles; this is yet no answer to my argument: this is no proof that it is appointed in scripture; which is the thing my argument turns on.

Revelation then fails you. Let us see now how reason and common sense, that common light of nature, will help you out.

You then reason thus: bare preaching, &c. will not prevail on men to hear and consider; and therefore some other means is necessary to make them do so. Pray what do you mean by men, or any other of those indefinite

terms, you have always used in this case? Is it that bare preaching will prevail on no men? Does reason (under which I comprehend experience too, and all the ways of knowledge contra-distinguished to revelation) discover any such thing to you? I imagine you will not say that; or pretend that nobody was ever brought, by preaching or persuasion, to hear and consider the truths of the gospel, (mean by considering what you will,) without other means used by those who applied themselves to the care of converting them. To such therefore as may be brought to hear and consider, without other means, you will not say that other means are necessary.

In the next place, therefore, When you say bare preaching will not prevail on men, do you mean that it will not prevail on all men, and therefore it is necessary that men should use other means? Neither, I think, will reason authorize you to draw such a consequence: because neither will preaching alone, nor preaching assisted with force, or any other means man can use, prevail on all men. And therefore no other means can be pretended to be necessary to be used by man, to do what men by those means never did, nor ever can do.

That some men shall be saved, and not all, is, I think, past question to all that are christians: and those that shall be saved, it is plain, are the elect. If you think not this plain enough in scripture, I desire you to turn to the seventeenth of the XXXIX articles of the church of England, where you will read these words: "Predestination to life is the everlasting purpose of God, whereby (before the foundations of the world were laid) he hath constantly decreed by his counsel secret to us, to deliver from curse and damnation those whom he has chosen in Christ out of mankind, and to bring them by Christ to everlasting salvation, as vessels made to honour. Wherefore they which be endued with so excellent a benefit of God, be called according to God's purpose by his spirit working in due season; they through grace obey the calling; they be justified freely; they be made sons of God by adoption; they be made like the image of his only begotten Son Jesus Christ; they walk religiously in good works; and at length, by God's mercy, they attain to everlasting felicity." Now pray tell me whether bare preaching will not prevail on all the elect to hear and consider without other means to be used by men. If you say it will; the necessity of your other means, I think, is out of doors. If you say it will not; I desire you to tell me how you do know it without revelation? And whether by your own reason you can tell us, whether any, and what means God has made necessary

besides what he has appointed in scripture for the calling his elect? When you can do this, we shall think you no ordinary divine, nor a stranger to the secret counsels of the infinitely wise God. But till then your mixing your opinion with the divine wisdom in the great work of salvation, and, from arguments of congruity, taking upon you to declare the necessity or usefulness of means, which God has not expressly directed, for the gathering in of his elect; will scarce authorize the magistrate to use his coactive power for the edifying and completing the body of Christ, which is his church. “Those whom God hath chosen in Christ out of mankind, before the foundations of the world, are called according to God’s purpose, by his spirit working in due season, and through grace obey the calling;” say you in your article. The outward means that God has appointed for this, is preaching. Ay, but preaching is not enough; that is, is not sufficient means, say you. And I ask you how you know it; since the scripture, which declares all that we can know in this matter, says nothing of the insufficiency of it, or of the necessity of any other? Nor can there be a necessity of any other means than what God expressly appoints, in a matter wherein no means can operate effectually, without the assistance of his grace; and where the assistance of his grace can make any outward means, he appoints effectual.

I must desire you here to take notice, that by preaching which I use for shortness, I mean exhortation, instruction, intreaty, praying for; and, in fine, any outward means of persuasion in the power of man, separate from force.

You tell us here, “as to the first spreaders of the gospel, God appointed other means, viz. miracles, for them to use to induce men to hear and consider.” If by the first spreaders of the gospel, you mean the twelve apostles and seventy disciples, whom Christ himself sent to preach the gospel; they indeed were appointed, by his immediate command, to show miracles by the power which he had bestowed upon them. But will you say, all the ministers and preachers of the gospel had such a commission, and such a power, all along from the apostles time; and that they, every one, did actually show miracles to induce men to hear and consider, quite down till christianity was supported by the law of the empire? Unless you could show this, though you could produce some well-attested miracles, done by some men in every age till that time; yet it would not be sufficient to prove that miracles were appointed to be constantly used to induce men to hear and consider; and so by your reasoning to supply the want of force, till that necessary assistance could be had from the authority of the magistrate

become christian. For since it is what you build upon, that men will not hear and consider upon bare preaching: and I think you will forwardly enough agree, that till christianity was made the religion of the empire, there were those every-where that heard the preachers of it so little, or so little considered what they said, that they rejected the gospel; and that therefore miracles or force are necessary means to make men hear and consider; you must own that those who preached without the power of miracles, or the coactive power of the magistrate accompanying them, were unfurnished of competent and sufficient means to make men hear and consider; and so to bring them to the true religion. If you will say the miracles done by others were enough to accompany their preaching to make it be heard and considered; the preaching of the ministers at this day is so accompanied, and so will need no assistance of force from the magistrate. If the report of miracles done by one minister of the gospel some time before, and in another place, were sufficient to make the preaching of ten or a thousand others be heard and considered; why is it not so now? For the credibility and attestation of the report is all that is of moment, when miracles done by others in other places are the argument that prevails. But this, I fear, will not serve your turn in the business of penalties; and, whatever might satisfy you in the case of miracles, I doubt you would not think the salvation of souls sufficiently provided for, if the report of the force of penalties, used some time since on one side of the Tweed, were all that should assist the preachers of the true religion on the other, to make men hear and consider.

St. Paul, in his epistle to Titus, instructs him what he, and the presbyters he should ordain in the cities of Crete, were to do for the propagating of the gospel, and bringing men heartily to embrace it. His directions are, that they should be “blameless, not rioters, not self-willed, not soon angry, not given to wine or filthy lucre, not strikers, not unruly; lovers of hospitality, and of good men; sober, just, holy, temperate; to be able by sound doctrine both to exhort and convince gainsayers; in all things to be a pattern of good works; in doctrine showing uncorruptedness, gravity, sincerity, sound speech that cannot be condemned, that he that is of the contrary part may be ashamed, having no evil to say of you. These things speak, and exhort, and rebuke, with all authority. Avoid foolish questions, and genealogies, and contentions. A man that is an heretic, after the first and second admonition, reject.” To repay you the favour of your Greek, it is παρατ[Editor: illegible

character]; which, if I may take your liberty of receding from our translation, I would read “avoid.”

The Cretans, by the account St. Paul gives of them, were a people that would require all the means that were needful to prevail with any strangers to the gospel to hear and consider. But yet we find nothing directed for the support and propagation of the gospel in this island, but preaching, exhortation, reproof, &c. with the example of a good life. In all this epistle, writ on purpose to instruct the preachers of the gospel, in the means they were to use among the Cretans, for their conversion, not a word about miracles, their power, or use: which one would think strange, if they were the means appointed, and necessary to make men hear and consider, and without which they would not do it. Preaching, admonition, exhortation, intreaties, instruction, by the common light of reason, were known, and natural to be used, to persuade men. There needed not much to be said to convince men of it. But, if miracles were a necessary means, it was a means wholly new, unexpected, and out of the power of other teachers. And therefore one would think, if they were appointed for the ends you propose, one should hear something of that appointment: since that they were to be used; or how, and when; was farther from common apprehension, and seems to need some particular direction.

If you say the same spirit that gave them the power of miracles, would also give them the knowledge both that they had it, and how to use it; I am far enough from limiting the operations of that infinitely wise spirit, who will not fail to bring all the elect of God into the obedience of truth, by those means, and in that manner he shall think necessary. But yet our Saviour, when he sent abroad his disciples, with the power of miracles, not only put it in their commission, whereby they were informed, that they had that extraordinary gift, but added instructions to them in the use of it: “Freely you have received, freely give;” a caution as necessary to the Cretan elders, in the use of miracles, if they had that power; there being nothing more liable to be turned to the advantage of filthy lucre.

I do not question but the spirit of God might give the power, and stir up the mind of the first spreaders of the gospel to do miracles on some extraordinary occasion. But if they were a necessary means to make men hear and consider what was preached to them, till force supplied their place, and so were ordinarily to accompany the preaching of the gospel, unless it should be preached without the means appointed and necessary to make it

prevail; I think in that case we may expect it should expressly have made a part of the preacher's commission; it making a necessary part of the effectual execution of his function.

But the apostle, it seems, thought fit to lay the stress upon instructing others, and living well themselves; upon "being instant in season and out of season;" and therefore directs all his advices for the ordering the Cretan church, and the propagating the gospel there, to make them attend to those necessary things of life and doctrine, without so much as mentioning the appointment, need, or use of miracles.

I said, "But whatever neglect or aversion there is in some men, impartially and thoroughly to be instructed; there will, upon a due examination, I fear, be found no less a neglect and aversion in others, impartially and thoroughly to instruct them. It is not the talking even general truths in plain and clear language; much less a man's own fancies in scholastical or uncommon ways of speaking, an hour or two, once a week, in public; that is enough to instruct even willing hearers in the way of salvation, and the grounds of their religion;" and that politic discourses and invectives from the pulpit, instead of friendly and christian debates with people at their houses, were not the proper means to inform men in the foundations of religion; and that if there were not a neglect in this part, I thought there would be little need of any other means. To this, you tell me, in the next paragraph, "you do not see how pertinent my discourse, about this matter, is to the present question." If the showing the neglects, observable in the use of what is agreed to be necessary means, will not be allowed by you to be pertinent, in a debate about necessary means; when possibly those very neglects may serve to make other means seem requisite, which really are not so; yet if you are not of those who will never think any such discourse pertinent; you will allow me to mind you of it again, as not impertinent in answer to your last letter, wherein you so often tell us of the sufficient provision made for instruction. For wherever the neglect be, it can scarce be said there is sufficient provision made for instruction in a christian country, where great numbers of those, who are in the communion of the national church, are grossly ignorant of the grounds of the christian religion. And I ask you, whether it be in respect of such conformists you say, as you do in the same paragraph, that "when the best provision is made that can be, for the instruction of the people, you fear a great part of them will still need some moderate penalties to bring them to hear and receive instruction?"

But what if all the means that can, be not used for their instruction? That there are neglects of this kind, you will, I suppose, take the word of a reverend prelate of our church, who thought he could not better show his good-will to the clergy, than by a seasonable discourse of the pastoral care, to cure that neglect for the future. There he tells you, , 118, that “ministers should watch over and feed their flock, and not enjoy their benefices as farms, &c. Which reproach, says he, whatever we may be, our church is free of; which he proves by the stipulation and covenant they make with Christ, that they will never cease their labour, care and diligence, till they have done all that lieth in them, according to their bounden duty; towards all such as are, or should be committed to their care, to bring them to a ripeness of age in Christ.” And a page or two after, having repeated part of the promise by those who take orders, he adds: “In this is expressed the so much neglected, but so necessary duty, which incumbents owe their flock in a private way; visiting, instructing, and admonishing; which is one of the most useful and important parts of their duty, how generally soever it may be disused or forgotten. P. 187, he says, every priest that minds his duty will find, that no part of it is so useful as catechistical discourses; by means whereof, his people will understand all his sermons the better, when they have once a clear notion of all those terms that must run through them; for those not being understood, renders them all unintelligible. Another part of the priest’s duty he tells you, , is with relation to them that are without, who are of the side of the church of Rome, or among the dissenters. Other churches and bodies are noted for their zeal in making proselytes; for their restless endeavours, as well as their unlawful methods in it: they reckoning perhaps that all will be sanctified by the increasing their party; which is the true name of making converts; except they become at the same time good men as well as votaries to a side or cause. We are certainly very remiss in this of both hands. Little pains is taken to gain either upon papists or nonconformists: the law has been so much trusted to, that that method only was thought sure; it was much valued, and others at the same time were much neglected. And whereas, at first, without force or violence, in forty years time, popery, from being the prevailing religion, was reduced to a handful: we have now, in above twice that number of years, made very little progress,” &c.

Perhaps here again you will tell me, you “do not see how this is pertinent to the present question,” which, that you may see, give me leave to put you

in mind, that neither you, nor any body else, can pretend force necessary, till all the means of persuasion have been used; and nothing neglected that can be done by all the softer ways of application. And since it is your own doctrine, that force is not lawful, unless where it is necessary; the magistrate, upon your principles, can neither lawfully use force, nor the ministers of any national church plead for it any-where, but where they themselves have first done their duties: a draft whereof, adapted to our present circumstances, we have in the newly published discourse of the pastoral care. And he that shall press the use of force as necessary, before he can answer it to himself and the world, that those who have taken on them the care of souls have performed their duties; were best consider, whether he does not draw up an accusation against the men of that holy order: or against the magistrate who suffers them to neglect any part of their duty. For whilst what that learned bishop, in the passages above cited, and in other places, mentions, is neglected; it cannot be said, that no other means but force is left; those, which are on all hands acknowledged necessary and useful means, not having yet been made use of.

To vindicate your method from novelty, you tell me, it is as old as St. Austin. Whatever he says in the place you quote, it shows only his opinion; but not that it was ever used. Therefore, to show it not to be new in practice, you add, that you “think it has been made use of by all those magistrates, who having made all requisite provisions for the instructing their people in the truth, have likewise required them under convenient penalties to embrace it.” Which is as much as to say, that those magistrates who used your method did use your method. And that certainly you may think safely, and without fear of being gainsaid.

But now I will tell you what I think, in my turn; and that is, if you could have found any magistrates who had made use of your method, as well as you think you have found a divine that approves of it; you would have named those magistrates as forwardly as you do St. Austin. If I think amiss, pray correct me yet, and name them.

That which makes me imagine you will hardly find any examples of it, is what I there said in these words; “All other law-makers have constantly taken this method; that where any thing was to be amended, the fault was first declared, and then penalties denounced against all those who, after a time set, should be found guilty of it. This the common sense of mankind, and the very reason of laws, (which are intended not for punishment, but

correction,) has made so plain, that the subtlest and most refined lawmakers have not gone out of this course, nor have the most ignorant and barbarous nations missed it. But you have outdone Solon and Lycurgus, Moses and our Saviour; and are resolved to be a law-maker of a way by yourself. It is an old and obsolete way, and will not serve your turn, to begin with warnings and threats of penalties, to be inflicted on those who do not reform, but continue to do that which you think they fail in. To allow of impunity to the innocent, or the opportunity of amendment to those who would avoid the penalties, are formalities not worth your notice. You are for a shorter and surer way. Take a whole tribe, and punish them at all adventures, whether guilty or no of the miscarriage which you would have amended; or without so much as telling them what it is you would have them do, but leaving them to find it out if they can. All these absurdities are contained in your way of proceeding, and are impossible to be avoided by any one, who will punish dissenters, and only dissenters, to make them consider and weigh the grounds of their religion, and impartially examine whether it be true or no; and upon what grounds they took it up; that so they may find and embrace the truth that must save them." These absurdities, I fear, must be removed, before any magistrates will find your method practicable.

I having said, "Your method is not altogether unlike the plea made use of to excuse the late barbarous usage of the protestants in France, from being a persecution for religion, viz. That it was not a punishment for religion, but for disobeying the king's laws, which required them to come to mass: so by your rule dissenters must be punished, not for the religion they have embraced, but the religion they have rejected." In answer to this, in the next paragraph, you take abundance of pains to prove, that the king of France's laws, that require going to mass, are no laws. You were best to say so on the other side of the water. It is sure the punishments were punishments, and the dragooning was dragooning. And if you think that plea excused them not, I am of your mind. But nevertheless am of opinion, as I was, that it will prove as good a plea as yours; which is what you argue against in your next paragraph, in the words following, wherein you examine the likeness of your new method to this plea. You tell me, "I say, by your rule, the dissenters (from the true religion, for you speak of no other) must be punished (or, if I please, subjected to moderate penalties, such as shall make them uneasy, but neither destroy or undo them:) for what?" Indeed I thought

by your first book you meant not for their religion, but to make them consider; but here you ask me, “where it is you say that dissenters from the true religion are not to be punished for their religion? So then, it seems in your opinion now, dissenters from the true religion are to be punished,” or, as you are pleased to mollify the expression, for the thing is the same, “subjected to moderate penalties for their religion.” I think I shall not need to prove, to any one but one of your nice style, that the execution of penal laws, let the penalties be great or small, are punishments.

If therefore the religion of dissenters from the true, be a fault to be punished by the magistrate; who is to judge who are guilty of that fault? Must it be the magistrate every-where; or the magistrate in some countries, and not in others; or the magistrate no-where? If the magistrate no-where is to be judge who are dissenters from the true religion, he can no-where punish them. If he be to be every-where judge; then the king of France, or the great Turk, must punish those whom they judge dissenters from the true religion, as well as other potentates. If some magistrates have a right to judge, and others not: that yet, I fear, how absurd soever it be, should I grant it, will not do your business. For besides that, they will hardly agree to make you their infallible umpire in the case, to determine who of them have, and who have not this right to judge which is the true religion; or if they should, and you should declare the king of England had that right; viz. whilst he complied to support the orthodoxy, ecclesiastical polity, and those ceremonies which you approve of; but that the king of France, and the great Turk, had it not; and so could have no right to use force on those they judged dissenters from the true religion; you ought to bethink yourself what you will reply to one that should use your own words: “If such a degree of outward force, as has been mentioned, be really of great and even necessary use, for the advancing of the true religion, and salvation of souls; then it must be acknowledged, that in France and Turkey, &c. there is a right somewhere to use it, for the advancing those ends; unless we will say (what without impiety cannot be said) that the wise and benign Disposer and Governor of all things, has not in France and Turkey furnished mankind with competent means for the promoting his own honour, and the good of souls.”

You go on, and tell us, they are to be punished, not for following the light of their own reason, nor for obeying the dictates of their own consciences, “but rather for the contrary. For the light of their own reason

and the dictates of their own conscience (if their reason and their consciences were not perverted and abused) would undoubtedly lead them to the same thing, to which the method you speak of is designed to bring them;" i. e. to the same thing to which your reason and your conscience leads you. For if you were to argue with a papist, or a presbyterian, in the case, what privilege have you to tell him, that his reason and conscience is perverted, more than he has to tell you that yours is so? Unless it be this insupportable presumption, that your reason and conscience ought to be the measure of all reason and conscience in all others; which how you can claim without pretending to infallibility, is not easy to discern.

The diversion you give yourself about the likeness and unlikeness of two pleas, I shall not trouble myself with; since, when your fit of mirth was over, you were forced to confess, That "as I have made your plea for you; you think there is no considerable difference, as to the fairness of them; excepting what arises from the different degrees of punishment, in the French discipline, and your method. But if the French plea be not true; and that which I make to be yours, be not yours;" — I must beg your pardon, sir, I did not think it was your opinion, nor do I yet remember that you anywhere said in your "Argument," &c. that men were to be punished for their religion; but that it was purely to make men "examine the religion they had embraced, and the religion that they had rejected." And if that were of moment, I should think myself sufficiently justified for this my mistake, by what you say in your "Argument," &c. from to 12. But since you explain yourself otherwise here, I am not unwilling to take your hypothesis, as you from time to time shall please to reform it. You answer then, that "to make them examine, is indeed the next end for which they are to be punished." But what is that to my question? Which, if it be pertinent, demands for what fault, not for what end, they are to be punished: as appears even by my next words. "So that they are punished, not for having offended against a law, i. e. not for any fault: for there is no law in England that requires them to examine." This, I must confess, was to show, that here, as in France, whatever was pretended, yet the true reason why people were punished, was their religion. And it was for this agreement, that in both places religion was meant, though something else was talked of, that I said your plea was like that made use of in France. But I see I might have spared my pains to prove that you punish dissenters for their religion, since you here own it.

You tell me, in the same place, I was impertinent in my question; which was this, “For what then are they to be punished?” that I demanded for what end, and not for what fault they are to be punished. In good earnest, sir, I was not so subtle as to distinguish them. I always thought that the end of all laws was to amend those faults which were forbidden; and that when any one was punished, the fault for which he was punished, was the transgression of the law, in that particular which was by the law commanded or forbidden; and the end of the punishment, was the amendment of that fault for the future. For example; if the law commanded to hear, not hearing was the fault punished; and the end of that punishment, was to make the offenders hear. If the law commanded to examine, the fault punished, when that law was put in execution, was not examining; and the end of the punishment, to make the offenders examine. If the law commanded conformity, the fault was nonconformity, and the end of it to make men conform.

This was my apprehension concerning laws, and ends of punishments. And I must own myself still so dull as not to distinguish otherwise between “the fault for which men are to be punished, and the end for which they are to be punished;” but only as the one is past, the other future. The transgression, or fault, is an omission or action that a man is already guilty of; the end of the punishment, that it be not again repeated. So that if a man be punished for the religion he professes, I can see no other end for which he is punished, but to make him quit that religion. No other immediate end, I mean; for other remote ends, to which this is subordinate, it may have. So that, if not examining the religion which men have embraced; and the religion they have rejected; be not the fault for which men are punished; I would be glad you would show me how it can be the next end, as you say it is, of their being punished. And that you may not think my dulness gives you a labour without ground, I will tell you the reason why I cannot find any other next end of punishment, but the amendment of the fault forbidden; and that is, because that seems to me to be the end, the next end, of any action; which, when obtained, the action is to cease; and not cease till it be attained. And thus, I think, it is in punishments ordained by the law. When the fault forbidden is amended, the punishment is to cease; and not till then. This is the only way I have to know the end, or final cause for which any action is done. If you have any other, you will do me a kindness to instruct me. This it is which makes me conclude, (and I think with me all

those who have not had the leisure and happiness to attain the utmost refining of the schools,) that if their religion be the fault for which dissenters are punished, examining is not the end for which they are punished, but the change of their religion: though examining may, perhaps, in some men, precede their change, and help to it. But that is not necessary. A man may change his religion without it: and when he has changed, let the motive be what it will, the end the law aims at is obtained, and the punishment ceases. So on the other side, if not hearing, not examining, be the fault for which men are punished; conformity is not the next end for which they are punished, though it may perhaps, in some, be a consequence of it; but hearing and examining must be understood to be the ends for which they are punished. If they are not the ends, why does the punishment cease, when those ends are attained? And thus you have my thoughts concerning this matter, which perhaps will not be very pertinent, as mine have not the good luck always to be to you; to a man of nicer distinctions.

But let us consider your hypothesis as it now stands, and see what advantage you have got to your cause by this new explication. "Dissenters from the true religion are to be punished, say you, for their religion." Why? Because it is a fault. Against whom? Against God. Thence it follows indeed, that God, if he pleases, may punish it. But how will you prove that God has given the magistrates of the earth a power to punish all faults against himself? Covetousness, or not loving our neighbour as ourselves, are faults or sins against God. Ought the magistrate to punish these? But I shall not need to trouble you much with that question. This matter, I think, will be decided between us without going so far.

If the magistrate may punish any one for not being of the true religion, must the magistrate judge what is that true religion, or no? If he must not, what must guide him in the punishing of some, and not of others? For so it is in all places where there is a national religion established by penal laws. If the magistrate be commissioned by the same law of nature (for that is all the commission you pretend to) to judge what is the true religion, by which he is authorized to punish those who dissent from it; must not all magistrates judge, and accordingly punish those who dissent from that, which they judge the true religion, i. e. in effect, those who dissent from theirs? And if all magistrates have a power to punish those who are not of their religion; I ask you, whether it be of more use or disadvantage to the promoting true religion, and salvation of souls? And when you have

resolved that question, you will then be able to tell me, whether the usefulness of it, which must be determined by the greater good or harm it is like to do, is such as to justify your doctrine about it, or the magistrate's use of it.

Besides, your making the dissenting from the true religion a fault to be punished by the magistrate, puts an end to your pretence to moderate punishments; which, in this place, you make use of to distinguish yours from the French method; saying, that "your method punishes men with punishments which do not deserve to be called so, when compared with those of the French discipline." But if the dissenting from the true religion be a fault that the magistrate is to punish, and a fault of that consequence, that it draws with it the loss of a man's soul; I do not see how other magistrates, whose duty it is to punish faults under their cognizance, and by punishing to amend them; can be more remiss than the king of France has been, and forbear declaring that they will have all their people saved, and endeavour by such ways as he has done to effect it: especially since you tell us, that "God now leaves religion to the care of men, under his ordinary providence, to try whether they will do their duties in their several capacities or not, leaving them answerable for all that may follow from their neglect." In the correcting of faults, "*malo nodo malus cuneus*," is not only what is justifiable, but what is requisite. But of this more fully in another place.

In the next place, I do not see how, by your method, as you explain it here, the magistrate can punish any one for not being of the true religion, though we should grant him to have a power to do it; whilst you tell us, that "your method punishes men for rejecting the true religion, proposed to them with sufficient evidence; which certainty is a fault." By this part of your scheme it is plain, that you allow the magistrate to punish none but those to whom the true religion is proposed with sufficient evidence; and sufficient evidence, you tell us, "is such as will certainly win assent where-ever it is duly considered." Now by this rule there will be very few that the magistrate will have a right to punish; since he cannot know whether those who dissent, do it for want of due consideration in them, or want of sufficient evidence in what is proposed; unless you mean by due consideration, such consideration that always does bring men actually to assent; which is in effect to say nothing at all. For then your rule amounts to thus much, "that sufficient evidence is such as will certainly win assent

wherever it is considered duly," i. e. so as to win assent. This being like some of those other rules we have met with, and ending in a circle; which after you have traced, you at last find yourself just where you were at setting out; I leave it to you to own as you think fit: and tell you, if by duly considering, you mean considering to his utmost; that then, that which is proposed to one with sufficient evidence to win assent, may not be so to another.

There are propositions extant in geometry, with their demonstrations annexed; and that with such sufficient evidence to some men of deep thought and penetration, as to make them see the demonstration, and give assent to the truth: whilst there are many others, and those no novices in mathematics, who, with all the consideration and attention they can use, are never able to attain unto it. It is so in other parts of truth. That which hath evidence enough to make one man certain, has not enough to make another so much as guess it to be true; though he has spared no endeavour or application in examining it. And therefore, if the magistrate be to punish none but those who reject the true religion, when it has been offered with sufficient evidence; I imagine he will not have many to punish, if he will, as he ought, distinguish between the innocent and the guilty.

Upon your forwardness to encourage the magistrate's use of force in matters of religion, by its usefulness; even so far as to pretend advantages from what yourself acknowledge the misapplication of it; I say that "So instead of disheartening from, you give encouragement to the mischief; which upon your principle, joined to the natural thirst in man after arbitrary power; may be carried to all manner of exorbitancy, with some pretence of right." To which your reply is, That you "speak no-where but of the use and necessity of force." What think you in the place mentioned of the gain that you tell the sufferers they shall make by the magistrate's punishing them to bring them to a wrong religion? You do not, as I remember, there say, that force is necessary in that case; though they gaining, as you say, by it this advantage, "that they know better than they did before, where the truth does lie," you cannot but allow, that such a misapplication of force "may do some service, indirectly and at a distance, towards the salvation of souls."

But that you may not think, whilst I had under consideration the dangerous encouragement you gave to men in power, to be very busy with their force in matters of religion; by all the sorts of usefulness you could imagine of it, however applied, right or wrong; that I declined mentioning

the necessity you pretend of force, because it would not as well serve to the purpose for which I mention its usefulness; I shall here take it so, that the reader may see what reason you had to complain of my not doing it before.

Thus then stands your system: “The procuring and advancing any way of the spiritual and eternal interests of men, is one of the ends of civil society.” And force is put into the magistrate’s hands, as necessary for the attaining those ends, where no other means are left, “Who then upon your grounds may quickly find reason, where it suits his inclination, or serves his turn, to punish men directly to bring them to his religion.” For if he may use force because it is necessary, as being the only means left to make men consider those reasons and arguments, which otherwise they would not consider; why may he not by the same rule use force, as the only means left to procure men degrees of glory, which otherwise they would not attain; and so to advance their eternal interests? For St. Paul assures us, that “the afflictions of this life work for us a far more exceeding weight of glory.” So that whether the magistrate may not, when it may serve his turn, argue thus from your principles, judge you: dissenters from my religion must be punished, if in the wrong, to bring them into the right way; if in the right, to make them by their sufferings gainers of a far more exceeding weight of glory.

But you say, “unless it be as necessary for men to attain any greater degree of glory, as it is to attain glory, it will not follow, that if the magistrate may use force, because it may be indirectly, &c. useful towards the procuring any degree of glory, he may by the same rule use it where it may be in that manner useful towards the procuring a greater degree of glory. But that there is the same necessity of men’s attaining a greater degree of glory, as there is of their attaining glory, no man will affirm. For without attaining glory, they cannot escape the damnation of hell; which yet they may escape, without any greater degree of glory.” One of the ends of a commonwealth is, say you, the advancing men’s eternal interests. The procuring greater degrees of glory, is the advancing a man’s eternal interest. The use of force to make men suffer for the truth, what otherwise they would not suffer, is as necessary for the attaining a higher degree of glory, as using force to make men consider, what otherwise they would not consider, is necessary for the attaining any degree of glory. But you will say, “Attaining glory is absolutely necessary, but the attaining any greater degree of glory, however desirable, is not so necessary. Now if there be not

the same necessity of the one of these, as there is of the other; there can be no pretence to say, that whatever is lawful in respect of one of them, is likewise so in respect of the other.” But there will always be a just pretence to say, if advancing the eternal interests of men be one of the ends of a commonwealth, and that the force in the magistrate’s hands be necessary to the attaining that end; that then the magistrate is obliged to use it; whether you will think that end absolutely necessary, or as necessary as another, or no. I shall not here trouble you again with your mistake about what is absolutely necessary; having taken notice of it in another place. Only I shall desire you to show me, that the attaining of glory is absolutely necessary, when next time you have occasion to affirm it. Attaining of glory is necessary in order to happiness: and attaining a greater degree of glory, is necessary in order to greater happiness: but neither of them is absolutely necessary, but in order to their respective ends.

And now, though as you say, “you do not think yourself bound to take notice of all that may be done with some pretence of right:” yet, I suppose, upon cooler thoughts, when you have considered of what dangerous consequence an argument, managed as yours is, may be to the true religion, and the sincere professors of it; and what occasion or encouragement it may give to men in power warmed with zeal, and excited by the proper ministers of their own religion, to make a wrong and exorbitant use of force in matters of religion; you will another time think yourself bound not to let it go abroad again without some caution to the magistrate in the use of it; without one word of advice at least, that since it is given him, as you say, only for promoting the true religion, he should take care, and examine impartially whether what he employs it for, be the one only true religion. It being your opinion, whenever he makes use of force in matters of religion, for the promoting any thing but that, he goes beyond his commission; injures his subjects, and endangers his own soul.

By this time, sir, I suppose you see upon what grounds I think you have not cleared those difficulties which were charged by me on your method: and my reader will see what reason there was for those imputations, which, with so loud an outcry, you laid upon me of unfair dealing; since there is not one of them which cannot be made good to be contained either in your book, or in your hypothesis; and so clearly, that I could not imagine that a man who had so far considered government, as to engage in print, in such a controversy as this; could miss seeing it as soon as mentioned to him. One

of them which very much offends you, and makes you so often tell me what I say is impertinent, and nothing to the purpose, and sometimes to use warmer expressions, is, that I argue against a power in the magistrate to bring men to his own religion: for I could not imagine that, to a man of any thought, it could need proving, that if there were a commission given to all magistrates by the law of nature, which obliged them to use force to bring men to the true religion; it was not possible for them to put this commission in execution, without being judges what was the true religion; and then there needed no great quickness to perceive, that every magistrate, when your commission came to be put in execution, would, one as well as another, find himself obliged to use force to bring men to that which he believed to be the true religion. But since this was so hard for you to see, I now have been at the pains to prove it, and thereby to clear all those imputations. I shall not instance in any other; they are all of a like kind. Only where you complain I have not cited your words fairly, if you can show that I have done it any where in this or the second letter, to the advantage of my cause; or to avoid any argument in them, not answered; if you please to show it me, I shall either let you see your mistake, or acknowledge mine.

And now, whether you shall think what I have said worth that consideration you promise, or take it all for cavils and impertinencies, to me is very indifferent. Enjoy, as you please, that short and easy way of answering. But if the party you write for be, as you say, God, and the souls of men; it will require you seriously to weigh your scheme, examine and put together the parts of it; observe the tendency and consequences; and, in a word, consider things, and not words. For the party of God and souls needs not any help from obscurity or uncertainty of general and equivocal terms; but may be spoke out clearly and distinctly; needs no retreat in the round of equivalent, or the uncertainty of misapplied expressions, that may serve to amuse and deceive the unwary, but instruct nobody; and, lastly, needs no leave nor allowance from men of art, to direct both subjects and magistrates to the examination of the scriptures, wherein God has revealed to the world the ways and means of salvation. In doing of this, in a treatise where you profess “the subject of your inquiry is only what method is to be used to bring men to the true religion,” the party you profess to write for, would have justified you against the rules of any lawful art: and no christian man,

of what art soever, would have denied you that liberty; and if I mistake not, the party, you say you write for, demands it of you.

If you find upon a review of the whole, that you have managed your cause for God and the souls of men, with that sincerity and clearness that satisfies your own reason, and you think may satisfy that of other men: I shall congratulate to you so happy a constitution. But if all your magnified and necessary means of force, in the way you contend for, reaches no further than to bring men to a bare outward conformity to the church of England; wherein you can sedately affirm, that it is presumable that all that are of it are so upon reason and conviction; I suppose there needs no more to be said to convince the world what party you write for.

The party you write for is God, you say. But if all you have said aims or amounts to nothing more, than that the church of England, as now established by law, in its doctrines, ceremonies, and discipline, should be supported by the power of the magistrate, and men by force be driven into it; I fear the world will think you have very narrow thoughts of God: or that that is not the party you write for. It is true, you all along speak of bringing men to the true religion. But to evidence to you, that by the one only true religion, you mean only that of the church of England, I tell you, that upon your principles, you cannot name any other church now in the world; (and I again demand of you to do it) for the promoting whereof, or punishing dissenters from it, the magistrate has the same right to use force, as you pretend he has here in England. Till you therefore name some such other true church and true religion, besides that of England, your saying, that God is the party you write for, will rather show that you make bold with his name, than that you do not write for another party.

You say too, you write not for any party, but the souls of men. You write indeed, and contend earnestly, that men should be brought into an outward conformity to the church of England. But that they embrace that profession upon reason and conviction; you are content to have it presumable, without any farther enquiry or examination. And those who are once in the outward communion of the national church, however ignorant or irreligious they are, you leave there unassisted by your only competent means, force; without which, you tell us, the true religion, by its own light and strength, is not able to prevail against men's lusts, and the corruption of nature, so as to be considered as it ought, and heartily embraced. And this dropped not from your pen by chance; but you professedly make excuses for those of the

national religion, who are ignorant of the grounds of it; and give us reasons why force cannot be used to those who outwardly conform, to make them consider so as sincerely to embrace, believe, and obey the truth that must save them. But the reverend author of the Pastoral Care tells you, , “Party is the true name of making converts, except they become at the same time good men.”

If the use of force be necessary for the salvation of souls, and men’s souls be the party you write for: you will be suspected to have betrayed your party, if your method and necessary means of salvation reach no further than to bring men to outward conformity, though to the true church; and after that abandons them to their lusts and depraved natures, destitute of the help of force; your necessary and competent means of salvation.

This way of managing the matter, whatever you intend, seems rather, in the fitness of it, to be for another party. But since you assure us, you write for nothing but God and men’s souls; it can only be said you had a good intention, but ill luck: since your scheme, put into the language of the country, will fit any national church and clergy in the world, that can but suppose itself the true; and that I presume none of them will fail to do.

You were more than ordinary reserved and gracious, when you tell me, That “what party I write for, you will not undertake to say.” But having told me, that my letter tends to the promoting of scepticism in religion; you thought, it is like, that was sufficient to show the party I write for; and so you might safely end your letter with words that looked like civil. But that you may another time be a little better informed what party I write for, I will tell you. They are those who in every nation fear God, work righteousness, and are accepted with him; and not those who in every nation are zealous for human constitutions: cry up nothing so much as outward conformity to the national religion; and are accepted by those who are the promoters of it. Those that I write for are those, who, according to the light of their own consciences, are every-where in earnest in matters of their own salvation, without any desire to impose on others; a party so seldom favoured by any of the powers or sects of the world; a party that has so few preferments to bestow; so few benefices to reward the endeavours of any one who appears for it; that I conclude I shall easily be believed when I say, that neither hopes of preferment, nor a design to recommend myself to those I live amongst, have biassed my understanding, or misled me in my undertaking. So much truth as serves the turn of any particular church, and

can be accommodated to the narrow interest of some human constitution, is indeed often received with applause, and the publisher finds his account in it. But I think I may say, truth, in its full latitude of those generous principles of the gospel, which so much recommend and inculcate universal charity, and a freedom from the inventions and impositions of men in the things of God; has so seldom had a fair and favourable hearing anywhere, that he must be very ignorant of the history and nature of man, however dignified and distinguished, who proposes to himself any secular advantage by writing for her at that rate.

As to your request in the close of your letter, I hope this will satisfy you, that you might have spared it; and you, with the rest of the world, will see that all I writ in my former was so true, that you need not have given me any caution for the future. As to the pertinence of what I say, I doubt whether I shall please you; because I find by your last letter, that what is brought by me to show the weakness, absurdities, or insignificancy of what you write, you are very apt to call impertinent and nothing to the purpose. You must pardon me therefore, if I have endeavoured more to please other readers than you in that point. I hope they will find, in what I have said, not much beside the matter. But to a man who, supposing himself in the right, builds all upon that supposition, and takes it for an injury to have that privilege denied him; to a man who would sovereignly decide for all the world, what is the true religion; and thereby empower what magistrates he thinks fit, and what not, to use force; to such a man, not to seem impertinent, would be really to be so. This makes me pleased with your reply to so many passages of my letter, that they were nothing to the purpose: and it is in your choice whether in your opinion any thing in this shall be so.

But since this depends upon your keeping steadily to clear and settled notions of things, separate from words and expressions used in a doubtful and undetermined signification; wherewith men of art often amuse themselves and others; I shall not be so unreasonable as to expect, whatever you promise, that you should lay by your learning to embrace truth, and own what will not perhaps suit very well with your circumstances and interest.

I see, my design not to omit any thing that you might think looks like an argument in yours, has made mine grow beyond the size of a letter. But an answer to any one being very little different from a letter, I shall let it go under that title. I have in it also endeavoured to bring the scattered parts of your scheme into some method, under distinct heads; to give a fuller and more distinct view of them; wherein, if any of the arguments, which give support to your hypothesis, have escaped me unawares, be pleased to show them me, and I shall either acknowledge their force, or endeavour to show their weakness.

I am, SIR, Your most humble servant,
June 20, 1692.
Philanthropus.

A FOURTH LETTER FOR TOLERATION

SIR,

A fresh revival of the controversy formerly between you and me, is what I suppose nobody did expect from you after twelve years silence. But reputation, a sufficient cause for a new war, as you give the world to understand, hath put a resolution into your heart, and arms into your hands, to make an example of me, to the shame and confusion of all those who could be so injurious to you, as to think you could quit the opinion you had appeared for in print, and agree with me in the matter of Toleration. It is visible how tender even men of the most settled calmness are in point of reputation, and it is allowed the most excusable part of human frailty; and therefore nobody can wonder to see a report thought injurious laboured against with might and main, and the assistance and cause of religion itself taken in and made use of to put a stop to it. But yet for all this there are sober men who are of opinion, that it better becomes a Christian temper, that disputes, especially of religion, should be waged purely for the sake of truth, and not for our own: self should have nothing to do in them. But since as we see it will crowd itself in, and be often the principal agent; your ingenuity in owning what has brought you upon the stage again, and set you on work, after the ease and quiet you resolutely maintained yourself in so many years; ought to be commended, in giving us a view of the discreet choice you have made of a method suited to your purpose, which you publish to the world in these words, : “Being desirous to put a stop to a report so injurious, as well as groundless, as I look upon this to be, I think, it will be no improper way of doing it, if I thus signify to you and the reader, that I find nothing more convincing in this your long letter, than I did in your two former; giving with all a brief Specimen of the answerableness of it: which I choose to do upon a few pages at the beginning, where you have placed your greatest strength, or at least so much of it, as you think sufficient to put an end to this controversy.”

Here we have your declaration of war, of the grounds that moved you to it, and of your compendious way to assured victory; which I must own is very new and very remarkable. You choose a few pages out of the beginning of my Third Letter; in these, you say, “I have placed my greatest

strength.” So that, what I have there said being baffled, it gives you a just triumph over my whole long Letter; and all the rest of it being but pitiful, weak, impertinent stuff, is by the overthrow of this forlorn hope fully confuted.

This is called answering by Specimen. A new way, which the world owes to your invention; an evidence that whilst you said nothing you did not spare thinking. And indeed it was a noble thought, a stratagem, which I believe scarce any other but yourself would have found out in a meditation of twice twelve years; how to answer arguments without saying a word to them, or so much as reciting them; and, by examining six or seven pages in the beginning of a book, reduce to nothing above three hundred pages of it that follow. This is indeed a decisive stroke that lays all flat before you. Who can stand against such a conqueror, who, by barely attacking of one, kills an hundred? This would certainly be an admirable way, did it not degrade the conqueror, whose business is to do; and turn him into a mere talking gazetteer, whose boasts are of no consequence. For after slaughter of foes, and routing of armies by such a dead-doing hand, nobody thinks it strange to find them all alive again safe and sound upon their feet, and in a posture of defending themselves. The event in all sorts of controversies, hath often better instructed those who have, without bringing it to trial, presumed on the weakness of their adversaries. However, this which you have set up, of confuting without arguing; cannot be denied to be a ready way, and well thought on to set you up high, and your reputation secure in the thoughts of your believing readers; if that be, as it seems it is, your business: but as I take it, tends not at all to the informing their understandings, and making them see the truth and grounds it stands on. That perhaps is too much for the profane vulgar to know; it is enough for them that you know it for them, and have assured them, that you can, when you please to condescend so far, confound all that any one offers against your opinion. An implicit faith of your being in the right, and ascribing victory to you, even in points whereof you have said nothing; is that which some sort of men think most useful; and so their followers have but tongues for their champion to give him the praise and authority he aims at, it is no matter whether they have any eyes for themselves to see on which side the truth lies. Thus methinks you and I both find our account in this controversy under your management; you in setting your reputation safe from the blemish it would have been to it that you were brought over to my opinion;

and I in seeing (if you will forgive me so presumptuous a word) that you have left my cause safe in all those parts you have said nothing to, and not very much damaged in that part you have attacked; as I hope to show the indifferent reader. You enter upon your specimen, , by minding me that I tell you, “That I doubt not but to let you see, that if you will be true to your own principles, and stand to what you have said, you must carry some degrees of force to all those degrees which in words you declare against; even to the discipline of fire and faggot.” And you say, “if I make my word good, you assure me you will carry a faggot yourself to the burning what you have written for so unmerciful and outrageous a discipline: but till I have done that, you suppose the discipline you have endeavoured to defend, may remain safe and unhurt; as it is in its own nature, harmless and salutary to the world.”

To promise fairly is then the part of an honest man, when the time of performance is not yet come. But it falls out unluckily here, for you who have undertaken, by answering some parts of my second Letter, to show the answerableness of the whole; that instead of answering, you promise to retract, “if I make good my word, in proving upon your own principles you must carry your some degrees of force to fire and faggot.”

Sir, my endeavours to make my word good, have lain before you a pretty competent time; the world is witness of it, and will, as I imagine, think it time for you, since you yourself have brought this question upon the stage, either to acknowledge that I have made my word good; or by invalidating my arguments, show that I have not. He that after a debt of so many years only promises what brave things he will do hereafter, is hardly thought upon the Exchange to do what he ought. The account in his hand requires to be made up and balanced; and that will show, not what he is to promise, but, if he be a fair man, what he is to perform. If the schools make longer allowances of time, and admit evasions for satisfaction; it is fit you use your privilege, and take more time to consider; only I crave leave in the mean while to refer my reader to what I have said on this argument, chap. iv. of my third Letter, that he may have a view of your way of answering by specimen, and judge whether all that I have there urged be answered by what you say here; or what you promise here be ever like to be performed.

The next sample you give to show the answerableness of my Letter, is not much more lucky than the former; it may be seen, and 4, where you say, that I tell you, , “That you have altered the question;” for it seems, , you tell

me the question between us is, “Whether the magistrate has a right to use force, to bring men to the true religion? Whereas, , you yourself, I say, own the question to be, whether the magistrate has a right to use force in matters of religion?” “Which affirmation, of mine, you must take leave to tell me, is a mere fiction, for neither , nor any-where else, do you own the question to be what I say you do.”

“And as to using force in matters of religion (which you say are my words not yours,) if I mean by it the using force to bring men to any other religion besides the true; you are so far from owning the question to be, whether the magistrate has a right to use force for such a purpose, that you have always thought it out of question, that no man in the world, magistrate or other, can have any right to use either force, or any other means that I can name, to bring men to any false religion; how much soever he may persuade himself that it is true.”

“It is not therefore from any alteration, but from the true state of the question, that you take occasion, as I complain without cause, to lay a load on me for charging you with the absurdities of a power in the magistrates to punish men, to bring them to their religion.” “But it seems, having little to say against what you do assert, you say, I find it necessary myself to alter the question, and to make the world believe that you assert what you do not; that I may have something before me which I can confute.”

In this paragraph you positively deny, that it is anywhere owned by you as the question between us “Whether the magistrate has a right of using force in matters of religion?” Indeed these words are not as they are cited in of your former Letter; but he that will turn over the leaf, may, in , read these words of yours, viz. that “You refer it to me, whether I, in saying nobody has a right, or you, in saying the magistrate has a right to use force in matters of religion, have most reason:” though you positively tell me, “that neither , nor any-where else, do you own the question to be what I say you do.” And now let the reader judge between us. I should not perhaps have so much as taken notice of this, but that you who are so sparing of your answer, that you think a brief specimen upon some few pages of the beginning of my Letter, sufficient to confute all I have said in it; do yet spend the better part of two pages on this: which if I had been mistaken in, it had been of no great consequence; of which I see no other use you have, but to cast on me some civil reflections of your fashion; and fix on me the imputation of fiction, mere fiction; a compliment which I shall not return

you, though you say, “using force in matters of religion,” are my words, not yours. Whether they are your words or not, let of your former Letter decide; where you own yourself to say, that “the magistrate has a right to use force in matters of religion.” So that this, as I take it, is a specimen of your being very positive in a mistake, and about a plain matter of fact; about an action of your own; and so will scarce prove a specimen of the answerableness of all I say in my letter; unless we must allow that truth and falsehood are equally answerable, when you declare against either of them.

The next part of your specimen we have, , 5, where you tell me that I undertake to prove, that “if upon your grounds the magistrate be obliged to use force to bring men to the true religion; it will necessarily follow, that every magistrate, who believes his religion to be true, is obliged to use force to bring men to his.”

“Now because this undertaking is so necessary for me; and my whole cause seems to depend upon the success of it: you shall the more carefully consider how well I perform it. But before you do this, it will be fit to let me know, in what sense you grant my inference, and in what sense you deny it. Now that every magistrate, who upon just and sufficient grounds believes his religion to be true, is obliged to use some moderate penalties, (which is all the force you ever contended for,) to bring men to his religion, you freely grant; because that must needs be the true religion; since no other can, upon such grounds, be believed to be true. But that any magistrate, who upon weak and deceitful grounds believes a false religion to be true, (and he can never do it upon better grounds,) is obliged to use the same, or any other means, to bring men to his religion; this you flatly deny; nor can it by any rules of reasoning be inferred from what you assert.”

Here you tell me you grant my inference in this sense, viz. “That every magistrate, who upon just and sufficient grounds believes his religion to be true, is bound to use force to bring men to it.”

Here you grant that every magistrate, without knowing that his religion is true, is obliged, upon his believing it to be true, to use force to bring men to it; indeed you add, “who believes it to be true upon just and sufficient grounds.” So you have got a distinction, and that always sets off a disputant, though many times it is of no use to his argument. For here let me ask you, who must be judge, whether the grounds upon which he believes his religion to be true, be just and sufficient? Must the magistrate himself judge for himself, or must you judge for him? A third competitor in this judgment

I know not where you will find for your turn. If every magistrate must judge for himself, whether the grounds upon which he believes his religion to be true, are just and sufficient grounds; your limitation of the use of force to such only as believe upon just and sufficient grounds, bating that it is an ornament to your style and learning, might have been spared, since it leaves my inference untouched in the full latitude I have expressed it concerning every magistrate; there not being any one magistrate excluded thereby from an obligation to use force to bring men to his own religion, by this your distinction. For if every magistrate, who upon just and sufficient grounds believes his religion to be true, be obliged to use force to bring men to his religion, and every magistrate be himself judge, whether the grounds he believes upon be just and sufficient; it is visible every magistrate is obliged to use force to bring men to his religion; since any one, who believes any religion to be true, cannot but judge the grounds, upon which he believes it to be true, are just and sufficient: for if he judged otherwise, he could not then believe it to be true. If you say, you must judge for the magistrate, then what you grant is this, That every magistrate who, upon grounds that you judge to be just and sufficient, believes his religion to be true, is obliged to use force to bring men to his religion. If this be your meaning, as it seems not much remote from it, you will do well to speak it out, that the magistrates of the world may know who to have recourse to in the difficulty you put upon them, in declaring them under an obligation to use force to bring men to the true religion; which they can neither certainly know, nor must venture to use force to bring men to, upon their own persuasion of the truth of it; when they have nothing but one of these two, viz. knowledge, or belief that the religion they promote is true, to determine them. Necessity has at last (unless you would have the magistrate act in the dark and use his force wholly at random) prevailed on you to grant, that the magistrate may use force to bring men to that religion which he believes to be true; but, say you, "his belief must be upon just and sufficient grounds." The same necessity remaining still, must prevail with you to go one step further, and tell me whether the magistrate himself must be judge, whether the grounds, upon which he believes his religion to be true, be just and sufficient; or whether you are to be judge for him. If you say the first, my inference stands good, and then this question, I think, is yielded, and at an end. If you say you are to be judge for the magistrates, I shall congratulate to the magistrates of the world the way you have found out for them to acquit

themselves of their duty, if you will but please to publish it, that they may know where to find you; for in truth, sir, I prefer you, in this case, to the pope; though you know that old gentleman at Rome has long since laid claim to all decisions of this kind, and alleges infallibility for the support of his title; which indeed will scarce be able to stand at Rome, or anywhere else, without the help of infallibility. But of this perhaps more in the next paragraph.

You go on with your specimen in your next paragraph, , which I shall crave leave of my reader to set down at large, it being a most exact and studied piece of artificial fencing, wherein, under the cover of good words, and the appearance of nice thinking, nothing is said; and therefore many deserve to be kept, not as a specimen of your answering; for, as we shall see, you answer nothing; but as a specimen of your skill in seeming to say something where you have nothing to answer. You tell me that I say, , that “I suppose that you will grant me (what he must be a hard man indeed that will not grant) that any thing laid upon the magistrate as a duty, is some way or other practicable. Now the magistrate being obliged to use force in matters of religion, but yet so as to bring men only to the true religion; he will not be in any capacity to perform this part of his duty, unless the religion he is to promote be what he can certainly know; or else what it is sufficient for him to believe to be the true: either his knowledge, or his opinion, must point out that religion to him, which he is by force to promote. Where, if by knowing, or knowledge, I mean the effect of strict demonstration; and by believing, or opinion, any sort of assent or persuasion how slightly soever grounded: then you must deny the sufficiency of my division; because there is a third sort or degree of persuasion, which, though not grounded upon strict demonstration; yet in firmness and stability does far exceed that which is built upon slight appearances of probability; being grounded upon such clear and solid proof, as leaves no reasonable doubt in an attentive and unbiassed mind: so that it approaches very near to that which is produced by demonstration; and is therefore, as it respects religion, very frequently and familiarly called in scripture not faith or belief only, but knowledge; and in divers places full assurance; as might easily be shown, if that were needful. Now this kind of persuasion, this knowledge, this full assurance men may, and ought to have of the true religion: but they can never have it of a false one. And this it is,

that must point out that religion to the magistrate, which he is to promote by the method you contend for.”

Here the first thing you do is to pretend an uncertainty of what I mean by “knowing or knowledge, and by believing or opinion.” First, As to knowledge, I have said “certainly know.” I have called it “vision; knowledge and certainty; knowledge properly so called.” And for believing or opinion, I speak of believing with assurance; and say, that believing in the highest degree of assurance, is not knowledge. That whatever is not capable of demonstration, is not, unless it be self-evident, capable to produce knowledge, how well grounded and great soever the assurance of faith may be wherewith it is received. That I grant, that a strong assurance of any truth, settled upon prevalent and well-grounded arguments of probability, is often called knowledge in popular ways of talking; but being here to distinguish between knowledge and belief, to what degrees of confidence soever raised, their boundaries must be kept, and their names not confounded; with more to the same purpose, , 121; whereby it is so plain, that by knowledge I mean the effect of strict demonstration; and by believing or opinion, I mean any degree of persuasion even to the highest degree of assurance; that I challenge you yourself to set it down in plainer and more express terms. But nobody can blame you for not finding your adversary’s meaning, let it be ever so plain; when you can find nothing to answer to it. The reason therefore which you allege for the denying the sufficiency of my division, is no reason at all. Your pretended reason is because there is “a third sort or degree of persuasion; which though not grounded upon strict demonstration; yet in firmness and stability does far exceed that which is built upon slight appearances of probability,” &c. Let it be so, that there is a degree of persuasion; not grounded upon strict demonstration, far exceeding that which is built upon slight appearances of probability. But let me ask you what reason can this be to deny the sufficiency of my division, because there is, as you say, a third sort or degree of persuasion; when even that which you call this third sort or degree of persuasion is contained in my division. This is a specimen indeed, not of answering what I have said; but of not answering; and for such I leave it to the reader. “A degree of persuasion, though not grounded on strict demonstration, yet in firmness and stability far exceeding that which is built upon slight appearances of probability, you call here a third sort or degree of persuasion.” Pray tell me which are the two other sorts; for

knowledge upon strict demonstration, is not belief or persuasion, but wholly above it. Besides, if the degrees of firmness in persuasion make different sorts of persuasion, there are not only three, but three hundred sorts of persuasion; and therefore the naming of your third sort was with little ground, and to no purpose or tendency to an answer; though the drawing in something like a distinction be always to the purpose of a man who hath nothing to answer; it giving occasion for the use of many good words; which, though nothing to the point, serve to cover the disputant's saying nothing, under the appearance of learning, to those who will not be at the pains to examine what he says.

You say, "every magistrate is by the law of nature under an obligation to use force to bring men to the true religion." To this I urge, that the magistrate hath nothing else to determine him in the use of force, for promotion of any religion one before another, but only his own belief or persuasion of the truth of it. Here you had nothing to do, but fairly to grant or deny: but instead thereof you first raise a groundless doubt as I have shown about my meaning, whereof there could be no doubt at all to any one who would but read what I had said: and thereupon having got a pretence for a distinction, you solemnly tell the world "there is a third sort of persuasion, which, though not grounded on strict demonstration; yet in firmness and stability does far exceed that which is built upon slight appearances of probability, leaving no doubt, approaching near to knowledge, being full assurance." Well, the magistrate hath a "persuasion of firmness and stability, has full assurance;" must he be determined by this his full assurance in the promoting of that religion by force, of whose truth he is in so high a degree of persuasion so fully assured? "No, say you, it must be grounded upon such clear and solid proof as leaves no reasonable doubt in an attentive and unbiassed mind." To which the magistrate is ready to reply, that he, upon his grounds, can see no reasonable doubt; and that his is an attentive and unbiassed mind; of all which he himself is to be judge, till you can produce your authority to judge for him; though, in the conclusion, you actually make yourself judge for him. "It is such a kind of persuasion, such a full assurance must point out to the magistrate that religion he is to promote by force, which can never be had but of the true religion:" which is in effect, as every one may see, the religion that you judge to be true; and not the religion the magistrate judges to be true. For pray tell me, must the magistrate's full assurance point out to him the

religion which he is by force to promote; or must he by force promote a religion, of whose truth he hath no belief, no assurance at all? If you say the first of these, you grant that every magistrate must use force to promote his own religion; for that is the religion whereof he has so full assurance, that he ventures his eternal state upon it. Ay, say you, that is for want of attention; and because he is not unbiassed. It is like he will say the same of you, and then you are quits. And that he should by force promote that religion which he believes not to be true, is so absurd, that I think you can neither expect it, nor bring yourself to say it. Neither of these therefore being answers that you can make use of, that which lies at the bottom, though you give it but covertly, is this, "That the magistrate ought by force to promote the religion that you believe with full assurance to be true." This would do admirably well for your purpose, were not the magistrate intitled to ask, "who made you a judge for him in the case?" And ready to retort your own words upon you, that it is want of attention and unbiassedness in you, that puts your religion past doubt with you upon your proofs of it. Try when you please with a bramin, a mahometan, a papist, lutheran, quaker, anabaptist, presbyterian, &c. you will find if you argue with them, as you do here with me, that the matter will rest here between you, and that you are no more a judge for any of them than they are for you. Men in all religions have equally strong persuasions, and every one must judge for himself; nor can any one judge for another, and you least of all for the magistrate; the ground you build upon, that "firmness and stability of persuasion in the highest degree of assurance leaves no doubt, can never be had of a false religion" being false; all your talk of full assurance pointing out to the magistrate the true religion that he is obliged by force to promote, amounts to no more but his own religion, and can point out no other to him.

However, in the next paragraph, you go on with your specimen, and tell me, "Hence appears the impertinency of all I discourse, , 144, concerning the difference between faith and knowledge: where the thing I was concerned to make out, if I would speak to the purpose, was no other but this, that there are as clear and solid grounds for the belief of false religions, as there are for the belief of the true: or that men both as firmly and as rationally believe and embrace false religions as they can the true. This, you confess, is a point, which, you say, when I have well cleared and established it, will do my business, but nothing else will. And therefore my talk of faith and knowledge; however it may amuse such as are prone to admire all that I

say; will never enable me, before better judges, from the duty of every magistrate to use moderate penalties for promoting the true religion, to infer the same obligation to lie upon every magistrate in respect of his religion, whatever it be.”

Where the impertinency lies will be seen when it is remembered, that the question between us is not what religion has the most clear and solid grounds for the belief of it; much less whether “there are as clear and solid grounds for the belief of false religions, as there are for the belief of the true,” i. e. whether falsehood has as much truth in it as truth itself? A question, which, I guess, no man but one of your great pertinency, could ever have proposed. But the question here between you and me, is what must point out to the magistrate that religion which he is by force to promote, that so he may be able to perform the duty that you pretend is incumbent on him by the law of nature; and here I proved, that having no certain demonstrative knowledge of the true religion, all that was left him to determine him in the application of force (which you make the proper instrument of promoting the true religion) for the promoting the true religion, was only his persuasion, belief, or assurance of the true religion, which was always his own; and so in this state the religion, which by force the magistrates of the world must of necessity promote, must be either their own or none at all. Thus the argument standing between us, I am apt to think the world may be of opinion, that it had been pertinent to your cause to have answered my argument, if you had any thing to answer; which since you have not done, this specimen also of the facility, wherewith you can answer all I have said in the third Letter, may be joined to the former, and be a specimen of something else than what you intended it. For in truth, sir, the endeavouring to set up a new question absurd in itself, and nothing at all to the purpose, without offering any thing to clear the difficulty you were pressed with; will to understanding readers appear pertinent in one who sets himself up for an arrant Drawcansir, and is giving specimens of himself, that nothing can stand in his way.

It is with the same pertinency, that to this proposition, “that there are as clear and solid grounds for the belief of a false religion as there are for the belief of the true,” you join this following as an equivalent, “Or that men may both as firmly and as rationally believe and embrace false religions as they can the true:” and you would fain have it thought that your cause is

gained, unless I will maintain these two absurd propositions, which my argument has nothing to do with.

And you seem to me to build upon these two false propositions:

That in the want of knowledge and certainty of which is the true religion, nothing is fit to set the magistrate upon doing his duty in employing of force to make men consider and embrace the true religion, but the highest persuasion and full assurance of its truth. Whereas his own persuasion of the truth of his own religion, in what degree soever it be, so he believes it to be true; will, if he thinks it his duty by force to promote the true, be sufficient to set him on work. Nor can it be otherwise, since his own persuasion of his own religion, which he judges so well grounded as to venture his future state upon it, cannot but be sufficient to set him upon doing what he takes to be his duty in bringing others to the same religion.

II. Another false supposition you build upon is this, that the true religion is always embraced with the firmest assent. There is scarce any one so little acquainted with the world, that hath not met with instances of men most unmoveably confident, and fully assured in a religion which was not the true. Nor is there among the many absurd religions of the world, almost any one that does not find votaries to lay down their lives for it: and if that be not firm persuasion and full assurance that is stronger than the love of life, and has force enough to make a man throw himself into the arms of death, it is hard to know what is firm persuasion and full assurance. Jews and mahometans have frequently given instances of this highest degree of persuasion. And the bramins religion in the East is entertained by its followers with no less assurance of its truth, since it is not unusual for some of them to throw themselves under the wheels of a mighty chariot, wherein they on solemn days draw the image of their God about in procession, there to be crushed to death, and sacrifice their lives in honour of the God they believe in. If it be objected, that those are examples of mean and common men; but the great men of the world, and the heads of societies, do not so easily give themselves up to a confirmed bigotry. I answer, The persuasion they have of the truth of their own religion, is visibly strong enough to make them venture themselves, and use force to others upon the belief of it. Princes are made like other men; believe upon the like grounds that other men do; and act as warmly upon that belief, though the grounds of their persuasion be in themselves not very clear, or may appear to others to be not of the utmost solidity. Men act by the strength of their persuasion,

though they do not always place their persuasion and assent on that side on which, in reality, the strength of truth lies. Reasons that are not thought of, nor heard of, nor rightly apprehended, nor duly weighed, make no impression on the mind: and truth, how richly soever stored with them, may not be assented to, but lie neglected. The only difference between princes and other men herein, is this, that princes are usually more positive in matters of religion, but less instructed. The softness and pleasures of a court, to which they are usually abandoned when young; and affairs of state which wholly possess them when grown up; seldom allow any of them time to consider and examine that they may embrace the true religion. And here your scheme, upon your own supposition, has a fundamental error that overturns it. For your affirming that force, your way applied, is the necessary and competent means to bring men to the true religion; you leave magistrates destitute of these necessary and competent means of being brought to the true religion, though that be the readiest way, in your scheme the only way, to bring other men to it, and is contended for by you as the only method.

But further, you will perhaps be ready to reply, that you do not say barely, that men may not as firmly, but that they cannot as firmly and rationally, believe and embrace false religions as they can the true. This, be it as true as it will, is of no manner of advantage to your cause. For here the question, necessary to be considered in your way of arguing, returns upon you, who must be judge whether the magistrate believes and embraces his religion rationally or no? If he himself be judge, then he does act rationally, and it must have the same operation on him, as if it were the most rational in the world; if you must be judge for him, whether his belief be rational or no, why may not others judge for him as well as you? or at least he judge for you, as well as you for him; at least till you have produced your patent of infallibility and commission of superintendency over the belief of the magistrates of the earth, and shown the commission whereby you are appointed the director of the magistrates of the world in their belief, which is or is not the true religion? Do not think this said without cause; your whole discourse here has no other tendency, but the making yourself judge of what religion should be promoted by the magistrate's force; which, let me tell you by the way, every warm zealot in any religion has as much right to be as you. I beseech you tell me, are you not persuaded, nay fully assured, that the church of England is in the right, and all that dissent from

her are in the wrong: Why else would you have force used to make them consider and conform? If then the religion of the church of England be, as you are fully assured, the only true religion, and the magistrate must ground his persuasion of the truth of his religion on such clear and solid proofs as the true religion alone has, and no false one can have; and by that persuasion the magistrate must be directed in the use of force, (for all this in effect you say, in the sixth and beginning of the seventh page;) what is this but covertly to say, that it is the duty of all magistrates to use force to bring men to embrace the religion of the church of England? Which, since it plainly follows from your doctrine, and I think you cannot deny to be your opinion, and what in effect you contend for; you will do well to speak it out in plain words, and then there will need no more to be said in the question.

And now I desire it may be considered, what advantage this supposition of force, which is supposed put into the magistrate's hands by the law of nature to be used in religion, brings to the true religion, when it arms five hundred magistrates against the true religion, who must unavoidably in the state of things in the world act against it, for one that uses force for it. I say that this use of force in the magistrate's hand, is barely supposed by you from the benefit it is like to produce; but it being demonstration, that the prejudice that will accrue to the true religion from such an use of force, is five hundred times more than the advantage can be expected from it; the natural and unavoidable inference from your own ground of benefit, is, that God never gave any such power to the magistrate; and there it will rest till you can by some better argument prove the magistrate to have such a power: to which give me leave to add one word more.

You say the magistrate is obliged by the law of nature to use force to promote the true religion; must he stand still and do nothing till he certainly know which is the true religion? If so, the commission is lost, and he can never do his duty; for to certain knowledge of the true religion, he can in this world never arrive. May he then act upon "firm persuasions and full assurance, grounded upon such clear and solid proofs as the true religion alone has, and no false one can have?" And then indeed you have distinguished yourself into a safe retreat. For who can doubt but your third sort or degree of persuasion, if that be your meaning, will determine the magistrate to the true religion, when it is grounded on those which are the proofs only of the true religion; which if it be all that you intend by your full assurance, (which is the title you give to this your third sort or degree of

persuasion,) I must desire you to apply this in answer to my argument. I say, magistrates in general have nothing to determine them in their application of force but their own persuasion; and your answer is, the magistrates of the true religion have their own persuasion to determine them; but of all the other magistrates, which are above an hundred, I might say a thousand to one, you say nothing at all; and thus, by the help of a distinction, the question is resolved. I say, the magistrates are not in a capacity to perform their duty, if they be obliged to use force to promote the true religion, since they have nothing to determine them but their own persuasion of the truth of any religion; which, in the variety of religions which the magistrates of the world have embraced, cannot direct them to the true. Yes, say you, their persuasion, who have embraced the true religion, will direct them to the true religion. Which amounts at last to no more but this, That the magistrate that is in the right, is in the right. A very true proposition without doubt; but whether it removes the difficulty I proposed, any better than begging the question, you were best consider. There are five hundred magistrates of false religions for one that is of the true; I speak much within compass; it is a duty incumbent on them all, say you, to use force to bring men to the true religion. My question is, how can this be compassed by men who are unavoidably determined by the persuasion of the truth of their own religion? It is answered, they who are of the true religion will perform their duty. A great advantage surely to true religion, and worth the contending for, that it should be the magistrate's duty to use force for promoting the true religion, when in the state of things that is at present in the world, and always hitherto has been, one magistrate in five hundred will use force to promote the true religion, and the other four hundred ninety-nine to promote false ones.

But perhaps you will tell me, That you do not allow that magistrates, who are of false religions, should be determined by their own persuasions, which are "built upon slight appearances of probability; but such as are grounded upon clear and solid proofs," which the true religion alone has. In answer to this, I ask, Who must be judge whether his persuasion be grounded on clear and solid proofs; the magistrate himself, or you for him? If the magistrate himself, then we are but where we were; and all that you say here, with the distinction that you have made about several sorts of persuasion, serves only to lead us about to the same place: for the magistrate, of what religion soever, must, notwithstanding all you have

said, be determined by his own persuasion. If you say you must be judge of the clearness and solidity of the proofs upon which the magistrate grounds the belief of his own religion, it is time you should produce your patent, and show the commission whereby you act.

There are other qualifications you assign of the proof, on which you tell us “your third sort or degree of persuasion is grounded; and that is such as leaves no reasonable doubt in an attentive and unbiassed mind:” which, unless you must be judge what is a reasonable doubt, and which is an attentive and unbiassed mind, will do you no manner of service. If the magistrate must be judge for himself in this case, you can have nothing to say to him; but if you must be judge, then any doubt about your religion will be unreasonable, and his not embracing and promoting your religion, will be want of attention and an unbiassed mind. But let me tell you, give but the same liberty of judging for the magistrate of your religion to the men of another religion, which they have as much right to as you have to judge for the magistrate of any other religion in the points mentioned; all this will return upon you. Go into France, and try whether it be not so. So that your plea for the magistrate’s using force for promoting the true religion, as you have stated it, gives as much power and authority to the king of France to use it against his dissenting subjects, as to any other prince in Christendom to use it against theirs; name which you please.

The fallacy in making it the magistrate’s duty to promote by force the only true religion lies in this, that you allow yourself to suppose the magistrate, who is of your religion, to be well-grounded, attentive and unbiassed, and fully and firmly assured that his religion is true; but that other magistrates of other religions different from yours are not so: which, what is it but to erect yourself into a state of infallibility above all other men of different persuasions from yours, which yet they have as good a title to as yourself?

Having thus advanced yourself into the chair, and given yourself the power of deciding for all men which is, and which is not, the true religion; it is not to be wondered that you so roundly pronounce all my discourse, , 144, “concerning the difference between faith and knowledge, to be impertinency;” and so magisterially to tell me, “that the thing I was there concerned to make out, if I would speak to the purpose, was no other but this, that there are as clear and as solid grounds for the belief of false

religions, as there are for belief of the true: or, that men may both as firmly and as rationally believe and embrace false religions as they can the true.”

The impertinency in these two or three pages, I shall leave to shift for itself in the judgment of any indifferent reader; and will only, at present, examine what you tell “I was concerned to make out, if I would speak to the purpose.”

My business there was to prove, That the magistrate being taught that it was his duty to use force to promote the true religion, it would thence unavoidably follow, that not having knowledge of the truth of any religion, but only belief that it was true, to determine him in his application of force; he would take himself in duty bound to promote his own religion by force; and thereupon force would inevitably be used to promote false religions, upon those very grounds upon which you pretend to make it serviceable only to the true: and this, I suppose, I have in those pages evidently proved, though you think not fit to give any other answer to what I there say, but that it is impertinent; and I should have proved something else, which you would have done well, by a plain and clear deduction, to have shown from my words.

[the two following leaves of the copy are either lost or mislaid.]

After this new invention of yours, “of answering by specimen,” so happily found out for the ease of yourself and other disputants of renown, that shall please to follow it; I cannot presume you should take notice of any thing I have to say: you have assumed the privilege, by showing your strength against one argument, to pronounce all the rest baffled; and therefore to what purpose is it to offer difficulties to you, who can blow them all off with a breath? But yet, to apologize for myself to the world, for being of opinion that it is not always from want of consideration, attention, or being unbiassed, that men with firmness of persuasion embrace, and with full assurance adhere to, the wrong side in matters of religion; I shall take the liberty to offer the famous instance of the two Reynolds’s, brothers, both men of learning and parts; whereof the one being of the church of England, and the other of the church of Rome, they both desiring each other’s conversion to the religion which he himself was of, writ to one another about it, and that with such appearance of solid and clear grounds on both sides, that they were wrought upon by them: each changed his religion, and that with so firm a persuasion and full an assurance of the truth of that which he turned to, that no endeavours or arguments of either of them could

ever after move the other, or bring him back from what he had persuaded him to. If now I should ask to which of these two, full assurance pointed out the true religion; you no doubt, if you would answer at all, would say, To him that embraced the church of England, and a papist would say the other; but if an indifferent man were asked whether this full assurance was sufficient to point out the true religion to either of them, he must answer, No; for if it were, they must necessarily have been both of the same religion.

To sum up then what you answer to my saying, “It cannot be the magistrate’s duty to use force to promote the true religion, because he is not in a capacity to perform that duty; for not having a certain knowledge, but only his own persuasion to point out to him which is the true religion, if he be satisfied it is his duty to use force to promote the true religion, it will inevitably follow, that he must always use it to promote his own.” To which you answer, That a persuasion of a low degree is not sufficient to point out that religion to the megistrate which he is to promote by force; but that a “firmness and stability of persuasion, a full assurance, is that which is to point out to the magistrate that religion which he is by force to promote.” Where if by firmness and stability of persuasion and full assurance, you mean what the words import; it is plain you confess the magistrate’s duty is to promote his own religion by force; for that is the religion which his firm persuasion and full assurance points out to him. If by full assurance you mean any thing but the strength of persuasion; you contradict all that you have said about firmness and stability, and degrees of persuasion; and having in that sense allowed the sufficiency of my division, where I say, “knowledge or opinion must point out that religion to him, which he is by force to promote;” retract it again, and instead thereof, under the name of full assurance, you substitute and put in true religion; and so firmness of persuasion is in effect laid by, and nothing but the name made use of: for pray tell me, is firmness of persuasion, or being of the true religion, either of them by itself sufficient to point out to the magistrate that religion which it is his duty to promote by force? For they do not always go together. If being of the true religion by itself may do it; your mentioning firmness of persuasion, grounded on solid proof that leaves no doubt, is to no purpose, but to mislead your reason; for every one that is of the true religion, does not arrive at that high degree of persuasion, that full assurance which approaches that which is very near to that which is produced by

demonstration. And in this sense of full assurance, which you say men may have of the true religion, and can never have of a false one; your answer amounts to this, that full assurance, in him that embraces the true religion, will point out the religion he is by force to promote: where it is plain, that by fulness of assurance you do mean not the firmness of his persuasion that points out to him the religion which he is by force to promote, (for any lower degree of persuasion to him that embraces the true religion would do it as certainly, and to one that embraces not the true religion, the highest degree of persuasion would even in your opinion do nothing at all;) but his being of the true religion, is that which alone guides him to his duty of promoting the true religion by force. So that to my question, how shall a magistrate who is persuaded that it is his and every magistrate's duty to promote the true religion by force, be determined in his use of force; you seem to say his firm persuasion or full assurance of the truth of the religion he so promotes must determine him; and presently, in other words, you seem to lay the stress upon his actually being of the true religion. The first of these answers is not true; for I have shown that firmness of persuasion may and does point out to magistrates false religions as well as the true: and the second is much what the same, as if to one, who should ask what should enable a man to find the right way who knows it not, it should be answered, the being in it. One of these must be your meaning, choose which you please of them; if you have any meaning at all in your sixth, and beginning of the seventh page, to which I refer the reader; where, if he find nothing else, he cannot fail to find a specimen of school-play, of talking uncertainly in the utmost perfection, nicely and artificially worded, that it may serve for a specimen of a master-piece in that kind; but a specimen of the answerableness of my Letter will require, as I imagine, a little more plain-dealing. And to satisfy readers, that have not attained to the admiration of skilfully saying nothing, you must directly inform them, whether firmness of persuasion be or be not sufficient in a magistrate to enable him to do his duty in promoting the true religion by force; or else this you have pitched on will scarce be a sample of the answerableness of all I have said.

But you stand positive in it, and that is like a master, that it cannot be inferred from the magistrate's being obliged to promote by force the true religion, that every magistrate is obliged to promote by force his own religion. And that for the same reason you had given before, more perplexed and obscurely, viz. "Because there is this perpetual advantage on

the side of the true religion, that it may and ought to be believed on clear and solid grounds, such as will appear the more so, the more they are examined: whereas no other religion can be believed so, but upon such appearances only, as will not bear a just examination.”

This would be an answer to what I have said, if it were so that all magistrates saw the preponderancy of the grounds of belief, which are on the side of the true religion; but since it is not the grounds and reasons of a truth that are not seen, that do or can set the magistrate upon doing his duty in the case; but it is the persuasion of the mind, produced by such reasons and grounds as do affect it, that alone does, or is capable to determine the magistrate in the use of force, for performing of his duty; it necessarily follows, that if two magistrates have equally strong persuasions concerning the truth of their religions respectively, they must both be set on work thereby, or neither; for though one be of a false, and the other of the true religion; yet the principle of operation, that alone which they have to determine them, being equal in both, they must both be determined by it; unless it can be said, that one of them must act according to that principle, which alone can determine; and the other must act against it: that is, do what he cannot do; be determined to one thing, by what at the same time determines him to another. From which incapacity in magistrates to perform their duty by force to promote the true religion, I think it may justly be concluded, that to use force for the promoting any religion cannot be their duty.

You tell us, it is by the law of nature magistrates are obliged to promote the true religion by force. It must be owned, that if this be an obligation of the law of nature, very few magistrates overlook it; so forward are they to promote that religion by force which they take to be true. This being the case, I beseech you tell me what was Huaina Capac, emperor of Peru, obliged to do? Who, being persuaded of his duty to promote the true religion, was not yet within distance of knowing or so much as hearing of the christian religion, which really is the true (so far was he from a possibility to have his belief grounded upon the solid and clear proofs of the true religion.) Was he to promote the true religion by force? That he neither did nor could know any thing of; so that was morally impossible for him to do. Was he to sit still in the neglect of his duty incumbent on him? That is in effect to suppose it a duty and no duty at the same time. If, upon his not knowing which is the true religion, you allow it not his duty to promote it

by force, the question is at an end: you and I are agreed, that it is not the magistrate's duty by force to promote the true religion. If you hold it in that case to be his duty; what remains for him to do, but to use force to promote that religion which he himself is strongly, nay, perhaps to the highest degree of firmness, persuaded is the true? Which is the granting what I contend for, that, if the magistrate be obliged to promote by force the true religion, it will thence follow, that he is obliged to promote by force that religion which he is persuaded is the true; since, as you will have it, force was given him to that end, and it is his duty to use it; and he hath nothing else to determine it to that end but his own persuasion. So that one of these two things must follow, either that in that case it ceases to be his duty, or else he must promote his own religion; choose you which you please

TWO TREATISES OF GOVERNMENT

1764 EDITION

These two famous treatises was first published anonymously in December 1689 as a refutation of Robert Filmer's *Patriarcha*, a 1680 book that provides a theory of absolute monarchy and the divine right of kings. King James II of England had been overthrown in 1688 by a union of Parliamentarians and stadtholder of the Dutch Republic William III of Oranje-Nassau (William of Orange), who as a result ascended the English throne as William III of England in the Glorious Revolution. Locke claims in the *Preface* to the *Two Treatises* that its purpose is to justify William III's ascension to the throne.

The First of the treatises attacks patriarchalism in the form of a sentence-by-sentence refutation of Filmer's *Patriarcha*. Locke proceeds through Filmer's arguments, contesting his proofs from Scripture and ridiculing them as senseless, until concluding that no government can be justified by an appeal to the divine right of kings. The Second Treatise outlines Locke's ideas for a more civilised society based on natural rights and contract theory. Locke begins by describing the state of nature, a picture much more stable than Thomas Hobbes' state of "war of every man against every man," and argues that all men are created equal in the state of nature by God. From this, he goes on to explain the hypothetical rise of property and civilization, in the process explaining that the only legitimate governments are those that have the consent of the people. Therefore, any government that rules without the consent of the people can, in theory, be overthrown.

TWO TREATISES OF GOVERNMENT. IN THE FORMER THE FALSE
PRINCIPLES AND FOUNDATION OF SIR ROBERT FILMER AND HIS
FOLLOWERS ARE DETECTED AND OVERTHROWN.

THE LATTER IS AN ESSAY CONCERNING THE TRUE ORIGINAL
EXTENT AND END OF CIVIL GOVERNMENT.

PREFACE

Reader, thou hast here the beginning and end of a discourse concerning government; what fate has otherwise disposed of the papers that should have filled up the middle, and were more than all the rest, it is not worth while to tell thee. These, which remain, I hope are sufficient to establish the throne of our great restorer, our present King William; to make good his title, in the consent of the people, which being the only one of all lawful governments, he has more fully and clearly, than any prince in Christendom; and to justify to the world the people of England, whose love of their just and natural rights, with their resolution to preserve them, saved the nation when it was on the very brink of slavery and ruin. If these papers have that evidence, I slatter myself is to be found in them, there will be no great miss of those which are lost, and my reader may be satisfied without them: for I imagine, I shall have neither the time, nor inclination to repeat my pains, and fill up the wanting part of my answer, by tracing Sir Robert again, through all the windings and obscurities, which are to be met with in the several branches of his wonderful system. The king, and body of the nation, have since so thoroughly confuted his Hypothesis, that I suppose no body hereafter will have either the confidence to appear against our common safety, and be again an advocate for slavery; or the weakness to be deceived with contradictions dressed up in a popular stile, and well-turned periods: for if any one will be at the pains, himself, in those parts, which are here untouched, to strip Sir Robert's discourses of the flourish of doubtful expressions, and endeavour to reduce his words to direct, positive, intelligible propositions, and then compare them one with another, he will quickly be satisfied, there was never so much glib nonsense put together in well-sounding English. If he think it not worth while to examine his works all thro', let him make an experiment in that part, where he treats of usurpation; and let him try, whether he can, with all his skill, make Sir Robert intelligible, and consistent with himself, or common sense. I should not speak so plainly of a gentleman, long since past answering, had not the pulpit, of late years, publicly owned his doctrine, and made it the current divinity of the times. It is necessary those men, who taking on them to be teachers, have so dangerously misled others, should be openly shewed of what authority this their Patriarch is, whom they have so blindly followed, that so they may either retract what upon so ill grounds they have vented,

and cannot be maintained; or else justify those principles which they preached up for gospel; though they had no better an author than an English courtier: for I should not have writ against Sir Robert, or taken the pains to shew his mistakes, inconsistencies, and want of (what he so much boasts of, and pretends wholly to build on) scripture-proofs, were there not men amongst us, who, by crying up his books, and espousing his doctrine, save me from the reproach of writing against a dead adversary. They have been so zealous in this point, that, if I have done him any wrong, I cannot hope they should spare me. I wish, where they have done the truth and the public wrong, they would be as ready to redress it, and allow its just weight to this reflection, viz. that there cannot be done a greater mischief to prince and people, than the propagating wrong notions concerning government; that so at last all times might not have reason to complain of the Drum Ecclesiastic. If any one, concerned really for truth, undertake the confutation of my Hypothesis, I promise him either to recant my mistake, upon fair conviction; or to answer his difficulties. But he must remember two things.

First, That cavilling here and there, at some expression, or little incident of my discourse, is not an answer to my book.

Secondly, That I shall not take railing for arguments, nor think either of these worth my notice, though I shall always look on myself as bound to give satisfaction to any one, who shall appear to be conscientiously scrupulous in the point, and shall shew any just grounds for his scruples.

I have nothing more, but to advertise the reader, that Observations stands for Observations on Hobbs, Milton, &c. and that a bare quotation of pages always means pages of his Patriarcha, Edition 1680.

BOOK I. OF GOVERNMENT

CHAPTER I.

§. 1.

Slavery is so vile and miserable an estate of man, and so directly opposite to the generous temper and courage of our nation; that it is hardly to be conceived, that an Englishman, much less a gentleman, should plead for it. And truly I should have taken Sir Robert Filmer's Patriarcha, as any other treatise, which would persuade all men, that they are slaves, and ought to be so, for such another exercise of wit, as was his who writ the encomium of Nero; rather than for a serious discourse meant in earnest, had not the gravity of the title and epistle, the picture in the front of the book, and the applause that followed it, required me to believe, that the author and publisher were both in earnest. I therefore took it into my hands with all the expectation, and read it through with all the attention due to a treatise that made such a noise at its coming abroad, and cannot but confess my self mightily surprised, that in a book, which was to provide chains for all mankind, I should find nothing but a rope of sand, useful perhaps to such, whose skill and business it is to raise a dust, and would blind the people, the better to mislead them; but in truth not of any force to draw those into bondage, who have their eyes open, and so much sense about them, as to consider, that chains are but an ill wearing, how much care soever hath been taken to file and polish them.

§. 2.

If any one think I take too much liberty in speaking so freely of a man, who is the great champion of absolute power, and the idol of those who worship it; I beseech him to make this small allowance for once, to one, who, even after the reading of Sir Robert's book, cannot but think himself, as the laws allow him, a freeman: and I know no fault it is to do so, unless any one better skilled in the fate of it, than I, should have it revealed to him, that this treatise, which has lain dormant so long, was, when it appeared in the world, to carry, by strength of its arguments, all liberty out of it; and that from thenceforth our author's short model was to be the pattern in the mount, and the perfect standard of politics for the future. His system lies in a little compass, it is no more but this,

That all government is absolute monarchy.
And the ground he builds on, is this,
That no man is born free.

§. 3.

In this last age a generation of men has sprung up amongst us, that would flatter princes with an opinion, that they have a divine right to absolute power, let the laws by which they are constituted, and are to govern, and the conditions under which they enter upon their authority, be what they will, and their engagements to observe them never so well ratified by solemn oaths and promises. To make way for this doctrine, they have denied mankind a right to natural freedom; whereby they have not only, as much as in them lies, exposed all subjects to the utmost misery of tyranny and oppression, but have also unsettled the titles, and shaken the thrones of princes: (for they too, by these mens system, except only one, are all born slaves, and by divine right are subjects to Adam's right heir;) as if they had designed to make war upon all government, and subvert the very foundations of human society, to serve their present turn.

§. 4.

However we must believe them upon their own bare words, when they tell us, we are all born slaves, and we must continue so, there is no remedy for it; life and thralldom we enter'd into together, and can never be quit of the one, till we part with the other. Scripture or reason I am sure do not any where say so, notwithstanding the noise of divine right, as if divine authority hath subjected us to the unlimited will of another. An admirable state of mankind, and that which they have not had wit enough to find out till this latter age. For, however Sir Robert Filmer seems to condemn the novelty of the contrary opinion, Patr. . yet I believe it will be hard for him to find any other age, or country of the world, but this, which has asserted monarchy to be *jure divino*. And he confesses, Patr. . That Heyward, Blackwood, Barclay, and others, that have bravely vindicated the right of kings in most points, never thought of this, but with one consent admitted the natural liberty and equality of mankind.

§. 5.

By whom this doctrine came at first to be broached, and brought in fashion amongst us, and what sad effects it gave rise to, I leave to historians to relate, or to the memory of those, who were contemporaries with Sibthorp and Manwering, to recollect. My business at present is only to consider what Sir Robert Filmer, who is allowed to have carried this argument farthest, and is supposed to have brought it to perfection, has said in it; for from him every one, who would be as fashionable as French was at court, has learned, and runs away with this short system of politics, viz. Men are not born free, and therefore could never have the liberty to choose either governors, or forms of government. Princes have their power absolute, and by divine right; for slaves could never have a right to compact or consent. Adam was an absolute monarch, and so are all princes ever since.

CHAPTER II. OF PATERNAL AND REGAL POWER.

§. 6.

SIR Robert Filmer's great position is, that men are not naturally free. This is the foundation on which his absolute monarchy stands, and from which it erects itself to an height, that its power is above every power, caput inter nubila, so high above all earthly and human things, that thought can scarce reach it; that promises and oaths, which tye the infinite Deity, cannot confine it. But if this foundation fails, all his fabric falls with it, and governments must be left again to the old way of being made by contrivance, and the consent of men (Ἀνθρώπων ἔκτισις) making use of their reason to unite together into society. To prove this grand position of his, he tells us, . Men are born in subjection to their parents, and therefore cannot be free. And this authority of parents, he calls royal authority, , 14. Fatherly authority, right of fatherhood, , 20. One would have thought he would, in the beginning of such a work as this, on which was to depend the authority of princes, and the obedience of subjects, have told us expressly, what that fatherly authority is, have defined it, though not limited it, because in some other treatises of his he tells us, it is unlimited, and unlimitable; he should at least have given us such an account of it, that we might have had an entire notion of this fatherhood, or fatherly authority, whenever it came in our way in his writings: this I expected to have found in the first chapter of his Patriarcha. But instead thereof, having, 1. en passant, made his obeysance to the arcana imperii, . 2. made his compliment to the rights and liberties of this, or any other nation, . which he is going presently to null and destroy; and, 3. made his leg to those learned men, who did not see so far into the matter as himself, . he comes to fall on Bellarmine, . and, by a victory over him, establishes his fatherly authority beyond any question. Bellarmine being routed by his own confession, . the day is clear got, and there is no more need of any forces: for having done that, I observe not that he states the question, or rallies up any arguments to make good his opinion, but rather tells us the story, as he thinks fit, of this strange kind of domineering phantom, called the fatherhood, which

whoever could catch, presently got empire, and unlimited absolute power. He assures us how this fatherhood began in Adam, continued its course, and kept the world in order all the time of the patriarchs till the flood, got out of the ark with Noah and his sons, made and supported all the kings of the earth till the captivity of the Israelites in Egypt, and then the poor fatherhood was under hatches, till God, by giving the Israelites kings, re-established the ancient and prime right of the lineal succession in paternal government. This is his business from . to 19. And then obviating an objection, and clearing a difficulty or two with one half reason, . to confirm the natural right of regal power, he ends the first chapter. I hope it is no injury to call an half quotation an half reason; for God says, Honour thy father and mother; but our author contents himself with half, leaves out thy mother quite, as little serviceable to his purpose. But of that more in another place.

§. 7.

I do not think our author so little skilled in the way of writing discourses of this nature, nor so careless of the point in hand, that he by over-sight commits the fault, that he himself, in his *Anarchy of a mixed Monarchy*, . objects to Mr. Hunton in these words: Where first I charge the author, that he hath not given us any definition, or description of monarchy in general; for by the rules of method he should have first defined. And by the like rule of method Sir Robert should have told us, what his fatherhood or fatherly authority is, before he had told us, in whom it was to be found, and talked so much of it. But perhaps Sir Robert found, that this fatherly authority, this power of fathers, and of kings, for he makes them both the same, . would make a very odd and frightful figure, and very disagreeing with what either children imagine of their parents, or subjects of their kings, if he should have given us the whole draught together in that gigantic form, he had painted it in his own fancy; and therefore, like a wary physician, when he would have his patient swallow some harsh or corrosive liquor, he mingles it with a large quantity of that which may dilute it; that the scattered parts may go down with less feeling, and cause less aversion.

§. 8.

Let us then endeavour to find what account he gives us of this fatherly authority, as it lies scattered in the several parts of his writings. And first, as it was vested in Adam, he says, Not only Adam, but the succeeding patriarchs, had, by right of fatherhood, royal authority over their children, . This lordship which Adam by command had over the whole world, and by right descending from him the patriarchs did enjoy, was as large and ample as the absolute dominion of any monarch, which hath been since the creation, . Dominion of life and death, making war, and concluding peace, . Adam and the patriarchs had absolute power of life and death, . Kings, in the right of parents, succeed to the exercise of supreme jurisdiction, . As kingly power is by the law of God, so it hath no inferior law to limit it; Adam was lord of all, . The father of a family governs by no other law, than by his own will, . The superiority of princes is above laws, . The unlimited jurisdiction of kings is so amply described by Samuel, . Kings are above the laws, . And to this purpose see a great deal more which our author delivers in Bodin's words: It is certain, that all laws, privileges, and grants of princes, have no force, but during their life; if they be not ratified by the express consent, or by sufferance of the prince following, especially privileges, Observations, . The reason why laws have been also made by kings, was this; when kings were either busied with wars, or distracted with public cares, so that every private man could not have access to their persons, to learn their wills and pleasure, then were laws of necessity invented, that so every particular subject might find his prince's pleasure decyphered unto him in the tables of his laws, . In a monarchy, the king must by necessity be above the laws, . A perfect kingdom is that, wherein the king rules all things according to his own will, . Neither common nor statute laws are, or can be, any diminution of that general power, which kings have over their people by right of fatherhood, . Adam was the father, king, and lord over his family; a son, a subject, and a servant or slave, were one and the same thing at first. The father had power to dispose or sell his children or servants; whence we find, that the first reckoning up of goods in scripture, the man-servant and the maid-servant, are numbred among the possessions and substance of the owner, as other goods were, Observations, Pref. God also hath given to the father a right or liberty, to alien his power over his children to any other; whence we find the sale and gift of children to have much been in use in the beginning of the world, when men had their servants for a possession and an inheritance, as well as other goods;

whereupon we find the power of castrating and making eunuchs much in use in old times, Observations, . Law is nothing else but the will of him that hath the power of the supreme father, Observations, . It was God's ordinance that the supremacy should be unlimited in Adam, and as large as all the acts of his will; and as in him so in all others that have supreme power, Observations, .

§. 9.

I have been fain to trouble my reader with these several quotations in our author's own words, that in them might be seen his own description of his fatherly authority, as it lies scattered up and down in his writings, which he supposes was first vested in Adam, and by right belongs to all princes ever since. This fatherly authority then, or right of fatherhood, in our author's sense, is a divine unalterable right of sovereignty, whereby a father or a prince hath an absolute, arbitrary, unlimited, and unlimitable power over the lives, liberties, and estates of his children and subjects; so that he may take or alienate their estates, sell, castrate, or use their persons as he pleases, they being all his slaves, and he lord or proprietor of every thing, and his unbounded will their law.

§. 10.

Our author having placed such a mighty power in Adam, and upon that supposition sounded all government, and all power of princes, it is reasonable to expect, that he should have proved this with arguments clear and evident, suitable to the weightiness of the cause; that since men had nothing else left them, they might in slavery have such undeniable proofs of its necessity, that their consciences might be convinced, and oblige them to submit peaceably to that absolute dominion, which their governors had a right to exercise over them. Without this, what good could our author do, or pretend to do, by erecting such an unlimited power, but flatter the natural vanity and ambition of men, too apt of itself to grow and encrease with the possession of any power? and by persuading those, who, by the consent of their fellowmen, are advanced to great, but limited, degrees of it, that by that part which is given them, they have a right to all, that was not so; and therefore may do what they please, because they have authority to do more

than others, and so tempt them to do what is neither for their own, nor the good of those under their care; whereby great mischiefs cannot but follow.

§. 11.

The sovereignty of Adam, being that on which, as a sure basis, our author builds his mighty absolute monarchy, I expected, that in his Patriarcha, this his main supposition would have been proved, and established with all that evidence of arguments, that such a fundamental tenet required; and that this, on which the great stress of the business depends, would have been made out with reasons sufficient to justify the confidence with which it was assumed. But in all that treatise, I could find very little tending that way; the thing is there so taken for granted, without proof, that I could scarce believe myself, when, upon attentive reading that treatise, I found there so mighty a structure raised upon the bare supposition of this foundation: for it is scarce credible, that in a discourse, where he pretends to confute the erroneous principle of man's natural freedom, he should do it by a bare supposition of Adam's authority, without offering any proof for that authority. Indeed he confidently says, that Adam had royal authority, , and 13. Absolute lordship and dominion of life and death, . An universal monarchy, . Absolute power of life and death, . He is very frequent in such assertions; but, what is strange, in all his whole Patriarcha I find not one pretence of a reason to establish this his great foundation of government; not any thing that looks like an argument, but these words: To confirm this natural right of regal power, we find in the Decalogue, that the law which enjoyns obedience to kings, is delivered in the terms, Honour thy father, as if all power were originally in the father. And why may I not add as well, that in the Decalogue, the law that enjoyns obedience to queens, is delivered in the terms of Honour thy mother, as if all power were originally in the mother? The argument, as Sir Robert puts it, will hold as well for one as the other: but of this, more in its due place.

§. 12.

All that I take notice of here, is, that this is all our author says in this first, or any of the following chapters, to prove the absolute power of Adam, which is his great principle: and yet, as if he had there settled it upon sure demonstration, he begins his second chapter with these words, By

conferring these proofs and reasons, drawn from the authority of the scripture. Where those proofs and reasons for Adam's sovereignty are, bating that of Honour thy father, above mentioned, I confess, I cannot find; unless what he says, . In these words we have an evident confession, viz. of Bellarmine, that creation made man prince of his posterity, must be taken for proofs and reasons drawn from scripture, or for any sort of proof at all: though from thence by a new way of inference, in the words immediately following, he concludes, the royal authority of Adam sufficiently settled in him.

§. 13.

If he has in that chapter, or any where in the whole treatise, given any other proofs of Adam's royal authority, other than by often repeating it, which, among some men, goes for argument, I desire any body for him to shew me the place and page, that I may be convinced of my mistake, and acknowledge my oversight. If no such arguments are to be found, I beseech those men, who have so much cried up this book, to consider, whether they do not give the world cause to suspect, that it is not the force of reason and argument, that makes them for absolute monarchy, but some other by interest, and therefore are resolved to applaud any author, that writes in favour of this doctrine, whether he support it with reason or no. But I hope they do not expect, that rational and indifferent men should be brought over to their opinion, because this their great doctor of it, in a discourse made on purpose, to set up the absolute monarchical power of Adam, in opposition to the natural freedom of mankind, has said so little to prove it, from whence it is rather naturally to be concluded, that there is little to be said.

§. 14.

But that I might omit no care to inform myself in our author's full sense, I consulted his Observations on Aristotle, Hobbes, &c. to see whether in disputing with others he made use of any arguments for this his darling tenet of Adam's sovereignty; since in his treatise of the Natural Power of Kings, he hath been so sparing of them. In his Observations on Mr. Hobbes's Leviathan, I think he has put, in short, all those arguments for it together, which in his writings I find him any where to make use of: his words are these: If God created only Adam, and of a piece of him made the

woman, and if by generation from them two, as parts of them, all mankind be propagated: if also God gave to Adam not only the dominion over the woman and the children that should issue from them, but also over all the earth to subdue it, and over all the creatures on it, so that as long as Adam lived, no man could claim or enjoy any thing but by donation, assignation or permission from him, I wonder, &c. Observations, 165. Here we have the sum of all his arguments, for Adam's sovereignty and against natural freedom, which I find up and down in his other treatises: and they are these following; God's creation of Adam, the dominion he gave him over Eve, and the dominion he had as father over his children: all which I shall particularly consider.

CHAPTER III. OF ADAM'S TITLE TO SOVEREIGNTY BY CREATION.

§. 15.

SIR Robert, in his preface to his Observations on Aristotle's politics, tells us, A natural freedom of mankind cannot be supposed without the denial of the creation of Adam: but how Adam's being created, which was nothing but his receiving a being immediately from omnipotence and the hand of God, gave Adam a sovereignty over any thing, I cannot see, nor consequently understand, how a supposition of natural freedom is a denial of Adam's creation, and would be glad any body else (since our author did not vouchsafe us the favour) would make it out for him: for I find no difficulty to suppose the freedom of mankind, though I have always believed the creation of Adam. He was created, or began to exist, by God's immediate power, without the intervention of parents or the pre-existence of any of the same species to beget him, when it pleased God he should; and so did the lion, the king of beasts, before him, by the same creating power of God: and if bare existence by that power, and in that way, will give dominion, without any more ado, our author, by this argument, will make the lion have as good a title to it, as he, and certainly the antienter. No! for Adam had his title by the appointment of God, says our author in another place. Then bare creation gave him not dominion, and one might have supposed mankind free without the denying the creation of Adam, since it was God's appointment made him monarch.

§. 16.

But let us see, how he puts his creation and this appointment together. By the appointment of God, says Sir Robert, as soon as Adam was created, he was monarch of the world, though he had no subjects; for though there could not be actual government till there were subjects, yet by the right of nature it was due to Adam to be governor of his posterity: though not in act, yet at least in habit, Adam was a king from his creation. I wish he had told us here, what he meant by God's appointment: for whatsoever providence

orders, or the law of nature directs, or positive revelation declares, may be said to be by God's appointment: but I suppose it cannot be meant here in the first sense, i. e. by providence; because that would be to say no more, but that as soon as Adam was created he was de facto monarch, because by right of nature it was due to Adam, to be governor of his posterity. But he could not de facto be by providence constituted the governor of the world, at a time when there was actually no government, no subjects to be governed, which our author here confesses. Monarch of the world is also differently used by our author; for sometimes he means by it a proprietor of all the world exclusive of the rest of mankind, and thus he does in the same page of his preface before cited: Adam, says he, being commanded to multiply and people the earth, and to subdue it, and having dominion given him over all creatures, was thereby the monarch of the whole world; none of his posterity had any right to possess any thing but by his grant or permission, or by succession from him. 2. Let us understand then by monarch proprietor of the world, and by appointment God's actual donation, and revealed positive grant made to Adam, i. Gen. 28. as we see Sir Robert himself does in this parallel place, and then his argument will stand thus, by the positive grant of God: as soon as Adam was created, he was proprietor of the world, because by the right of nature it was due to Adam to be governor of his posterity. In which way of arguing there are two manifest falsehoods. First, It is false, that God made that grant to Adam, as soon as he was created, since, tho' it stands in the text immediately after his creation, yet it is plain it could not be spoken to Adam, till after Eve was made and brought to him: and how then could he be monarch by appointment as soon as created, especially since he calls, if I mistake not, that which God says to Eve, iii. Gen. 16, the original grant of government, which not being till after the fall, when Adam was somewhat, at least in time, and very much distant in condition, from his creation, I cannot see, how our author can say in this sense, that by God's appointment, as soon as Adam was created, he was monarch of the world. Secondly, were it true that God's actual donation appointed Adam monarch of the world as soon as he was created, yet the reason here given for it would not prove it; but it would always be a false inference, that God, by a positive donation, appointed Adam monarch of the world, because by right of nature it was due to Adam to be governor of his posterity: for having given him the right of

government by nature, there was no need of a positive donation; at least it will never be a proof of such a donation.

§. 17.

On the other side the matter will not be much mended, if we understand by God's appointment the law of nature, (though it be a pretty harsh expression for it in this place) and by monarch of the world, sovereign ruler of mankind: for then the sentence under consideration must run thus: By the law of nature, as soon as Adam was created he was governor of mankind, for by right of nature it was due to Adam to be governor of his posterity; which amounts to this, he was governor by right of nature, because he was governor by right of nature: but supposing we should grant, that a man is by nature governor of his children, Adam could not hereby be monarch as soon as created: for this right of nature being founded in his being their father, how Adam could have a natural right to be governor, before he was a father, when by being a father only he had that right, is, methinks, hard to conceive, unless he will have him to be a father before he was a father, and to have a title before he had it.

§. 18.

To this foreseen objection, our author answers very logically, he was governor in habit, and not in act: a very pretty way of being a governor without government, a father without children, and a king without subjects. And thus Sir Robert was an author before he writ his book; not in act it is true, but in habit; for when he had once published it, it was due to him by the right of nature, to be an author, as much as it was to Adam to be governor of his children, when he had begot them: and if to be such a monarch of the world, an absolute monarch in habit, but not in act, will serve the turn, I should not much envy it to any of Sir Robert's friends, that he thought fit graciously to bestow it upon, though even this of act and habit, if it signified any thing but our author's skill in distinctions, be not to his purpose in this place. For the question is not here about Adam's actual exercise of government, but actually having a title to be governor. Government, says our author, was due to Adam by the right of nature: what is this right of nature? A right fathers have over their children by begetting them; *generatione jus acquiritur parentibus in liberos*, says our author out of

Grotius, *Observations*, 223. The right then follows the begetting as arising from it; so that, according to this way of reasoning or distinguishing of our author, Adam, as soon as he was created, had a title only in habit, and not in act, which in plain English is, he had actually no title at all.

§. 19.

To speak less learnedly, and more intelligibly, one may say of Adam, he was in a possibility of being governor, since it was possible he might beget children, and thereby acquire that right of nature, be it what it will, to govern them, that accrues from thence: but what connection has this with Adam's creation, to make him say, that as soon as he was created, he was monarch of the world? for it may be as well said of Noah, that as soon as he was born, he was monarch of the world, since he was in possibility (which in our author's sense is enough to make a monarch, a monarch in habit,) to outlive all mankind, but his own posterity. What such necessary connection there is betwixt Adam's creation and his right to government, so that a natural freedom of mankind cannot be supposed without the denial of the creation of Adam, I confess for my part I do not see; nor how those words, by the appointment, &c. *Observations*, 254. how ever explained, can be put together, to make any tolerable sense, at least to establish this position, with which they end, viz. Adam was a king from his creation; a king, says our author, not in act, but in habit, i. e. actually no king at all.

§. 20.

I fear I have tired my reader's patience, by dwelling longer on this passage, than the weightiness of any argument in it seems to require: but I have unavoidably been engaged in it by our author's way of writing, who, hudling several suppositions together, and that in doubtful and general terms, makes such a medly and confusion, that it is impossible to shew his mistakes, without examining the several senses wherein his words may be taken, and without seeing how, in any of these various meanings, they will consist together, and have any truth in them: for in this present passage before us, how can any one argue against this position of his, that Adam was a king from his creation, unless one examine, whether the words, from his creation, be to be taken, as they may, for the time of the commencement of his government, as the foregoing words import, as soon as he was created

he was monarch; or, for the cause of it, as he says, . creation made man prince of his posterity? how farther can one judge of the truth of his being thus king, till one has examined whether king be to be taken, as the words in the beginning of this passage would persuade, on supposition of his private dominion, which was, by God's positive grant, monarch of the world by appointment; or king on supposition of his fatherly power over his off-spring, which was by nature, due by the right of nature; whether, I say, king be to be taken in both, or one only of these two senses, or in neither of them, but only this, that creation made him prince, in a way different from both the other? For though this assertion, that Adam was king from his creation, be true in no sense, yet it stands here as an evident conclusion drawn from the preceding words, though in truth it be but a bare assertion joined to other assertions of the same kind, which confidently put together in words of undetermined and dubious meaning, look like a sort of arguing, when there is indeed neither proof nor connection: a way very familiar with our author: of which having given the reader a taste here, I shall, as much as the argument will permit me, avoid touching on hereafter; and should not have done it here, were it not to let the world see, how incoherences in matter, and suppositions without proofs put handsomely together in good words and a plausible stile, are apt to pass for strong reason and good sense, till they come to be looked into with attention.

CHAPTER IV. OF ADAM'S TITLE TO SOVEREIGNTY BY DONATION, GEN. I. 28.

§. 21.

HAVING at last got through the foregoing passage, where we have been so long detained, not by the force of arguments and opposition, but the intricacy of the words, and the doubtfulness of the meaning; let us go on to his next argument, for Adam's sovereignty. Our author tells us in the words of Mr. Selden, that Adam by donation from God, Gen. i. 28. was made the general lord of all things, not without such a private dominion to himself, as without his grant did exclude his children. This determination of Mr. Selden, says our author, is consonant to the history of the Bible, and natural reason, Observations, 210. And in his Pref. to his Observations on Aristotle, he says thus, The first government in the world was monarchical in the father of all flesh, Adam being commanded to multiply and people the earth, and to subdue it, and having dominion given him over all creatures, was thereby the monarch of the whole world: none of his posterity had any right to possess any thing, but by his grant or permission, or by succession from him: The earth, saith the Psalmist, hath he given to the children of men, which shew the title comes from fatherhood.

§. 22.

Before I examine this argument, and the text on which it is founded, it is necessary to desire the reader to observe, that our author, according to his usual method, begins in one sense, and concludes in another; he begins here with Adam's propriety, or private dominion, by donation; and his conclusion is, which shew the title comes from fatherhood.

§. 23.

But let us see the argument. The words of the text are these; and God blessed them, and God said unto them, be fruitful and multiply, and replenish the earth and subdue it, and have dominion over the fish of the sea, and over the fowl of the air, and over every living thing that moveth

upon the earth, i. Gen. 28. from whence our author concludes, that Adam, having here dominion given him over all creatures, was thereby the monarch of the whole world: whereby must be meant, that either this grant of God gave Adam property, or as our author calls it, private dominion over the earth, and all inferior or irrational creatures, and so consequently that he was thereby monarch; or 2dly, that it gave him rule and dominion over all earthly creatures whatsoever, and thereby over his children; and so he was monarch: for, as Mr. Selden has properly worded it, Adam was made general lord of all things, one may very clearly understand him, that he means nothing to be granted to Adam here but property, and therefore he says not one word of Adam's monarchy. But our author says, Adam was hereby monarch of the world, which, properly speaking, signifies sovereign ruler of all the men in the world; and so Adam, by this grant, must be constituted such a ruler. If our author means otherwise, he might with much clearness have said, that Adam was hereby proprietor of the whole world. But he begs your pardon in that point: clear distinct speaking not serving every where to his purpose, you must not expect it in him, as in Mr. Selden, or other such writers.

§. 24.

In opposition therefore to our author's doctrine, that Adam was monarch of the whole world, founded on this place, I shall shew,

That by this grant, i. Gen. 28. God gave no immediate power to Adam over men, over his children, over those of his own species; and so he was not made ruler, or monarch, by this charter.

That by this grant God gave him not private dominion over the inferior creatures, but right in common with all mankind; so neither was he monarch, upon the account of the property here given him.

§. 25.

That this donation, i. Gen. 28. gave Adam no power over men, will appear if we consider the words of it: for since all positive grants convey no more than the express words they are made in will carry, let us see which of them here will comprehend mankind, or Adam's posterity; and those, I imagine, if any, must be these, every living thing that moveth: the words in Hebrew are, השמרה היה i. e. Bestiam Reptantem, of which words the scripture

itself is the best interpreter: God having created the fishes and fowls the 5th day, the beginning of the 6th, he creates the irrational inhabitants of the dry land, which, v. 24. are described in these words, let the earth bring forth the living creature after his kind; cattle and creeping things, and beasts of the earth, after his kind, and, v. 2. and God made the beasts of the earth after his kind, and cattle after their kind, and every thing that creepeth on the earth after his kind: here, in the creation of the brute inhabitants of the earth, he first speaks of them all under one general name, of living creatures, and then afterwards divides them into three ranks, 1. Cattle, or such creatures as were or might be tame, and so be the private possession of particular men; 2. *היח* which, ver. 24, and 25. in our Bible, is translated beasts, and by the Septuagint *θηρία*, wild beasts, and is the same word, that here in our text, ver. 28. where we have this great charter to Adam, is translated living thing, and is also the same word used, Gen. ix. 2. where this grant is renewed to Noah, and there likewise translated beast. 3. The third rank were the creeping animals, which ver. 24, and 25. are comprised under the word, *השׁמרה*, the same that is used here, ver. 28. and is translated moving, but in the former verses creeping, and by the Septuagint in all these places, *ἐρπετά*, or reptils; from whence it appears, that the words which we translate here in God's donation, ver. 28. living creatures moving, are the same, which in the history of the creation, ver. 24, 25. signify two ranks of terrestrial creatures, viz. wild beasts and reptils, and are so understood by the Septuagint.

§. 26.

When God had made the irrational animals of the world, divided into three kinds, from the places of their habitation, viz. fishes of the sea, fowls of the air, and living creatures of the earth, and these again into cattle, wild beasts, and reptils, he considers of making man, and the dominion he should have over the terrestrial world, ver. 26. and then he reckons up the inhabitants of these three kingdoms, but in the terrestrial leaves out the second rank *היח* or wild beasts: but here, ver. 28. where he actually exercises this design, and gives him this dominion, the text mentions the fishes of the sea, and fowls of the air, and the terrestrial creatures in the words that signify the wild beasts and reptils, though translated living thing that moveth, leaving out cattle. In both which places, though the word that signifies wild beasts be

omitted in one, and that which signifies cattle in the other, yet, since God certainly executed in one place, what he declares he designed in the other, we cannot but understand the same in both places, and have here only an account, how the terrestrial irrational animals, which were already created and reckoned up at their creation, in three distinct ranks of cattle, wild beasts, and reptils, were here, ver. 28. actually put under the dominion of man, as they were designed, ver. 26. nor do these words contain in them the least appearance of any thing that can be wrested to signify God's giving to one man dominion over another, to Adam over his posterity.

§. 27.

And this further appears from Gen. ix. 2. where God renewing this charter to Noah and his sons, he gives them dominion over the fowls of the air, and the fishes of the sea, and the terrestrial creatures, expressed by *היח* and *שמרר* wild beasts and reptils, the same words that in the text before us, i. Gen. 28. are translated every moving thing, that moveth on the earth, which by no means can comprehend man, the grant being made to Noah and his sons, all the men then living, and not to one part of men over another: which is yet more evident from the very next words, ver. 3. where God gives every *שמר* every moving thing, the very words used, ch. i. 28. to them for food. By all which it is plain that God's donation to Adam, ch. i. 28. and his designation, ver. 26. and his grant again to Noah and his sons, refer to and contain in them neither more nor less than the works of the creation the 5th day, and the beginning of the 6th, as they are set down from the 20th to 26th ver. inclusively of the 1st ch. and so comprehend all the species of irrational animals of the terraqueous globe, tho' all the words, whereby they are expressed in the history of their creation, are no where used in any of the following grants, but some of them omitted in one, and some in another. From whence I think it is past all doubt, that man cannot be comprehended in this grant, nor any dominion over those of his own species be conveyed to Adam. All the terrestrial irrational creatures are enumerated at their creation, ver. 25. under the names beasts of the earth, cattle and creeping things; but man, being not then created, was not contained under any of those names; and therefore, whether we understand the Hebrew words right or no, they cannot be supposed to comprehend man, in the very same history, and the very next verses following, especially

since that Hebrew word שִׁמְרָה which, if any in this donation to Adam, ch. i. 28. must comprehend man, is so plainly used in contradistinction to him, as Gen. vi. 20. vii. 14, 21, 23. Gen. viii. 17, 19. And if God made all mankind slaves to Adam and his heirs by giving Adam dominion over every living thing that moveth on the earth, ch. i. 28. as our author would have it, methinks Sir Robert should have carried his monarchical power one step higher, and satisfied the world, that princes might eat their subjects too, since God gave as full power to Noah and his heirs, ch. ix. 2. to eat every living thing that moveth, as he did to Adam to have dominion over them, the Hebrew words in both places being the same.

§. 28.

David, who might be supposed to understand the donation of God in this text, and the right of kings too, as well as our author in his comment on this place, as the learned and judicious Ainsworth calls it, in the 8th Psalm, finds here no such charter of monarchical power, his words are, Thou hast made him, i. e. man, the Son of man, a little lower than the angels; thou madest him to have dominion over the works of thy hands; thou hast put all things under his feet, all sheep and oxen, and the beasts of the field, and the fowls of the air, and fish of the sea, and whatsoever passeth thro' the paths of the sea. In which words, if any one can find out, that there is meant any monarchical power of one man over another, but only the dominion of the whole species of mankind, over the inferior species of creatures, he may, for aught I know, deserve to be one of Sir Robert's monarchs in habit, for the rareness of the discovery. And by this time, I hope it is evident, that he that gave dominion over every living thing that moveth on the earth, gave Adam no monarchical power over those of his own species, which will yet appear more fully in the next thing I am to shew.

§. 29.

Whatever God gave by the words of this grant, i. Gen. 28. it was not to Adam in particular, exclusive of all other men: whatever dominion he had thereby, it was not a private dominion, but a dominion in common with the rest of mankind. That this donation was not made in particular to Adam, appears evidently from the words of the text, it being made to more than one; for it was spoken in the plural number, God blessed them, and said

unto them, Have dominion. God says unto Adam and Eve, Have dominion; thereby, says our author, Adam was monarch of the world: but the grant being to them, i. e. spoke to Eve also, as many interpreters think with reason, that these words were not spoken till Adam had his wife, must not she thereby be lady, as well as he lord of the world? If it be said, that Eve was subjected to Adam, it seems she was not so subjected to him, as to hinder her dominion over the creatures, or property in them: for shall we say that God ever made a joint grant to two, and one only was to have the benefit of it?

§. 30.

But perhaps it will be said, Eve was not made till afterward: grant it so, what advantage will our author get by it? The text will be only the more directly against him, and shew that God, in this donation, gave the world to mankind in common, and not to Adam in particular. The word them in the text must include the species of man, for it is certain them can by no means signify Adam alone. In the 26th verse, where God declares his intention to give this dominion, it is plain he meant, that he would make a species of creatures, that should have dominion over the other species of this terrestrial globe: the words are, And God said, Let us make man in our image, after our likeness, and let them have dominion over the fish, &c. They then were to have dominion. Who? even those who were to have the image of God, the individuals of that species of man, that he was going to make; for that them should signify Adam singly, exclusive of the rest that should be in the world with him, is against both scripture and all reason: and it cannot possibly be made sense, if man in the former part of the verse do not signify the same with them in the latter; only man there, as is usual, is taken for the species, and them the individuals of that species: and we have a reason in the very text. God makes him in his own image, after his own likeness; makes him an intellectual creature, and so capable of dominion: for wherein soever else the image of God consisted, the intellectual nature was certainly a part of it, and belonged to the whole species, and enabled them to have dominion over the inferior creatures; and therefore David says in the 8th Psalm above cited, Thou hast made him little lower than the angels, thou hast made him to have dominion. It is not of Adam king David speaks here,

for verse 4. it is plain, it is of man, and the son of man, of the species of mankind.

§. 31.

And that this grant spoken to Adam was made to him, and the whole species of man, is clear from our author's own proof out of the Psalmist. The earth, faith the Psalmist, hath he given to the children of men; which shews the title comes from fatherhood. These are Sir Robert's words in the preface before cited, and a strange inference it is he makes; God hath given the earth to the children of men, ergo the title comes from fatherhood. It is pity the propriety of the Hebrew tongue had not used fathers of men, instead of children of men, to express mankind: then indeed our author might have had the countenance of the sound of the words, to have placed the title in the fatherhood. But to conclude, that the fatherhood had the right to the earth, because God gave it to the children of men, is a way of arguing peculiar to our author: and a man must have a great mind to go contrary to the sound as well as sense of the words, before he could light on it. But the sense is yet harder, and more remote from our author's purpose: for as it stands in his preface, it is to prove Adam's being monarch, and his reasoning is thus, God gave the earth to the children of men, ergo Adam was monarch of the world. I defy any man to make a more pleasant conclusion than this, which cannot be excused from the most obvious absurdity, till it can be shewn, that by children of men, he who had no father, Adam alone is signified; but whatever our author does, the scripture speaks not nonsense.

§. 32.

To maintain this property and private dominion of Adam, our author labours in the following page to destroy the community granted to Noah and his sons, in that parallel place, ix. Gen. 1, 2, 3. and he endeavours to do it two ways.

Sir Robert would persuade us against the express words of the scripture, that what was here granted to Noah, was not granted to his sons in common with him. His words are, As for the general community between Noah and his sons, which Mr. Selden will have to be granted to them, ix. Gen. 2. the text doth not warrant it. What warrant our author would have, when the

plain express words of scripture, not capable of another meaning, will not satisfy him, who pretends to build wholly on scripture, is not easy to imagine. The text says, God blessed Noah and his sons, and said unto them, i. e. as our author would have it, unto him: for, faith he, although the sons are there mentioned with Noah in the blessing, yet it may best be understood, with a subordination or benediction in succession, Observations, 211. That indeed is best, for our author to be understood, which best serves to his purpose; but that truly may best be understood by any body else, which best agrees with the plain construction of the words, and arises from the obvious meaning of the place; and then with subordination and in succession, will not be best understood, in a grant of God, where he himself put them not, nor mentions any such limitation. But yet, our author has reasons, why it may best be understood so. The blessing, says he in the following words, might truly be fulfilled, if the sons, either under or after their father, enjoyed a private dominion, Observations, 211. which is to say, that a grant, whose express words give a joint title in present (for the text says, into your hands they are delivered) may best be understood with a subordination or in succession; because it is possible, that in subordination, or in succession, it may be enjoyed. Which is all one as to say, that a grant of any thing in present possession may best be understood of reversion; because it is possible one may live to enjoy it in reversion. If the grant be indeed to a father and to his sons after him, who is so kind as to let his children enjoy it presently in common with him, one may truly say, as to the event one will be as good as the other; but it can never be true, that what the express words grant in possession, and in common, may best be understood, to be in reversion. The sum of all his reasoning amounts to this: God did not give to the sons of Noah the world in common with their father, because it was possible they might enjoy it under, or after him. A very good sort of argument against an express text of scripture: but God must not be believed, though he speaks it himself, when he says he does any thing, which will not consist with Sir Robert's hypothesis.

§. 33.

For it is plain, however he would exclude them, that part of this benediction, as he would have it in succession, must needs be meant to the sons, and not to Noah himself at all: Be fruitful, and multiply, and replenish

the earth, says God, in this blessing. This part of the benediction, as appears by the sequel, concerned not Noah himself at all; for we read not of any children he had after the flood; and in the following chapter, where his posterity is reckoned up, there is no mention of any; and so this benediction in succession was not to take place till 350 years after: and to save our author's imaginary monarchy, the peopling of the world must be deferred 350 years; for this part of the benediction cannot be understood with subordination, unless our author will say, that they must ask leave of their father Noah to lie with their wives. But in this one point our author is constant to himself in all his discourses, he takes great care there should be monarchs in the world, but very little that there should be people; and indeed his way of government is not the way to people the world: for how much absolute monarchy helps to fulfil this great and primary blessing of God Almighty, Be fruitful, and multiply, and replenish the earth, which contains in it the improvement too of arts and sciences, and the conveniences of life, may be seen in those large and rich countries which are happy under the Turkish government, where are not now to be found one third, nay in many, if not most parts of them one thirtieth, perhaps I might say not one hundredth of the people, that were formerly, as will easily appear to any one, who will compare the accounts we have of it at this time, with antient history. But this by the by.

§. 34.

The other parts of this benediction, or grant, are so expressed, that they must needs be understood to belong equally to them all; as much to Noah's sons as to Noah himself, and not to his sons with a subordination, or in succession. The fear of you, and the dread of you, says God, shall be upon every beast, &c. Will any body but our author say, that the creatures feared and stood in awe of Noah only, and not of his sons without his leave, or till after his death? And the following words, into your hands they are delivered, are they to be understood as our author says, if your father please, or they shall be delivered into your hands hereafter? If this be to argue from scripture, I know not what may not be proved by it; and I can scarce see how much this differs from that fiction and fansie, or how much a surer foundation it will prove, than the opinions of philosophers and poets, which our author so much condemns in his preface.

§. 35.

But our author goes on to prove, that it may best be understood with a subordination, or a benediction in succession; for, says he, it is not probable that the private dominion which God gave to Adam, and by his donation, assignation, or cession to his children, was abrogated, and a community of all things instituted between Noah and his sons ——— Noah was left the sole heir of the world; why should it be thought that God would disinberit him of his birth-right, and make him of all men in the world the only tenant in common with his children? Observations, 211.

§. 36.

The prejudices of our own ill-grounded opinions, however by us called probable, cannot authorise us to understand scripture contrary to the direct and plain meaning of the words. I grant, it is not probable, that Adam's private dominion was here abrogated: because it is more than improbable, (for it will never be proved) that ever Adam had any such private dominion: and since parallel places of scripture are most probable to make us know how they may be best understood, there needs but the comparing this blessing here to Noah and his sons after the flood, with that to Adam after the creation, i. Gen. 28. to assure any one that God gave Adam no such private dominion. It is probable, I confess, that Noah should have the same title, the same property and dominion after the flood, that Adam had before it: but since private dominion cannot consist with the blessing and grant God gave to him and his sons in common, it is a sufficient reason to conclude, that Adam had none, especially since in the donation made to him, there are no words that express it, or do in the least favour it; and then let my reader judge whether it may best be understood, when in the one place there is not one word for it, not to say what has been above proved, that the text itself proves the contrary; and in the other, the words and sense are directly against it.

§. 37.

But our author says, Noah was the sole heir of the world; why should it be thought that God would disinherit him of his birth-right? Heir, indeed, in England, signifies the eldest son, who is by the law of England to have all

his father's land; but where God ever appointed any such heir of the world, our author would have done well to have shewed us; and how God disinherited him of his birth-right, or what harm was done him if God gave his sons a right to make use of a part of the earth for the support of themselves and families, when the whole was not only more than Noah himself, but infinitely more than they all could make use of, and the possessions of one could not at all prejudice, or, as to any use, streighten that of the other.

§. 38.

Our author probably foreseeing he might not be very successful in persuading people out of their senses, and, say what he could, men would be apt to believe the plain words of scripture, and think, as they saw, that the grant was spoken to Noah and his sons jointly; he endeavours to insinuate, as if this grant to Noah conveyed no property, no dominion; because, subduing the earth and dominion over the creatures are therein omitted, nor the earth once named. And therefore, says he, there is a considerable difference between these two texts; the first blessing gave Adam a dominion over the earth and all creatures; the latter allows Noah liberty to use the living creatures for food: here is no alteration or diminishing of his title to a property of all things, but an enlargement only of his commons, *Observations*, 211. So that in our author's sense, all that was said here to Noah and his sons, gave them no dominion, no property, but only enlarged the commons; their commons, I should say, since God says, to you are they given, though our author says his; for as for Noah's sons, they, it seems, by Sir Robert's appointment, during their father's lifetime, were to keep fasting days.

§. 39.

Any one but our author would be mightily suspected to be blinded with prejudice, that in all this blessing to Noah and his sons, could see nothing but only an enlargement of commons: for as to dominion, which our author thinks omitted, the fear of you, and the dread of you, says God, shall be upon every beast, which I suppose expresses the dominion, or superiority was designed man over the living creatures, as fully as may be; for in that fear and dread seems chiefly to consist what was given to Adam over the

inferior animals; who, as absolute a monarch as he was, could not make bold with a lark or rabbit to satisfy his hunger, and had the herbs but in common with the beasts, as is plain from i Gen. 2, 9, and 30. In the next place, it is manifest that in this blessing to Noah and his sons, property is not only given in clear words, but in a larger extent than it was to Adam. Into your hands they are given, says God to Noah and his sons; which words, if they give not property, nay, property in possession, it will be hard to find words that can; since there is not a way to express a man's being possessed of any thing more natural, nor more certain, than to say, it is delivered into his hands. And ver. 3. to shew, that they had then given them the utmost property man is capable of, which is to have a right to destroy any thing by using it; Every moving thing that liveth, saith God, shall be meat for you; which was not allowed to Adam in his charter. This our author calls, a liberty of using them for food, and only an enlargement of commons, but no alteration of property, Observations, 211. What other property man can have in the creatures, but the liberty of using them, is hard to be understood: so that if the first blessing, as our author says, gave Adam dominion over the creatures, and the blessing to Noah and his sons, gave them such a liberty to use them, as Adam had not; it must needs give them something that Adam with all his sovereignty wanted, something that one would be apt to take for a greater property; for certainly he has no absolute dominion over even the brutal part of the creatures; and the property he has in them is very narrow and scanty, who cannot make that use of them, which is permitted to another. Should any one who is absolute lord of a country, have bidden our author subdue the earth, and given him dominion over the creatures in it, but not have permitted him to have taken a kid or a lamb out of the flock, to satisfy his hunger, I guess, he would scarce have thought himself lord or proprietor of that land, or the cattle on it; but would have found the difference between having dominion, which a shepherd may have, and having full property as an owner. So that, had it been his own case, Sir Robert, I believe, would have thought here was an alteration, nay, an enlarging of property; and that Noah and his children had by this grant, not only property given them, but such a property given them in the creatures, as Adam had not: For however, in respect of one another, men may be allowed to have propriety in their distinct portions of the creatures; yet in respect of God the maker of heaven and earth, who is sole lord and proprietor of the whole world, man's propriety in the creatures is nothing

but that liberty to use them, which God has permitted; and so man's property may be altered and enlarged, as we see it was here, after the flood, when other uses of them are allowed, which before were not. From all which I suppose it is clear, that neither Adam, nor Noah, had any private dominion, any property in the creatures, exclusive of his posterity, as they should successively grow up into need of them, and come to be able to make use of them.

§. 40.

Thus we have examined our author's argument for Adam's monarchy, founded on the blessing pronounced, i. Gen. 28. Wherein I think it is impossible for any sober reader, to find any other but the setting of mankind above the other kinds of creatures, in this habitable earth of ours. It is nothing but the giving to man, the whole species of man, as the chief inhabitant, who is the image of his Maker, the dominion over the other creatures. This lies so obvious in the plain words, that any one, but our author, would have thought it necessary to have shewn, how these words, that seemed to say the quite contrary, gave Adam monarchical absolute power over other men, or the sole property in all the creatures; and methinks in a business of this moment, and that whereon he builds all that follows, he should have done something more than barely cite words, which apparently make against him; for I confess, I cannot see any thing in them, tending to Adam's monarchy, or private dominion, but quite the contrary. And I the less deplore the dulness of my apprehension herein, since I find the apostle seems to have as little notion of any such private dominion of Adam as I, when he says, God gives us all things richly to enjoy, which he could not do, if it were all given away already, to Monarch Adam, and the monarchs his heirs and successors. To conclude, this text is so far from proving Adam sole proprietor, that, on the contrary, it is a confirmation of the original community of all things amongst the sons of men, which appearing from this donation of God, as well as other places of scripture, the sovereignty of Adam, built upon his private dominion, must fall, not having any foundation to support it.

§. 41.

But yet, if after all, any one will needs have it so, that by this donation of God, Adam was made sole proprietor of the whole earth, what will this be to his sovereignty? and how will it appear, that propriety in land gives a man power over the life of another? or how will the possession even of the whole earth, give any one a sovereign arbitrary authority over the persons of men? The most specious thing to be said, is, that he that is proprietor of the whole world, may deny all the rest of mankind food, and so at his pleasure starve them, if they will not acknowledge his sovereignty, and obey his will. If this were true, it would be a good argument to prove, that there never was any such property, that God never gave any such private dominion; since it is more reasonable to think, that God, who bid mankind increase and multiply, should rather himself give them all a right to make use of the food and raiment, and other conveniences of life, the materials whereof he had so plentifully provided for them; than to make them depend upon the will of a man for their subsistence, who should have power to destroy them all when he pleased, and who, being no better than other men, was in succession likelier, by want and the dependence of a scanty fortune, to tie them to hard service, than by liberal allowance of the conveniences of life to promote the great design of God, increase and multiply: he that doubts this, let him look into the absolute monarchies of the world, and see what becomes of the conveniences of life, and the multitudes of people.

§. 42.

But we know God hath not left one man so to the mercy of another, that he may starve him if he please: God the Lord and Father of all has given no one of his children such a property in his peculiar portion of the things of this world, but that he has given his needy brother a right to the surplusage of his goods; so that it cannot justly be denied him, when his pressing wants call for it: and therefore no man could ever have a just power over the life of another by right of property in land or possessions; since it would always be a sin, in any man of estate, to let his brother perish for want of affording him relief out of his plenty. As justice gives every man a title to the product of his honest industry, and the fair acquisitions of his ancestors descended to him; so charity gives every man a title to so much out of another's plenty, as will keep him from extreme want, where he has no means to subsist otherwise: and a man can no more justly make use of another's necessity, to

force him to become his vassal, by with-holding that relief, God requires him to afford to the wants of his brother, than he that has more strength can seize upon a weaker, master him to his obedience, and with a dagger at his throat offer him death or slavery.

§. 43.

Should any one make so perverse an use of God's blessings poured on him with a liberal hand; should any one be cruel and uncharitable to that extremity, yet all this would not prove that propriety in land, even in this case, gave any authority over the persons of men, but only that compact might; since the authority of the rich proprietor, and the subjection of the needy beggar, began not from the possession of the Lord, but the consent of the poor man, who preferred being his subject to starving. And the man he thus submits to, can pretend to no more power over him, than he has consented to, upon compact. Upon this ground a man's having his stores filled in a time of scarcity, having money in his pocket, being in a vessel at sea, being able to swim, &c. may as well be the foundation of rule and dominion, as being possessor of all the land in the world; any of these being sufficient to enable me to save a man's life, who would perish if such assistance were denied him; and any thing, by this rule, that may be an occasion of working upon another's necessity, to save his life, or any thing dear to him, at the rate of his freedom, may be made a foundation of sovereignty, as well as property. From all which it is clear, that though God should have given Adam private dominion, yet that private dominion could give him no sovereignty; but we have already sufficiently proved, that God gave him no private dominion.

CHAPTER V. OF ADAM'S TITLE TO SOVEREIGNTY BY THE SUBJECTION OF EVE.

§. 44.

THE next place of scripture we find our author builds his monarchy of Adam on, is iii. Gen. 26. And thy defire shall be to thy husband, and he shall rule over thee. Here we have (says he) the original grant of government, from whence he concludes, in the following part of the page, Observations, 244. That the supreme power is settled in the fatherhood, and limited to one kind of government, that is, to monarchy. For let his premises be what they will, this is always the conclusion; let rule, in any text, be but once named, and presently absolute monarchy is by divine right established. If any one will but carefully read our author's own reasoning from these words, Observations, 244. and consider, among other things, the line and posterity of Adam, as he there brings them in, he will find some difficulty to make sense of what he says; but we will allow this at present to his peculiar way of writing, and consider the force of the text in hand. The words are the curse of God upon the woman, for having been the first and forwardest in the disobedience; and if we will consider the occasion of what God says here to our first parents, that he was denouncing judgment, and declaring his wrath against them both, for their disobedience, we cannot suppose that this was the time, wherein God was granting Adam prerogatives and privileges, investing him with dignity and authority, elevating him to dominion and monarchy: for though, as a helper in the temptation, Eve was laid below him, and so he had accidentally a superiority over her, for her greater punishment; yet he too had his share in the fall, as well as the sin, and was laid lower, as may be seen in the following verses; and it would be hard to imagine, that God, in the same breath, should make him universal monarch over all mankind, and a day-labourer for his life; turn him out of paradise to till the ground, ver. 23. and at the same time advance him to a throne, and all the privileges and ease of absolute power.

§. 45.

This was not a time, when Adam could expect any favours, any grant of privileges, from his offended Maker. If this be the original grant of government, as our author tells us, and Adam was now made monarch, whatever Sir Robert would have him, it is plain, God made him but a very poor monarch, such an one, as our author himself would have counted it no great privilege to be. God sets him to work for his living, and seems rather to give him a spade into his hand, to subdue the earth, than a sceptre to rule over its inhabitants. In the sweat of thy face thou shalt eat thy bread, says God to him, ver. 19. This was unavoidable, may it perhaps be answered, because he was yet without subjects, and had nobody to work for him; but afterwards, living as he did above 900 years, he might have people enough, whom he might command, to work for him; no, says God, not only whilst thou art without other help, save thy wife, but as long as thou livest, shalt thou live by thy labour, In the sweat of thy face, shalt thou eat thy bread, till thou return unto the ground, for out of it wast thou taken, for dust thou art, and unto dust shalt thou return, v. 19. It will perhaps be answered again in favour of our author, that these words are not spoken personally to Adam, but in him, as their representative, to all mankind, this being a curse upon mankind, because of the fall.

§. 46.

God, I believe, speaks differently from men, because he speaks with more truth, more certainty: but when he vouchsafes to speak to men, I do not think he speaks differently from them, in crossing the rules of language in use amongst them: this would not be to condescend to their capacities, when he humbles himself to speak to them, but to lose his design in speaking what, thus spoken, they could not understand. And yet thus must we think of God, if the interpretations of scripture, necessary to maintain our author's doctrine, must be received for good: for by the ordinary rules of language, it will be very hard to understand what God says, if what he speaks here, in the singular number, to Adam, must be understood to be spoken to all mankind, and what he says in the plural number, i. Gen. 26, and 28. must be understood of Adam alone, exclusive of all others, and what he says to Noah and his sons jointly, must be understood to be meant to Noah alone, Gen. ix.

§. 47.

Farther it is to be noted, that these words here of iii. Gen. 16. which our author calls the original grant of government, were not spoken to Adam, neither indeed was there any grant in them made to Adam, but a punishment laid upon Eve: and if we will take them as they were directed in particular to her, or in her, as their representative, to all other women, they will at most concern the female sex only, and import no more, but that subjection they should ordinarily be in to their husbands: but there is here no more law to oblige a woman to such a subjection, if the circumstances either of her condition, or contract with her husband, should exempt her from it, than there is, that she should bring forth her children in sorrow and pain, if there could be found a remedy for it, which is also a part of the same curse upon her: for the whole verse runs thus, Unto the woman he said, I will greatly multiply thy sorrow and thy conception; in sorrow thou shalt bring forth children, and thy desire shall be to thy husband, and he shall rule over thee. It would, I think, have been a hard matter for any body, but our author, to have found out a grant of monarchical government to Adam in these words, which were neither spoke to, nor of him: neither will any one, I suppose, by these words, think the weaker sex, as by a law, so subjected to the curse contained in them, that it is their duty not to endeavour to avoid it. And will any one say, that Eve, or any other woman, sinned, if she were brought to bed without those multiplied pains God threatens her here with? or that either of our queens, Mary or Elizabeth, had they married any of their subjects, had been by this text put into a political subjection to him? or that he thereby should have had monarchical rule over her? God, in this text, gives not, that I see, any authority to Adam over Eve, or to men over their wives, but only foretels what should be the woman's lot, how by his providence he would order it so, that she should be subject to her husband, as we see that generally the laws of mankind and customs of nations have ordered it so; and there is, I grant, a foundation in nature for it.

§. 48.

Thus when God says of Jacob and Esau, that the elder should serve the younger, xxv. Gen. 23. no body supposes that God hereby made Jacob Esau's sovereign, but foretold what should de facto come to pass.

But if these words here spoke to Eve must needs be understood as a law to bind her and all other women to subjection, it can be no other subjection than what every wife owes her husband; and then if this be the original grant of government and the foundation of monarchical power, there will be as many monarchs as there are husbands: if therefore these words give any power to Adam, it can be only a conjugal power, not political; the power that every husband hath to order the things of private concernment in his family, as proprietor of the goods and land there, and to have his will take place before that of his wife in all things of their common concernment; but not a political power of life and death over her, much less over any body else.

§. 49.

This I am sure: if our author will have this text to be a grant, the original grant of government, political government, he ought to have proved it by some better arguments than by barely saying, that thy desire shall be unto thy husband, was a law whereby Eve, and all that should come of her, were subjected to the absolute monarchical power of Adam and his heirs. Thy desire shall be to thy husband, is too doubtful an expression, of whose signification interpreters are not agreed, to build so confidently on, and in a matter of such moment, and so great and general concernment: but our author, according to his way of writing, having once named the text, concludes presently without any more ado, that the meaning is as he would have it. Let the words rule and subject be but found in the text or margent, and it immediately signifies the duty of a subject to his prince; the relation is changed, and though God says husband, Sir Robert will have it king; Adam has presently absolute monarchical power over Eve, and not only over Eve, but all that should come of her, though the scripture says not a word of it, nor our author a word to prove it. But Adam must for all that be an absolute monarch, and so down to the end of the chapter. And here I leave my reader to consider, whether my bare saying, without offering any reasons to evince it, that this text gave not Adam that absolute monarchical power, our author supposes, be not as sufficient to destroy that power, as his bare assertion is to establish it, since the text mentions neither prince nor people, speaks nothing of absolute or monarchical power, but the subjection of Eve to Adam, a wife to her husband. And he that would trace our author

so all through, would make a short and sufficient answer to the greatest part of the grounds he proceeds on, and abundantly consute them by barely denying; it being a sufficient answer to assertions without proof, to deny them without giving a reason. And therefore should I have said nothing but barely denied, that by this text the supreme power was settled and founded by God himself, in the fatherhood, limited to monarchy, and that to Adam's person and heirs, all which our author notably concludes from these words, as may be seen in the same page, Observations, 244. it had been a sufficient answer: should I have desired any sober man only to have read the text, and considered to whom, and on what occasion it was spoken, he would no doubt have wondered how our author found out monarchical absolute power in it, had he not had an exceeding good faculty to find it himself, where he could not shew it others. And thus we have examined the two places of scripture, all that I remember our author brings to prove Adam's sovereignty, that supremacy, which he says, it was God's ordinance should be unlimited in Adam, and as large as all the acts of his will, Observations, 254. viz. i. Gen. 28. and iii. Gen. 16. one whereof signifies only the subjection of the inferior ranks of creatures to mankind, and the other the subjection that is due from a wife to her husband, both far enough from that which subjects owe the governors of political societies.

CHAPTER VI. OF ADAM'S TITLE TO SOVEREIGNTY BY FATHERHOOD.

§. 50.

THERE is one thing more, and then I think I have given you all that our author brings for proof of Adam's sovereignty, and that is a supposition of a natural right of dominion over his children, by being their father: and this title of fatherhood he is so pleased with, that you will find it brought in almost in every page; particularly he says, not only Adam, but the succeeding patriarchs had by right of fatherhood royal authority over their children, . And in the same page, this subjection of children being the fountain of all regal authority, &c. This being, as one would think by his so frequent mentioning it, the main basis of all his frame, we may well expect clear and evident reason for it, since he lays it down as a position necessary to his purpose, that every man that is born is so far from being free, that by his very birth he becomes a subject of him that begets him, Observations, 156. so that Adam being the only man created, and all ever since being begotten, no body has been born free. If we ask how Adam comes by this power over his children, he tells us here it is by begetting them: and so again, Observations, 223. this natural dominion of Adam, says he, may be proved out of Grotius himself, who teacheth, that *generatio jus acquiritur parentibus in liberos*. And indeed the act of begetting being that which makes a man a father, his right of a father over his children can naturally arise from nothing else.

§. 51.

Grotius tells us not here how far this *jus in liberos*, this power of parents over their children extends; but our author, always very clear in the point, assures us, it is supreme power, and like that of absolute monarchs over their slaves, absolute power of life and death. He that should demand of him, how, or for what reason it is, that begetting a child gives the father such an absolute power over him, will find him answer nothing: we are to take his word for this, as well as several other things; and by that the laws

of nature and the constitutions of government must stand or fall. Had he been an absolute monarch, this way of talking might have suited well enough; *proratione voluntas* might have been of force in his mouth; but in the way of proof or argument is very unbecoming, and will little advantage his plea for absolute monarchy. Sir Robert has too much lessened a subject's authority to leave himself the hopes of establishing any thing by his bare saying it; one slave's opinion without proof is not of weight enough to dispose of the liberty and fortunes of all mankind. If all men are not, as I think they are, naturally equal, I am sure all slaves are; and then I may without presumption oppose my single opinion to his; and be confident that my saying, that begetting of children makes them not slaves to their fathers, as certainly sets all mankind free, as his affirming the contrary makes them all slaves. But that this position, which is the foundation of all their doctrine, who would have monarchy to be *jure divino*, may have all fair play, let us hear what reasons others give for it, since our author offers none.

§. 52.

The argument, I have heard others make use of, to prove that fathers, by begetting them, come by an absolute power over their children, is this; that fathers have a power over the lives of their children, because they give them life and being, which is the only proof it is capable of: since there can be no reason, why naturally one man should have any claim or pretence of right over that in another, which was never his, which he bestowed not, but was received from the bounty of another. 1. I answer, that every one who gives another any thing, has not always thereby a right to take it away again. But 2. They who say the father gives life to his children, are so dazzled with the thoughts of monarchy, that they do not, as they ought, remember God, who is the author and giver of life: it is in him alone we live, move, and have our being. How can he be thought to give life to another, that knows not wherein his own life consists? Philosophers are at a loss about it after their most diligent enquiries; and anatomists, after their whole lives and studies spent in dissections, and diligent examining the bodies of men, confess their ignorance in the structure and use of many parts of man's body, and in that operation wherein life consists in the whole. And doth the rude plough-man, or the more ignorant voluptuary, frame or fashion such an admirable engine as this is, and then put life and sense into it? Can any man say, he formed

the parts that are necessary to the life of his child? or can he suppose himself to give the life, and yet not know what subject is fit to receive it, nor what actions or organs are necessary for its reception or preservation?

§. 53.

To give life to that which has yet no being, is to frame and make a living creature, fashion the parts, and mould and suit them to their uses, and having proportioned and fitted them together, to put into them a living soul. He that could do this, might indeed have some pretence to destroy his own workmanship. But is there any one so bold, that dares thus far arrogate to himself the incomprehensible works of the almighty? Who alone did at first, and continues still to make a living soul, he alone can breathe in the breath of life. If any one thinks himself an artist at this, let him number up the parts of his child's body which he hath made, tell me their uses and operations, and when the living and rational soul began to inhabit this curious structure, when sense began, and how this engine, which he has framed, thinks and reasons: if he made it, let him, when it is out of order, mend it, at least tell wherein the defects lie. Shall he that made the eye not see? says the Psalmist, Psalm xciv. 9. See these men's vanities! the structure of that one part is sufficient to convince us of an all-wise contriver, and he has so visible a claim to us as his workmanship, that one of the ordinary appellations of God in scripture is, God our Maker, and the Lord our Maker. And therefore though our author, for the magnifying his fatherhood, be pleased to say, Observations, 159. That even the power which God himself exerciseth over mankind is by right of fatherhood, yet this fatherhood is such an one as utterly excludes all pretence of title in earthly parents; for he is king, because he is indeed maker of us all, which no parents can pretend to be of their children.

§. 54.

But had men skill and power to make their children, it is not so slight a piece of workmanship, that it can be imagined, they could make them without designing it. What father of a thousand, when he begets a child, thinks farther than the satisfying his present appetite? God in his infinite wisdom has put strong desires of copulation into the constitution of men, thereby to continue the race of mankind, which he doth most commonly

without the intention, and often against the consent and will of the begetter. And indeed those who desire and design children, are but the occasions of their being, and when they design and wish to beget them, do little more towards their making, than Deucalion and his wife in the fable did towards the making of mankind, by throwing pebbles over their heads.

§. 55.

But grant that the parents made their children, gave them life and being, and that hence there followed an absolute power. This would give the father but a joint dominion with the mother over them: for no body can deny but that the woman hath an equal share, if not the greater, as nourishing the child a long time in her own body out of her own substance: there it is fashioned, and from her it receives the materials and principles of its constitution: and it is so hard to imagine the rational soul should presently inhabit the yet unformed embryo, as soon as the father has done his part in the act of generation, that if it must be supposed to derive any thing from the parents, it must certainly owe most to the mother. But be that as it will, the mother cannot be denied an equal share in begetting of the child, and so the absolute authority of the father will not arise from hence. Our author indeed is of another mind; for he says, We know that God at the creation gave the sovereignty to the man over the woman, as being the nobler and principal agent in generation, *Observations*, 172. I remember not this in my Bible; and when the place is brought where God at the creation gave the sovereignty to man over the woman, and that for this reason, because he is the nobler and principal agent in generation, it will be time enough to consider, and answer it. But it is no new thing for our author to tell us his own fancies for certain and divine truths, tho' there be often a great deal of difference between his and divine revelations; for God in the scripture says, his father and his mother that begot him.

§. 56.

They who alledge the practice of mankind, for exposing or selling their children, as a proof of their power over them, are with Sir Robert happy arguers; and cannot but recommend their opinion, by founding it on the most shameful action, and most unnatural murder, human nature is capable of. The dens of lions and nurseries of wolves know no such cruelty as this:

these savage inhabitants of the desert obey God and nature in being tender and careful of their off-spring: they will hunt, watch, fight, and almost starve for the preservation of their young; never part with them; never forsake them, till they are able to shift for themselves. And is it the privilege of man alone to act more contrary to nature than the wild and most untamed part of the creation? doth God forbid us under the severest penalty, that of death, to take away the life of any man, a stranger, and upon provocation? and does he permit us to destroy those, he has given us the charge and care of; and by the dictates of nature and reason, as well as his revealed command, requires us to preserve? He has in all the parts of the creation taken a peculiar care to propagate and continue the several species of creatures, and makes the individuals act so strongly to this end, that they sometimes neglect their own private good for it, and seem to forget that general rule, which nature teaches all things, of self-preservation; and the preservation of their young, as the strongest principle in them, over-rules the constitution of their particular natures. Thus we see, when their young stand in need of it, the timorous become valiant, the fierce and savage kind, and the ravenous tender and liberal.

§. 57.

But if the example of what hath been done, be the rule of what ought to be, history would have furnished our author with instances of this absolute fatherly power in its height and perfection, and he might have shewed us in Peru, people that begot children on purpose to fatten and eat them. The story is so remarkable, that I cannot but set it down in the author's words. "In some provinces, says he, they were so liquorish after man's flesh, that they would not have the patience to stay till the breath was out of the body, but would suck the blood as it ran from the wounds of the dying man; they had public shambles of man's flesh, and their madness herein was to that degree, that they spared not their own children, which they had begot on strangers taken in war: for they made their captives their mistresses, and choicely nourished the children they had by them, till about thirteen years old they butchered and eat them; and they served the mothers after the same fashion, when they grew past child bearing, and ceased to bring them any more roasters," Garcilasso de la Vega *hist. des Yncas de Peru*, l. i. c. 12.

§. 58.

Thus far can the busy mind of man carry him to a brutality below the level of beasts, when he quits his reason, which places him almost equal to angels. Nor can it be otherwise in a creature, whose thoughts are more than the sands, and wider than the ocean, where fancy and passion must needs run him into strange courses, if reason, which is his only star and compass, be not that he steers by. The imagination is always restless, and suggests variety of thoughts, and the will, reason being laid aside, is ready for every extravagant project; and in this state, he that goes farthest out of the way, is thought fittest to lead, and is sure of most followers: and when fashion hath once established what folly or craft began, custom makes it sacred, and it will be thought impudence, or madness, to contradict or question it. He that will impartially survey the nations of the world, will find so much of their religions, governments and manners, brought in and continued amongst them by these means, that he will have but little reverence for the practices which are in use and credit amongst men; and will have reason to think, that the woods and forests, where the irrational untaught inhabitants keep right by following nature, are fitter to give us rules, than cities and palaces, where those that call themselves civil and rational, go out of their way, by the authority of example. If precedents are sufficient to establish a rule in this case, our author might have found in holy writ children sacrificed by their parents, and this amongst the people of God themselves: the Psalmist tells us, Psal. cvi. 38. They shed innocent blood, even the blood of their sons and of their daughters, whom they sacrificed unto the idols of Canaan. But God judged not of this by our author's rule, nor allowed of the authority of practice against his righteous law; but as it follows there, the land was polluted with blood; therefore was the wrath of the Lord kindled against his people, insomuch that he abhorred his own inheritance. The killing of their children, though it were fashionable, was charged on them as innocent blood, and so had in the account of God the guilt of murder, as the offering them to idols had the guilt of idolatry.

§. 59.

Be it then, as Sir Robert says, that anciently it was usual for men to sell and castrate their children, Observations, 155. Let it be, that they exposed them;

add to it, if you please, for this is still greater power, that they begat them for their tables, to fat and eat them: if this proves a right to do so, we may, by the same argument, justify adultery, incest and sodomy, for there are examples of these too, both ancient and modern; sins, which I suppose have their principal aggravation from this, that they cross the main intention of nature, which willeth the increase of mankind, and the continuation of the species in the highest perfection, and the distinction of families, with the security of the marriage bed, as necessary thereunto.

§. 60.

In confirmation of this natural authority of the father, our author brings a lame proof from the positive command of God in scripture: his words are, To confirm the natural right of regal power, we find in the Decalogue, that the law which enjoins obedience to kings, is delivered in the terms, Honour thy father, . Whereas many confess, that government only in the abstract, is the ordinance of God, they are not able to prove any such ordinance in the scripture, but only in the fatherly power; and therefore we find the commandment, that enjoins obedience to superiors, given in the terms, Honour thy father; so that not only the power and right of government, but the form of the power governing, and the person having the power, are all the ordinances of God. The first father had not only simply power, but power monarchical, as he was father immediately from God, Observations, 254. To the same purpose, the same law is cited by our author in several other places, and just after the same fashion; that is, and mother, as apochryphal words, are always left out; a great argument of our author's ingenuity, and the goodness of his cause, which required in its defender zeal to a degree of warmth, able to warp the sacred rule of the word of God, to make it comply with his present occasion; a way of proceeding not unusual to those, who embrace not truths because reason and revelation offer them, but espouse tenets and parties for ends different from truth, and then resolve at any rate to defend them; and so do with the words and sense of authors, they would fit to their purpose, just as Procrustes did with his guests, lop or stretch them, as may best fit them to the size of their notions: and they always prove like those so served, deformed, lame, and useless.

§. 61.

For had our author set down this command without garbling, as God gave it, and joined mother to father, every reader would have seen, that it had made directly against him; and that it was so far from establishing the monarchical power of the father, that it set up the mother equal with him, and enjoined nothing but what was due in common, to both father and mother: for that is the constant tenor of the scripture, Honour thy father and thy mother, Exod. xx. He that smiteth his father or mother, shall surely be put to death, xxi. 15. He that curseth his father or mother, shall surely be put to death, ver. 17. Repeated Lev. xx. 9. and by our Saviour, Matth. xv. 4. Ye shall fear every man his mother and his father, Lev. xix. 3. If a man have a rebellious son, which will not obey the voice of his father, or the voice of his mother; then shall his father and his mother lay hold on him, and say, This our son is stubborn and rebellious, he will not obey our voice, Deut. xxi. 18, 19, 20, 21. Cursed be he that setteth light by his father or his mother, xxviii. 16. My son, hear the instructions of thy father, and forsake not the law of thy mother, are the words of Solomon, a king who was not ignorant of what belonged to him as a father or a king; and yet he joins father and mother together, in all the instructions he gives children quite thro' his book of Proverbs. Woe unto him, that sayeth unto his father, What begettest thou, or to the woman, What hast thou brought forth? Isa. xi. ver. 10. In thee have they set light by father or mother, Ezek. xxviii. 2. And it shall come to pass, that when any shall yet prophesy, then his father and his mother that begat him, shall say unto him, Thou shalt not live, and his father and his mother that begat him, shall thrust him through when he prophesieth, Zech. xiii. 3. Here not the father only, but the father and mother jointly, had power in this case of life and death. Thus ran the law of the Old Testament, and in the New they are likewise joined, in the obedience of their children, Eph. vi. 1. The rule is, Children, obey your parents; and I do not remember, that I any where read, Children, obey your father, and no more: the scripture joins mother too in that homage, which is due from children; and had there been any text, where the honour or obedience of children had been directed to the father alone, it is not likely that our author, who pretends to build all upon scripture, would have omitted it: nay, the scripture makes the authority of father and mother, in respect of those they have begot, so equal, that in some places it neglects even the priority of order, which is thought due to the father, and the mother is put first, as Lev. xix. 3. from which so constantly joining father and

mother together, as is found quite through the scripture, we may conclude that the honour they have a title to from their children, is one common right belonging so equally to them both, that neither can claim it wholly, neither can be excluded.

§. 62.

One would wonder then how our author infers from the 5th commandment, that all power was originally in the father; how he finds monarchical power of government settled and fixed by the commandment, Honour thy father and thy mother. If all the honour due by the commandment, be it what it will, be the only right of the father, because he, as our author says, has the sovereignty over the woman, as being the nobler and principler agent in generation, why did God afterwards all along join the mother with him, to share in his honour? can the father, by this sovereignty of his, discharge the child from paying this honour to his mother? The scripture gave no such licence to the Jews, and yet there were often breaches wide enough betwixt husband and wife, even to divorce and separation: and, I think, no body will say a child may with-hold honour from his mother, or, as the scripture terms it, set light by her, though his father should command him to do so; no more than the mother could dispense with him for neglecting to honour his father: whereby it is plain, that this command of God gives the father no sovereignty, no supremacy.

§. 63.

I agree with our author that the title to this honour is vested in the parents by nature, and is a right which accrues to them by their having begotten their children, and God by many positive declarations has confirmed it to them: I also allow our author's rule, that in grants and gifts, that have their original from God and nature, as the power of the father, (let me add and mother, for whom God hath joined together, let no man put asunder) no inferior power of men can limit, nor make any law of prescription against them, Observations, 158. so that the mother having, by this law of God, a right to honour from her children, which is not subject to the will of her husband, we see this absolute monarchical power of the father can neither be founded on it, nor consist with it; and he has a power very far from monarchical, very far from that absoluteness our author contends for, when

another has over his subjects the same power he hath, and by the same title: and therefore he cannot forbear saying himself that he cannot see how any man's children can be free from subjection to their parents, . which, in common speech, I think, signifies mother as well as father, or if parents here signifies only father, it is the first time I ever yet knew it to do so, and by such an use of words one may say any thing.

§. 64.

By our author's doctrine, the father having absolute jurisdiction over his children, has also the same over their issue; and the consequence is good, were it true, that the father had such a power: and yet I ask our author whether the grandfather, by his sovereignty, could discharge the grandchild from paying to his father the honour due to him by the 5th commandment. If the grandfather hath, by right of fatherhood, sole sovereign power in him, and that obedience which is due to the supreme magistrate, be commanded in these words, Honour thy father, it is certain the grandfather might dispense with the grandson's honouring his father, which since it is evident in common sense he cannot, it follows from hence, that Honour thy father and mother, cannot mean an absolute subjection to a sovereign power, but something else. The right therefore which parents have by nature, and which is confirmed to them by the 5th commandment, cannot be that political dominion, which our author would derive from it: for that being in every civil society supreme somewhere, can discharge any subject from any political obedience to any one of his fellow subjects. But what law of the magistrate can give a child liberty, not to honour his father and mother? It is an eternal law, annexed purely to the relation of parents and children, and so contains nothing of the magistrate's power in it, nor is subjected to it.

§. 65.

Our author says, God hath given to a father a right or liberty to alien his power over his children to any other, Observations, 155. I doubt whether he can alien wholly the right of honour that is due from them: but be that as it will, this I am sure, he cannot alien, and retain the same power. If therefore the magistrate's sovereignty be, as our author would have it, nothing but the authority of a supreme father, . it is unavoidable, that if the magistrate hath all this paternal right, as he must have if fatherhood be the fountain of all

authority; then the subjects, though fathers, can have no power over their children, no right to honour from them: for it cannot be all in another's hands, and a part remain with the parents. So that, according to our author's own doctrine, Honour thy father and mother cannot possibly be understood of political subjection and obedience; since the laws both in the Old and New Testament, that commanded children to honour and obey their parents, were given to such, whose fathers were under civil government, and fellow subjects with them in political societies; and to have bid them honour and obey their parents, in our author's sense, had been to bid them be subjects to those who had no title to it; the right to obedience from subjects, being all vested in another; and instead of teaching obedience, this had been to foment sedition, by setting up powers that were not. If therefore this command, Honour thy father and mother, concern political dominion, it directly overthrows our author's monarchy; since it being to be paid by every child to his father, even in society, every father must necessarily have political dominion, and there will be as many sovereigns as there are fathers: besides that the mother too hath her title, which destroys the sovereignty of one supreme monarch. But if Honour thy father and mother mean something distinct from political power, as necessarily it must, it is besides our author's business, and serves nothing to his purpose.

§. 66.

The law that enjoins obedience to kings is delivered, says our author, in the terms, Honour thy father, as if all power were originally in the father, Observations, 254: and that law is also delivered, say I, in the terms, Honour thy mother, as if all power were originally in the mother. I appeal whether the argument be not as good on one side as the other, father and mother being joined all along in the Old and New Testament where-ever honour or obedience is enjoined children. Again our author tells us, Observations, 254. that this command, Honour thy father, gives the right to govern, and makes the form of government monarchical. To which I answer, that if by Honour thy father be meant obedience to the political power of the magistrate, it concerns not any duty we owe to our natural fathers, who are subjects; because they, by our author's doctrine, are divested of all that power, it being placed wholly in the prince, and so being equally subjects and slaves with their children, can have no right, by that

title, to any such honour or obedience, as contains in it political subjection: if Honour thy father and mother signifies the duty we owe our natural parents, as by our Saviour's interpretation, Matth. xv. 4. and all the other mentioned places, it is plain it does, then it cannot concern political obedience, but a duty that is owing to persons, who have no title to sovereignty, nor any political authority as magistrates over subjects. For the person of a private father, and a title to obedience, due to the supreme magistrate, are things inconsistent; and therefore this command, which must necessarily comprehend the persons of our natural fathers, must mean a duty we owe them distinct from our obedience to the magistrate, and from which the most absolute power of princes cannot absolve us. What this duty is, we shall in its due place examine.

§. 67.

And thus we have at last got thro' all, that in our author looks like an argument for that absolute unlimited sovereignty described, sect. 8. which he supposes in Adam; so that mankind ever since have been all born slaves, without any title to freedom. But if creation, which gave nothing but a being, made not Adam prince of his posterity: if Adam, Gen. i. 28. was not constituted lord of mankind, nor had a private dominion given him exclusive of his children, but only a right and power over the earth, and inferiour creatures in common with the children of men; if also Gen. iii. 16. God gave not any political power to Adam over his wife and children, but only subjected Eve to Adam, as a punishment, or foretold the subjection of the weaker sex, in the ordering the common concerns of their families, but gave not thereby to Adam, as to the husband, power of life and death, which necessarily belongs to the magistrate: if fathers by begetting their children acquire no such power over them; and if the command, Honour thy father and mother, give it not, but only enjoins a duty owing to parents equally, whether subjects or not, and to the mother as well as the father; if all this be so, as I think, by what has been said, is very evident; then man has a natural freedom, notwithstanding all our author confidently says to the contrary; since all that share in the same common nature, faculties and powers, are in nature equal, and ought to partake in the same common rights and privileges, till the manifest appointment of God, who is Lord over all, blessed for ever, can be produced to shew any particular person's

supremacy; or a man's own consent subjects him to a superiour. This is so plain, that our author confesses, that Sir John Hayward, Blackwood and Barclay, the great vindicators of the right of kings, could not deny it, but admit with one consent the natural liberty and equality of mankind, for a truth unquestionable. And our author hath been so far from producing any thing, that may make good his great position, that Adam was absolute monarch, and so men are not naturally free, that even his own proofs make against him; so that to use his own way of arguing, the first erroneous principle failing, the whole fabric of this vast engine of absolute power and tyranny drops down of itself, and there needs no more to be said in answer to all that he builds upon so false and frail a foundation.

§. 68.

But to save others the pains, were there any need, he is not sparing himself to shew, by his own contradictions, the weakness of his own doctrine. Adam's absolute and sole dominion is that, which he is every where full of, and all along builds on, and yet he tells us, . that as Adam was lard of his children, so his children under him had a command and power over their own children. The unlimited and undivided sovereignty of Adam's fatherhood, by our author's computation, stood but a little while, only during the first generation, but as soon as he had grand-children, Sir Robert could give but a very ill account of it. Adam, as father of his children, faith he, hath an absolute, unlimited royal power over them, and by virtue thereof over those that they begot, and so to all generations; and yet his children, viz. Cain and Seth, have a paternal power over their children at the same time; so that they are at the same time absolute lords, and yet vassals and slaves; Adam has all the authority, as grand-father of the people, and they have a part of it as fathers of a part of them: he is absolute over them and their posterity, by having begotten them, and yet they are absolute over their children by the same title. No, says our author, Adam's children under him had power over their own children, but still with subordination to the first parent. A good distinction that sounds well, and it is pity it signifies nothing, nor can be reconciled with our author's words. I readily grant, that supposing Adam's absolute power over his posterity, any of his children might have from him a delegated, and so a subordinate power over a part, or all the rest: but that cannot be the power our author speaks of here; it is not

a power by grant and commission, but the natural paternal power he supposes a father to have over his children. For 1. he says, As Adam was lord of his children, so his children under him had a power over their own children: they were then lords over their own children after the same manner, and by the same title, that Adam was, i. e. by right of generation, by right of fatherhood. 2. It is plain he means the natural power of fathers, because he limits it to be only over their own children; a delegated power has no such limitation, as only over their own children, it might be over others, as well as their own children. 3. If it were a delegated power, it must appear in scripture; but there is no ground in scripture to affirm, that Adam's children had any other power over theirs, than what they naturally had as fathers.

§. 69.

But that he means here paternal power, and no other, is past doubt, from the inference he makes in these words immediately following, I see not then how the children of Adam, or of any man else, can be free from subjection to their parents. Whereby it appears that the power on one side, and the subjection on the other, our author here speaks of, is that natural power and subjection between parents and children: for that which every man's children owed, could be no other; and that our author always affirms to be absolute and unlimited. This natural power of parents over their children, Adam had over his posterity, says our author; and this power of parents over their children, his children had over theirs in his life-time, says our author also; so that Adam, by a natural right of father, had an absolute unlimited power over all his posterity, and at the same time his children had by the same right absolute unlimited power over theirs. Here then are two absolute unlimited powers existing together, which I would have any body reconcile one to another, or to common sense. For the salvo he has put in of subordination, makes it more absurd: to have one absolute, unlimited, nay unlimitable power in subordination to another, is so manifest a contradiction, that nothing can be more. Adam is absolute prince with the unlimited authority of fatherhood over all his posterity; all his posterity are then absolutely his subjects; and, as our author says, his slaves, children, and grand-children, are equally in this state of subjection and slavery; and yet, says our author, the children of Adam have paternal, i. e. absolute

unlimited power over their own children: Which in plain English is, they are slaves and absolute princes at the same time, and in the same government; and one part of the subjects have an absolute unlimited power over the other by the natural right of parentage.

§. 70.

If any one will suppose, in favour of our author, that he here meant, that parents, who are in subjection themselves to the absolute authority of their father, have yet some power over their children; I confess he is something nearer the truth: but he will not at all hereby help our author: for he nowhere speaking of the paternal power, but as an absolute unlimited authority, cannot be supposed to understand any thing else here, unless he himself had limited it, and shewed how far it reached. And that he means here paternal authority in that large extent, is plain from the immediate following words; This subjection of children being, says he, the foundation of all regal authority, . the subjection then that in the former line, he says, every man is in to his parents, and consequently what Adam's grandchildren were in to their parents, was that which was the fountain of all regal authority, i. e. according to our author, absolute unlimitable authority. And thus Adam's children had regal authority over their children, whilst they themselves were subjects to their father, and fellow-subjects with their children. But let him mean as he pleases, it is plain he allows Adam's children to have paternal power, . as also all other fathers to have paternal power over their children, Observations, 156. From whence one of these two things will necessarily follow, that either Adam's children, even in his life-time, had, and so all other fathers have, as he phrases it, . by right of fatherhood, royal authority over their children, or else, that Adam, by right of fatherhood, had not royal authority. For it cannot be but that paternal power does, or does not, give royal authority to them that have it: if it does not, then Adam could not be sovereign by this title, nor any body else; and then there is an end of all our author's politics at once: if it does give royal authority, then every one that has paternal power has royal authority; and then, by our author's patriarchal government, there will be as many kings as there are fathers.

§. 71.

And thus what a monarchy he hath set up, let him and his disciples consider. Princes certainly will have great reason to thank him for these new politics, which set up as many absolute kings in every country as there are fathers of children. And yet who can blame our author for it, it lying unavoidably in the way of one discoursing upon our author's principles? For having placed an absolute power in fathers by right of begetting, he could not easily resolve how much of this power belonged to a son over the children he had begotten; and so it fell out to be a very hard matter to give all the power, as he does, to Adam, and yet allow a part in his life-time to his children, when they were parents, and which he knew not well how to deny them. This makes him so doubtful in his expressions, and so uncertain where to place this absolute natural power, which he calls fatherhood. Sometimes Adam alone has it all, as . Observations, 244, 245. & Pref.

Sometimes parents have it, which word scarce signifies the father alone, , 19.

Sometimes children during their fathers life-time, as .

Sometimes fathers of families, as , and 79.

Sometimes fathers indefinitely, Observations, 155.

Sometimes the heir to Adam, Observations, 253.

Sometimes the posterity of Adam, 244, 246.

Sometimes prime fathers, all sons or grand-children of Noah, Observations, 244.

Sometimes the eldest parents, .

Sometimes all kings, .

Sometimes all that have supreme power, Observations, 245.

Sometimes heirs to those first progenitors, who were at first the natural parents of the whole people, .

Sometimes an elective king, .

Sometimes those, whether a few or a multitude, that govern the common-wealth, .

Sometimes he that can catch it, an usurper, . Observations, 155.

§. 72.

Thus this new nothing, that is to carry with it all power, authority, and government; this fatherhood, which is to design the person, and establish the throne of monarchs, whom the people are to obey, may, according to Sir

Robert, come into any hands, any how, and so by his politics give to democracy royal authority, and make an usurper a lawful prince. And if it will do all these fine feats, much good do our author and all his followers with their omnipotent fatherhood, which can serve for nothing but to unsettle and destroy all the lawful governments in the world, and to establish in their room disorder, tyranny, and usurpation.

CHAPTER VII. OF FATHERHOOD AND PROPERTY CONSIDERED TOGETHER AS FOUNTAINS OF SOVEREIGNTY.

§. 73.

In the foregoing chapters we have seen what Adam's monarchy was, in our author's opinion, and upon what titles he founded it. The foundations which he lays the chief stress on, as those from which he thinks he may best derive monarchical power to future princes, are two, viz. Fatherhood and property: and therefore the way he proposes to remove the absurdities and inconveniencies of the doctrine of natural freedom, is, to maintain the natural and private dominion of Adam, *Observations*, 222. Conformable hereunto, he tells us, the grounds and principles of government necessarily depend upon the original of property, *Observations*, 108. The subjection of children to their parents is the fountain of all regal authority, . And all power on earth is either derived or usurped from the fatherly power, there being no other original to be found of any power whatsoever, *Observations*, 158. I will not stand here to examine how it can be said without a contradiction, that the first grounds and principles of government necessarily depend upon the original of property, and yet, that there is no other original of any power whatsoever, but that of the father: it being hard to understand how there can be no other original but fatherhood, and yet that the grounds and principles of government depend upon the original of property; property and fatherhood being as far different as lord of a manor and father of children. Nor do I see how they will either of them agree with what our author says, *Observations*, 244. of God's sentence against Eve, *Gen.* iii. 16. That it is the original grant of government: so that if that were the original, government had not its original, by our author's own confession, either from property or fatherhood; and this text, which he brings as a proof of Adam's power over Eve, necessarily contradicts what he says of the fatherhood, that it is the sole fountain of all power: for if Adam had any such regal power over Eve, as our author contends for, it must be by some other title than that of begetting.

§. 74.

But I leave him to reconcile these contradictions, as well as many others, which may plentifully be found in him by any one, who will but read him with a little attention; and shall come now to consider, how these two originals of government, Adam's natural and private dominion, will consist, and serve to make out and establish the titles of succeeding monarchs, who, as our author obliges them, must all derive their power from these fountains. Let us then suppose Adam made, by God's donation, lord and sole proprietor of the whole earth, in as large and ample a manner as Sir Robert could wish; let us suppose him also, by right of fatherhood, absolute ruler over his children with an unlimited supremacy; I ask then, upon Adam's death what becomes of both his natural and private dominion? and I doubt not it will be answered, that they descended to his next heir, as our author tells us in several places. But this way, it is plain, cannot possibly convey both his natural and private dominion to the same person: for should we allow, that all the property, all the estate of the father, ought to descend to the eldest son, (which will need some proof to establish it) and so he has by that title all the private dominion of the father, yet the father's natural dominion, the paternal power cannot descend to him by inheritance: for it being a right that accrues to a man only by begetting, no man can have this natural dominion over any one he does not beget; unless it can be supposed, that a man can have a right to any thing, without doing that upon which that right is solely founded: for if a father by begetting, and no other title, has natural dominion over his children, he that does not beget them cannot have this natural dominion over them; and therefore be it true or false, that our author says, *Observations*, 156. That every man that is born, by his very birth becomes a subject to him that begets him, this necessarily follows, viz. That a man by his birth cannot become a subject to his brother, who did not beget him; unless it can be supposed that a man by the very same title can come to be under the natural and absolute dominion of two different men at once; or it be sense to say, that a man by birth is under the natural dominion of his father, only because he begat him, and a man by birth also is under the natural dominion of his eldest brother, though he did not beget him.

§. 75.

If then the private dominion of Adam, i. e. his property in the creatures, descended at his death all entirely to his eldest son, his heir; (for, if it did not, there is presently an end of all Sir Robert's monarchy) and his natural dominion, the dominion a father has over his children by begetting them, belonged immediately, upon Adam's decease, equally to all his sons who had children, by the same title their father had it, the sovereignty founded upon property, and the sovereignty founded upon fatherhood, come to be divided; since Cain, as heir, had that of property alone; Seth, and the other sons, that of fatherhood equally with him. This is the best can be made of our author's doctrine, and of the two titles of sovereignty he sets up in Adam: one of them will either signify nothing; or, if they both must stand, they can serve only to confound the rights of princes, and disorder government in his posterity: for by building upon two titles to dominion, which cannot descend together, and which he allows may be separated, (for he yields that Adam's children had their distinct territories by right of private dominion, *Observations*, 210.p.40.) he makes it perpetually a doubt upon his principles where the sovereignty is, or to whom we owe our obedience, since fatherhood and property are distinct titles, and began presently upon Adam's death to be in distinct persons. And which then was to give way to the other?

§. 76.

Let us take the account of it, as he himself gives it us. He tells us out of Grotius, That Adam's children by donation, assignation, or some kind of cession before he was dead, had their distinct territories by right of private dominion; Abel had his flocks and pastures for them: Cain had his fields for corn, and the land of Nod, where he built him a city, *Observations*, 210. Here it is obvious to demand, which of these two after Adam's death was sovereign? Cain, says our author, . By what title? As heir; for heirs to progenitors, who were natural parents of their people, are not only lords of their own children, but also of their brethren, says our author, . What was Cain heir to? Not the entire possessions, not all that which Adam had private dominion in; for our author allows that Abel, by a title derived from his father, had his distinct territory for pasture by right of private dominion. What then Abel had by private dominion, was exempt from Cain's dominion: for he could not have private dominion over that which was

under the private dominion of another; and therefore his sovereignty over his brother is gone with this private dominion, and so there are presently two sovereigns, and his imaginary title of fatherhood is out of doors, and Cain is no prince over his brother: or else, if Cain retain his sovereignty over Abel, notwithstanding his private dominion, it will follow, that the first grounds and principles of government have nothing to do with property, whatever our author says to the contrary. It is true, Abel did not outlive his father Adam; but that makes nothing to the argument, which will hold good against Sir Robert in Abel's issue, or in Seth, or any of the posterity of Adam, not descended from Cain.

§. 77.

The same inconvenience he runs into about the three sons of Noah, who, as he says, . had the whole world divided amongst them by their father. I ask then, in which of the three shall we find the establishment of regal power after Noah's death? If in all three, as our author there seems to say; then it will follow, that regal power is founded in property of land, and follows private dominion, and not in paternal power, or natural dominion; and so there is an end of paternal power as the fountain of regal authority, and the so-much-magnified fatherhood quite vanishes. If the regal power descended to Shem as eldest, and heir to his father, then Noah's division of the world by lot to his sons, or his ten years sailing about the Mediterranean to appoint each son his part, which our author tells of, . was labour lost; his division of the world to them, was to ill, or to no purpose: for his grant to Cham and Japhet was little worth, if Shem, notwithstanding this grant, as soon as Noah was dead, was to be lord over them. Or, if this grant of private dominion to them, over their assigned territories, were good, here were set up two distinct sorts of power, not subordinate one to the other, with all those inconveniences which he musters up against the power of the people, *Observations*, 158. which I shall set down in his own words, only changing property for people. All power on earth is either derived or usurped from the fatherly power, there being no other original to be found of any power whatsoever: for if there should be granted two sorts of power, without any subordination of one to the other, they would be in perpetual strife which should be supreme, for two supremes cannot agree: if the fatherly power be supreme, then the power grounded on private dominion must be

subordinate, and depend on it; and if the power grounded on property be supreme, then the fatherly power must submit to it, and cannot be exercised without the licence of the proprietors, which must quite destroy the frame and course of nature. This is his own arguing against two distinct independent powers, which I have set down in his own words, only putting power rising from property, for power of the people; and when he has answered what he himself has urged here against two distinct powers, we shall be better able to see how, with any tolerable sense, he can derive all regal authority from the natural and private dominion of Adam, from fatherhood and property together, which are distinct titles, that do not always meet in the same person; and it is plain, by his own confession, presently separated as soon both as Adam's and Noah's death made way for succession: though our author frequently in his writings jumbles them together, and omits not to make use of either, where he thinks it will sound best to his purpose. But the absurdities of this will more fully appear in the next chapter, where we shall examine the ways of conveyance of the sovereignty of Adam, to princes that were to reign after him.

CHAPTER VIII. OF THE CONVEYANCE OF ADAM'S SOVEREIGN MONARCHICAL POWER.

§. 78.

SIR Robert, having not been very happy in any proof he brings for the sovereignty of Adam, is not much more fortunate in conveying it to future princes, who, if his politics be true, must all derive their titles from that first monarch. The ways he has assigned, as they lie scattered up and down in his writings, I will set down in his own words: in his preface he tells us, That Adam being monarch of the whole world, none of his posterity had any right to possess any thing, but by his grant or permission, or by succession from him. Here he makes two ways of conveyance of any thing Adam stood possessed of; and those are grants or succession. Again he says, All kings either are, or are to be reputed, the next heirs to those first progenitors, who were at first the natural parents of the whole people, . There cannot be any multitude of men whatsoever, but that in it, considered by itself, there is one man amongst them, that in nature hath a right to be the king of all the rest, as being the next heir to Adam, *Observations*, 253. Here in these places inheritance is the only way he allows of conveying monarchical power to princes. In other places he tells us, *Observations*, 155. All power on earth is either derived or usurped from the fatherly power, *Observations*, 158. All kings that now are, or ever were, are or were either fathers of their people, or heirs of such fathers, or usurpers of the right of such fathers, *Observations*, 253. And here he makes inheritance or usurpation the only ways whereby kings come by this original power: but yet he tells us, This fatherly empire, as it was of itself hereditary, so it was alienable by patent, and seizable by an usurper, *Observations*, 190. So then here inheritance, grant, or usurpation, will convey it. And last of all, which is most admirable, he tells us, . It skills not which way kings come by their power, whether by election, donation, succession, or by any other means; for it is still the manner of the government by supreme power, that makes them properly kings, and not the means of obtaining their crowns. Which I think is a full answer to all his whole hypothesis and discourse about Adam's

royal authority, as the fountain from which all princes were to derive theirs: and he might have spared the trouble of speaking so much as he does, up and down, of heirs and inheritance, if to make any one properly a king, needs no more but governing by supreme power, and it matters not by what means he came by it.

§. 79.

By this notable way, our author may make Oliver as properly king, as any one else he could think of: and had he had the happiness to live under Massanello's government, he could not by this his own rule have forbore to have done homage to him, with O king live for ever, since the manner of his government by supreme power, made him properly king, who was but the day before properly a fisherman. And if Don Quixote had taught his squire to govern with supreme authority, our author no doubt could have made a most loyal subject in Sancho Pancho's island; and he must needs have deserved some preferment in such governments, since I think he is the first politician, who, pretending to settle government upon its true basis, and to establish the thrones of lawful princes, ever told the world, That he was properly a king, whose manner of government was by supreme power, by what means soever he obtained it; which in plain English is to say, that regal and supreme power is properly and truly his, who can by any means seize upon it; and if this be to be properly a king, I wonder how he came to think of, or where he will find, an usurper.

§. 80.

This is so strange a doctrine, that the surprise of it hath made me pass by, without their due reflection, the contradictions he runs into, by making sometimes inheritance alone, sometimes only grant or inheritance, sometimes only inheritance or usurpation, sometimes all these three, and at last election, or any other means, added to them, the ways whereby Adam's royal authority, that is, his right to supreme rule, could be conveyed down to future kings and governors, so as to give them a title to the obedience and subjection of the people. But these contradictions lie so open, that the very reading of our author's own words will discover them to any ordinary understanding; and though what I have quoted out of him (with abundance more of the same strain and coherence, which might be found in him) might

well excuse me from any farther trouble in this argument, yet having proposed to myself, to examine the main parts of his doctrine, I shall a little more particularly consider how inheritance, grant, usurpation or election, can any way make out government in the world upon his principles; or derive to any one a right of empire, from this regal authority of Adam, had it been never so well proved, that he had been absolute monarch, and lord of the whole world.

CHAPTER IX. OF MONARCHY, BY INHERITANCE FROM ADAM.

§. 81.

Though it be never so plain, that there ought to be government in the world, nay, should all men be of our author's mind, that divine appointment had ordained it to be monarchical; yet, since men cannot obey any thing, that cannot command; and ideas of government in the fancy, though never so perfect, though never so right, cannot give laws, nor prescribe rules to the actions of men; it would be of no behoof for the settling of order, and establishment of government in its exercise and use amongst men, unless there were a way also taught how to know the person, to whom it belonged to have this power, and exercise this dominion over others. It is in vain then to talk of subjection and obedience without telling us whom we are to obey: for were I never so fully persuaded that there ought to be magistracy and rule in the world; yet I am never the less at liberty still, till it appears who is the person that hath right to my obedience; since, if there be no marks to know him by, and distinguish him that hath right to rule from other men, it may be myself, as well as any other. And therefore, though submission to government be every one's duty, yet since that signifies nothing but submitting to the direction and laws of such men as have authority to command, it is not enough to make a man a subject, to convince him that there is regal power in the world; but there must be ways of designing, and knowing the person to whom this regal power of right belongs: and a man can never be obliged in conscience to submit to any power, unless he can be satisfied who is the person who has a right to exercise that power over him. If this were not so, there would be no distinction between pirates and lawful princes; he that has force is without any more ado to be obeyed, and crowns and scepters would become the inheritance only of violence and rapine. Men too might as often and as innocently change their governors, as they do their physicians, if the person cannot be known who has a right to direct me, and whose prescriptions I am bound to follow. To settle therefore men's consciences, under an obligation to obedience, it is necessary that they

know not only, that there is a power somewhere in the world, but the person who by right is vested with this power over them.

§. 82.

How successful our author has been in his attempts, to set up a monarchical absolute power in Adam, the reader may judge by what has been already said; but were that absolute monarchy as clear as our author would desire it, as I presume it is the contrary, yet it could be of no use to the government of mankind now in the world, unless he also make out these two things.

First, That this power of Adam was not to end with him, but was upon his decease conveyed intire to some other person, and so on to posterity.

Secondly, That the princes and rulers now on earth are possessed of this power of Adam, by a right way of conveyance derived to them.

§. 83.

If the first of these fail, the power of Adam, were it never so great, never so certain, will signify nothing to the present government and societies in the world; but we must seek out some other original of power for the government of politys than this of Adam, or else there will be none at all in the world. If the latter fail, it will destroy the authority of the present governors, and absolve the people from subjection to them, since they, having no better a claim than others to that power, which is alone the fountain of all authority, can have no title to rule over them.

§. 84.

Our author, having fancied an absolute sovereignty in Adam, mentions several ways of its conveyance to princes, that were to be his successors; but that which he chiefly insists on, is that of inheritance, which occurs so often in his several discourses; and I having in the foregoing chapter quoted several of these passages, I shall not need here again to repeat them. This sovereignty he erects, as has been said, upon a double foundation, viz. that of property, and that of fatherhood. One was the right he was supposed to have in all creatures, a right to possess the earth with the beasts, and other inferior ranks of things in it, for his private use, exclusive of all other men.

The other was the right he was supposed to have, to rule and govern men, all the rest of mankind.

§. 85.

In both these rights, there being supposed an exclusion of all other men, it must be upon some reason peculiar to Adam, that they must both be founded.

That of his property our author supposes to arise from God's immediate donation, Gen. i. 28. and that of fatherhood from the act of begetting: now in all inheritance, if the heir succeed not to the reason upon which his father's right was founded, he cannot succeed to the right which followeth from it. For example, Adam had a right of property in the creatures upon the donation and grant of God almighty, who was lord and proprietor of them all: let this be so as our author tells us, yet upon his death his heir can have no title to them, no such right of property in them, unless the same reason, viz. God's donation, vested a right in the heir too: for if Adam could have had no property in, nor use of the creatures, without this positive donation from God, and this donation were only personally to Adam, his heir could have no right by it; but upon his death it must revert to God, the lord and owner again; for positive grants give no title farther than the express words convey it, and by which only it is held. And thus, if as our author himself contends, that donation, Gen. i. 28. were made only to Adam personally, his heir could not succeed to his property in the creatures; and if it were a donation to any but Adam, let it be shewn, that it was to his heir in our author's sense, i. e. to one of his children, exclusive of all the rest.

§. 86.

But not to follow our author too far out of the way, the plain of the case is this. God having made man, and planted in him, as in all other animals, a strong desire of self-preservation; and furnished the world with things fit for food and raiment, and other necessities of life, subservient to his design, that man should live and abide for some time upon the face of the earth, and not that so curious and wonderful a piece of workmanship, by his own negligence, or want of necessities, should perish again, presently after a few moments continuance; God, I say, having made man and the world thus, spoke to him, (that is) directed him by his senses and reason, as he did

the inferior animals by their sense and instinct, which were serviceable for his subsistence, and given him as the means of his preservation. And therefore I doubt not, but before these words were pronounced, i. Gen. 28, 29. (if they must be understood literally to have been spoken) and without any such verbal donation, man had a right to an use of the creatures, by the will and grant of God: for the desire, strong desire of preserving his life and being, having been planted in him as a principle of action by God himself, reason, which was the voice of God in him, could not but teach him and assure him, that pursuing that natural inclination he had to preserve his being, he followed the will of his maker, and therefore had a right to make use of those creatures, which by his reason or senses he could discover would be serviceable thereunto. And thus man's property in the creatures was founded upon the right he had to make use of those things that were necessary or useful to his being.

§. 87.

This being the reason and foundation of Adam's property, gave the same title, on the same ground, to all his children, not only after his death, but in his life-time: so that here was no privilege of his heir above his other children, which could exclude them from an equal right to the use of the inferior creatures, for the comfortable preservation of their beings, which is all the property man hath in them; and so Adam's sovereignty built on property, or, as our author calls it, private dominion, comes to nothing. Every man had a right to the creatures, by the same title Adam had, viz. by the right every one had to take care of, and provide for their subsistence: and thus men had a right in common, Adam's children in common with him. But if any one had began, and made himself a property in any particular thing, (which how he, or any one else, could do, shall be shewn in another place) that thing, that possession, if he disposed not otherwise of it by his positive grant, descended naturally to his children, and they had a right to succeed to it, and possess it.

§. 88.

It might reasonably be asked here, how come children by this right of possessing, before any other, the properties of their parents upon their decease? for it being personally the parents, when they die, without actually

transferring their right to another, why does it not return again to the common stock of mankind? It will perhaps be answered, that common consent hath disposed of it to their children. Common practice, we see indeed, does so dispose of it; but we cannot say, that it is the common consent of mankind; for that hath never been asked, nor actually given; and if common tacit consent hath established it, it would make but a positive, and not a natural right of children to inherit the goods of their parents: but where the practice is universal, it is reasonable to think the cause is natural. The ground then I think to be this. The first and strongest desire God planted in men, and wrought into the very principles of their nature, being that of self-preservation, that is the foundation of a right to the creatures for the particular support and use of each individual person himself. But, next to this, God planted in men a strong desire also of propagating their kind, and continuing themselves in their posterity; and this gives children a title to share in the property of their parents, and a right to inherit their possessions. Men are not proprietors of what they have, merely for themselves; their children have a title to part of it, and have their kind of right joined with their parents, in the possession which comes to be wholly their's, when death, having put an end to their parents use of it, hath taken them from their possessions; and this we call inheritance: men being by a like obligation bound to preserve what they have begotten, as to preserve themselves, their issue come to have a right in the goods they are possessed of. That children have such a right, is plain from the laws of God; and that men are convinced that children have such a right, is evident from the law of the land; both which laws require parents to provide for their children.

§. 89.

For children being by the course of nature, born weak, and unable to provide for themselves, they have by the appointment of God himself, who hath thus ordered the course of nature, a right to be nourished and maintained by their parents; nay, a right not only to a bare subsistence, but to the conveniencies and comforts of life, as far as the conditions of their parents can afford it. Hence it comes, that when their parents leave the world, and so the care due to their children ceases, the effects of it are to extend as far as possibly they can, and the provisions they have made in their life-time, are understood to be intended, as nature requires they should,

for their children, whom, after themselves, they are bound to provide for: though the dying parents, by express words, declare nothing about them, nature appoints the descent of their property to their children, who thus come to have a title, and natural right of inheritance to their fathers goods, which the rest of mankind cannot pretend to.

§. 90.

Were it not for this right of being nourished and maintained by their parents, which God and nature has given to children, and obliged parents to as a duty, it would be reasonable, that the father should inherit the estate of his son, and be preferred in the inheritance before his grand-child: for to the grand-father there is due a long score of care and expences laid out upon the breeding and education of his son, which one would think in justice ought to be paid. But that having been done in obedience to the same law, whereby he received nourishment and education from his own parents; this score of education, received from a man's father, is paid by taking care, and providing for his own children; is paid, I say, as much as is required of payment by alteration of property, unless present necessity of the parents require a return of goods for their necessary support and subsistence: for we are not now speaking of that reverence, acknowledgment, respect and honour, that is always due from children to their parents; but of possessions and commodities of life valuable by money. But though it be incumbent on parents to bring up and provide for their children, yet this debt to their children does not quite cancel the score due to their parents; but only is made by nature preferable to it: for the debt a man owes his father takes place, and gives the father a right to inherit the son's goods, where, for want of issue, the right of children doth not exclude that title. And therefore a man having a right to be maintained by his children, where he needs it; and to enjoy also the comforts of life from them, when the necessary provision due to them and their children will afford it; if his son die without issue, the father has a right in nature to possess his goods, and inherit his estate, (whatever the municipal laws of some countries may absurdly direct otherwise;) and so again his children and their issue from him; or, for want of such, his father and his issue. But where no such are to be found, i. e. no kindred, there we see the possessions of a private man revert to the community, and so in politic societies come into the hands of the public

magistrate; but in the state of nature become again perfectly common, no body having a right to inherit them: nor can any one have a property in them, otherwise than in other things common by nature; of which I shall speak in its due place.

§. 91.

I have been the larger, in shewing upon what ground children have a right to succeed to the possession of their fathers properties, not only because by it, it will appear, that if Adam had a property (a titular, insignificant, useless property; for it could be no better, for he was bound to nourish and maintain his children and posterity out of it) in the whole earth and its product, yet all his children coming to have, by the law of nature, and right of inheritance, a joint title, and right of property in it after his death, it could convey no right of sovereignty to any one of his posterity over the rest: since every one having a right of inheritance to his portion, they might enjoy their inheritance, or any part of it in common, or share it, or some parts of it, by division, as it best liked them. But no one could pretend to the whole inheritance, or any sovereignty supposed to accompany it; since a right of inheritance gave every one of the rest, as well as any one, a title to share in the goods of his father. Not only upon this account, I say, have I been so particular in examining the reason of children's inheriting the property of their fathers, but also because it will give us farther light in the inheritance of rule and power, which in countries where their particular municipal laws give the whole possession of land entirely to the first-born, and descent of power has gone so to men by this custom, some have been apt to be deceived into an opinion, that there was a natural or divine right of primogeniture, to both estate and power; and that the inheritance of both rule over men, and property in things, sprang from the same original, and were to descend by the same rules.

§. 92.

Property, whose original is from the right a man has to use any of the inferior creatures, for the subsistence and comfort of his life, is for the benefit and sole advantage of the proprietor, so that he may even destroy the thing, that he has property in by his use of it, where need requires: but government being for the preservation of every man's right and property, by

preserving him from the violence or injury of others, is for the good of the governed: for the magistrate's sword being for a terror to evil doers, and by that terror to enforce men to observe the positive laws of the society, made conformable to the laws of nature, for the public good, i. e. the good of every particular member of that society, as far as by common rules it can be provided for; the sword is not given the magistrate for his own good alone.

§. 93.

Children therefore, as has been shewed, by the dependance they have on their parents for subsistence, have a right of inheritance to their fathers property, as that which belongs to them for their proper good and behoof, and therefore are fitly termed goods, wherein the first-born has not a sole or peculiar right by any law of God and nature, the younger children having an equal title with him, founded on that right they all have to maintenance, support, and comfort from their parents, and on nothing else. But government being for the benefit of the governed, and not the sole advantage of the governors, (but only for their's with the rest, as they make a part of that politic body, each of whose parts and members are taken care of, and directed in its peculiar functions for the good of the whole, by the laws of society) cannot be inherited by the same title, that children have to the goods of their father. The right a son has to be maintained and provided with the necessaries and conveniences of life out of his father's stock, gives him a right to succeed to his father's property for his own good; but this can give him no right to succeed also to the rule, which his father had over other men. All that a child has right to claim from his father is nourishment and education, and the things nature furnishes for the support of life: but he has no right to demand rule or dominion from him: he can subsist and receive from him the portion of good things, and advantages of education naturally due to him, without empire and dominion. That (if his father hath any) was vested in him, for the good and behoof of others: and therefore the son cannot claim or inherit it by a title, which is founded wholly on his own private good and advantage.

§. 94.

We must know how the first ruler, from whom any one claims, came by his authority, upon what ground any one has empire, what his title is to it,

before we can know who has a right to succeed him in it, and inherit it from him: if the agreement and consent of men first gave a scepter into any one's hand, or put a crown on his head, that also must direct its descent and conveyance; for the same authority, that made the first a lawful ruler, must make the second too, and so give right of succession: in this case inheritance, or primogeniture, can in its self have no right, no pretence to it, any farther than that consent, which established the form of the government, hath so settled the succession. And thus we see, the succession of crowns, in several countries, places it on different heads, and he comes by right of succession to be a prince in one place, who would be a subject in another.

§. 95.

If God, by his positive grant and revealed declaration, first gave rule and dominion to any man, he that will claim by that title, must have the same positive grant of God for his succession: for if that has not directed the course of its descent and conveyance down to others, no body can succeed to this title of the first ruler. Children have no right of inheritance to this; and primogeniture can lay no claim to it, unless God, the author of this constitution, hath so ordained it. Thus we see, the pretensions of Saul's family, who received his crown from the immediate appointment of God, ended with his reign; and David, by the same title that Saul reigned, viz. God's appointment, succeeded in his throne, to the exclusion of Jonathan, and all pretensions of paternal inheritance: and if Solomon had a right to succeed his father, it must be by some other title, than that of primogeniture. A cadet, or sister's son, must have the preference in succession, if he has the same title the first lawful prince had: and in dominion that has its foundation only in the positive appointment of God himself, Benjamin, the youngest, must have the inheritance of the crown, if God so direct, as well as one of that tribe had the first possession.

§. 96.

If paternal right, the act of begetting, give a man rule and dominion, inheritance or primogeniture can give no title: for he that cannot succeed to his father's title, which was begetting, cannot succeed to that power over his brethren, which his father had by paternal right over them. But of this I shall have occasion to say more in another place. This is plain in the mean time,

that any government, whether supposed to be at first founded in paternal right, consent of the people, or the positive appointment of God himself, which can supersede either of the other, and so begin a new government upon a new foundation; I say, any government began upon either of these, can by right of succession come to those only, who have the title of him they succeed to: power founded on contract can descend only to him, who has right by that contract: power founded on begetting, he only can have that begets; and power founded on the positive grant or donation of God, he only can have by right of succession, to whom that grant directs it.

§. 97.

From what I have said, I think this is clear, that a right to the use of the creatures, being founded originally in the right a man has to subsist and enjoy the conveniencies of life; and the natural right children have to inherit the goods of their parents, being founded in the right they have to the same subsistence and commodities of life, out of the stock of their parents, who are therefore taught by natural love and tenderness to provide for them, as a part of themselves; and all this being only for the good of the proprietor, or heir; it can be no reason for children's inheriting of rule and dominion, which has another original and a different end. Nor can primogeniture have any pretence to a right of solely inheriting either property or power, as we shall, in its due place, see more fully. It is enough to have shewed here, that Adam's property, or private dominion, could not convey any sovereignty or rule to his heir, who not having a right to inherit all his father's possessions, could not thereby come to have any sovereignty over his brethren: and therefore, if any sovereignty on account of his property had been vested in Adam, which in truth there was not, yet it would have died with him.

§. 98.

As Adam's sovereignty, if, by virtue of being proprietor of the world, he had any authority over men, could not have been inherited by any of his children over the rest, because they had the same title to divide the inheritance, and every one had a right to a portion of his father's possessions; so neither could Adam's sovereignty by right of fatherhood, if any such he had, descend to any one of his children: for it being, in our author's account, a right acquired by begetting to rule over those he had

begotten, it was not a power possible to be inherited, because the right being consequent to, and built on, an act perfectly personal, made that power so too, and impossible to be inherited: for paternal power, being a natural right rising only from the relation of father and son, is as impossible to be inherited as the relation itself; and a man may pretend as well to inherit the conjugal power the husband, whose heir he is, had over his wife, as he can to inherit the paternal power of a father over his children: for the power of the husband being founded on contract, and the power of the father on begetting, he may as well inherit the power obtained by the conjugal contract, which was only personal, as he may the power obtained by begetting, which could reach no farther than the person of the begetter, unless begetting can be a title to power in him that does not beget.

§. 99.

Which makes it a reasonable question to ask, whether Adam, dying before Eve, his heir, (suppose Cain or Seth) should have by right of inheriting Adam's fatherhood, sovereign power over Eve his mother: for Adam's fatherhood being nothing but a right he had to govern his children, because he begot them, he that inherits Adam's fatherhood, inherits nothing, even in our author's sense, but the right Adam had to govern his children, because he begot them: so that the monarchy of the heir would not have taken in Eve; or if it did, it being nothing but the fatherhood of Adam descended by inheritance, the heir must have right to govern Eve, because Adam begot her; for fatherhood is nothing else.

§. 100.

Perhaps it will be said with our author, that a man can alien his power over his child; and what may be transferred by compact, may be possessed by inheritance. I answer, a father cannot alien the power he has over his child: he may perhaps to some degrees forfeit it, but cannot transfer it; and if any other man acquire it, it is not by the father's grant, but by some act of his own. For example, a father, unnaturally careless of his child, sells or gives him to another man; and he again exposes him; a third man finding him, breeds up, cherishes, and provides for him as his own: I think in this case, no body will doubt, but that the greatest part of filial duty and subjection was here owing, and to be paid to this foster-father; and if any thing could

be demanded from the child, by either of the other, it could be only due to his natural father, who perhaps might have forfeited his right to much of that duty comprehended in the command, Honour your parents, but could transfer none of it to another. He that purchased, and neglected the child, got by his purchase and grant of the father, no title to duty or honour from the child; but only he acquired it, who by his own authority, performing the office and care of a father, to the forlorn and perishing infant, made himself, by paternal care, a title to proportionable degrees of paternal power. This will be more easily admitted upon consideration of the nature of paternal power, for which I refer my reader to the second book.

§. 101.

To return to the argument in hand; this is evident, That paternal power arising only from begetting, for in that our author places it alone, can neither be transferred nor inherited: and he that does not beget, can no more have paternal power, which arises from thence, than he can have a right to any thing, who performs not the condition, to which only it is annexed. If one should ask, by what law has a father power over his children? it will be answered, no doubt, by the law of nature, which gives such a power over them, to him that begets them. If one should ask likewise, by what law does our author's heir come by a right to inherit? I think it would be answered, by the law of nature too: for I find not that our author brings one word of scripture to prove the right of such an heir he speaks of. Why then the law of nature gives fathers paternal power over their children, because they did beget them; and the same law of nature gives the same paternal power to the heir over his brethren, who did not beget them: whence it follows, that either the father has not his paternal power by begetting, or else that the heir has it not at all; for it is hard to understand how the law of nature, which is the law of reason, can give the paternal power to the father over his children, for the only reason of begetting; and to the first-born over his brethren without this only reason, i. e. for no reason at all: and if the eldest, by the law of nature, can inherit this paternal power, without the only reason that gives a title to it, so may the youngest as well as he, and a stranger as well as either; for where there is no reason for any one, as there is not, but for him that begets, all have an equal title. I am sure our author offers no reason; and when any body does, we shall see whether it will hold or no.

§. 102.

In the mean time it is as good sense to say, that by the law of nature a man has right to inherit the property of another, because he is of kin to him, and is known to be of his blood; and therefore, by the same law of nature, an utter stranger to his blood has right to inherit his estate; as to say that, by the law of nature, he that begets them has paternal power over his children, and therefore, by the law of nature, the heir that begets them not, has this paternal power over them; or supposing the law of the land gave absolute power over their children, to such only who nursed them, and fed their children themselves, could any body pretend, that this law gave any one, who did no such thing, absolute power over those, who were not his children?

§. 103.

When therefore it can be shewed, that conjugal power can belong to him that is not an husband, it will also I believe be proved, that our author's paternal power, acquired by begetting, may be inherited by a son; and that a brother, as heir to his father's power, may have paternal power over his brethren, and by the same rule conjugal power too: but till then, I think we may rest satisfied, that the paternal power of Adam, this sovereign authority of fatherhood, were there any such, could not descend to, nor be inherited by, his next heir. Fatherly power, I easily grant our author, if it will do him any good, can never be lost, because it will be as long in the world as there are fathers: but none of them will have Adam's paternal power, or derive their's from him; but every one will have his own, by the same title Adam had his, viz. by begetting, but not by inheritance, or succession, no more than husbands have their conjugal power by inheritance from Adam. And thus we see, as Adam had no such property, no such paternal power, as gave him sovereign jurisdiction over mankind; so likewise his sovereignty built upon either of these titles, if he had any such, could not have descended to his heir, but must have ended with him. Adam therefore, as has been proved, being neither monarch, nor his imaginary monarchy hereditary, the power which is now in the world, is not that which was Adam's, since all that Adam could have upon our author's grounds, either of property or fatherhood, necessarily died with him, and could not be conveyed to

posterity by inheritance. In the next place we will consider, whether Adam had any such heir, to inherit his power, as our author talks of.

CHAPTER X. OF THE HEIR TO ADAM'S MONARCHICAL POWER.

§. 104.

OUR author tells us, Observations, 253. That it is a truth undeniable, that there cannot be any multitude of men whatsoever, either great or small, tho' gathered together from the several corners and remotest regions of the world, but that in the same multitude, considered by its self, there is one man amongst them, that in nature hath a right to be king of all the rest, as being the next heir to Adam, and all the other subjects to him: every man by nature is a king or a subject. And again, . If Adam himself were still living, and now ready to die, it is certain that there is one man, and but one in the world, who is next heir. Let this multitude of men be, if our author pleases, all the princes upon the earth, there will then be, by our author's rule, one amongst them, that in nature hath a right to be king of all the rest, as being the right heir to Adam; an excellent way to establish the thrones of princes, and settle the obedience of their subjects, by setting up an hundred, or perhaps a thousand titles (if there be so many princes in the world) against any king now reigning, each as good, upon our author's grounds, as his who wears the crown. If this right of heir carry any weight with it, if it be the ordinance of God, as our author seems to tell us, Observations, 244. must not all be subject to it, from the highest to the lowest? Can those who wear the name of princes, without having the right of being heirs to Adam, demand obedience from their subjects by this title, and not be bound to pay it by the same law? Either governments in the world are not to be claimed, and held by this title of Adam's heir; and then the starting of it is to no purpose, the being or not being Adam's heir signifies nothing as to the title of dominion: or if it really be, as our author says, the true title to government and sovereignty, the first thing to be done, is to find out this true heir of Adam, seat him in his throne, and then all the kings and princes of the world ought to come and resign up their crowns and scepters to him, as things that belong no more to them, than to any of their subjects.

§. 105.

For either this right in nature, of Adam's heir, to be king over all the race of men, (for all together they make one multitude) is a right not necessary to the making of a lawful king, and so there may be lawful kings without it, and then kings titles and power depend not on it; or else all the kings in the world but one are not lawful kings, and so have no right to obedience: either this title of heir to Adam is that whereby kings hold their crowns, and have a right to subjection from their subjects, and then one only can have it, and the rest being subjects can require no obedience from other men, who are but their fellow subjects; or else it is not the title whereby kings rule, and have a right to obedience from their subjects, and then kings are kings without it, and this dream of the natural sovereignty of Adam's heir is of no use to obedience and government: for if kings have a right to dominion, and the obedience of their subjects, who are not, nor can possibly be, heirs to Adam, what use is there of such a title, when we are obliged to obey without it? If kings, who are not heirs to Adam, have no right to sovereignty, we are all free, till our author, or any body for him, will shew us Adam's right heir. If there be but one heir of Adam, there can be but one lawful king in the world, and no body in conscience can be obliged to obedience till it be resolved who that is; for it may be any one, who is not known to be of a younger house, and all others have equal titles. If there be more than one heir of Adam, every one is his heir, and so every one has regal power: for if two sons can be heirs together, then all the sons are equally heirs, and so all are heirs, being all sons, or sons sons of Adam. Betwixt these two the right of heir cannot stand; for by it either but one only man, or all men are kings. Take which you please, it dissolves the bonds of government and obedience; since, if all men are heirs, they can owe obedience to no body; if only one, no body can be obliged to pay obedience to him, till he be known, and his title made out.

CHAPTER XI. WHO HEIR?

§. 106.

THE great question which in all ages has disturbed mankind, and brought on them the greatest part of those mischiefs which have ruined cities, depopulated countries, and disordered the peace of the world, has been, not whether there be power in the world, nor whence it came, but who should have it. The settling of this point being of no smaller moment than the security of princes, and the peace and welfare of their estates and kingdoms, a reformer of politics, one would think, should lay this sure, and be very clear in it: for if this remain disputable, all the rest will be to very little purpose; and the skill used in dressing up power with all the splendor and temptation absoluteness can add to it, without shewing who has a right to have it, will serve only to give a greater edge to man's natural ambition, which of its self is but too keen. What can this do but set men on the more eagerly to scramble, and so lay a sure and lasting foundation of endless contention and disorder, instead of that peace and tranquillity, which is the business of government, and the end of human society?

§. 107.

This designation of the person our author is more than ordinary obliged to take care of, because he, affirming that the assignment of civil power is by divine institution, hath made the conveyance as well as the power itself sacred: so that no consideration, no act or art of man, can divert it from that person, to whom, by this divine right, it is assigned; no necessity or contrivance can substitute another person in his room: for if the assignment of civil power be by divine institution, and Adam's heir be he to whom it is thus assigned, as in the foregoing chapter our author tells us, it would be as much sacrilege for any one to be king, who was not Adam's heir, as it would have been amongst the Jews, for any one to have been priest, who had not been of Aaron's posterity: for not only the priesthood in general being by divine institution, but the assignment of it to the sole line and posterity of Aaron, made it impossible to be enjoyed or exercised by any one, but those persons who were the off-spring of Aaron: whose succession

therefore was carefully observed, and by that the persons who had a right to the priesthood certainly known.

§. 108.

Let us see then what care our author has taken, to make us know who is this heir, who by divine institution has a right to be king over all men. The first account of him we meet with is, . in these words: This subjection of children, being the fountain of all regal authority, by the ordination of God himself; it follows, that civil power, not only in general, is by divine institution, but even the assignment of it, specifically to the eldest parents. Matters of such consequence as this is, should be in plain words, as little liable, as might be, to doubt or equivocation; and I think, if language be capable of expressing any thing distinctly and clearly, that of kindred, and the several degrees of nearness of blood, is one. It were therefore to be wished, that our author had used a little more intelligible expressions here, that we might have better known, who it is, to whom the assignment of civil power is made by divine institution; or at least would have told us what he meant by eldest parents: for I believe, if land had been assigned or granted to him, and the eldest parents of his family, he would have thought it had needed an interpreter; and it would scarce have been known to whom next it belonged.

§. 109.

In propriety of speech, (and certainly propriety of speech is necessary in a discourse of this nature) eldest parents signifies either the eldest men and women that have had children, or those who have longest had issue; and then our author's assertion will be, that those fathers and mothers, who have been longest in the world, or longest fruitful, have by divine institution a right to civil power. If there be any absurdity in this, our author must answer for it: and if his meaning be different from my explication, he is to be blamed, that he would not speak it plainly. This I am sure, parents cannot signify heirs male, nor eldest parents an infant child: who yet may sometimes be the true heir, if there can be but one. And we are hereby still as much at a loss, who civil power belongs to, notwithstanding this assignment by divine institution, as if there had been no such assignment at all, or our author had said nothing of it. This of eldest parents leaving us

more in the dark, who by divine institution has a right to civil power, than those who never heard any thing at all of heir, or descent, of which our author is so full. And though the chief matter of his writing be to teach obedience to those, who have a right to it, which he tells us is conveyed by descent, yet who those are, to whom this right by descent belongs, he leaves, like the philosophers stone in politics, out of the reach of any one to discover from his writings.

§. 110.

This obscurity cannot be imputed to want of language in so great a master of style as Sir Robert is, when he is resolved with himself what he would say: and therefore, I fear, finding how hard it would be to settle rules of descent by divine institution, and how little it would be to his purpose, or conduce to the clearing and establishing the titles of princes, if such rules of descent were settled, he chose rather to content himself with doubtful and general terms, which might make no ill found in mens ears, who were willing to be pleased with them, rather than offer any clear rules of descent of this fatherhood of Adam, by which men's consciences might be satisfied to whom it descended, and know the persons who had a right to regal power, and with it to their obedience.

§. 111.

How else is it possible, that laying so much stress, as he does, upon descent, and Adam's heir, next heir, true heir, he should never tell us what heir means, nor the way to know who the next or true heir is? This, I do not remember, he does any where expresly handle; but, where it comes in his way, very warily and doubtfully touches; though it be so necessary, that without it all discourses of government and obedience upon his principles would be to no purpose, and fatherly power, never so well made out, will be of no use to any body. Hence he tells us, Observations, 244. That not only the constitution of power in general, but the limitation of it to one kind, (i. e.) monarchy, and the determination of it to the individual person and line of Adam, are all three ordinances of God; neither Eve nor her children could either limit Adam's power, or join others with him; and what was given unto Adam was given in his person to his posterity. Here again our author informs us, that the divine ordinance hath limited the descent of

Adam's monarchical power. To whom? To Adam's line and posterity, says our author. A notable limitation, a limitation to all mankind: for if our author can find any one amongst mankind, that is not of the line and posterity of Adam, he may perhaps tell him, who this next heir of Adam is: but for us, I despair how this limitation of Adam's empire to his line and posterity will help us to find out one heir. This limitation indeed of our author will save those the labour, who would look for him amongst the race of brutes, if any such there were; but will very little contribute to the discovery of one next heir amongst men, though it make a short and easy determination of the question about the descent of Adam's regal power, by telling us, that the line and posterity of Adam is to have it, that is, in plain English, any one may have it, since there is no person living that hath not the title of being of the line and posterity of Adam; and while it keeps there, it keeps within our author's limitation by God's ordinance. Indeed, . he tells us, that such heirs are not only lords of their own children, but of their brethren; whereby, and by the words following, which we shall consider anon, he seems to insinuate, that the eldest son is heir; but he no where, that I know, says it in direct words, but by the instances of Cain and Jacob, that there follow, we may allow this to be so far his opinion concerning heirs, that where there are divers children, the eldest son has the right to be heir. That primogeniture cannot give any title to paternal power, we have already shewed. That a father may have a natural right to some kind of power over his children, is easily granted; but that an elder brother has so over his brethren, remains to be proved: God or nature has not any where, that I know, placed such jurisdiction in the first-born; nor can reason find any such natural superiority amongst brethren. The law of Moses gave a double portion of the goods and possessions to the eldest; but we find not any where that naturally, or by God's institution, superiority or dominion belonged to him, and the instances there brought by our author are but slender proofs of a right to civil power and dominion in the first-born, and do rather shew the contrary.

§. 112.

His words are in the forecited place: And therefore we find God told Cain of his brother Abel; his desire shall be subject unto thee, and thou shalt rule over him. To which I answer,

These words of God to Cain, are by many interpreters, with great reason, understood in a quite different sense than what our author uses them in.

Whatever was meant by them, it could not be, that Cain, as elder, had a natural dominion over Abel; for the words are conditional, If thou dost well; and so personal to Cain: and whatever was signified by them, did depend on his carriage, and not follow his birth-right; and therefore could by no means be an establishment of dominion in the first-born in general: for before this Abel had his distinct territories by right of private dominion, as our author himself confesses, Observations, 210. which he could not have had to the prejudice of the heirs title, if by divine institution, Cain as heir were to inherit all his father's dominion.

If this were intended by God as the charter of primogeniture, and the grant of dominion to elder brothers in general as such, by right of inheritance, we might expect it should have included all his brethren: for we may well suppose, Adam, from whom the world was to be peopled, had by this time, that these were grown up to be men, more sons than these two: whereas Abel himself is not so much as named; and the words in the original can scarce, with any good construction, be applied to him.

It is too much to build a doctrine of so mighty consequence upon so doubtful and obscure a place of scripture, which may be well, nay better, understood in a quite different sense, and so can be but an ill proof, being as doubtful as the thing to be proved by it; especially when there is nothing else in scripture or reason to be found, that favours or supports it.

§. 113.

It follows, . Accordingly when Jacob bought his brother's birth-right, Isaac blessed him thus; Be lord over thy brethren, and let the sons of thy mother bow before thee. Another instance, I take it, brought by our author to evince dominion due to birth-right, and an admirable one it is: for it must be no ordinary way of reasoning in a man, that is pleading for the natural power of kings, and against all compact, to bring for proof of it, an example, where his own account of it founds all the right upon compact, and settles empire in the younger brother, unless buying and selling be no compact; for he tells us, when Jacob bought his brother's birthright. But passing by that, let us consider the history itself, with what use our author makes of it, and we shall find these following mistakes about it.

That our author reports this, as if Isaac had given Jacob this blessing, immediately upon his purchasing the birth-right; for he says, when Jacob bought, Isaac blessed him; which is plainly otherwise in the scripture: for it appears, there was a distance of time between, and if we will take the story in the order it lies, it must be no small distance; all Isaac's sojourning in Gerar, and transactions with Abimelech, Gen. xxvi. coming between; Rebecca being then beautiful, and consequently young; but Isaac, when he blessed Jacob, was old and decrepit: and Esau also complains of Jacob, Gen. xxvii. 36. that two times he had supplanted him; He took away my birth-right, says he, and behold now he hath taken away my blessing; words, that I think signify distance of time and difference of action.

Another mistake of our author's is, that he supposes Isaac gave Jacob the blessing, and bid him be lord over his brethren, because he had the birth-right; for our author brings this example to prove, that he that has the birth-right, has thereby a right to be lord over his brethren. But it is also manifest by the text, that Isaac had no consideration of Jacob's having bought the birth-right; for when he blessed him, he considered him not as Jacob, but took him for Esau. Nor did Esau understand any such connection between birth-right and the blessing; for he says, He hath supplanted me these two times, he took away my birth-right, and behold now he hath taken away my blessing: whereas had the blessing, which was to be lord over his brethren, belonged to the birth-right, Esau could not have complained of this second, as a cheat, Jacob having got nothing but what Esau had sold him, when he sold him his birth-right; so that it is plain, dominion, if these words signify it, was not understood to belong to the birth-right.

§. 114.

And that in those days of the patriarchs, dominion was not understood to be the right of the heir, but only a greater portion of goods, is plain from Gen. xxi. 10. for Sarah, taking Isaac to be heir, says, Cast out this bondwoman and her son, for the son of this bondwoman shall not be heir with my son: whereby could be meant nothing, but that he should not have a pretence to an equal share of his father's estate after his death, but should have his portion presently, and be gone. Accordingly we read, Gen. xxv. 5, 6. That Abraham gave all that he had unto Isaac, but unto the sons of the concubines which Abraham had, Abraham gave gifts, and sent them away

from Isaac his son, while he yet lived. That is, Abraham having given portions to all his other sons, and sent them away, that which he had reserved, being the greatest part of his substance, Isaac as heir possessed after his death: but by being heir, he had no right to be lord over his brethren; for if he had, why should Sarah endeavour to rob him of one of his subjects, or lessen the number of his slaves, by desiring to have Ishmael sent away?

§. 115.

Thus, as under the law, the privilege of birth-right was nothing but a double portion: so we see that before Moses, in the patriarchs time, from whence our author pretends to take his model, there was no knowledge, no thought, that birth-right gave rule or empire, paternal or kingly authority, to any one over his brethren. If this be not plain enough in the story of Isaac and Ishmael, he that will look into 1 Chron. v. 12. may there read these words: Reuben was the first-born; but forasmuch as he defiled his father's bed, his birth-right was given unto the sons of Joseph, the son of Israel: and the genealogy is not to be reckoned after the birth-right; for Judah prevailed above his brethren, and of him came the chief ruler; but the birth-right was Joseph's. What this birth-right was, Jacob blessing Joseph, Gen. xlviii. 22. telleth us in these words, Moreover I have given thee one portion above thy brethren, which I took out of the hand of the Amorite, with my sword and with my bow. Whereby it is not only plain, that the birth-right was nothing but a double portion; but the text in Chronicles is express against our author's doctrine, and shews that dominion was no part of the birth-right; for it tells us, that Joseph had the birth-right, but Judah the dominion. One would think our author were very fond of the very name of birth-right, when he brings this instance of Jacob and Esau, to prove that dominion belongs to the heir over his brethren.

§. 116.

Because it will be but an ill example to prove, that dominion by God's ordination belonged to the eldest son, because Jacob the youngest here had it, let him come by it how he would: for if it prove any thing, it can only prove, against our author, that the assignment of dominion to the eldest is not by divine institution, which would then be unalterable: for if by the law

of God, or nature, absolute power and empire belongs to the eldest son and his heirs, so that they are supreme monarchs, and all the rest of their brethren slaves, our author gives us reason to doubt whether the eldest son has a power to part with it, to the prejudice of his posterity, since he tells us, *Observations*, 158. That in grants and gifts that have their original from God or nature, no inferior power of man can limit, or make any law of prescription against them.

§. 117.

Because this place, *Gen.* xxvii. 29. brought by our author, concerns not at all the dominion of one brother over the other, nor the subjection of Esau to Jacob: for it is plain in the history, that Esau was never subject to Jacob, but lived apart in mount Seir, where he founded a distinct people and government, and was himself prince over them, as much as Jacob was in his own family. This text, if considered, can never be understood of Esau himself, or the personal dominion of Jacob over him: for the words brethren and sons of thy mother, could not be used literally by Isaac, who knew Jacob had only one brother; and these words are so far from being true in a literal sense, or establishing any dominion in Jacob over Esau, that in the story we find the quite contrary, for *Gen.* xxxii. Jacob several times calls Esau lord, and himself his servant; and *Gen.* xxxiii. he bowed himself seven times to the ground to Esau. Whether Esau then were a subject and vassal (nay, as our author tells us, all subjects are slaves) to Jacob, and Jacob his sovereign prince by birth-right, I leave the reader to judge; and to believe if he can, that these words of Isaac, Be lord over thy brethren, and let thy mother's sons bow down to thee, confirmed Jacob in a sovereignty over Esau, upon the account of the birth-right he had got from him.

§. 118.

He that reads the story of Jacob and Esau, will find there was never any jurisdiction or authority, that either of them had over the other after their father's death: they lived with the friendship and equality of brethren, neither lord, neither slave to his brother; but independent each of other, were both heads of their distinct families, where they received no laws from one another, but lived separately, and were the roots out of which sprang two distinct people under two distinct governments. This blessing then of

Isaac, whereon our author would build the dominion of the elder brother, signifies no more, but what Rebecca had been told from God, Gen. xxv. 23. Two nations are in thy womb, and two manner of people shall be separated from thy bowels, and the one people shall be stronger than the other people, and the elder shall serve the younger; and so Jacob blessed Judah, Gen. xlix. and gave him the scepter and dominion, from whence our author might have argued as well, that jurisdiction and dominion belongs to the third son over his brethren, as well as from this blessing of Isaac, that it belonged to Jacob: both these places contain only predictions of what should long after happen to their posterities, and not any declaration of the right of inheritance to dominion in either. And thus we have our author's two great and only arguments to prove, that heirs are lords over their brethren.

Because God tells Cain, Gen. iv. that however sin might set upon him, he ought or might be master of it: for the most learned interpreters understood the words of sin, and not of Abel, and give so strong reasons for it, that nothing can convincingly be inferred, from so doubtful a text, to our author's purpose.

Because in this of Gen. xxvii. Isaac foretels that the Israelites, the posterity of Jacob, should have dominion over the Edomites, the posterity of Esau; therefore says our author, heirs are lords of their brethren: I leave any one to judge of the conclusion.

§. 119.

And now we see how our author has provided for the descending, and conveyance down of Adam's monarchical power, or paternal dominion to posterity, by the inheritance of his heir, succeeding to all his father's authority, and becoming upon his death as much lord as his father was, not only over his own children, but over his brethren, and all descended from his father, and so in infinitum. But yet who this heir is, he does not once tell us; and all the light we have from him in this so fundamental a point, is only, that in his instance of Jacob, by using the word birth-right, as that which passed from Esau to Jacob, he leaves us to guess, that by heir, he means the eldest son; though I do not remember he any where mentions expressly the title of the first-born, but all along keeps himself under the shelter of the indefinite term heir. But taking it to be his meaning, that the eldest son is heir, (for if the eldest be not, there will be no pretence why the

sons should not be all heirs alike) and so by right of primogeniture has dominion over his brethren; this is but one step towards the settlement of succession, and the difficulties remain still as much as ever, till he can shew us who is meant by right heir, in all those cases which may happen where the present possessor hath no son. This he silently passes over, and perhaps wisely too: for what can be wiser, after one has affirmed, that the person having that power, as well as the power and form of government, is the ordinance of God, and by divine institution, vid. Observations, 254. . than to be careful, not to start any question concerning the person, the resolution whereof will certainly lead him into a confession, that God and nature hath determined nothing about him? And if our author cannot shew who by right of nature, or a clear positive law of God, has the next right to inherit the dominion of this natural monarch he has been at such pains about, when he died without a son, he might have spared his pains in all the rest, it being more necessary for the settling men's consciences, and determining their subjection and allegiance, to shew them who by original right, superior and antecedent to the will, or any act of men, hath a title to this paternal jurisdiction, than it is to shew that by nature there was such a jurisdiction; it being to no purpose for me to know there is such a paternal power, which I ought, and am disposed to obey, unless, where there are many pretenders, I also know the person that is rightfully invested and endowed with it.

§. 120.

For the main matter in question being concerning the duty of my obedience, and the obligation of conscience I am under to pay it to him that is of right my lord and ruler, I must know the person that this right of paternal power resides in, and so impowers him to claim obedience from me: for let it be true what he says, . That civil power not only in general is by divine institution, but even the assignment of it specially to the eldest parents; and Observations, 254. That not only the power or right of government, but the form of the power of governing, and the person having that power, are all the ordinance of God; yet unless he shew us in all cases who is this person, ordained by God, who is this eldest parent; all his abstract notions of monarchical power will signify just nothing, when they are to be reduced to practice, and men are conscientiously to pay their obedience: for paternal jurisdiction being not the thing to be obeyed, because it cannot command,

but is only that which gives one man a right which another hath not, and if it come by inheritance, another man cannot have, to command and be obeyed; it is ridiculous to say, I pay obedience to the paternal power, when I obey him, to whom paternal power gives no right to my obedience: for he can have no divine right to my obedience, who cannot shew his divine right to the power of ruling over me, as well as that by divine right there is such a power in the world.

§. 121.

And hence not being able to make out any prince's title to government, as heir to Adam, which therefore is of no use, and had been better let alone, he is fain to resolve all into present possession, and makes civil obedience as due to an usurper, as to a lawful king; and thereby the usurper's title as good. His words are, *Observations*, 253. and they deserve to be remembered: If an usurper dispossess the true heir, the subjects obedience to the fatherly power must go along, and wait upon God's providence. But I shall leave his title of usurpers to be examined in its due place, and desire my sober reader to consider what thanks princes owe such politics as this, which can suppose paternal power (i. e.) a right to government in the hands of a Cade, or a Cromwell; and so all obedience being due to paternal power, the obedience of subjects will be due to them, by the same right, and upon as good grounds, as it is to lawful princes; and yet this, as dangerous a doctrine as it is, must necessarily follow from making all political power to be nothing else, but Adam's paternal power by right and divine institution, descending from him without being able to shew to whom it descended, or who is heir to it.

§. 122.

To settle government in the world, and to lay obligations to obedience on any man's conscience, it is as necessary (supposing with our author that all power be nothing but the being possessed of Adam's fatherhood) to satisfy him, who has a right to this power, this fatherhood, when the possessor dies without sons to succeed immediately to it, as it was to tell him, that upon the death of the father, the eldest son had a right to it: for it is still to be remembered, that the great question is, (and that which our author would be thought to contend for, if he did not sometimes forget it) what persons have

a right to be obeyed, and not whether there be a power in the world, which is to be called paternal, without knowing in whom it resides: for so it be a power, i. e. right to govern, it matters not, whether it be termed paternal or regal, natural or acquired; whether you call it supreme fatherhood, or supreme brotherhood, will be all one, provided we know who has it.

§. 123.

I go on then to ask, whether in the inheriting of this paternal power, this supreme fatherhood, the grandson by a daughter hath a right before a nephew by a brother? Whether the grandson by the eldest son, being an infant, before the younger son, a man and able? Whether the daughter before the uncle? or any other man, descended by a male line? Whether a grandson by a younger daughter, before a grand-daughter by an elder daughter? Whether the elder son by a concubine, before a younger son by a wife? From whence also will arise many questions of legitimation, and what in nature is the difference betwixt a wife and a concubine? for as to the municipal or positive laws of men, they can signify nothing here. It may farther be asked, Whether the eldest son, being a fool, shall inherit this paternal power, before the younger, a wise man? and what degree of folly it must be that shall exclude him? and who shall be judge of it? Whether the son of a fool, excluded for his folly, before the son of his wise brother who reigned? Who has the paternal power whilst the widow-queen is with child by the deceased king, and no body knows whether it will be a son or a daughter? Which shall be heir of the two male-twins, who by the dissection of the mother were laid open to the world? Whether a sister by the half blood, before a brother's daughter by the whole blood?

§. 124.

These, and many more such doubts, might be proposed about the titles of succession, and the right of inheritance; and that not as idle speculations, but such as in history we shall find have concerned the inheritance of crowns and kingdoms; and if our's want them, we need not go farther for famous examples of it, than the other kingdom in this very island, which having been fully related by the ingenious and learned author of *Patriarcha non Monarcha*, I need say no more of. Till our author hath resolved all the doubts that may arise about the next heir, and shewed that they are plainly

determined by the law of nature, or the revealed law of God, all his suppositions of a monarchical, absolute, supreme, paternal power in Adam, and the descent of that power to his heirs, would not be of the least use to establish the authority, or make out the title, of any one prince now on earth; but would rather unsettle and bring all into question: for let our author tell us as long as he pleases, and let all men believe it too, that Adam had a paternal, and thereby a monarchical power; that this (the only power in the world) descended to his heirs; and that there is no other power in the world but this: let this be all as clear demonstration, as it is manifest error, yet if it be not past doubt, to whom this paternal power descends, and whose now it is, no body can be under any obligation of obedience, unless any one will say, that I am bound to pay obedience to paternal power in a man who has no more paternal power than I myself; which is all one as to say, I obey a man, because he has a right to govern; and if I be asked, how I know he has a right to govern, I should answer, it cannot be known, that he has any at all: for that cannot be the reason of my obedience, which I know not to be so; much less can that be a reason of my obedience, which no body at all can know to be so.

§. 125.

And therefore all this ado about Adam's fatherhood, the greatness of its power, and the necessity of its supposal, helps nothing to establish the power of those that govern, or to determine the obedience of subjects who are to obey, if they cannot tell whom they are to obey, or it cannot be known who are to govern, and who to obey. In the state the world is now, it is irrecoverably ignorant, who is Adam's heir. This fatherhood, this monarchical power of Adam, descending to his heirs, would be of no more use to the government of mankind, than it would be to the quieting of mens consciences, or securing their healths, if our author had assured them, that Adam had a power to forgive sins, or cure diseases, which by divine institution descended to his heir, whilst this heir is impossible to be known. And should not he do as rationally, who upon this assurance of our author went and confessed his sins, and expected a good absolution; or took physic with expectation of health, from any one who had taken on himself the name of priest or physician, or thrust himself into those employments, saying, I acquiesce in the absolving power descending from Adam, or I

shall be cured by the medicinal power descending from Adam; as he who says, I submit to and obey the paternal power descending from Adam, when it is confessed all these powers descend only to his single heir, and that heir is unknown?

§. 126.

It is true, the civil lawyers have pretended to determine some of these cases concerning the succession of princes; but by our author's principles, they have meddled in a matter that belongs not to them: for if all political power be derived only from Adam, and be to descend only to his successive heirs, by the ordinance of God and divine institution, this is a right antecedent and paramount to all government; and therefore the positive laws of men cannot determine that, which is itself the foundation of all law and government, and is to receive its rule only from the law of God and nature. And that being silent in the case, I am apt to think there is no such right to be conveyed this way: I am sure it would be to no purpose if there were, and men would be more at a loss concerning government, and obedience to governors, than if there were no such right; since by positive laws and compact, which divine institution (if there be any) shuts out, all these endless inextricable doubts can be safely provided against: but it can never be understood, how a divine natural right, and that of such moment as is all order and peace in the world, should be conveyed down to posterity, without any plain natural or divine rule concerning it. And there would be an end of all civil government, if the assignment of civil power were by divine institution to the heir, and yet by that divine institution the person of the heir could not be known. This paternal regal power being by divine right only his, it leaves no room for human prudence, or consent, to place it any where else; for if only one man hath a divine right to the obedience of mankind, no body can claim that obedience, but he that can shew that right; nor can men's consciences by any other pretence be obliged to it. And thus this doctrine cuts up all government by the roots.

§. 127.

Thus we see how our author, laying it for a sure foundation, that the very person that is to rule, is the ordinance of God, and by divine institution, tells us at large, only that this person is the heir, but who this heir is, he leaves us

to guess; and so this divine institution, which assigns it to a person whom we have no rule to know, is just as good as an assignment to no body at all. But whatever our author does, divine institution makes no such ridiculous assignments: nor can God be supposed to make it a sacred law, that one certain person should have a right to something, and yet not give rules to mark out, and know that person by, or give an heir a divine right to power, and yet not point out who that heir is. It is rather to be thought, that an heir had no such right by divine institution, than that God should give such a right to the heir, but yet leave it doubtful and undeterminable who such heir is.

§. 128.

If God had given the land of Canaan to Abraham, and in general terms to some body after him, without naming his seed, whereby it might be known who that somebody was, it would have been as good and useful an assignment, to determine the right to the land of Canaan, as it would be the determining the right of crowns, to give empire to Adam and his successive heirs after him, without telling who his heir is: for the word heir, without a rule to know who it is, signifies no more than some body, I know not whom. God making it a divine institution, that men should not marry those who were near of kin, thinks it not enough to say, None of you shall approach to any that is near of kin to him, to uncover their nakedness; but moreover, gives rules to know who are those near of kin, forbidden by divine institution; or else that law would have been of no use, it being to no purpose to lay restraint, or give privileges to men, in such general terms, as the particular person concerned cannot be known by. But God not having any where said, the next heir shall inherit all his father's estate or dominion, we are not to wonder, that he hath no where appointed who that heir should be; for never having intended any such thing, never designed any heir in that sense, we cannot expect he should any where nominate, or appoint any person to it, as we might, had it been otherwise. And therefore in scripture, though the word heir occur, yet there is no such thing as heir in our author's sense, one that was by right of nature to inherit all that his father had, exclusive of his brethren. Hence Sarah supposes, that if Ishmael staid in the house, to share in Abraham's estate after his death, this son of a bond-woman might be heir with Isaac; and therefore, says she, cast out this bond-

woman and her son, for the son of this bond-woman shall not be heir with my son: but this cannot excuse our author, who telling us there is, in every number of men, one who is right and next heir to Adam, ought to have told us what the laws of descent are: but he having been so sparing to instruct us by rules, how to know who is heir, let us see in the next place, what his history out of scripture, on which he pretends wholly to build his government, gives us in this necessary and fundamental point.

§. 129.

Our author, to make good the title of his book, . begins his history of the descent of Adam's regal power, . in these words: This lordship which Adam by command had over the whole world, and by right descending from him, the patriarchs did enjoy, was a large, &c. How does he prove that the patriarchs by descent did enjoy it? for dominion of life and death, says he, we find Judah the father pronounced sentence of death against Thamar his daughter in law for playing the harlot, . How does this prove that Judah had absolute and sovereign authority? he pronounced sentence of death. The pronouncing of sentence of death is not a certain mark of sovereignty, but usually the office of inferior magistrates. The power of making laws of life and death is indeed a mark of sovereignty, but pronouncing the sentence according to those laws may be done by others, and therefore this will but ill prove that he had sovereign authority: as if one should say, Judge Jefferies pronounced sentence of death in the late times, therefore Judge Jefferies had sovereign authority. But it will be said, Judah did it not by commission from another, and therefore did it in his own right. Who knows whether he had any right at all? Heat of passion might carry him to do that which he had no authority to do. Judah had dominion of life and death: how does that appear? He exercised it, he pronounced sentence of death against Thamar: our author thinks it is very good proof, that because he did it, therefore he had a right to do it: he lay with her also: by the same way of proof, he had a right to do that too. If the consequence be good from doing to a right of doing, Absalom too may be reckoned amongst our author's sovereigns, for he pronounced such a sentence of death against his brother Amnon, and much upon a like occasion, and had it executed too, if that be sufficient to prove a dominion of life and death.

But allowing this all to be clear demonstration of sovereign power, who was it that had this lordship by right descending to him from Adam, as large and ample as the absolutest dominion of any monarch? Judah, says our author, Judah a younger son of Jacob, his father and elder brethren living; so that if our author's own proof be to be taken, a younger brother may, in the life of his father and elder brothers, by right of descent, enjoy Adam's monarchical power; and if one so qualified may be monarch by descent, why may not every man? if Judah, his father and elder brother living, were one of Adam's heirs, I know not who can be excluded from this inheritance; all men by inheritance may be monarchs as well as Judah.

§. 130.

Touching war, we see that Abraham commanded an army of 318 soldiers of his own family, and Esau met his brother Jacob with 400 men at arms: for matter of peace, Abraham made a league with Abimelech, &c. . Is it not possible for a man to have 318 men in his family, without being heir to Adam? A planter in the West Indies has more, and might, if he pleased, (who doubts?) muster them up and lead them out against the Indians, to seek reparation upon any injury received from them; and all this without the absolute dominion of a monarch, descending to him from Adam. Would it not be an admirable argument to prove, that all power by God's institution descended from Adam by inheritance, and that the very person and power of this planter were the ordinance of God, because he had power in his family over servants, born in his house, and bought with his money? For this was just Abraham's case; those who were rich in the patriarch's days, as in the West Indies now, bought men and maid servants, and by their increase, as well as purchasing of new, came to have large and numerous families, which though they made use of in war or peace, can it be thought the power they had over them was an inheritance descended from Adam, when it was the purchase of their money? A man's riding in an expedition against an enemy, his horse bought in a fair would be as good a proof that the owner enjoyed the lordship which Adam by command had over the whole world, by right descending to him, as Abraham's leading out the servants of his family is, that the patriarchs enjoyed this lordship by descent from Adam: since the title to the power, the master had in both cases, whether over slaves or horses, was only from his purchase; and the getting a

dominion over any thing by bargain and money, is a new way of proving one had it by descent and inheritance.

§. 131.

But making war and peace are marks of sovereignty. Let it be so in politic societies: may not therefore a man in the West Indies, who hath with him sons of his own, friends, or companions, soldiers under pay, or slaves bought with money, or perhaps a band made up of all these, make war and peace, if there should be occasion, and ratify the articles too with an oath, without being a sovereign, an absolute king over those who went with him? He that says he cannot, must then allow many masters of ships, many private planters, to be absolute monarchs, for as much as this they have done. War and peace cannot be made for politic societies, but by the supreme power of such societies; because war and peace, giving a different motion to the force of such a politic body, none can make war or peace, but that which has the direction of the force of the whole body, and that in politic societies is only the supreme power. In voluntary societies for the time, he that has such a power by consent, may make war and peace, and so may a single man for himself, the state of war not consisting in the number of partisans, but the enmity of the parties, where they have no superior to appeal to.

§. 132.

The actual making of war or peace is no proof of any other power, but only of disposing those to exercise or cease acts of enmity for whom he makes it; and this power in many cases any one may have without any politic supremacy: and therefore the making of war or peace will not prove that every one that does so is a politic ruler, much less a king; for then common-wealths must be kings too, for they do as certainly make war and peace as monarchical government.

§. 133.

But granting this a mark of sovereignty in Abraham, is it a proof of the descent to him of Adam's sovereignty over the whole world? If it be, it will surely be as good a proof of the descent of Adam's lordship to others too. And then common-wealths, as well as Abraham, will be heirs of Adam, for

they make war and peace, as well as he. If you say, that the lordship of Adam doth not by right descend to common-wealths, though they make war and peace, the same say I of Abraham, and then there is an end of your argument: if you stand to your argument, and say those that do make war and peace, as common-wealths do without doubt, do inherit Adam's lordship, there is an end of your monarchy, unless you will say, that commonwealths by descent enjoying Adam's lordship are monarchies; and that indeed would be a new way of making all the governments in the world monarchical.

§. 134.

To give our author the honour of this new invention, for I confess it is not I have first found it out by tracing his principles, and so charged it on him, it is fit my readers know that (as absurd as it may seem) he teaches it himself, . where he ingenuously says, In all kingdoms and common-wealths in the world, whether the prince be the supreme father of the people, or but the true heir to such a father, or come to the crown by usurpation or election, or whether some few or a multitude govern the common-wealth; yet still the authority that is in any one, or in many, or in all these, is the only right, and natural authority of a supreme father; which right of fatherhood, he often tells us, is regal and royal authority; as particularly, . the page immediately preceding this instance of Abraham. This regal authority, he says, those that govern common-wealths have; and if it be true, that regal and royal authority be in those that govern common-wealths, it is as true that common-wealths are governed by kings; for if regal authority be in him that governs, he that governs must needs be a king, and so all common-wealths are nothing but down-right monarchies; and then what need any more ado about the matter? The governments of the world are as they should be, there is nothing but monarchy in it. This, without doubt, was the surest way our author could have found, to turn all other governments, but monarchical, out of the world.

§. 135.

But all this scarce proves Abraham to have been a king as heir to Adam. If by inheritance he had been king, Lot, who was of the same family, must needs have been his subject, by that title, before the servants in his family;

but we see they lived as friends and equals, and when their herdsmen could not agree, there was no pretence of jurisdiction or superiority between them, but they parted by consent, Gen. xiii. hence he is called both by Abraham, and by the text, Abraham's brother, the name of friendship and equality, and not of jurisdiction and authority, though he were really but his nephew. And if our author knows that Abraham was Adam's heir, and a king, it was more, it seems, than Abraham himself knew, or his servant whom he sent a wooing for his son; for when he sets out the advantages of the match, xxiv. Gen. 35. thereby to prevail with the young woman and her friends, he says, I am Abraham's servant, and the lord hath blessed my master greatly, and he is become great; and he hath given him flocks and herds, and silver and gold, and men-servants and maid-servants, and camels and asses; and Sarah, my master's wife, bare a son to my master when she was old, and unto him hath he given all he hath. Can one think that a discreet servant, that was thus particular to set out his master's greatness, would have omitted the crown Isaac was to have, if he had known of any such? Can it be imagined he should have neglected to have told them on such an occasion as this, that Abraham was a king, a name well known at that time, for he had nine of them his neighbours, if he or his master had thought any such thing, the likeliest matter of all the rest, to make his errand successful?

§. 136.

But this discovery it seems was reserved for our author to make 2 or 3000 years after, and let him enjoy the credit of it; only he should have taken care that some of Adam's land should have descended to this his heir, as well as all Adam's lordship: for though this lordship which Abraham, (if we may believe our author) as well as the other patriarchs, by right descending to him, did enjoy, was as large and ample as the absolutest dominion of any monarch which hath been since the creation; yet his estate, his territories, his dominions were very narrow and scanty, for he had not the possession of a foot of land, till he bought a field and a cave of the sons of Heth to bury Sarah in.

§. 137.

The instance of Esau joined with this of Abraham, to prove that the lordship which Adam had over the whole world, by right descending from him, the

patriarchs did enjoy, is yet more pleasant than the former. Esau met his brother Jacob with 400 men at arms; he therefore was a king by right of heir to Adam. Four hundred armed men then, however got together, are enough to prove him that leads them, to be a king and Adam's heir. There have been tories in Ireland, (whatever there are in other countries) who would have thanked our author for so honourable an opinion of them, especially if there had been no body near with a better title of 500 armed men, to question their royal authority of 400. It is a shame for men to trifle so, to say no worse of it, in so serious an argument. Here Esau is brought as a proof that Adam's lordship, Adam's absolute dominion, as large as that of any monarch, descended by right to the patriarchs, and in this very chap. . Jacob is brought as an instance of one, that by birth-right was lord over his brethren. So we have here two brothers absolute monarchs by the same title, and at the same time heirs to Adam; the eldest, heir to Adam, because he met his brother with 400 men; and the youngest, heir to Adam by birth-right: Esau enjoyed the lordship which Adam had over the whole world by right descending to him, in as large and ample manner, as the absolutest dominion of any monarch; and at the same time, Jacob lord over him, by the right heirs have to be lords over their brethren. *Risum teneatis?* I never, I confess, met with any man of parts so dexterous as Sir Robert at this way of arguing: but it was his misfortune to light upon an hypothesis, that could not be accommodated to the nature of things, and human affairs; his principles could not be made to agree with that constitution and order, which God had settled in the world, and therefore must needs often clash with common sense and experience.

§. 138.

In the next section, he tells us, This patriarchal power continued not only till the flood, but after it, as the name patriarch doth in part prove. The word patriarch doth more than in part prove, that patriarchal power continued in the world as long as there were patriarchs, for it is necessary that patriarchal power should be whilst there are patriarchs; as it is necessary there should be paternal or conjugal power whilst there are fathers or husbands; but this is but playing with names. That which he would fallaciously insinuate is the thing in question to be proved, viz. that the lordship which Adam had over the world, the supposed absolute universal dominion of Adam by right

descending from him, the patriarchs did enjoy. If he affirms such an absolute monarchy continued to the flood, in the world, I would be glad to know what records he has it from; for I confess I cannot find a word of it in my Bible: if by patriarchal power he means any thing else, it is nothing to the matter in hand. And how the name patriarch in some part proves, that those, who are called by that name, had absolute monarchical power, I confess, I do not see, and therefore I think needs no answer till the argument from it be made out a little clearer.

§. 139.

The three sons of Noah had the world, says our author, divided amongst them by their father, for of them was the whole world overspread, . The world might be overspread by the offspring of Noah's sons, though he never divided the world amongst them; for the earth might be replenished without being divided: so that all our author's argument here proves no such division. However, I allow it to him, and then ask, the world being divided amongst them, which of the three was Adam's heir? If Adam's lordship, Adam's monarchy, by right descended only to the eldest, then the other two could be but his subjects, his slaves: if by right it descended to all three brothers, by the same right, it will descend to all mankind; and then it will be impossible what he says, . that heirs are lords of their brethren, should be true; but all brothers, and consequently all men, will be equal and independent, all heirs to Adam's monarchy, and consequently all monarchs too, one as much as another. But it will be said, Noah their father divided the world amongst them; so that our author will allow more to Noah, than he will to God almighty, for Observations, 211. he thought it hard, that God himself should give the world to Noah and his sons, to the prejudice of Noah's birth-right: his words are, Noah was left sole heir to the world: why should it be thought that God would disinherit him of his birth-right, and make him, of all men in the world, the only tenant in common with his children? and yet here he thinks it fit that Noah should disinherit Shem of his birth-right, and divide the world betwixt him and his brethren; so that this birth-right, when our author pleases, must, and when he pleases must not, be sacred and inviolable.

§. 140.

If Noah did divide the world between his sons, and his assignment of dominions to them were good, there is an end of divine institution; all our author's discourse of Adam's heir, with whatsoever he builds on it, is quite out of doors; the natural power of kings falls to the ground; and then the form of the power governing, and the person having that power, will not be (as he says they are, *Observations*, 254.) the ordinance of God, but they will be ordinances of man: for if the right of the heir be the ordinance of God, a divine right, no man, father or not father, can alter it: if it be not a divine right, it is only human, depending on the will of man: and so where human institution gives it not, the first-born has no right at all above his brethren; and men may put government into what hands, and under what form, they please.

§. 141.

He goes on, Most of the civilest nations of the earth labour to fetch their original from some of the sons, or nephews of Noah, . How many do most of the civilest nations amount to? and who are they? I fear the Chineses, a very great and civil people, as well as several other people of the East, West, North and South, trouble not themselves much about this matter. All that believe the Bible, which I believe are our author's most of the civilest nations, must necessarily derive themselves from Noah; but for the rest of the world, they think little of his sons or nephews. But if the heralds and antiquaries of all nations, for it is these men generally that labour to find out the originals of nations, or all the nations themselves, should labour to fetch their original from some of the sons or nephews of Noah, what would this be to prove, that the lordship which Adam had over the whole world, by right descended to the patriarchs? Whoever, nations, or races of men, labour to fetch their original from, may be concluded to be thought by them, men of renown, famous to posterity, for the greatness of their virtues and actions; but beyond these they look not, nor consider who they were heirs to, but look on them as such as raised themselves, by their own virtue, to a degree that would give a lustre to those who in future ages could pretend to derive themselves from them. But if it were Ogyges, Hercules, Brama, Tamberlain, Pharamond; nay, if Jupiter and Saturn were the names, from whence divers races of men, both ancient and modern, have laboured to derive their original; will that prove, that those men enjoyed the lordship of Adam, by

right descending to them? If not, this is but a flourish of our author's to mislead his reader, that in itself signifies nothing.

§. 142.

To as much purpose is what he tells us, . concerning this division of the world, That some say it was by Lot, and others that Noah sailed round the Mediterreanean in ten years, and divided the world into Asia, Afric and Europe, portions for his three sons. America then, it seems, was left to be his that could catch it. Why our author takes such pains to prove the division of the world by Noah to his sons, and will not leave out an imagination, though no better than a dream, that he can find any where to favour it, is hard to guess, since such a division, if it prove any thing, must necessarily take away the title of Adam's heir; unless three brothers can all together be heirs of Adam; and therefore the following words, Howsoever the manner of this division be uncertain, yet it is most certain the division itself was by families from Noah and his children, over which the parents were heads and princes, . if allowed him to be true, and of any sorce to prove, that all the power in the world is nothing but the lordship of Adam's descending by right, they will only prove, that the fathers of the children are all heirs to this lordship of Adam: for if in those days Cham and Japhet, and other parents, besides the eldest son, were heads and princes over their families, and had a right to divide the earth by families, what hinders younger brothers, being fathers of families, from having the same right? If Cham and Japhet were princes by right descending to them, notwithstanding any title of heir in their eldest brother, younger brothers by the same right descending to them are princes now; and so all our author's natural power of kings will reach no farther than their own children, and no kingdom, by this natural right, can be bigger than a family: for either this lordship of Adam over the whole world, by right descends only to the eldest son, and then there can be but one heir, as our author says, . or else, it by right descends to all the sons equally, and then every father of a family will have it, as well as the three sons of Noah: take which you will, it destroys the present governments and kingdoms, that are now in the world, since whoever has this natural power of a king, by right descending to him, must have it, either as our author tells us Cain had it, and be lord over his brethren, and so be alone king of the whole world; or else, as he tells us

here, Shem, Cham and Japhet had it, three brothers, and so be only prince of his own family, and all families independent one of another: all the world must be only one empire by the right of the next heir, or else every family be a distinct government of itself, by the lordship of Adam's descending to parents of families. And to this only tend all the proofs he here gives us of the descent of Adam's lordship: for continuing his story of this descent, he says,

§. 143.

In the dispersion of Babel, we must certainly find the establishment of royal power, throughout the kingdoms of the world, . If you must find it, pray do, and you will help us to a new piece of history: but you must shew it us before we shall be bound to believe, that regal power was established in the world upon your principles: for, that regal power was established in the kingdoms of the world, I think no body will dispute; but that there should be kingdoms in the world, whose several kings enjoyed their crowns, by right descending to them from Adam, that we think not only apocryphal, but also utterly impossible. If our author has no better foundation for his monarchy than a supposition of what was done at the dispersion of Babel, the monarchy he erects thereon, whose top is to reach to heaven to unite mankind, will serve only to divide and scatter them as that tower did; and, instead of establishing civil government and order in the world, will produce nothing but confusion.

§. 144.

For he tells us, the nations they were divided into, were distinct families, which had fathers for rulers over them; whereby it appears, that even in the confusion, God was careful to preserve the fatherly authority, by distributing the diversity of languages according to the diversity of families, . It would have been a hard matter for any one but our author to have found out so plainly, in the text he here brings, that all the nations in that dispersion were governed by fathers, and that God was careful to preserve the fatherly authority. The words of the text are; These are the sons of Shem after their families, after their tongues in their lands, after their nations; and the same thing is said of Cham and Japhet, after an enumeration of their posterities; in all which there is not one word said of their governors, or

forms of government; of fathers, or fatherly authority. But our author, who is very quick sighted to spy out fatherhood, where no body else could see any the least glimpses of it, tells us positively their rulers were fathers, and God was careful to preserve the fatherly authority; and why? Because those of the same family spoke the same language, and so of necessity in the division kept together. Just as if one should argue thus: Hanibal in his army, consisting of divers nations, kept those of the same language together; therefore fathers were captains of each band, and Hanibal was careful of the fatherly authority: or in peopling of Carolina, the English, French, Scotch and Welch that are there, plant themselves together, and by them the country is divided in their lands after their tongues, after their families, after their nations; therefore care was taken of the fatherly authority: or because, in many parts of America, every little tribe was a distinct people, with a different language, one should infer, that therefore God was careful to preserve the fatherly authority, or that therefore their rulers enjoyed Adam's lordship by right descending to them, though we know not who were their governors, nor what their form of government, but only that they were divided into little independent societies, speaking different languages.

§. 145.

The scripture says not a word of their rulers or forms of government, but only gives an account, how mankind came to be divided into distinct languages and nations; and therefore it is not to argue from the authority of scripture, to tell us positively, fathers were their rulers, when the scripture says no such thing; but to set up fancies of one's own brain, when we confidently aver matter of fact, where records are utterly silent. Upon a like ground, i. e. none at all, he says, That they were not confused multitudes without heads and governors, and at liberty to choose what governors or governments they pleased.

§. 146.

For I demand, when mankind were all yet of one language, all congregated in the plain of Shinar, were they then all under one monarch, who enjoyed the lordship of Adam by right descending to him? If they were not, there were then no thoughts, it is plain, of Adam's heir, no right to government known then upon that title; no care taken, by God or man, of Adam's

fatherly authority. If when mankind were but one people, dwelt all together, and were of one language, and were upon building a city together; and when it was plain, they could not but know the right heir, for Shem lived till Isaac's time, a long while after the division at Babel; if then, I say, they were not under the monarchical government of Adam's fatherhood, by right descending to the heir, it is plain there was no regard had to the fatherhood, no monarchy acknowledged due to Adam's heir, no empire of Shem's in Asia, and consequently no such division of the world by Noah, as our author has talked of. As far as we can conclude any thing from scripture in this matter, it seems from this place, that if they had any government, it was rather a common-wealth than an absolute monarchy: for the scripture tells us, Gen. xi. They said: it was not a prince commanded the building of this city and tower, it was not by the command of one monarch, but by the consultation of many, a free people; let us build us a city: they built it for themselves as free-men, not as slaves for their lord and master: that we be not scattered abroad; having a city once built, and fixed habitations to settle our abodes and families. This was the consultation and design of a people, that were at liberty to part asunder, but desired to keep in one body, and could not have been either necessary or likely in men tied together under the government of one monarch, who if they had been, as our author tells us, all slaves under the absolute dominion of a monarch, needed not have taken such care to hinder themselves from wandering out of the reach of his dominion. I demand whether this be not plainer in scripture than any thing of Adam's heir or fatherly authority?

§. 147.

But if being, as God says, Gen. xi. 6. one people, they had one ruler, one king by natural right, absolute and supreme over them, what care had God to preserve the paternal authority of the supreme fatherhood, if on a sudden he suffer 72 (for so many our author talks of) distinct nations to be erected out of it, under distinct governors, and at once to withdraw themselves from the obedience of their sovereign? This is to intitle God's care how, and to what we please. Can it be sense to say, that God was careful to preserve the fatherly authority in those who had it not? for if these were subjects under a supreme prince, what authority had they? Was it an instance of God's care to preserve the fatherly authority, when he took away the true supreme

fatherhood of the natural monarch? Can it be reason to say, that God, for the preservation of fatherly authority, lets several new governments with their governors start up, who could not all have fatherly authority? And is it not as much reason to say, that God is careful to destroy fatherly authority, when he suffers one, who is in possession of it, to have his government torn in pieces, and shared by several of his subjects? Would it not be an argument just like this, for monarchical government, to say, when any monarchy was shattered to pieces, and divided amongst revolted subjects, that God was careful to preserve monarchical power, by rending a settled empire into a multitude of little governments? If any one will say, that what happens in providence to be preserved, God is careful to preserve as a thing therefore to be esteemed by men as necessary or useful, it is a peculiar propriety of speech, which every one will not think fit to imitate: but this I am sure is impossible to be either proper, or true speaking, that Shem, for example, (for he was then alive,) should have fatherly authority, or sovereignty by right of fatherhood, over that one people at Babel, and that the next moment, Shem yet living, 72 others should have fatherly authority, or sovereignty by right of fatherhood, over the same people, divided into so many distinct governments: either these 72 fathers actually were rulers, just before the confusion, and then they were not one people, but that God himself says they were; or else they were a common-wealth, and then where was monarchy? or else these 72 fathers had fatherly authority, but knew it not. Strange! that fatherly authority should be the only original of government amongst men, and yet all mankind not know it; and stranger yet, that the confusion of tongues should reveal it to them all of a sudden, that in an instant these 72 should know that they had fatherly power, and all others know that they were to obey it in them, and every one know that particular fatherly authority to which he was a subject. He that can think this arguing from scripture, may from thence make out what model of an Eutopia will best suit with his fancy or interest; and this fatherhood, thus disposed of, will justify both a prince who claims an universal monarchy, and his subjects, who, being fathers of families, shall quit all subjection to him, and canton his empire into less governments for themselves; for it will always remain a doubt in which of these the fatherly authority resided, till our author resolves us, whether Shem, who was then alive, or these 72 new princes, beginning so many new empires in his dominions, and over his subjects, had right to govern, since our author tells us, that both one and the

other had fatherly, which is supreme authority, and are brought in by him as instances of those who did enjoy the lordships of Adam by right descending to them, which was as large and ample as the absolute dominion of any monarch. This at least is unavoidable, that if God was careful to preserve the fatherly authority, in the 72 new-erected nations, it necessarily follows, that he was as careful to destroy all pretences of Adam's heir; since he took care, and therefore did preserve the fatherly authority in so many, at least 71, that could not possibly be Adam's heirs, when the right heir (if God had ever ordained any such inheritance) could not but be known, Shem then living, and they being all one people.

§. 148.

Nimrod is his next instance of enjoying this patriarchal power, . but I know not for what reason our author seems a little unkind to him, and says, that he against right enlarged his empire, by seizing violently on the rights of other lords of families. These lords of families here were called fathers of families, in his account of the dispersion at Babel: but it matters not how they were called, so we know who they are; for this fatherly authority must be in them, either as heirs to Adam, and so there could not be 72, nor above one at once; or else as natural parents over their children, and so every father will have paternal authority over his children by the same right, and in as large extent as those 72 had, and so be independent princes over their own offspring. Taking his lords of families in this later sense, (as it is hard to give those words any other sense in this place) he gives us a very pretty account of the original of monarchy, in these following words, . And in this sense he may be said to be the author and founder of monarchy, viz. As against right seizing violently on the rights of fathers over their children; which paternal authority, if it be in them, by right of nature, (for else how could those 72 come by it?) no body can take from them without their own consents; and then I desire our author and his friends to consider, how far this will concern other princes, and whether it will not, according to his conclusion of that paragraph, resolve all regal power of those, whose dominions extend beyond their families, either into tyranny and usurpation, or election and consent of fathers of families, which will differ very little from consent of the people.

All his instances, in the next section, . of the 12 dukes of Edom, the nine kings in a little corner of Asia in Abraham's days, the 31 kings in Canaan destroyed by Joshua, and the care he takes to prove that these were all sovereign princes, and that every town in those days had a king, are so many direct proofs against him, that it was not the lordship of Adam by right descending to them, that made kings: for if they had held their royalties by that title, either there must have been but one sovereign over them all, or else every father of a family had been as good a prince, and had as good a claim to royalty, as these: for if all the sons of Esau had each of them, the younger as well as the eldest, the right of fatherhood, and so were sovereign princes after their fathers death, the same right had their sons after them, and so on to all posterity; which will limit all the natural power of fatherhood, only to be over the issue of their own bodies, and their descendents; which power of fatherhood dies with the head of each family, and makes way for the like power of fatherhood to take place in each of his sons over their respective posterities: whereby the power of fatherhood will be preserved indeed, and is intelligible, but will not be at all to our author's purpose. None of the instances he brings are proofs of any power they had, as heirs of Adam's paternal authority by the title of his fatherhood descending to them; no, nor of any power they had by virtue of their own: for Adam's fatherhood being over all mankind, it could descend but to one at once, and from him to his right heir only, and so there could by that title be but one king in the world at a time: and by right of fatherhood, not descending from Adam, it must be only as they themselves were fathers, and so could be over none but their own posterity. So that if those 12 dukes of Edom; if Abraham and the nine kings his neighbours; if Jacob and Esau, and the 31 kings in Canaan, the 72 kings mutilated by Adonibeseck, the 32 kings that came to Benhadad, the 70 kings of Greece making war at Troy, were, as our author contends, all of them sovereign princes; it is evident that kings derived their power from some other original than fatherhood, since some of these had power over more than their own posterity; and it is demonstration, they could not be all heirs to Adam: for I challenge any man to make any pretence to power by right of fatherhood, either intelligible or possible in any one, otherwise, than either as Adam's heir, or as progenitor over his own descendents, naturally sprung from him. And if our author

could shew that any one of these princes, of which he gives us here so large a catalogue, had his authority by either of these titles, I think I might yield him the cause; though it is manifest they are all impertinent, and directly contrary to what he brings them to prove, viz. That the lordship which Adam had over the world by right descended to the patriarchs.

§. 150.

Having told us, , That the patriarchal government continued in Abraham, Isaac, and Jacob, until the Egyptian bondage, . he tells us, By manifest footsteps we may trace this paternal government unto the Israelites coming into Egypt, where the exercise of supreme patriarchal government was intermitted, because they were in subjection to a stronger prince. What these footsteps are of paternal government, in our author's sense, i. e. of absolute monarchical power descending from Adam, and exercised by right of fatherhood, we have seen, that is for 2290 years no footsteps at all; since in all that time he cannot produce any one example of any person who claimed or exercised regal authority by right of fatherhood; or shew any one who being a king was Adam's heir: all that his proofs amount to, is only this, that there were fathers, patriarchs and kings, in that age of the world; but that the fathers and patriarchs had any absolute arbitrary power, or by what titles those kings had their's, and of what extent it was, the scripture is wholly filent; it is manifest by right of fatherhood they neither did, nor could claim any title to dominion and empire.

§. 151.

To say, that the exercise of supreme patriarchal government was intermitted, because they were in subjection to a stronger prince, proves nothing but what I before suspected, viz. That patriarchal jurisdiction or government is a fallacious expression, and does not in our author signify (what he would yet insinuate by it) paternal and regal power, such an absolute sovereignty as he supposes was in Adam.

§. 152.

For how can he say that patriarchal jurisdiction was intermitted in Egypt, where there was a king, under whose regal government the Israelites were,

if patriarchal were absolute monarchical jurisdiction? And if it were not, but something else, why does he make such ado about a power not in question, and nothing to the purpose? The exercise of patriarchal jurisdiction, if patriarchal be regal, was not intermitted whilst the Israelites were in Egypt. It is true, the exercise of regal power was not then in the hands of any of the promised seed of Abraham, nor before neither that I know; but what is that to the intermission of regal authority, as descending from Adam, unless our author will have it, that this chosen line of Abraham had the right of inheritance to Adam's lordship? and then to what purpose are his instances of the 72 rulers, in whom the fatherly authority was preserved in the confusion at Babel? Why does he bring the 12 princes sons of Ismael; and the dukes of Edom, and join them with Abraham, Isaac, and Jacob, as examples of the exercise of true patriarchal government, if the exercise of patriarchal jurisdiction were intermitted in the world, whenever the heirs of Jacob had not supreme power? I fear, supreme patriarchal jurisdiction was not only intermitted, but from the time of the Egyptian bondage quite lost in the world, since it will be hard to find, from that time downwards, any one who exercised it as an inheritance descending to him from the patriarchs Abraham, Isaac, and Jacob. I imagined monarchical government would have served his turn in the hands of Pharaoh, or any body. But one cannot easily discover in all places what his discourse tends to, as particularly in this place it is not obvious to guess what he drives at, when he says, the exercise of supreme patriarchal jurisdiction in Egypt, or how this serves to make out the descent of Adam's lordship to the patriarchs, or any body else.

§. 153.

For I thought he had been giving us out of scripture, proofs and examples of monarchical government, founded on paternal authority, descending from Adam; and not an history of the Jews: amongst whom yet we find no kings, till many years after they were a people: and when kings were their rulers, there is not the least mention or room for a pretence that they were heirs to Adam, or kings by paternal authority. I expected, talking so much as he does of scripture, that he would have produced thence a series of monarchs, whose titles were clear to Adam's fatherhood, and who, as heirs to him, owned and exercised paternal jurisdiction over their subjects, and that this was the true patriarchal government; whereas he neither proves, that the

patriarchs were kings; nor that either kings or patriarchs were heirs to Adam, or so much as pretended to it: and one may as well prove, that the patriarchs were all absolute monarchs; that the power both of patriarchs and kings was only paternal; and that this power descended to them from Adam: I say all these propositions may be as well proved by a confused account of a multitude of little kings in the West-Indies, out of Ferdinando Soto, or any of our late histories of the Northern America, or by our author's 70 kings of Greece, out of Homer, as by any thing he brings out of scripture, in that multitude of kings he has reckoned up.

§. 154.

And methinks he should have let Homer and his wars of Troy alone, since his great zeal to truth or monarchy carried him to such a pitch of transport against philosophers and poets, that he tells us in his preface, that there are too many in these days, who please themselves in running after the opinions of philosophers and poets, to find out such an original of government, as might promise them some title to liberty, to the great scandal of Christianity, and bringing in of atheism. And yet these heathens, philosopher Aristotle, and poet Homer, are not rejected by our zealous Christian politician, whenever they offer any thing that seems to serve his turn; whether to the great scandal of Christianity and bringing in of atheism, let him look. This I cannot but observe, in authors who it is visible write not for truth, how ready zeal for interest and party is to entitle Christianity to their designs, and to charge atheism on those who will not without examining submit to their doctrines, and blindly swallow their nonsense.

But to return to his scripture history, our author farther tells us, . that after the return of the Israelites out of bondage, God, out of a special care of them, chose Moses and Joshua successively to govern as princes in the place and stead of the supreme fathers. If it be true, that they returned out of bondage, it must be into a state of freedom, and must imply, that both before and after this bondage they were free, unless our author will say, that changing of masters is returning out of bondage; or that a slave returns out of bondage, when he is removed from one gally to another. If then they returned out of bondage, it is plain that in those days, whatever our author in his preface says to the contrary, there were difference between a son, a subject, and a slave; and that neither the patriarchs before, nor their rulers

after this Egyptian bondage, numbered their sons or subjects amongst their possessions, and disposed of them with as absolute a dominion, as they did their other goods.

§. 155.

This is evident in Jacob, to whom Reuben offered his two sons as pledges; and Judah was at last surety for Benjamin's safe return out of Egypt: which all had been vain, superfluous, and but a sort of mockery, if Jacob had had the same power over every one of his family, as he had over his ox or his ass, as an owner over his substance; and the offers that Reuben or Judah made had been such a security for returning of Benjamin, as if a man should take two lambs out of his lord's flock, and offer one as security, that he will safely restore the other.

§. 156.

When they were out of this bondage, what then? God out of a special care of them, the Israelites. It is well that once in his book he will allow God to have any care of the people; for in other places he speaks of mankind, as if God had no care of any part of them, but only of their monarchs, and that the rest of the people, the societies of men, were made as so many herds of cattle, only for the service, use, and pleasure of their princes.

§. 157.

Chose Moses and Joshua successively to govern as princes; a shrewd argument our author has found out to prove God's care of the fatherly authority, and Adam's heirs, that here, as an expression of his care of his own people, he chooses those for princes over them, that had not the least pretence to either. The persons chosen were, Moses of the tribe of Levi, and Joshua of the tribe of Ephraim, neither of which had any title of fatherhood. But says our author, they were in the place and stead of the supreme fathers. If God had any where as plainly declared his choice of such fathers to be rulers, as he did of Moses and Joshua, we might believe Moses and Joshua were in their place and stead: but that being the question in debate, till that be better proved, Moses being chosen by God to be ruler of his people, will no more prove that government belonged to Adam's heir, or to the fatherhood, than God's choosing Aaron of the tribe of Levi to be priest, will

prove that the priesthood belonged to Adam's heir, or the prime fathers; since God would choose Aaron to be priest, and Moses ruler in Israel, though neither of those offices were settled on Adam's heir, or the fatherhood.

§. 158.

Our author goes on, and after them likewise for a time he raised up judges, to defend his people in time of peril, . This proves fatherly authority to be the original of government, and that it descended from Adam to his heirs, just as well as what went before: only here our author seems to confess, that these judges, who were all the governors they then had, were only men of valour, whom they made their generals to defend them in time of peril; and cannot God raise up such men, unless fatherhood have a title to government?

But says our author, when God gave the Israelites kings, he re-established the ancient and prime right of lineal succession to paternal government, .

§. 160.

How did God re-establish it? by a law, a positive command? We find no such thing. Our author means then, that when God gave them a king, in giving them a king, he re-established the right, &c. To re-establish *de facto* the right of lineal succession to paternal government, is to put a man in possession of that government which his fathers did enjoy, and he by lineal succession had a right to: for, first, if it were another government than what his ancestors had, it was not succeeding to an ancient right, but beginning a new one: for if a prince should give a man, besides his antient patrimony, which for some ages his family had been disseized of, an additional estate, never before in the possession of his ancestors, he could not be said to re-establish the right of lineal succession to any more than what had been formerly enjoyed by his ancestors. If therefore the power the kings of Israel had, were any thing more than Isaac or Jacob had, it was not the re-establishing in them the right of succession to a power, but giving them a new power, however you please to call it, paternal or not: and whether Isaac and Jacob had the same power that the kings of Israel had, I desire any one,

by what has been above said, to consider; and I do not think they will find, that either Abraham, Isaac, or Jacob, had any regal power at all.

§. 161.

Next, there can be no re-establishment of the prime and ancient right of lineal succession to any thing, unless he, that is put in possession of it, has the right to succeed, and be the true and next heir to him he succeeds to. Can that be a re-establishment, which begins in a new family? or that the re-establishment of an ancient right of lineal succession, when a crown is given to one, who has no right of succession to it, and who, if the lineal succession had gone on, had been out of all possibility of pretence to it? Saul, the first king God gave the Israelites, was of the tribe of Benjamin. Was the ancient and prime right of lineal succession re-established in him? The next was David, the youngest son of Jesse, of the posterity of Judah, Jacob's third son. Was the ancient and prime right of lineal succession to paternal government re-established in him? or in Solomon, his younger son and successor in the throne? or in Jereboam over the ten tribes? or in Athaliah, a woman who reigned six years an utter stranger to the royal blood? If the ancient and prime right of lineal succession to paternal government were re-established in any of these or their posterity, the ancient and prime right of lineal succession to paternal government belongs to younger brothers as well as elder, and may be re-established in any man living; for whatever younger brothers, by ancient and prime right of lineal succession, may have as well as the elder, that every man living may have a right to, by lineal succession, and Sir Robert as well as any other. And so what a brave right of lineal succession, to his paternal or regal government, our author has re-established, for the securing the rights and inheritance of crowns, where every one may have it, let the world consider.

§. 162.

But says our author however, . Whensoever God made choice of any special person to be king, he intended that the issue also should have benefit thereof, as being comprehended sufficiently in the person of the father, altho' the father was only named in the grant. This yet will not help out succession; for if, as our author says, the benefit of the grant be intended to the issue of the grantee, this will not direct the succession; since, if God

give any thing to a man and his issue in general, the claim cannot be to any one of that issue in particular; every one that is of his race will have an equal right. If it be said, our author meant heir, I believe our author was as willing as any body to have used that word, if it would have served his turn: but Solomon, who succeeded David in the throne, being no more his heir than Jeroboham, who succeeded him in the government of the ten tribes, was his issue, our author had reason to avoid saying, That God intended it to the heirs, when that would not hold in a succession, which our author could not except against; and so he has left his succession as undetermined, as if he had said nothing about it: for if the regal power be given by God to a man and his issue, as the land of Canaan was to Abraham and his seed, must they not all have a title to it, all share in it? And one may as well say, that by God's grant to Abraham and his seed, the land of Canaan was to belong only to one of his seed exclusive of all others, as by God's grant of dominion to a man and his issue, this dominion was to belong in peculiar to one of his issue exclusive of all others.

§. 163.

But how will our author prove that whensoever God made choice of any special person to be a king, he intended that the (I suppose he means his) issue also should have benefit thereof? has he so soon forgot Moses and Joshua, whom in this very section, he says, God out of a special care chose to govern as princes, and the judges that God raised up? Had not these princes, having the authority of the supreme fatherhood, the same power that the kings had; and being specially chosen by God himself, should not their issue have the benefit of that choice, as well as David's or Solomon's? If these had the paternal authority put into their hands immediately by God, why had not their issue the benefit of this grant in a succession to this power? or if they had it as Adam's heirs, why did not their heirs enjoy it after them by right descending to them? for they could not be heirs to one another. Was the power the same, and from the same original, in Moses, Joshua and the Judges, as it was in David and the Kings; and was it inheritable in one, and not in the other? If it was not paternal authority, then God's own people were governed by those that had not paternal authority, and those governors did well enough without it: if it were paternal authority, and God chose the persons that were to exercise it, our author's rule fails,

that whensoever God makes choice of any person to be supreme ruler (for I suppose the name king has no spell in it, it is not the title, but the power makes the difference) he intends that the issue also should have the benefit of it, since from their coming out of Egypt to David's time, 400 years, the issue was never so sufficiently comprehended in the person of the father, as that any son, after the death of his father, succeeded to the government amongst all those judges that judged Israel. If, to avoid this, it be said, God always chose the person of the successor, and so, transferring the fatherly authority to him, excluded his issue from succeeding to it, that is manifestly not so in the story of Jephtha, where he articted with the people, and they made him judge over them, as is plain, Judg. 11.

§. 164.

It is in vain then to say, that whensoever God chooses any special person to have the exercise of paternal authority, (for if that be not to be king, I desire to know the difference between a king and one having the exercise of paternal authority) he intends the issue also should have the benefit of it, since we find the authority, the judges had, ended with them, and descended not to their issue; and if the judges had not paternal authority, I fear it will trouble our author, or any of the friends to his principles, to tell who had then the paternal authority, that is, the government and supreme power amongst the Israelites; and I suspect they must confess that the chosen people of God continued a people several hundreds of years, without any knowledge or thought of this paternal authority, or any appearance of monarchical government at all.

§. 165.

To be satisfied of this, he need but read the story of the Levite, and the war thereupon with the Benjamites, in the three last chapters of Judges; and when he finds, that the Levite appeals to the people for justice that it was the tribes and the congregation, that debated, resolved, and directed all that was done on that occasion; he must conclude, either that God was not careful to preserve the fatherly authority amongst his own chosen people; or else that the fatherly authority may be preserved, where there is no monarchical government: if the latter, then it will follow, that though fatherly authority be never so well proved, yet it will not infer a necessity of

monarchical government; if the former, it will seem very strange and improbable, that God should ordain fatherly authority to be so sacred amongst the sons of men, that there could be no power, or government without it, and yet that amongst his own people, even whilst he is providing a government for them, and therein prescribes rules to the several states and relations of men, this great and fundamental one, this most material and necessary of all the rest, should be concealed, and lie neglected for 400 years after.

§. 166.

Before I leave this, I must ask how our author knows that whensoever God makes choice of any special person to be king, he intends that the issue should have the benefit thereof? Does God by the law of nature or revelation say so? By the same law also he must say, which of his issue must enjoy the crown in succession, and so point out the heir, or else leave his issue to divide or scramble for the government: both alike absurd, and such as will destroy the benefit of such grant to the issue. When any such declaration of God's intention is produced, it will be our duty to believe God intends it so; but till that be done, our author must shew us some better warrant, before we shall be obliged to receive him as the authentic revealer of God's intentions.

§. 167.

The issue, says our author, is comprehended sufficiently in the person of the father, although the father only was named in the grant: and yet God, when he gave the land of Canaan to Abraham, Gen. xiii. 15. thought fit to put his seed into the grant too: so the priesthood was given to Aaron and his seed; and the crown God gave not only to David, but his seed also: and however our author assures us that God intends, that the issue should have the benefit of it, when he chooses any person to be king, yet we see that the kingdom which he gave to Saul, without mentioning his seed after him, never came to any of his issue: and why, when God chose a person to be king, he should intend, that his issue should have the benefit of it, more than when he chose one to be judge in Israel, I would fain know a reason; or why does a grant of fatherly authority to a king more comprehend the issue, than when a like grant is made to a judge? Is paternal authority by right to descend to the

issue of one, and not of the other? There will need some reason to be shewn of this difference, more than the name, when the thing given is the same fatherly authority, and the manner of giving it, God's choice of the person, the same too; for I suppose our author, when he says, God raised up judges, will by no means allow, they were chosen by the people.

§. 168.

But since our author has so confidently assured us of the care of God to preserve the fatherhood, and pretends to build all he says upon the authority of the scripture, we may well expect that that people, whose law, constitution and history is chiefly contained in the scripture, should furnish him with the clearest instances of God's care of preserving the fatherly authority, in that people who it is agreed he had a most peculiar care of. Let us see then what state this paternal authority or government was in amongst the Jews, from their beginning to be a people. It was omitted, by our author's confession, from their coming into Egypt, till their return out of that bondage, above 200 years: from thence till God gave the Israelites a king, about 400 years more, our author gives but a very slender account of it; nor indeed all that time are there the least footsteps of paternal or regal government amongst them. But then says our author, God re-established the ancient and prime right of lineal succession to paternal government.

§. 169.

What a lineal succession to paternal government was then established, we have already seen. I only now consider how long this lasted, and that was to their captivity, about 500 years: from thence to their destruction by the Romans, above 650 years after, the ancient and prime right of lineal succession to paternal government was again lost, and they continued a people in the promised land without it. So that of 1750 years that they were God's peculiar people, they had hereditary kingly government amongst them not one third of the time; and of that time there is not the least footstep of one moment of paternal government, nor the re-establishment of the ancient and prime right of lineal succession to it, whether we suppose it to be derived, as from its fountain, from David, Saul, Abraham, or, which upon our author's principles is the only true, from Adam.

BOOK II. OF CIVIL-GOVERNMENT

CHAPTER I.

§. 1.

It having been shewn in the foregoing discourse,

That Adam had not, either by natural right of fatherhood, or by positive donation from God, any such authority over his children, or dominion over the world, as is pretended:

That if he had, his heirs, yet, had no right to it:

That if his heirs had, there being no law of nature nor positive law of God that determines which is the right heir in all cases that may arise, the right of succession, and consequently of bearing rule, could not have been certainly determined:

That if even that had been determined, yet the knowledge of which is the eldest line of Adam's posterity, being so long since utterly lost, that in the races of mankind and families of the world, there remains not to one above another, the least pretence to be the eldest house, and to have the right of inheritance:

All these premises having, as I think, been clearly made out, it is impossible that the rulers now on earth should make any benefit, or derive any the least shadow of authority from that, which is held to be the fountain of all power, Adam's private dominion and paternal jurisdiction; so that he that will not give just occasion to think that all government in the world is the product only of force and violence, and that men live together by no other rules but that of beasts, where the strongest carries it, and so lay a foundation for perpetual disorder and mischief, tumult, sedition and rebellion, (things that the followers of that hypothesis so loudly cry out against) must of necessity find out another rise of government, another original of political power, and another way of designing and knowing the persons that have it, than what Sir Robert Filmer hath taught us.

§. 2.

To this purpose, I think it may not be amiss, to set down what I take to be political power; that the power of a magistrate over a subject may be distinguished from that of a father over his children, a master over his servant, a husband over his wife, and a lord over his slave. All which

distinct powers happening sometimes together in the same man, if he be considered under these different relations, it may help us to distinguish these powers one from another, and shew the difference betwixt a ruler of a common-wealth, a father of a family, and a captain of a galley.

§. 3.

Political power, then, I take to be a right of making laws with penalties of death, and consequently all less penalties, for the regulating and preserving of property, and of employing the force of the community, in the execution of such laws, and in the defence of the common-wealth from foreign injury; and all this only for the public good.

CHAPTER II. OF THE STATE OF NATURE.

§. 4.

TO understand political power right, and derive it from its original, we must consider, what state all men are naturally in, and that is, a state of perfect freedom to order their actions, and dispose of their possessions and persons, as they think fit, within the bounds of the law of nature, without asking leave, or depending upon the will of any other man.

A state also of equality, wherein all the power and jurisdiction is reciprocal, no one having more than another; there being nothing more evident, than that creatures of the same species and rank, promiscuously born to all the same advantages of nature, and the use of the same faculties, should also be equal one amongst another without subordination or subjection, unless the lord and master of them all should, by any manifest declaration of his will, set one above another, and confer on him, by an evident and clear appointment, an undoubted right to dominion and sovereignty.

§. 5.

This equality of men by nature, the judicious Hooker looks upon as so evident in itself, and beyond all question, that he makes it the foundation of that obligation to mutual love amongst men, on which he builds the duties they owe one another, and from whence he derives the great maxims of justice and charity. His words are,

The like natural inducement hath brought men to know that it is no less their duty, to love others than themselves; for seeing those things which are equal, must needs all have one measure; if I cannot but wish to receive good, even as much at every man's hands, as any man can wish unto his own soul, how should I look to have any part of my desire herein satisfied, unless myself be careful to satisfy the like desire, which is undoubtedly in other men, being of one and the same nature? To have any thing offered them repugnant to this desire, must needs in all respects grieve them as much as me; so that if I do harm, I must look to suffer, there being no reason that others should shew greater measure of love to me, than they

have by me shewed unto them: my desire therefore to be loved of my equals in nature, as much as possible may be, imposeth upon me a natural duty of bearing to them-ward fully the like affection; from which relation of equality between ourselves and them that are as ourselves, what several rules and canons natural reason hath drawn, for direction of life, no man is ignorant. Eccl. Pol. Lib. 1.

§. 6.

But though this be a state of liberty, yet it is not a state of licence: though man in that state have an uncontrollable liberty to dispose of his person or possessions, yet he has not liberty to destroy himself, or so much as any creature in his possession, but where some nobler use than its bare preservation calls for it. The state of nature has a law of nature to govern it, which obliges every one: and reason, which is that law, teaches all mankind, who will but consult it, that being all equal and independent, no one ought to harm another in his life, health, liberty, or possessions: for men being all the workmanship of one omnipotent, and infinitely wise maker; all the servants of one sovereign master, sent into the world by his order, and about his business; they are his property, whose workmanship they are, made to last during his, not one another's pleasure: and being furnished with like faculties, sharing all in one community of nature, there cannot be supposed any such subordination among us, that may authorize us to destroy one another, as if we were made for one another's uses, as the inferior ranks of creatures are for our's. Every one, as he is bound to preserve himself, and not to quit his station wilfully, so by the like reason, when his own preservation comes not in competition, ought he, as much as he can, to preserve the rest of mankind, and may not, unless it be to do justice on an offender, take away, or impair the life, or what tends to the preservation of the life, the liberty, health, limb, or goods of another.

§. 7.

And that all men may be restrained from invading others rights, and from doing hurt to one another, and the law of nature be observed, which willeth the peace and preservation of all mankind, the execution of the law of nature is, in that state, put into every man's hands, whereby every one has a right to punish the transgressors of that law to such a degree, as may hinder

its violation: for the law of nature would, as all other laws that concern men in this world, be in vain, if there were no body that in the state of nature had a power to execute that law, and thereby preserve the innocent and restrain offenders. And if any one in the state of nature may punish another for any evil he has done, every one may do so: for in that state of perfect equality, where naturally there is no superiority or jurisdiction of one over another, what any may do in prosecution of that law, every one must needs have a right to do.

§. 8.

And thus, in the state of nature, one man comes by a power over another; but yet no absolute or arbitrary power, to use a criminal, when he has got him in his hands, according to the passionate heats, or boundless extravagancy of his own will; but only to retribute to him, so far as calm reason and conscience dictate, what is proportionate to his transgression, which is so much as may serve for reparation and restraint: for these two are the only reasons, why one man may lawfully do harm to another, which is that we call punishment. In transgressing the law of nature, the offender declares himself to live by another rule than that of reason and common equity, which is that measure God has set to the actions of men, for their mutual security; and so he becomes dangerous to mankind, the tie, which is to secure them from injury and violence, being slighted and broken by him. Which being a trespass against the whole species, and the peace and safety of it, provided for by the law of nature, every man upon this score, by the right he hath to preserve mankind in general, may restrain, or where it is necessary, destroy things noxious to them, and so may bring such evil on any one, who hath transgressed that law, as may make him repent the doing of it, and thereby deter him, and by his example others, from doing the like mischief. And in this case, and upon this ground, every man hath a right to punish the offender, and be executioner of the law of nature.

§. 9.

I doubt not but this will seem a very strange doctrine to some men: but before they condemn it, I desire them to resolve me, by what right any prince or state can put to death, or punish an alien, for any crime he commits in their country. It is certain their laws, by virtue of any sanction

they receive from the promulgated will of the legislative, reach not a stranger: they speak not to him, nor, if they did, is he bound to hearken to them. The legislative authority, by which they are in force over the subjects of that common-wealth, hath no power over him. Those who have the supreme power of making laws in England, France or Holland, are to an Indian, but like the rest of the world, men without authority: and therefore, if by the law of nature every man hath not a power to punish offences against it, as he soberly judges the case to require, I see not how the magistrates of any community can punish an alien of another country; since, in reference to him, they can have no more power than what every man naturally may have over another.

§. 10.

Besides the crime which consists in violating the law, and varying from the right rule of reason, whereby a man so far becomes degenerate, and declares himself to quit the principles of human nature, and to be a noxious creature, there is commonly injury done to some person or other, and some other man receives damage by his transgression: in which case he who hath received any damage, has, besides the right of punishment common to him with other men, a particular right to seek reparation from him that has done it: and any other person, who finds it just, may also join with him that is injured, and assist him in recovering from the offender so much as may make satisfaction for the harm he has suffered.

§. 11.

From these two distinct rights, the one of punishing the crime for restraint, and preventing the like offence, which right of punishing is in every body; the other of taking reparation, which belongs only to the injured party, comes it to pass that the magistrate, who by being magistrate hath the common right of punishing put into his hands, can often, where the public good demands not the execution of the law, remit the punishment of criminal offences by his own authority, but yet cannot remit the satisfaction due to any private man for the damage he has received. That, he who has suffered the damage has a right to demand in his own name, and he alone can remit: the damnified person has this power of appropriating to himself the goods or service of the offender, by right of self-preservation, as every

man has a power to punish the crime, to prevent its being committed again, by the right he has of preserving all mankind, and doing all reasonable things he can in order to that end: and thus it is, that every man, in the state of nature, has a power to kill a murderer, both to deter others from doing the like injury, which no reparation can compensate, by the example of the punishment that attends it from every body, and also to secure men from the attempts of a criminal, who having renounced reason, the common rule and measure God hath given to mankind, hath, by the unjust violence and slaughter he hath committed upon one, declared war against all mankind, and therefore may be destroyed as a lion or a tyger, one of those wild savage beasts, with whom men can have no society nor security: and upon this is grounded that great law of nature, Whoso sheddeth man's blood, by man shall his blood be shed. And Cain was so fully convinced, that every one had a right to destroy such a criminal, that after the murder of his brother, he cries out, Every one that findeth me, shall slay me; so plain was it writ in the hearts of all mankind.

§. 12.

By the same reason may a man in the state of nature punish the lesser breaches of that law. It will perhaps be demanded, with death? I answer, each transgression may be punished to that degree, and with so much severity, as will suffice to make it an ill bargain to the offender, give him cause to repent, and terrify others from doing the like. Every offence, that can be committed in the state of nature, may in the state of nature be also punished equally, and as far forth as it may, in a common-wealth: for though it would be besides my present purpose, to enter here into the particulars of the law of nature, or its measures of punishment; yet, it is certain there is such a law, and that too, as intelligible and plain to a rational creature, and a studier of that law, as the positive laws of common-wealths; nay, possibly plainer; as much as reason is easier to be understood, than the fancies and intricate contrivances of men, following contrary and hidden interests put into words; for so truly are a great part of the municipal laws of countries, which are only so far right, as they are founded on the law of nature, by which they are to be regulated and interpreted.

§. 13.

To this strange doctrine, viz. That in the state of nature every one has the executive power of the law of nature, I doubt not but it will be objected, that it is unreasonable for men to be judges in their own cases, that self-love will make men partial to themselves and their friends: and on the other side, that ill nature, passion and revenge will carry them too far in punishing others; and hence nothing but confusion and disorder will follow, and that therefore God hath certainly appointed government to restrain the partiality and violence of men. I easily grant, that civil government is the proper remedy for the inconveniencies of the state of nature, which must certainly be great, where men may be judges in their own case, since it is easy to be imagined, that he who was so unjust as to do his brother an injury, will scarce be so just as to condemn himself for it: but I shall desire those who make this objection, to remember, that absolute monarchs are but men; and if government is to be the remedy of those evils, which necessarily follow from men's being judges in their own cases, and the state of nature is therefore not to be endured, I desire to know what kind of government that is, and how much better it is than the state of nature, where one man, commanding a multitude, has the liberty to be judge in his own case, and may do to all his subjects whatever he pleases, without the least liberty to any one to question or controul those who execute his pleasure? and in whatsoever he doth, whether led by reason, mistake or passion, must be submitted to? much better it is in the state of nature, wherein men are not bound to submit to the unjust will of another: and if he that judges, judges amiss in his own, or any other case, he is answerable for it to the rest of mankind.

§. 14.

It is often asked as a mighty objection, where are, or ever were there any men in such a state of nature? To which it may suffice as an answer at present, that since all princes and rulers of independent governments all through the world, are in a state of nature, it is plain the world never was, nor ever will be, without numbers of men in that state. I have named all governors of independent communities, whether they are, or are not, in league with others: for it is not every compact that puts an end to the state of nature between men, but only this one of agreeing together mutually to enter into one community, and make one body politic; other promises, and

compacts, men may make one with another, and yet still be in the state of nature. The promises and bargains for truck, &c. between the two men in the desert island, mentioned by Garcilasso de la Vega, in his history of Peru; or between a Swiss and an Indian, in the woods of America, are binding to them, though they are perfectly in a state of nature, in reference to one another: for truth and keeping of faith belongs to men, as men, and not as members of society.

§. 15.

To those that say, there were never any men in the state of nature, I will not only oppose the authority of the judicious Hooker, Eccl. Pol. lib. i. sect. 10. where he says, The laws which have been hitherto mentioned, i. e. the laws of nature, do bind men absolutely, even as they are men, although they have never any settled fellowship, never any solemn agreement amongst themselves what to do, or not to do: but forasmuch as we are not by ourselves sufficient to furnish ourselves with competent store of things, needful for such a life as our nature doth desire, a life fit for the dignity of man; therefore to supply those defects and imperfections which are in us, as living single and solely by ourselves, we are naturally induced to seek communion and fellowship with others: this was the cause of men's uniting themselves at first in politic societies. But I moreover affirm, that all men are naturally in that state, and remain so, till by their own consents they make themselves members of some politic society; and I doubt not in the sequel of this discourse, to make it very clear.

CHAPTER III. OF THE STATE OF WAR.

§. 16.

THE state of war is a state of enmity and destruction: and therefore declaring by word or action, not a passionate and hasty, but a sedate settled design upon another man's life, puts him in a state of war with him against whom he has declared such an intention, and so has exposed his life to the other's power to be taken away by him, or any one that joins with him in his defence, and espouses his quarrel; it being reasonable and just, I should have a right to destroy that which threatens me with destruction: for, by the fundamental law of nature, man being to be preserved as much as possible, when all cannot be preserved, the safety of the innocent is to be preferred: and one may destroy a man who makes war upon him, or has discovered an enmity to his being, for the same reason that he may kill a wolf or a lion; because such men are not under the ties of the common-law of reason, have no other rule, but that of force and violence, and so may be treated as beasts of prey, those dangerous and noxious creatures, that will be sure to destroy him whenever he falls into their power.

§. 17.

And hence it is, that he who attempts to get another man into his absolute power, does thereby put himself into a state of war with him; it being to be understood as a declaration of a design upon his life: for I have reason to conclude, that he who would get me into his power without my consent, would use me as he pleased when he had got me there, and destroy me too when he had a fancy to it; for no body can desire to have me in his absolute power, unless it be to compel me by force to that which is against the right of my freedom, i. e. make me a slave. To be free from such force is the only security of my preservation; and reason bids me look on him, as an enemy to my preservation, who would take away that freedom which is the fence to it; so that he who makes an attempt to enslave me, thereby puts himself into a state of war with me. He that, in the state of nature, would take away the freedom that belongs to any one in that state, must necessarily be supposed to have a design to take away every thing else, that freedom being

the foundation of all the rest; as he that, in the state of society, would take away the freedom belonging to those of that society or common-wealth, must be supposed to design to take away from them every thing else, and so be looked on as in a state of war.

§. 18.

This makes it lawful for a man to kill a thief, who has not in the least hurt him, nor declared any design upon his life, any farther than, by the use of force, so to get him in his power, as to take away his money, or what he pleases, from him; because using force, where he has no right, to get me into his power, let his pretence be what it will, I have no reason to suppose, that he, who would take away my liberty, would not, when he had me in his power, take away every thing else. And therefore it is lawful for me to treat him as one who has put himself into a state of war with me, i. e. kill him if I can; for to that hazard does he justly expose himself, whoever introduces a state of war, and is aggressor in it.

§. 19.

And here we have the plain difference between the state of nature and the state of war, which however some men have confounded, are as far distant, as a state of peace, good will, mutual assistance and preservation, and a state of enmity, malice, violence and mutual destruction, are one from another. Men living together according to reason, without a common superior on earth, with authority to judge between them, is properly the state of nature. But force, or a declared design of force, upon the person of another, where there is no common superior on earth to appeal to for relief, is the state of war: and it is the want of such an appeal gives a man the right of war even against an aggressor, tho' he be in society and a fellow subject. Thus a thief, whom I cannot harm, but by appeal to the law, for having stolen all that I am worth, I may kill, when he sets on me to rob me but of my horse or coat; because the law, which was made for my preservation, where it cannot interpose to secure my life from present force, which, if lost, is capable of no reparation, permits me my own defence, and the right of war, a liberty to kill the aggressor, because the aggressor allows not time to appeal to our common judge, nor the decision of the law, for remedy in a case where the mischief may be irreparable. Want of a common judge with

authority, puts all men in a state of nature: force without right, upon a man's person, makes a state of war, both where there is, and is not, a common judge.

§. 20.

But when the actual force is over, the state of war ceases between those that are in society, and are equally on both sides subjected to the fair determination of the law; because then there lies open the remedy of appeal for the past injury, and to prevent future harm: but where no such appeal is, as in the state of nature, for want of positive laws, and judges with authority to appeal to, the state of war once begun, continues, with a right to the innocent party to destroy the other whenever he can, until the aggressor offers peace, and desires reconciliation on such terms as may repair any wrongs he has already done, and secure the innocent for the future; nay, where an appeal to the law, and constituted judges, lies open, but the remedy is denied by a manifest perverting of justice, and a barefaced wresting of the laws to protect or indemnify the violence or injuries of some men, or party of men, there it is hard to imagine any thing but a state of war: for where-ever violence is used, and injury done, though by hands appointed to administer justice, it is still violence and injury, however coloured with the name, pretences, or forms of law, the end whereof being to protect and redress the innocent, by an unbiassed application of it, to all who are under it; where-ever that is not bona fide done, war is made upon the sufferers, who having no appeal on earth to right them, they are left to the only remedy in such cases, an appeal to heaven.

§. 21.

To avoid this state of war (wherein there is no appeal but to heaven, and wherein every the least difference is apt to end, where there is no authority to decide between the contenders) is one great reason of men's putting themselves into society, and quitting the state of nature: for where there is an authority, a power on earth, from which relief can be had by appeal, there the continuance of the state of war is excluded, and the controversy is decided by that power. Had there been any such court, any superior jurisdiction on earth, to determine the right between Jephtha and the Ammonites, they had never come to a state of war: but we see he was

forced to appeal to heaven. The Lord the Judge (says he) be judge this day between the children of Israel and the children of Ammon, Judg. xi. 27. and then prosecuting, and relying on his appeal, he leads out his army to battle: and therefore in such controversies, where the question is put, who shall be judge? It cannot be meant, who shall decide the controversy; every one knows what Jephtha here tells us, that the Lord the Judge shall judge. Where there is no judge on earth, the appeal lies to God in heaven. That question then cannot mean, who shall judge, whether another hath put himself in a state of war with me, and whether I may, as Jephtha did, appeal to heaven in it? of that I myself can only be judge in my own conscience, as I will answer it, at the great day, to the supreme judge of all men.

CHAPTER IV. OF SLAVERY.

§. 22.

THE natural liberty of man is to be free from any superior power on earth, and not to be under the will or legislative authority of man, but to have only the law of nature for his rule. The liberty of man, in society, is to be under no other legislative power, but that established, by consent, in the commonwealth; nor under the dominion of any will, or restraint of any law, but what that legislative shall enact, according to the trust put in it. Freedom then is not what Sir Robert Filmer tells us, *Observations*, A. 55. a liberty for every one to do what he lists, to live as he pleases, and not to be tied by any laws: but freedom of men under government is, to have a standing rule to live by, common to every one of that society, and made by the legislative power erected in it; a liberty to follow my own will in all things, where the rule prescribes not; and not to be subject to the inconstant, uncertain, unknown, arbitrary will of another man: as freedom of nature is, to be under no other restraint but the law of nature.

§. 23.

This freedom from absolute, arbitrary power, is so necessary to, and closely joined with a man's preservation, that he cannot part with it, but by what forfeits his preservation and life together: for a man, not having the power of his own life, cannot, by compact, or his own consent, enslave himself to any one, nor put himself under the absolute, arbitrary power of another, to take away his life, when he pleases. No body can give more power than he has himself; and he that cannot take away his own life, cannot give another power over it. Indeed, having by his fault forfeited his own life, by some act that deserves death; he, to whom he has forfeited it, may (when he has him in his power) delay to take it, and make use of him to his own service, and he does him no injury by it: for, whenever he finds the hardship of his slavery outweigh the value of his life, it is in his power, by resisting the will of his master, to draw on himself the death he desires.

§. 24.

This is the perfect condition of slavery, which is nothing else, but the state of war continued, between a lawful conqueror and a captive: for, if once compact enter between them, and make an agreement for a limited power on the one side, and obedience on the other, the state of war and slavery ceases, as long as the compact endures: for, as has been said, no man can, by agreement, pass over to another that which he hath not in himself, a power over his own life.

I confess, we find among the Jews, as well as other nations, that men did sell themselves; but, it is plain, this was only to drudgery, not to slavery: for, it is evident, the person sold was not under an absolute, arbitrary, despotical power: for the master could not have power to kill him, at any time, whom, at a certain time, he was obliged to let go free out of his service; and the master of such a servant was so far from having an arbitrary power over his life, that he could not, at pleasure, so much as maim him, but the loss of an eye, or tooth, set him free, Exod. xxi.

CHAPTER V. OF PROPERTY.

§. 25.

WHether we consider natural reason, which tells us, that men, being once born, have a right to their preservation, and consequently to meat and drink, and such other things as nature affords for their subsistence: or revelation, which gives us an account of those grants God made of the world to Adam, and to Noah, and his sons, it is very clear, that God, as king David says, Psal. CXV. 16. has given the earth to the children of men; given it to mankind in common. But this being supposed, it seems to some a very great difficulty, how any one should ever come to have a property in any thing: I will not content myself to answer, that if it be difficult to make out property, upon a supposition that God gave the world to Adam, and his posterity in common, it is impossible that any man, but one universal monarch, should have any property upon a supposition, that God gave the world to Adam, and his heirs in succession, exclusive of all the rest of his posterity. But I shall endeavour to shew, how men might come to have a property in several parts of that which God gave to mankind in common, and that without any express compact of all the commoners.

§. 26.

God, who hath given the world to men in common, hath also given them reason to make use of it to the best advantage of life, and convenience. The earth, and all that is therein, is given to men for the support and comfort of their being. And tho' all the fruits it naturally produces, and beasts it feeds, belong to mankind in common, as they are produced by the spontaneous hand of nature; and no body has originally a private dominion, exclusive of the rest of mankind, in any of them, as they are thus in their natural state: yet being given for the use of men, there must of necessity be a means to appropriate them some way or other, before they can be of any use, or at all beneficial to any particular man. The fruit, or venison, which nourishes the wild Indian, who knows no inclosure, and is still a tenant in common, must be his, and so his, i. e. a part of him, that another can no longer have any right to it, before it can do him any good for the support of his life.

§. 27.

Though the earth, and all inferior creatures, be common to all men, yet every man has a property in his own person: this no body has any right to but himself. The labour of his body, and the work of his hands, we may say, are properly his. Whatsoever then he removes out of the state that nature hath provided, and left it in, he hath mixed his labour with, and joined to it something that is his own, and thereby makes it his property. It being by him removed from the common state nature hath placed it in, it hath by this labour something annexed to it, that excludes the common right of other men: for this labour being the unquestionable property of the labourer, no man but he can have a right to what that is once joined to, at least where there is enough, and as good, left in common for others.

§. 28.

He that is nourished by the acorns he picked up under an oak, or the apples he gathered from the trees in the wood, has certainly appropriated them to himself. No body can deny but the nourishment is his. I ask then, when did they begin to be his? when he digested? or when he eat? or when he boiled? or when he brought them home? or when he picked them up? and it is plain, if the first gathering made them not his, nothing else could. That labour put a distinction between them and common: that added something to them more than nature, the common mother of all, had done; and so they became his private right. And will any one say, he had no right to those acorns or apples, he thus appropriated, because he had not the consent of all mankind to make them his? Was it a robbery thus to assume to himself what belonged to all in common? If such a consent as that was necessary, man had starved, notwithstanding the plenty God had given him. We see in commons, which remain so by compact, that it is the taking any part of what is common, and removing it out of the state nature leaves it in, which begins the property; without which the common is of no use. And the taking of this or that part, does not depend on the express consent of all the commoners. Thus the grass my horse has bit; the turfs my servant has cut; and the ore I have digged in any place, where I have a right to them in common with others, become my property, without the assignation or

consent of any body. The labour that was mine, removing them out of that common state they were in, hath fixed my property in them.

§. 29.

By making an explicit consent of every commoner, necessary to any one's appropriating to himself any part of what is given in common, children or servants could not cut the meat, which their father or master had provided for them in common, without assigning to every one his peculiar part. Though the water running in the fountain be every one's, yet who can doubt, but that in the pitcher is his only who drew it out? His labour hath taken it out of the hands of nature, where it was common, and belonged equally to all her children, and hath thereby appropriated it to himself.

§. 30.

Thus this law of reason makes the deer that Indian's who hath killed it; it is allowed to be his goods, who hath bestowed his labour upon it, though before it was the common right of every one. And amongst those who are counted the civilized part of mankind, who have made and multiplied positive laws to determine property, this original law of nature, for the beginning of property, in what was before common, still takes place; and by virtue thereof, what fish any one catches in the ocean, that great and still remaining common of mankind; or what ambergrise any one takes up here, is by the labour that removes it out of that common state nature left it in, made his property, who takes that pains about it. And even amongst us, the hare that any one is hunting, is thought his who pursues her during the chase: for being a beast that is still looked upon as common, and no man's private possession; whoever has employed so much labour about any of that kind, as to find and pursue her, has thereby removed her from the state of nature, wherein she was common, and hath begun a property.

§. 31.

It will perhaps be objected to this, that if gathering the acorns, or other fruits of the earth, &c. makes a right to them, then any one may ingross as much as he will. To which I answer, Not so. The same law of nature, that does by this means give us property, does also bound that property too. God

has given us all things richly, 1 Tim. vi. 12. is the voice of reason confirmed by inspiration. But how far has he given it us? To enjoy. As much as any one can make use of to any advantage of life before it spoils, so much he may by his labour fix a property in: whatever is beyond this, is more than his share, and belongs to others. Nothing was made by God for man to spoil or destroy. And thus, considering the plenty of natural provisions there was a long time in the world, and the few spenders; and to how small a part of that provision the industry of one man could extend itself, and ingross it to the prejudice of others; especially keeping within the bounds, set by reason, of what might serve for his use; there could be then little room for quarrels or contentions about property so established.

§. 32.

But the chief matter of property being now not the fruits of the earth, and the beasts that subsist on it, but the earth itself; as that which takes in and carries with it all the rest; I think it is plain, that property in that too is acquired as the former. As much land as a man tills, plants, improves, cultivates, and can use the product of, so much is his property. He by his labour does, as it were, inclose it from the common. Nor will it invalidate his right, to say every body else has an equal title to it; and therefore he cannot appropriate, he cannot inclose, without the consent of all his fellow-commoners, all mankind. God, when he gave the world in common to all mankind, commanded man also to labour, and the penury of his condition required it of him. God and his reason commanded him to subdue the earth, i. e. improve it for the benefit of life, and therein lay out something upon it that was his own, his labour. He that in obedience to this command of God, subdued, tilled and sowed any part of it, thereby annexed to it something that was his property, which another had no title to, nor could without injury take from him.

§. 33.

Nor was this appropriation of any parcel of land, by improving it, any prejudice to any other man, since there was still enough, and as good left; and more than the yet unprovided could use. So that, in effect, there was never the less left for others because of his inclosure for himself: for he that leaves as much as another can make use of, does as good as take nothing at

all. No body could think himself injured by the drinking of another man, though he took a good draught, who had a whole river of the same water left him to quench his thirst: and the case of land and water, where there is enough of both, is perfectly the same.

§. 34.

God gave the world to men in common; but since he gave it them for their benefit, and the greatest conveniencies of life they were capable to draw from it, it cannot be supposed he meant it should always remain common and uncultivated. He gave it to the use of the industrious and rational, (and labour was to be his title to it;) not to the fancy or covetousness of the quarrelsome and contentious. He that had as good left for his improvement, as was already taken up, needed not complain, ought not to meddle with what was already improved by another's labour: if he did, it is plain he desired the benefit of another's pains, which he had no right to, and not the ground which God had given him in common with others to labour on, and whereof there was as good left, as that already possessed, and more than he knew what to do with, or his industry could reach to.

§. 35.

It is true, in land that is common in England, or any other country, where there is plenty of people under government, who have money and commerce, no one can inclose or appropriate any part, without the consent of all his fellow-commoners; because this is left common by compact, i. e. by the law of the land, which is not to be violated. And though it be common, in respect of some men, it is not so to all mankind; but is the joint property of this country, or this parish. Besides, the remainder, after such inclosure, would not be as good to the rest of the commoners, as the whole was when they could all make use of the whole; whereas in the beginning and first peopling of the great common of the world, it was quite otherwise. The law man was under, was rather for appropriating. God commanded, and his wants forced him to labour. That was his property which could not be taken from him where-ever he had fixed it. And hence subduing or cultivating the earth, and having dominion, we see are joined together. The one gave title to the other. So that God, by commanding to subdue, gave authority so far to appropriate: and the condition of human life, which

requires labour and materials to work on, necessarily introduces private possessions.

§. 36.

The measure of property nature has well set by the extent of men's labour and the conveniencies of life: no man's labour could subdue, or appropriate all; nor could his enjoyment consume more than a small part; so that it was impossible for any man, this way, to intrench upon the right of another, or acquire to himself a property, to the prejudice of his neighbour, who would still have room for as good, and as large a possession (after the other had taken out his) as before it was appropriated. This measure did confine every man's possession to a very moderate proportion, and such as he might appropriate to himself, without injury to any body, in the first ages of the world, when men were more in danger to be lost, by wandering from their company, in the then vast wilderness of the earth, than to be straitened for want of room to plant in. And the same measure may be allowed still without prejudice to any body, as full as the world seems: for supposing a man, or family, in the state they were at first peopling of the world by the children of Adam, or Noah; let him plant in some in-land, vacant places of America, we shall find that the possessions he could make himself, upon the measures we have given, would not be very large, nor, even to this day, prejudice the rest of mankind, or give them reason to complain, or think themselves injured by this man's incroachment, though the race of men have now spread themselves to all the corners of the world, and do infinitely exceed the small number was at the beginning. Nay, the extent of ground is of so little value, without labour, that I have heard it affirmed, that in Spain itself a man may be permitted to plough, sow and reap, without being disturbed, upon land he has no other title to, but only his making use of it. But, on the contrary, the inhabitants think themselves beholden to him, who, by his industry on neglected, and consequently waste land, has increased the stock of corn, which they wanted. But be this as it will, which I lay no stress on; this I dare boldly affirm, that the same rule of propriety, (viz.) that every man should have as much as he could make use of, would hold still in the world, without straitening any body; since there is land enough in the world to suffice double the inhabitants, had not the invention of money, and the tacit agreement of men to put a value on it, introduced

(by consent) larger possessions, and a right to them; which, how it has done, I shall by and by shew more at large.

§. 37.

This is certain, that in the beginning, before the desire of having more than man needed had altered the intrinsic value of things, which depends only on their usefulness to the life of man; or had agreed, that a little piece of yellow metal, which would keep without wasting or decay, should be worth a great piece of flesh, or a whole heap of corn; though men had a right to appropriate, by their labour, each one to himself, as much of the things of nature, as he could use: yet this could not be much, nor to the prejudice of others, where the same plenty was still left to those who would use the same industry. To which let me add, that he who appropriates land to himself by his labour, does not lessen, but increase the common stock of mankind: for the provisions serving to the support of human life, produced by one acre of inclosed and cultivated land, are (to speak much within compass) ten times more than those which are yielded by an acre of land of an equal richness lying waste in common. And therefore he that incloses land, and has a greater plenty of the conveniencies of life from ten acres, than he could have from an hundred left to nature, may truly be said to give ninety acres to mankind: for his labour now supplies him with provisions out of ten acres, which were but the product of an hundred lying in common. I have here rated the improved land very low, in making its product but as ten to one, when it is much nearer an hundred to one: for I ask, whether in the wild woods and uncultivated waste of America, left to nature, without any improvement, tillage or husbandry, a thousand acres yield the needy and wretched inhabitants as many conveniencies of life, as ten acres of equally fertile land do in Devonshire, where they are well cultivated?

Before the appropriation of land, he who gathered as much of the wild fruit, killed, caught, or tamed, as many of the beasts, as he could; he that so employed his pains about any of the spontaneous products of nature, as any way to alter them from the state which nature put them in, by placing any of his labour on them, did thereby acquire a propriety in them: but if they perished, in his possession, without their due use; if the fruits rotted, or the venison putrified, before he could spend it, he offended against the common law of nature, and was liable to be punished; he invaded his neighbour's

share, for he had no right, farther than his use called for any of them, and they might serve to afford him conveniencies of life.

§. 38.

The same measures governed the possession of land too: whatsoever he tilled and reaped, laid up and made use of, before it spoiled, that was his peculiar right; whatsoever he enclosed, and could feed, and make use of, the cattle and product was also his. But if either the grass of his inclosure rotted on the ground, or the fruit of his planting perished without gathering, and laying up, this part of the earth, notwithstanding his inclosure, was still to be looked on as waste, and might be the possession of any other. Thus, at the beginning, Cain might take as much ground as he could till, and make it his own land, and yet leave enough to Abel's sheep to feed on; a few acres would serve for both their possessions. But as families increased, and industry enlarged their stocks, their possessions enlarged with the need of them; but yet it was commonly without any fixed property in the ground they made use of, till they incorporated, settled themselves together, and built cities; and then, by consent, they came in time, to set out the bounds of their distinct territories, and agree on limits between them and their neighbours; and by laws within themselves, settled the properties of those of the same society: for we see, that in that part of the world which was first inhabited, and therefore like to be best peopled, even as low down as Abraham's time, they wandered with their flocks, and their herds, which was their substance, freely up and down; and this Abraham did, in a country where he was a stranger. Whence it is plain, that at least a great part of the land lay in common; that the inhabitants valued it not, nor claimed property in any more than they made use of. But when there was not room enough in the same place, for their herds to feed together, they by consent, as Abraham and Lot did, Gen. xiii. 5. separated and enlarged their pasture, where it best liked them. And for the same reason Esau went from his father, and his brother, and planted in mount Seir, Gen. xxxvi. 6.

§. 39.

And thus, without supposing any private dominion, and property in Adam, over all the world, exclusive of all other men, which can no way be proved, nor any one's property be made out from it; but supposing the world given,

as it was, to the children of men in common, we see how labour could make men distinct titles to several parcels of it, for their private uses; wherein there could be no doubt of right, no room for quarrel.

§. 40.

Nor is it so strange, as perhaps before consideration it may appear, that the property of labour should be able to over-balance the community of land: for it is labour indeed that puts the difference of value on every thing; and let any one consider what the difference is between an acre of land planted with tobacco or sugar, sown with wheat or barley, and an acre of the same land lying in common, without any husbandry upon it, and he will find, that the improvement of labour makes the far greater part of the value. I think it will be but a very modest computation to say, that of the products of the earth useful to the life of man nine tenths are the effects of labour: nay, if we will rightly estimate things as they come to our use, and cast up the several expences about them, what in them is purely owing to nature, and what to labour, we shall find, that in most of them ninety-nine hundredths are wholly to be put on the account of labour.

§. 41.

There cannot be a clearer demonstration of any thing, than several nations of the Americans are of this, who are rich in land, and poor in all the comforts of life; whom nature having furnished as liberally as any other people, with the materials of plenty, i. e. a fruitful soil, apt to produce in abundance, what might serve for food, raiment, and delight; yet for want of improving it by labour, have not one hundredth part of the conveniencies we enjoy: and a king of a large and fruitful territory there, feeds, lodges, and is clad worse than a day-labourer in England.

§. 42.

To make this a little clearer, let us but trace some of the ordinary provisions of life, through their several progresses, before they come to our use, and see how much they receive of their value from human industry. Bread, wine and cloth, are things of daily use, and great plenty; yet notwithstanding, acorns, water and leaves, or skins, must be our bread, drink and cloathing,

did not labour furnish us with these more useful commodities: for whatever bread is more worth than acorns, wine than water, and cloth or silk, than leaves, skins or moss, that is wholly owing to labour and industry; the one of these being the food and raiment which unassisted nature furnishes us with; the other, provisions which our industry and pains prepare for us, which how much they exceed the other in value, when any one hath computed, he will then see how much labour makes the far greatest part of the value of things we enjoy in this world: and the ground which produces the materials, is scarce to be reckoned in, as any, or at most, but a very small part of it; so little, that even amongst us, land that is left wholly to nature, that hath no improvement of pasturage, tillage, or planting, is called, as indeed it is, waste; and we shall find the benefit of it amount to little more than nothing.

This shews how much numbers of men are to be preferred to largeness of dominions; and that the increase of lands, and the right employing of them, is the great art of government: and that prince, who shall be so wise and godlike, as by established laws of liberty to secure protection and encouragement to the honest industry of mankind, against the oppression of power and narrowness of party, will quickly be too hard for his neighbours: but this by the by. To return to the argument in hand,

§. 43.

An acre of land, that bears here twenty bushels of wheat, and another in America, which, with the same husbandry, would do the like, are, without doubt, of the same natural intrinsic value: but yet the benefit mankind receives from the one in a year, is worth 5 l. and from the other possibly not worth a penny, if all the profit an Indian received from it were to be valued, and sold here; at least, I may truly say, not one thousandth. It is labour then which puts the greatest part of value upon land, without which it would scarcely be worth any thing: it is to that we owe the greatest part of all its useful products; for all that the straw, bran, bread, of that acre of wheat, is more worth than the product of an acre of as good land, which lies waste, is all the effect of labour: for it is not barely the plough-man's pains, the reaper's and thresher's toil, and the baker's sweat, is to be counted into the bread we eat; the labour of those who broke the oxen, who digged and wrought the iron and stones, who felled and framed the timber employed

about the plough, mill, oven, or any other utensils, which are a vast number, requisite to this corn, from its being seed to be sown to its being made bread, must all be charged on the account of labour, and received as an effect of that: nature and the earth furnished only the almost worthless materials, as in themselves. It would be a strange catalogue of things, that industry provided and made use of, about every loaf of bread, before it came to our use, if we could trace them; iron, wood, leather, bark, timber, stone, bricks, coals, lime, cloth, dying drugs, pitch, tar, masts, ropes, and all the materials made use of in the ship, that brought any of the commodities made use of by any of the workmen, to any part of the work; all which it would be almost impossible, at least too long, to reckon up.

§. 44.

From all which it is evident, that though the things of nature are given in common, yet man, by being master of himself, and proprietor of his own person, and the actions or labour of it, had still in himself the great foundation of property; and that, which made up the great part of what he applied to the support or comfort of his being, when invention and arts had improved the conveniencies of life, was perfectly his own, and did not belong in common to others.

§. 45.

Thus labour, in the beginning, gave a right of property, wherever any one was pleased to employ it upon what was common, which remained a long while the far greater part, and is yet more than mankind makes use of. Men, at first, for the most part, contented themselves with what unassisted nature offered to their necessities: and though afterwards, in some parts of the world, (where the increase of people and stock, with the use of money, had made land scarce, and so of some value) the several communities settled the bounds of their distinct territories, and by laws within themselves regulated the properties of the private men of their society, and so, by compact and agreement, settled the property which labour and industry began; and the leagues that have been made between several states and kingdoms, either expressly or tacitly disowning all claim and right to the land in the others possession, have, by common consent, given up their pretences to their natural common right, which originally they had to those countries, and so

have, by positive agreement, settled a property amongst themselves, in distinct parts and parcels of the earth; yet there are still great tracts of ground to be found, which (the inhabitants thereof not having joined with the rest of mankind, in the consent of the use of their common money) lie waste, and are more than the people who dwell on it do, or can make use of, and so still lie in common; tho' this can scarce happen amongst that part of mankind that have consented to the use of money.

§. 46.

The greatest part of things really useful to the life of man, and such as the necessity of subsisting made the first commoners of the world look after, as it doth the Americans now, are generally things of short duration; such as, if they are not consumed by use, will decay and perish of themselves: gold, silver and diamonds, are things that fancy or agreement hath put the value on, more than real use, and the necessary support of life. Now of those good things which nature hath provided in common, every one had a right (as hath been said) to as much as he could use, and property in all that he could effect with his labour; all that his industry could extend to, to alter from the state nature had put it in, was his. He that gathered a hundred bushels of acorns or apples, had thereby a property in them, they were his goods as soon as gathered. He was only to look, that he used them before they spoiled, else he took more than his share, and robbed others. And indeed it was a foolish thing, as well as dishonest, to hoard up more than he could make use of. If he gave away a part to any body else, so that it perished not uselessly in his possession, these he also made use of. And if he also bartered away plums, that would have rotted in a week, for nuts that would last good for his eating a whole year, he did no injury; he wasted not the common stock; destroyed no part of the portion of goods that belonged to others, so long as nothing perished uselessly in his hands. Again, if he would give his nuts for a piece of metal, pleased with its colour; or exchange his sheep for shells, or wool for a sparkling pebble or a diamond, and keep those by him all his life, he invaded not the right of others, he might heap up as much of these durable things as he pleased; the exceeding of the bounds of his just property not lying in the largeness of his possession, but the perishing of any thing uselessly in it.

§. 47.

And thus came in the use of money, some lasting thing that men might keep without spoiling, and that by mutual consent men would take in exchange for the truly useful, but perishable supports of life.

§. 48.

And as different degrees of industry were apt to give men possessions in different proportions, so this invention of money gave them the opportunity to continue and enlarge them: for supposing an island, separate from all possible commerce with the rest of the world, wherein there were but an hundred families, but there were sheep, horses and cows, with other useful animals, wholesome fruits, and land enough for corn for a hundred thousand times as many, but nothing in the island, either because of its commonness, or perishableness, fit to supply the place of money; what reason could any one have there to enlarge his possessions beyond the use of his family, and a plentiful supply to its consumption, either in what their own industry produced, or they could barter for like perishable, useful commodities, with others? Where there is not some thing, both lasting and scarce, and so valuable to be hoarded up, there men will be apt to enlarge their possessions of land, were it never so rich, never so free for them to take: for I ask, what would a man value ten thousand, or an hundred thousand acres of excellent land, ready cultivated, and well stocked too with cattle, in the middle of the inland parts of America, where he had no hopes of commerce with other parts of the world, to draw money to him by the sale of the product? It would not be worth the inclosing, and we should see him give up again to the wild common of nature, whatever was more than would supply the conveniencies of life to be had there for him and his family.

§. 49.

Thus in the beginning all the world was America, and more so than that is now; for no such thing as money was any where known. Find out something that hath the use and value of money amongst his neighbours, you shall see the same man will begin presently to enlarge his possessions.

§. 50.

But since gold and silver, being little useful to the life of man in proportion to food, raiment, and carriage, has its value only from the consent of men, whereof labour yet makes, in great part, the measure, it is plain, that men have agreed to a disproportionate and unequal possession of the earth, they having, by a tacit and voluntary consent, found out a way how a man may fairly possess more land than he himself can use the product of, by receiving in exchange for the overplus gold and silver, which may be hoarded up without injury to any one; these metals not spoiling or decaying in the hands of the possessor. This partage of things in an inequality of private possessions, men have made practicable out of the bounds of society, and without compact, only by putting a value on gold and silver, and tacitly agreeing in the use of money: for in governments, the laws regulate the right of property, and the possession of land is determined by positive constitutions.

§. 51.

And thus, I think, it is very easy to conceive, without any difficulty, how labour could at first begin a title of property in the common things of nature, and how the spending it upon our uses bounded it. So that there could then be no reason of quarrelling about title, nor any doubt about the largeness of possession it gave. Right and conveniency went together; for as a man had a right to all he could employ his labour upon, so he had no temptation to labour for more than he could make use of. This left no room for controversy about the title, nor for incroachment on the right of others; what portion a man carved to himself, was easily seen; and it was useless, as well as dishonest, to carve himself too much, or take more than he needed.

CHAPTER VI. OF PATERNAL POWER.

§. 52.

IT may perhaps be censured as an impertinent criticism, in a discourse of this nature, to find fault with words and names, that have obtained in the world: and yet possibly it may not be amiss to offer new ones, when the old are apt to lead men into mistakes, as this of paternal power probably has done, which seems so to place the power of parents over their children wholly in the father, as if the mother had no share in it; whereas, if we consult reason or revelation, we shall find, she hath an equal title. This may give one reason to ask, whether this might not be more properly called parental power? for whatever obligation nature and the right of generation lays on children, it must certainly bind them equal to both the concurrent causes of it. And accordingly we see the positive law of God every where joins them together, without distinction, when it commands the obedience of children, Honour thy father and thy mother, Exod. xx. 12. Whosoever curseth his father or his mother, Lev. xx. 9. Ye shall fear every man his mother and his father, Lev. xix. 3. Children, obey your parents, &c. Eph. vi. 1. is the stile of the Old and New Testament.

§. 53.

Had but this one thing been well considered, without looking any deeper into the matter, it might perhaps have kept men from running into those gross mistakes, they have made, about this power of parents; which, however it might, without any great harshness, bear the name of absolute dominion, and regal authority, when under the title of paternal power it seemed appropriated to the father, would yet have sounded but oddly, and in the very name shewn the absurdity, if this supposed absolute power over children had been called parental; and thereby have discovered, that it belonged to the mother too: for it will but very ill serve the turn of those men, who contend so much for the absolute power and authority of the fatherhood, as they call it, that the mother should have any share in it; and it would have but ill supported the monarchy they contend for, when by the very name it appeared, that that fundamental authority, from whence they

would derive their government of a single person only, was not placed in one, but two persons jointly. But to let this of names pass.

§. 54.

Though I have said above, Chap. II. That all men by nature are equal, I cannot be supposed to understand all sorts of equality: age or virtue may give men a just precedency: excellency of parts and merit may place others above the common level: birth may subject some, and alliance or benefits others, to pay an observance to those to whom nature, gratitude, or other respects, may have made it due: and yet all this consists with the equality, which all men are in, in respect of jurisdiction or dominion one over another; which was the equality I there spoke of, as proper to the business in hand, being that equal right, that every man hath, to his natural freedom, without being subjected to the will or authority of any other man.

§. 55.

Children, I confess, are not born in this full state of equality, though they are born to it. Their parents have a sort of rule and jurisdiction over them, when they come into the world, and for some time after; but it is but a temporary one. The bonds of this subjection are like the swaddling clothes they are wrapt up in, and supported by, in the weakness of their infancy: age and reason as they grow up, loosen them, till at length they drop quite off, and leave a man at his own free disposal.

§. 56.

Adam was created a perfect man, his body and mind in full possession of their strength and reason, and so was capable, from the first instant of his being to provide for his own support and preservation, and govern his actions according to the dictates of the law of reason which God had implanted in him. From him the world is peopled with his descendants, who are all born infants, weak and helpless, without knowledge or understanding: but to supply the defects of this imperfect state, till the improvement of growth and age hath removed them, Adam and Eve, and after them all parents were, by the law of nature, under an obligation to preserve, nourish, and educate the children they had begotten; not as their

own workmanship, but the workmanship of their own maker, the Almighty, to whom they were to be accountable for them.

§. 57.

The law, that was to govern Adam, was the same that was to govern all his posterity, the law of reason. But his offspring having another way of entrance into the world, different from him, by a natural birth, that produced them ignorant and without the use of reason, they were not presently under that law; for no body can be under a law, which is not promulgated to him; and this law being promulgated or made known by reason only, he that is not come to the use of his reason, cannot be said to be under this law; and Adam's children, being not presently as soon as born under this law of reason, were not presently free: for law, in its true notion, is not so much the limitation as the direction of a free and intelligent agent to his proper interest, and prescribes no farther than is for the general good of those under that law: could they be happier without it, the law, as an useless thing, would of itself vanish; and that ill deserves the name of confinement which hedges us in only from bogs and precipices. So that, however it may be mistaken, the end of law is not to abolish or restrain, but to preserve and enlarge freedom: for in all the states of created beings capable of laws, where there is no law, there is no freedom: for liberty is, to be free from restraint and violence from others; which cannot be, where there is no law: but freedom is not, as we are told, a liberty for every man to do what he lists: (for who could be free, when every other man's humour might domineer over him?) but a liberty to dispose, and order as he lists, his person, actions, possessions, and his whole property, within the allowance of those laws under which he is, and therein not to be subject to the arbitrary will of another, but freely follow his own.

§. 58.

The power, then, that parents have over their children, arises from that duty which is incumbent on them, to take care of their off-spring, during the imperfect state of childhood. To inform the mind, and govern the actions of their yet ignorant non-age, till reason shall take its place, and ease them of that trouble, is what the children want, and the parents are bound to: for God having given man an understanding to direct his actions, has allowed

him a freedom of will, and liberty of acting, as properly belonging thereunto, within the bounds of that law he is under. But whilst he is in an estate, wherein he has not understanding of his own to direct his will, he is not to have any will of his own to follow: he that understands for him, must will for him too; he must prescribe to his will, and regulate his actions; but when he comes to the estate that made his father a freeman, the son is a freeman too.

§. 59.

This holds in all the laws a man is under, whether natural or civil. Is a man under the law of nature? What made him free of that law? what gave him a free disposing of his property, according to his own will, within the compass of that law? I answer, a state of maturity wherein he might be supposed capable to know that law, that so he might keep his actions within the bounds of it. When he has acquired that state, he is presumed to know how far that law is to be his guide, and how far he may make use of his freedom, and so comes to have it; till then, some body else must guide him, who is presumed to know how far the law allows a liberty. If such a state of reason, such an age of discretion made him free, the same shall make his son free too. Is a man under the law of England? What made him free of that law? that is, to have the liberty to dispose of his actions and possessions according to his own will, within the permission of that law? A capacity of knowing that law; which is supposed by that law, at the age of one and twenty years, and in some cases sooner. If this made the father free, it shall make the son free too. Till then we see the law allows the son to have no will, but he is to be guided by the will of his father or guardian, who is to understand for him. And if the father die, and fail to substitute a deputy in his trust; if he hath not provided a tutor, to govern his son, during his minority, during his want of understanding, the law takes care to do it; some other must govern him, and be a will to him, till he hath attained to a state of freedom, and his understanding be fit to take the government of his will. But after that, the father and son are equally free as much as tutor and pupil after nonage; equally subjects of the same law together, without any dominion left in the father over the life, liberty, or estate of his son, whether they be only in the state and under the law of nature, or under the positive laws of an established government.

§. 60.

But if, through defects that may happen out of the ordinary course of nature, any one comes not to such a degree of reason, wherein he might be supposed capable of knowing the law, and so living within the rules of it, he is never capable of being a free man, he is never let loose to the disposal of his own will (because he knows no bounds to it, has not understanding, its proper guide) but is continued under the tuition and government of others, all the time his own understanding is incapable of that charge. And so lunatics and ideots are never set free from the government of their parents; children, who are not as yet come unto those years whereat they may have; and innocents which are excluded by a natural defect from ever having; thirdly, madmen, which for the present cannot possibly have the use of right reason to guide themselves, have for their guide, the reason that guideth other men which are tutors over them, to seek and procure their good for them, says Hooker, Eccl. Pol. lib. i. sect. 7. All which seems no more than that duty, which God and nature has laid on man, as well as other creatures, to preserve their offspring, till they can be able to shift for themselves, and will scarce amount to an instance or proof of parents regal authority.

§. 61.

Thus we are born free, as we are born rational; not that we have actually the exercise of either: age, that brings one, brings with it the other too. And thus we see how natural freedom and subjection to parents may consist together, and are both founded on the same principle. A child is free by his father's title, by his father's understanding, which is to govern him till he hath it of his own. The freedom of a man at years of discretion, and the subjection of a child to his parents, whilst yet short of that age, are so consistent, and so distinguishable, that the most blinded contenders for monarchy, by right of fatherhood, cannot miss this difference; the most obstinate cannot but allow their consistency: for were their doctrine all true, were the right heir of Adam now known, and by that title settled a monarch in his throne, invested with all the absolute unlimited power Sir Robert Filmer talks of; if he should die as soon as his heir were born, must not the child, notwithstanding he were never so free, never so much sovereign, be in

subjection to his mother and nurse, to tutors and governors, till age and education brought him reason and ability to govern himself and others? The necessities of his life, the health of his body, and the information of his mind, would require him to be directed by the will of others, and not his own; and yet will any one think, that this restraint and subjection were inconsistent with, or spoiled him of that liberty or sovereignty he had a right to, or gave away his empire to those who had the government of his nonage? This government over him only prepared him the better and sooner for it. If any body should ask me, when my son is of age to be free? I shall answer, just when his monarch is of age to govern. But at what time, says the judicious Hooker, Eccl. Pol. l. i. sect. 6. a man may be said to have attained so far forth the use of reason, as sufficeth to make him capable of those laws whereby he is then bound to guide his actions: this is a great deal more easy for sense to discern, than for any one by skill and learning to determine.

§. 62.

Common-wealths themselves take notice of, and allow, that there is a time when men are to begin to act like free men, and therefore till that time require not oaths of fealty, or allegiance, or other public owning of, or submission to the government of their countries.

§. 63.

The freedom then of man, and liberty of acting according to his own will, is grounded on his having reason, which is able to instruct him in that law he is to govern himself by, and make him know how far he is left to the freedom of his own will. To turn him loose to an unrestrained liberty, before he has reason to guide him, is not the allowing him the privilege of his nature to be free; but to thrust him out amongst brutes, and abandon him to a state as wretched, and as much beneath that of a man, as their's. This is that which puts the authority into the parents hands to govern the minority of their children. God hath made it their business to employ this care on their off-spring, and hath placed in them suitable inclinations of tenderness and concern to temper this power, to apply it, as his wisdom designed it, to the children's good, as long as they should need to be under it.

§. 64.

But what reason can hence advance this care of the parents due to their offspring into an absolute arbitrary dominion of the father, whose power reaches no farther, than by such a discipline, as he finds most effectual, to give such strength and health to their bodies, such vigour and rectitude to their minds, as may best fit his children to be most useful to themselves and others; and, if it be necessary to his condition, to make them work, when they are able, for their own subsistence. But in this power the mother too has her share with the father.

§. 65.

Nay, this power so little belongs to the father by any peculiar right of nature, but only as he is guardian of his children, that when he quits his care of them, he loses his power over them, which goes along with their nourishment and education, to which it is inseparably annexed; and it belongs as much to the foster-father of an exposed child, as to the natural father of another. So little power does the bare act of begetting give a man over his issue; if all his care ends there, and this be all the title he hath to the name and authority of a father. And what will become of this paternal power in that part of the world, where one woman hath more than one husband at a time? or in those parts of America, where, when the husband and wife part, which happens frequently, the children are all left to the mother, follow her, and are wholly under her care and provision? If the father die whilst the children are young, do they not naturally every where owe the same obedience to their mother, during their minority, as to their father were he alive? and will any one say, that the mother hath a legislative power over her children? that she can make standing rules, which shall be of perpetual obligation, by which they ought to regulate all the concerns of their property, and bound their liberty all the course of their lives? or can she enforce the observation of them with capital punishments? for this is the proper power of the magistrate, of which the father hath not so much as the shadow. His command over his children is but temporary, and reaches not their life or property: it is but a help to the weakness and imperfection of their nonage, a discipline necessary to their education: and though a father may dispose of his own possessions as he pleases, when his children are out

of danger of perishing for want, yet his power extends not to the lives or goods, which either their own industry, or another's bounty has made their's; nor to their liberty neither, when they are once arrived to the enfranchisement of the years of discretion. The father's empire then ceases, and he can from thence forwards no more dispose of the liberty of his son, than that of any other man: and it must be far from an absolute or perpetual jurisdiction, from which a man may withdraw himself, having licence from divine authority to leave father and mother, and cleave to his wife.

§. 66.

But though there be a time when a child comes to be as free from subjection to the will and command of his father, as the father himself is free from subjection to the will of any body else, and they are each under no other restraint, but that which is common to them both, whether it be the law of nature, or municipal law of their country; yet this freedom exempts not a son from that honour which he ought, by the law of God and nature, to pay his parents. God having made the parents instruments in his great design of continuing the race of mankind, and the occasions of life to their children; as he hath laid on them an obligation to nourish, preserve, and bring up their offspring; so he has laid on the children a perpetual obligation of honouring their parents, which containing in it an inward esteem and reverence to be shewn by all outward expressions, ties up the child from any thing that may ever injure or affront, disturb or endanger, the happiness or life of those from whom he received his; and engages him in all actions of defence, relief, assistance and comfort of those, by whose means he entered into being, and has been made capable of any enjoyments of life: from this obligation no state, no freedom can absolve children. But this is very far from giving parents a power of command over their children, or an authority to make laws and dispossess as they please of their lives or liberties. It is one thing to owe honour, respect, gratitude and assistance; another to require an absolute obedience and submission. The honour due to parents, a monarch in his throne owes his mother; and yet this lessens not his authority, nor subjects him to her government.

§. 67.

The subjection of a minor places in the father a temporary government, which terminates with the minority of the child: and the honour due from a child, places in the parents a perpetual right to respect, reverence, support and compliance too, more or less, as the father's care, cost, and kindness in his education, has been more or less. This ends not with minority, but holds in all parts and conditions of a man's life. The want of distinguishing these two powers, viz. that which the father hath in the right of tuition, during minority, and the right of honour all his life, may perhaps have caused a great part of the mistakes about this matter: for to speak properly of them, the first of these is rather the privilege of children, and duty of parents, than any prerogative of paternal power. The nourishment and education of their children is a charge so incumbent on parents for their children's good, that nothing can absolve them from taking care of it: and though the power of commanding and chastising them go along with it, yet God hath woven into the principles of human nature such a tenderness for their off-spring, that there is little fear that parents should use their power with too much rigour; the excess is seldom on the severe side, the strong byass of nature drawing the other way. And therefore God almighty when he would express his gentle dealing with the Israelites, he tells them, that though he chastened them, he chastened them as a man chastens his son, Deut. viii. 5. i. e. with tenderness and affection, and kept them under no severer discipline than what was absolutely best for them, and had been less kindness to have slackened. This is that power to which children are commanded obedience, that the pains and care of their parents may not be increased, or ill rewarded.

§. 68.

On the other side, honour and support, all that which gratitude requires to return for the benefits received by and from them, is the indispensable duty of the child, and the proper privilege of the parents. This is intended for the parents advantage, as the other is for the child's; though education, the parents duty, seems to have most power, because the ignorance and infirmities of childhood stand in need of restraint and correction; which is a visible exercise of rule, and a kind of dominion. And that duty which is comprehended in the word honour, requires less obedience, though the obligation be stronger on grown, than younger children: for who can think

the command, Children obey your parents, requires in a man, that has children of his own, the same submission to his father, as it does in his yet young children to him; and that by this precept he were bound to obey all his father's commands, if, out of a conceit of authority, he should have the indiscretion to treat him still as a boy?

§. 69.

The first part then of paternal power, or rather duty, which is education, belongs so to the father, that it terminates at a certain season; when the business of education is over, it ceases of itself, and is also alienable before: for a man may put the tuition of his son in other hands; and he that has made his son an apprentice to another, has discharged him, during that time, of a great part of his obedience both to himself and to his mother. But all the duty of honour, the other part, remains never the less entire to them; nothing can cancel that: it is so inseparable from them both, that the father's authority cannot dispossess the mother of this right, nor can any man discharge his son from honouring her that bore him. But both these are very far from a power to make laws, and enforcing them with penalties, that may reach estate, liberty, limbs and life. The power of commanding ends with nonage; and though, after that, honour and respect, support and defence, and whatsoever gratitude can oblige a man to, for the highest benefits he is naturally capable of, be always due from a son to his parents; yet all this puts no scepter into the father's hand, no sovereign power of commanding. He has no dominion over his son's property, or actions; nor any right, that his will should prescribe to his son's in all things; however it may become his son in many things, not very inconvenient to him and his family, to pay a deference to it.

§. 70.

A man may owe honour and respect to an ancient, or wise man; desence to his child or friend; relief and support to the distressed; and gratitude to a benefactor, to such a degree, that all he has, all he can do, cannot sufficiently pay it: but all these give no authority, no right to any one, of making laws over him from whom they are owing. And it is plain, all this is due not only to the bare title of father; not only because, as has been said, it is owing to the mother too; but because these obligations to parents, and the

degrees of what is required of children, may be varied by the different care and kindness, trouble and expence, which is often employed upon one child more than another.

§. 71.

This shews the reason how it comes to pass, that parents in societies, where they themselves are subjects, retain a power over their children, and have as much right to their subjection, as those who are in the state of nature. Which could not possibly be, if all political power were only paternal, and that in truth they were one and the same thing: for then, all paternal power being in the prince, the subject could naturally have none of it. But these two powers, political and paternal, are so perfectly distinct and separate; are built upon so different foundations, and given to so different ends, that every subject that is a father, has as much a paternal power over his children, as the prince has over his: and every prince, that has parents, owes them as much filial duty and obedience, as the meanest of his subjects do to their's; and can therefore contain not any part or degree of that kind of dominion, which a prince or magistrate has over his subject.

§. 72.

Though the obligation on the parents to bring up their children, and the obligation on children to honour their parents, contain all the power on the one hand, and submission on the other, which are proper to this relation, yet there is another power ordinarily in the father, whereby he has a tie on the obedience of his children; which tho' it be common to him with other men, yet the occasions of shewing it, almost constantly happening to fathers in their private families, and the instances of it elsewhere being rare, and less taken notice of, it passes in the world for a part of paternal jurisdiction. And this is the power men generally have to bestow their estates on those who please them best; the possession of the father being the expectation and inheritance of the children, ordinarily in certain proportions, according to the law and custom of each country; yet it is commonly in the father's power to bestow it with a more sparing or liberal hand, according as the behaviour of this or that child hath comported with his will and humour.

§. 73.

This is no small tie on the obedience of children: and there being always annexed to the enjoyment of land, a submission to the government of the country, of which that land is a part; it has been commonly supposed, that a father could oblige his posterity to that government, of which he himself was a subject, and that his compact held them; whereas, it being only a necessary condition annexed to the land, and the inheritance of an estate which is under that government, reaches only those who will take it on that condition, and so is no natural tie or engagement, but a voluntary submission: for every man's children being by nature as free as himself, or any of his ancestors ever were, may, whilst they are in that freedom, choose what society they will join themselves to, what common-wealth they will put themselves under. But if they will enjoy the inheritance of their ancestors, they must take it on the same terms their ancestors had it, and submit to all the conditions annexed to such a possession. By this power indeed fathers oblige their children to obedience to themselves, even when they are past minority, and most commonly too subject them to this or that political power: but neither of these by any peculiar right of fatherhood, but by the reward they have in their hands to enforce and recompence such a compliance; and is no more power than what a French man has over an English man, who by the hopes of an estate he will leave him, will certainly have a strong tie on his obedience: and if, when it is left him, he will enjoy it, he must certainly take it upon the conditions annexed to the possession of land in that country where it lies, whether it be France or England.

§. 74.

To conclude then, tho' the father's power of commanding extends no farther than the minority of his children, and to a degree only fit for the discipline and government of that age; and tho' that honour and respect, and all that which the Latins called piety, which they indispensibly owe to their parents all their life-time, and in all estates, with all that support and defence is due to them, gives the father no power of governing, i. e. making laws and enacting penalties on his children; though by all this he has no dominion over the property or actions of his son: yet it is obvious to conceive how easy it was, in the first ages of the world, and in places still, where the thinness of people gives families leave to separate into unpossessed quarters, and they have room to remove or plant themselves in yet vacant

habitations, for the father of the family to become the prince of it; he had been a ruler from the beginning of the infancy of his children: and since without some government it would be hard for them to live together, it was likeliest it should, by the express or tacit consent of the children when they were grown up, be in the father, where it seemed without any change barely to continue; when indeed nothing more was required to it, than the permitting the father to exercise alone, in his family, that executive power of the law of nature, which every free man naturally hath, and by that permission resigning up to him a monarchical power, whilst they remained in it. But that this was not by any paternal right, but only by the consent of his children, is evident from hence, that no body doubts, but if a stranger, whom chance or business had brought to his family, had there killed any of his children, or committed any other fact, he might condemn and put him to death, or otherwise have punished him, as well as any of his children; which it was impossible he should do by virtue of any paternal authority over one who was not his child, but by virtue of that executive power of the law of nature, which, as a man, he had a right to: and he alone could punish him in his family, where the respect of his children had laid by the exercise of such a power, to give way to the dignity and authority they were willing should remain in him, above the rest of his family.

§. 75.

Thus it was easy, and almost natural for children, by a tacit, and scarce avoidable consent, to make way for the father's authority and government. They had been accustomed in their childhood to follow his direction, and to refer their little differences to him; and when they were men, who fitter to rule them? Their little properties, and less covetousness, seldom afforded greater controversies; and when any should arise, where could they have a fitter umpire than he, by whose care they had every one been sustained and brought up, and who had a tenderness for them all? It is no wonder that they made no distinction betwixt minority and full age; nor looked after one and twenty, or any other age that might make them the free disposers of themselves and fortunes, when they could have no desire to be out of their pupilage: the government they had been under, during it, continued still to be more their protection than restraint; and they could no where find a

greater security to their peace, liberties, and fortunes, than in the rule of a father.

§. 76.

Thus the natural fathers of families, by an insensible change, became the politic monarchs of them too: and as they chanced to live long, and leave able and worthy heirs, for several successions, or otherwise; so they laid the foundations of hereditary, or elective kingdoms, under several constitutions and manners, according as chance, contrivance, or occasions happened to mould them. But if princes have their titles in their fathers right, and it be a sufficient proof of the natural right of fathers to political authority, because they commonly were those in whose hands we find, *de facto*, the exercise of government: I say, if this argument be good, it will as strongly prove, that all princes, nay princes only, ought to be priests, since it is as certain, that in the beginning, the father of the family was priest, as that he was ruler in his own household.

CHAPTER VII. OF POLITICAL OR CIVIL SOCIETY.

§. 77.

GOD having made man such a creature, that in his own judgment, it was not good for him to be alone, put him under strong obligations of necessity, convenience, and inclination to drive him into society, as well as fitted him with understanding and language to continue and enjoy it. The first society was between man and wife, which gave beginning to that between parents and children; to which, in time, that between master and servant came to be added: and though all these might, and commonly did meet together, and make up but one family, wherein the master or mistress of it had some sort of rule proper to a family; each of these, or all together, came short of political society, as we shall see, if we consider the different ends, ties, and bounds of each of these.

§. 78.

Conjugal society is made by a voluntary compact between man and woman; and tho' it consist chiefly in such a communion and right in one another's bodies as is necessary to its chief end, procreation; yet it draws with it mutual support and assistance, and a communion of interests too, as necessary not only to unite their care and affection, but also necessary to their common off-spring, who have a right to be nourished, and maintained by them, till they are able to provide for themselves.

§. 79.

For the end of conjunction, between male and female, being not barely procreation, but the continuation of the species; this conjunction betwixt male and female ought to last, even after procreation, so long as is necessary to the nourishment and support of the young ones, who are to be sustained by those that got them, till they are able to shift and provide for themselves. This rule, which the infinite wise maker hath set to the works of his hands, we find the inferior creatures steadily obey. In those viviparous

animals which feed on grass, the conjunction between male and female lasts no longer than the very act of copulation; because the teat of the dam being sufficient to nourish the young, till it be able to feed on grass, the male only begets, but concerns not himself for the female or young, to whose sustenance he can contribute nothing. But in beasts of prey the conjunction lasts longer: because the dam not being able well to subsist herself, and nourish her numerous off-spring by her own prey alone, a more laborious, as well as more dangerous way of living, than by feeding on grass, the assistance of the male is necessary to the maintenance of their common family, which cannot subsist till they are able to prey for themselves, but by the joint care of male and female. The same is to be observed in all birds, (except some domestic ones, where plenty of food excuses the cock from feeding, and taking care of the young brood) whose young needing food in the nest, the cock and hen continue mates, till the young are able to use their wing, and provide for themselves.

§. 80.

And herein I think lies the chief, if not the only reason, why the male and female in mankind are tied to a longer conjunction than other creatures, viz. because the female is capable of conceiving, and de facto is commonly with child again, and brings forth too a new birth, long before the former is out of a dependency for support on his parents help, and able to shift for himself, and has all the assistance is due to him from his parents: whereby the father, who is bound to take care for those he hath begot, is under an obligation to continue in conjugal society with the same woman longer than other creatures, whose young being able to subsist of themselves, before the time of procreation returns again, the conjugal bond dissolves of itself, and they are at liberty, till Hymen at his usual anniversary season summons them again to chuse new mates. Wherein one cannot but admire the wisdom of the great Creator, who having given to man foresight, and an ability to lay up for the future, as well as to supply the present necessity, hath made it necessary, that society of man and wife should be more lasting, than of male and female amongst other creatures; that so their industry might be encouraged, and their interest better united, to make provision and lay up goods for their common issue, which uncertain mixture, or easy and frequent solutions of conjugal society would mightily disturb.

§. 81.

But tho' these are ties upon mankind, which make the conjugal bonds more firm and lasting in man, than the other species of animals; yet it would give one reason to enquire, why this compact, where procreation and education are secured, and inheritance taken care for, may not be made determinable, either by consent, or at a certain time, or upon certain conditions, as well as any other voluntary compacts, there being no necessity in the nature of the thing, nor to the ends of it, that it should always be for life; I mean, to such as are under no restraint of any positive law, which ordains all such contracts to be perpetual.

§. 82.

But the husband and wife, though they have but one common concern, yet having different understandings, will unavoidably sometimes have different wills too; it therefore being necessary that the last determination, i. e. the rule, should be placed somewhere; it naturally falls to the man's share, as the abler and the stronger. But this reaching but to the things of their common interest and property, leaves the wife in the full and free possession of what by contract is her peculiar right, and gives the husband no more power over her life than she has over his; the power of the husband being so far from that of an absolute monarch, that the wife has in many cases a liberty to separate from him, where natural right, or their contract allows it; whether that contract be made by themselves in the state of nature, or by the customs or laws of the country they live in; and the children upon such separation fall to the father or mother's lot, as such contract does determine.

§. 83.

For all the ends of marriage being to be obtained under politic government, as well as in the state of nature, the civil magistrate doth not abridge the right or power of either naturally necessary to those ends, viz. procreation and mutual support and assistance whilst they are together; but only decides any controversy that may arise between man and wife about them. If it were otherwise, and that absolute sovereignty and power of life and death naturally belonged to the husband, and were necessary to the society

between man and wife, there could be no matrimony in any of those countries where the husband is allowed no such absolute authority. But the ends of matrimony requiring no such power in the husband, the condition of conjugal society put it not in him, it being not at all necessary to that state. Conjugal society could subsist and attain its ends without it; nay, community of goods, and the power over them, mutual assistance and maintenance, and other things belonging to conjugal society, might be varied and regulated by that contract which unites man and wife in that society, as far as may consist with procreation and the bringing up of children till they could shift for themselves; nothing being necessary to any society, that is not necessary to the ends for which it is made.

§. 84.

The society betwixt parents and children, and the distinct rights and powers belonging respectively to them, I have treated of so largely, in the foregoing chapter, that I shall not here need to say any thing of it. And I think it is plain, that it is far different from a politic society.

§. 85.

Master and servant are names as old as history, but given to those of far different condition; for a freeman makes himself a servant to another, by selling him, for a certain time, the service he undertakes to do, in exchange for wages he is to receive: and though this commonly puts him into the family of his master, and under the ordinary discipline thereof; yet it gives the master but a temporary power over him, and no greater than what is contained in the contract between them. But there is another sort of servants, which by a peculiar name we call slaves, who being captives taken in a just war, are by the right of nature subjected to the absolute dominion and arbitrary power of their masters. These men having, as I say, forfeited their lives, and with it their liberties, and lost their estates; and being in the state of slavery, not capable of any property, cannot in that state be considered as any part of civil society; the chief end whereof is the preservation of property.

§. 86.

Let us therefore consider a master of a family with all these subordinate relations of wife, children, servants, and slaves, united under the domestic rule of a family; which, what resemblance soever it may have in its order, offices, and number too, with a little common-wealth, yet is very far from it, both in its constitution, power and end: or if it must be thought a monarchy, and the paterfamilias the absolute monarch in it, absolute monarchy will have but a very shattered and short power, when it is plain, by what has been said before, that the master of the family has a very distinct and differently limited power, both as to time and extent, over those several persons that are in it; for excepting the slave (and the family is as much a family, and his power as paterfamilias as great, whether there be any slaves in his family or no) he has no legislative power of life and death over any of them, and none too but what a mistress of a family may have as well as he. And he certainly can have no absolute power over the whole family, who has but a very limited one over every individual in it. But how a family, or any other society of men, differ from that which is properly political society, we shall best see, by considering wherein political society itself consists.

§. 87.

Man being born, as has been proved, with a title to perfect freedom, and an uncontrouled enjoyment of all the rights and privileges of the law of nature, equally with any other man, or number of men in the world, hath by nature a power, not only to preserve his property, that is, his life, liberty and estate, against the injuries and attempts of other men; but to judge of, and punish the breaches of that law in others, as he is persuaded the offence deserves, even with death itself, in crimes where the heinousness of the fact, in his opinion, requires it. But because no political society can be, nor subsist, without having in itself the power to preserve the property, and in order thereunto, punish the offences of all those of that society; there, and there only is political society, where every one of the members hath quitted this natural power, resigned it up into the hands of the community in all cases that exclude him not from appealing for protection to the law established by it. And thus all private judgment of every particular member being excluded, the community comes to be umpire, by settled standing rules, indifferent, and the same to all parties; and by men having authority from

the community, for the execution of those rules, decides all the differences that may happen between any members of that society concerning any matter of right; and punishes those offences which any member hath committed against the society, with such penalties as the law has established: whereby it is easy to discern, who are, and who are not, in political society together. Those who are united into one body, and have a common established law and judicature to appeal to, with authority to decide controversies between them, and punish offenders, are in civil society one with another: but those who have no such common people, I mean on earth, are still in the state of nature, each being, where there is no other, judge for himself, and executioner; which is, as I have before shewed it, the perfect state of nature.

§. 88.

And thus the common-wealth comes by a power to set down what punishment shall belong to the several transgressions which they think worthy of it, committed amongst the members of that society, (which is the power of making laws) as well as it has the power to punish any injury done unto any of its members, by any one that is not of it, (which is the power of war and peace;) and all this for the preservation of the property of all the members of that society, as far as is possible. But though every man who has entered into civil society, and is become a member of any common-wealth, has thereby quitted his power to punish offences, against the law of nature, in prosecution of his own private judgment, yet with the judgment of offences, which he has given up to the legislative in all cases, where he can appeal to the magistrate, he has given a right to the common-wealth to employ his force, for the execution of the judgments of the common-wealth, whenever he shall be called to it; which indeed are his own judgments, they being made by himself, or his representative. And herein we have the original of the legislative and executive power of civil society, which is to judge by standing laws, how far offences are to be punished, when committed within the common-wealth; and also to determine, by occasional judgments founded on the present circumstances of the fact, how far injuries from without are to be vindicated; and in both these to employ all the force of all the members, when there shall be need.

§. 89.

Where-ever therefore any number of men are so united into one society, as to quit every one his executive power of the law of nature, and to resign it to the public, there and there only is a political, or civil society. And this is done, where-ever any number of men, in the state of nature, enter into society to make one people, one body politic, under one supreme government; or else when any one joins himself to, and incorporates with any government already made: for hereby he authorizes the society, or which is all one, the legislative thereof, to make laws for him, as the public good of the society shall require; to the execution whereof, his own assistance (as to his own decrees) is due. And this puts men out of a state of nature into that of a common-wealth, by setting up a judge on earth, with authority to determine all the controversies, and redress the injuries that may happen to any member of the common-wealth; which judge is the legislative, or magistrates appointed by it. And where-ever there are any number of men, however associated, that have no such decisive power to appeal to, there they are still in the state of nature.

§. 90.

Hence it is evident, that absolute monarchy, which by some men is counted the only government in the world, is indeed inconsistent with civil society, and so can be no form of civil-government at all: for the end of civil society, being to avoid, and remedy those inconveniencies of the state of nature, which necessarily follow from every man's being judge in his own case, by setting up a known authority, to which every one of that society may appeal upon any injury received, or controversy that may arise, and which every one of the society ought to obey; where-ever any persons are, who have not such an authority to appeal to, for the decision of any difference between them, there those persons are still in the state of nature; and so is every absolute prince, in respect of those who are under his dominion.

§. 91.

For he being supposed to have all, both legislative and executive power in himself alone, there is no judge to be found, no appeal lies open to any one, who may fairly, and indifferently, and with authority decide, and from

whose decision relief and redress may be expected of any injury or inconviency, that may be suffered from the prince, or by his order: so that such a man, however intitled, Czar, or Grand Seignior, or how you please, is as much in the state of nature, with all under his dominion, as he is with the rest of mankind: for where-ever any two men are, who have no standing rule, and common judge to appeal to on earth, for the determination of controversies of right betwixt them, there they are still in the state of nature, and under all the inconveniencies of it, with only this woful difference to the subject, or rather slave of an absolute prince: that whereas, in the ordinary state of nature, he has a liberty to judge of his right, and according to the best of his power, to maintain it; now, whenever his property is invaded by the will and order of his monarch, he has not only no appeal, as those in society ought to have, but as if he were degraded from the common state of rational creatures, is denied a liberty to judge of, or to defend his right; and so is exposed to all the misery and inconveniencies, that a man can fear from one, who being in the unrestrained state of nature, is yet corrupted with flattery, and armed with power.

§. 92.

For he that thinks absolute power purifies men's blood, and corrects the baseness of human nature, need read but the history of this, or any other age, to be convinced of the contrary. He that would have been insolent and injurious in the woods of America, would not probably be much better in a throne; where perhaps learning and religion shall be found out to justify all that he shall do to his subjects, and the sword presently silence all those that dare question it: for what the protection of absolute monarchy is, what kind of fathers of their countries it makes princes to be, and to what a degree of happiness and security it carries civil society, where this sort of government is grown to perfection, he that will look into the late relation of Ceylon, may easily see.

§. 93.

In absolute monarchies indeed, as well as other governments of the world, the subjects have an appeal to the law, and judges to decide any controversies, and restrain any violence that may happen betwixt the subjects themselves, one amongst another. This every one thinks necessary,

and believes he deserves to be thought a declared enemy to society and mankind, who should go about to take it away. But whether this be from a true love of mankind and society, and such a charity as we owe all one to another, there is reason to doubt: for this is no more than what every man, who loves his own power, profit, or greatness, may and naturally must do, keep those animals from hurting, or destroying one another, who labour and drudge only for his pleasure and advantage; and so are taken care of, not out of any love the master has for them, but love of himself, and the profit they bring him: for if it be asked, what security, what fence is there, in such a state, against the violence and oppression of this absolute ruler? the very question can scarce be borne. They are ready to tell you, that it deserves death only to ask after safety. Betwixt subject and subject, they will grant, there must be measures, laws and judges, for their mutual peace and security: but as for the ruler, he ought to be absolute, and is above all such circumstances; because he has power to do more hurt and wrong, it is right when he does it. To ask how you may be guarded from harm, or injury, on that side where the strongest hand is to do it, is presently the voice of faction and rebellion: as if when men quitting the state of nature entered into society, they agreed that all of them but one, should be under the restraint of laws, but that he should still retain all the liberty of the state of nature, increased with power, and made licentious by impunity. This is to think, that men are so foolish, that they take care to avoid what mischiefs may be done them by pole-cats, or foxes; but are content, nay, think it safety, to be devoured by lions.

§. 94.

But whatever flatterers may talk to amuse people's understandings, it hinders not men from feeling; and when they perceive, that any man, in what station soever, is out of the bounds of the civil society which they are of, and that they have no appeal on earth against any harm, they may receive from him, they are apt to think themselves in the state of nature, in respect of him whom they find to be so; and to take care, as soon as they can, to have that safety and security in civil society, for which it was first instituted, and for which only they entered into it. And therefore, though perhaps at first, (as shall be shewed more at large hereafter in the following part of this discourse) some one good and excellent man having got a pre-

eminency amongst the rest, had this deference paid to his goodness and virtue, as to a kind of natural authority, that the chief rule, with arbitration of their differences, by a tacit consent devolved into his hands, without any other caution, but the assurance they had of his uprightness and wisdom; yet when time, giving authority, and (as some men would persuade us) sacredness of customs, which the negligent, and unforeseeing innocence of the first ages began, had brought in successors of another stamp, the people finding their properties not secure under the government, as then it was, (whereas government has no other end but the preservation of property) could never be safe nor at rest, nor think themselves in civil society, till the legislature was placed in collective bodies of men, call them senate, parliament, or what you please. By which means every single person became subject, equally with other the meanest men, to those laws, which he himself, as part of the legislative, had established; nor could any one, by his own authority, avoid the force of the law, when once made; nor by any pretence of superiority plead exemption, thereby to license his own, or the miscarriages of any of his dependents. No man in civil society can be exempted from the laws of it: for if any man may do what he thinks fit, and there be no appeal on earth, for redress or security against any harm he shall do; I ask, whether he be not perfectly still in the state of nature, and so can be no part or member of that civil society; unless any one will say, the state of nature and civil society are one and the same thing, which I have never yet found any one so great a patron of anarchy as to affirm.

CHAPTER VIII. OF THE BEGINNING OF POLITICAL SOCIETIES.

§. 95.

MEN being, as has been said, by nature, all free, equal, and independent, no one can be put out of this estate, and subjected to the political power of another, without his own consent. The only way whereby any one divests himself of his natural liberty, and puts on the bonds of civil society, is by agreeing with other men to join and unite into a community, for their comfortable, safe, and peaceable living one amongst another, in a secure enjoyment of their properties, and a greater security against any, that are not of it. This any number of men may do, because it injures not the freedom of the rest; they are left as they were in the liberty of the state of nature. When any number of men have so consented to make one community or government, they are thereby presently incorporated, and make one body politic, wherein the majority have a right to act and conclude the rest.

§. 96.

For when any number of men have, by the consent of every individual, made a community, they have thereby made that community one body, with a power to act as one body, which is only by the will and determination of the majority: for that which acts any community, being only the consent of the individuals of it, and it being necessary to that which is one body to move one way; it is necessary the body should move that way whither the greater force carries it, which is the consent of the majority: or else it is impossible it should act or continue one body, one community, which the consent of every individual that united into it, agreed that it should; and so every one is bound by that consent to be concluded by the majority. And therefore we see, that in assemblies, impowered to act by positive laws, where no number is set by that positive law which impowers them, the act of the majority passes for the act of the whole, and of course determines, as having, by the law of nature and reason, the power of the whole.

§. 97.

And thus every man, by consenting with others to make one body politic under one government, puts himself under an obligation, to every one of that society, to submit to the determination of the majority, and to be concluded by it; or else this original compact, whereby he with others incorporates into one society, would signify nothing, and be no compact, if he be left free, and under no other ties than he was in before in the state of nature. For what appearance would there be of any compact? what new engagement if he were no farther tied by any decrees of the society, than he himself thought fit, and did actually consent to? This would be still as great a liberty, as he himself had before his compact, or any one else in the state of nature hath, who may submit himself, and consent to any acts of it if he thinks fit.

§. 98.

For if the consent of the majority shall not, in reason, be received as the act of the whole, and conclude every individual; nothing but the consent of every individual can make any thing to be the act of the whole: but such a consent is next to impossible ever to be had, if we consider the infirmities of health, and avocations of business, which in a number, though much less than that of a common-wealth, will necessarily keep many away from the public assembly. To which if we add the variety of opinions, and contrariety of interests, which unavoidably happen in all collections of men, the coming into society upon such terms would be only like Cato's coming into the theatre, only to go out again. Such a constitution as this would make the mighty Leviathan of a shorter duration, than the feeblest creatures, and not let it outlast the day it was born in: which cannot be supposed, till we can think, that rational creatures should desire and constitute societies only to be dissolved: for where the majority cannot conclude the rest, there they cannot act as one body, and consequently will be immediately dissolved again.

§. 99.

Whosoever therefore out of a state of nature unite into a community, must be understood to give up all the power, necessary to the ends for which they unite into society, to the majority of the community, unless they expressly agreed in any number greater than the majority. And this is done by barely

agreeing to unite into one political society, which is all the compact that is, or needs be, between the individuals, that enter into, or make up a common-wealth. And thus that, which begins and actually constitutes any political society, is nothing but the consent of any number of freemen capable of a majority to unite and incorporate into such a society. And this is that, and that only, which did, or could give beginning to any lawful government in the world.

§. 100.

To this I find two objections made.

First, That there are no instances to be found in story, of a company of men independent, and equal one amongst another, that met together, and in this way began and set up a government.

Secondly, It is impossible of right, that men should do so, because all men being born under government, they are to submit to that, and are not at liberty to begin a new one.

§. 101.

To the first there is this to answer, That it is not at all to be wondered, that history gives us but a very little account of men, that lived together in the state of nature. The inconveniences of that condition, and the love and want of society, no sooner brought any number of them together, but they presently united and incorporated, if they designed to continue together. And if we may not suppose men ever to have been in the state of nature, because we hear not much of them in such a state, we may as well suppose the armies of Salmanasser or Xerxes were never children, because we hear little of them, till they were men, and imbodyed in armies. Government is every where antecedent to records, and letters seldom come in amongst a people till a long continuation of civil society has, by other more necessary arts, provided for their safety, ease, and plenty: and then they begin to look after the history of their founders, and search into their original, when they have outlived the memory of it: for it is with common-wealths as with particular persons, they are commonly ignorant of their own births and infancies: and if they know any thing of their original, they are beholden for it, to the accidental records that others have kept of it. And those that we have, of the beginning of any polities in the world, excepting that of the

Jews, where God himself immediately interposed, and which favours not at all paternal dominion, are all either plain instances of such a beginning as I have mentioned, or at least have manifest footsteps of it.

§. 102.

He must shew a strange inclination to deny evident matter of fact, when it agrees not with his hypothesis, who will not allow, that the beginning of Rome and Venice were by the uniting together of several men free and independent one of another, amongst whom there was no natural superiority or subjection. And if Josephus Acosta's word may be taken, he tells us, that in many parts of America there was no government at all. There are great and apparent conjectures, says he, that these men, speaking of those of Peru, for a long time had neither kings nor common-wealths, but lived in troops, as they do this day in Florida, the Cheriquanas, those of Brasil, and many other nations, which have no certain kings, but as occasion is offered, in peace or war, they choose their captains as they please, l. i. c. 25. If it be said, that every man there was born subject to his father, or the head of his family; that the subjection due from a child to a father took not away his freedom of uniting into what political society he thought fit, has been already proved. But be that as it will, these men, it is evident, were actually free; and whatever superiority some politicians now would place in any of them, they themselves claimed it not, but by consent were all equal, till by the same consent they set rulers over themselves. So that their politic societies all began from a voluntary union, and the mutual agreement of men freely acting in the choice of their governors, and forms of government.

§. 103.

And I hope those who went away from Sparta with Palantus, mentioned by Justin, l. iii. c. 4. will be allowed to have been freemen independent one of another, and to have set up a government over themselves, by their own consent. Thus I have given several examples, out of history, of people free and in the state of nature, that being met together incorporated and began a common-wealth. And if the want of such instances be an argument to prove that government were not, nor could not be so begun, I suppose the contenders for paternal empire were better let it alone, than urge it against

natural liberty: for if they can give so many instances, out of history, of governments begun upon paternal right, I think (though at best an argument from what has been, to what should of right be, has no great force) one might, without any great danger, yield them the cause. But if I might advise them in the case, they would do well not to search too much into the original of governments, as they have begun de facto, lest they should find, at the foundation of most of them, something very little favourable to the design they promote, and such a power as they contend for.

§. 104.

But to conclude, reason being plain on our side, that men are naturally free, and the examples of history shewing, that the governments of the world, that were begun in peace, had their beginning laid on that foundation, and were made by the consent of the people; there can be little room for doubt, either where the right is, or what has been the opinion, or practice of mankind, about the first erecting of governments.

§. 105.

I will not deny, that if we look back as far as history will direct us, towards the original of common-wealths, we shall generally find them under the government and administration of one man. And I am also apt to believe, that where a family was numerous enough to subsist by itself, and continued entire together, without mixing with others, as it often happens, where there is much land, and few people, the government commonly began in the father: for the father having, by the law of nature, the same power with every man else to punish, as he thought fit, any offences against that law, might thereby punish his transgressing children, even when they were men, and out of their pupilage; and they were very likely to submit to his punishment, and all join with him against the offender, in their turns, giving him thereby power to execute his sentence against any transgression, and so in effect make him the law-maker, and governor over all that remained in conjunction with his family. He was fittest to be trusted; paternal affection secured their property and interest under his care; and the custom of obeying him, in their childhood, made it easier to submit to him, rather than to any other. If therefore they must have one to rule them, as government is hardly to be avoided amongst men that live together; who so

likely to be the man as he that was their common father; unless negligence, cruelty, or any other defect of mind or body made him unfit for it? But when either the father died, and left his next heir, for want of age, wisdom, courage, or any other qualities, less fit for rule; or where several families met, and consented to continue together; there, it is not to be doubted, but they used their natural freedom, to set up him, whom they judged the ablest, and most likely, to rule well over them. Conformable hereunto we find the people of America, who (living out of the reach of the conquering swords, and spreading domination of the two great empires of Peru and Mexico) enjoyed their own natural freedom, though, *cæteris paribus*, they commonly prefer the heir of their deceased king; yet if they find him any way weak, or uncapable, they pass him by, and set up the stoutest and bravest man for their ruler.

§. 106.

Thus, though looking back as far as records give us any account of peopling the world, and the history of nations, we commonly find the government to be in one hand; yet it destroys not that which I affirm, viz. that the beginning of politic society depends upon the consent of the individuals, to join into, and make one society; who, when they are thus incorporated, might set up what form of government they thought fit. But this having given occasion to men to mistake, and think, that by nature government was monarchical, and belonged to the father, it may not be amiss here to consider, why people in the beginning generally pitched upon this form, which though perhaps the father's pre-eminency might, in the first institution of some common-wealths, give a rise to, and place in the beginning, the power in one hand; yet it is plain that the reason, that continued the form of government in a single person, was not any regard, or respect to paternal authority; since all petty monarchies, that is, almost all monarchies, near their original, have been commonly, at least upon occasion, elective.

§. 107.

First then, in the beginning of things, the father's government of the childhood of those sprung from him, having accustomed them to the rule of one man, and taught them that where it was exercised with care and skill,

with affection and love to those under it, it was sufficient to procure and preserve to men all the political happiness they sought for in society. It was no wonder that they should pitch upon, and naturally run into that form of government, which from their infancy they had been all accustomed to; and which, by experience, they had found both easy and safe. To which, if we add, that monarchy being simple, and most obvious to men, whom neither experience had instructed in forms of government, nor the ambition or insolence of empire had taught to beware of the encroachments of prerogative, or the inconveniencies of absolute power, which monarchy in succession was apt to lay claim to, and bring upon them; it was not at all strange, that they should not much trouble themselves to think of methods of restraining any exorbitances of those to whom they had given the authority over them, and of balancing the power of government, by placing several parts of it in different hands. They had neither felt the oppression of tyrannical dominion, nor did the fashion of the age, nor their possessions, or way of living, (which afforded little matter for covetousness or ambition) give them any reason to apprehend or provide against it; and therefore it is no wonder they put themselves into such a frame of government, as was not only, as I said, most obvious and simple, but also best suited to their present state and condition; which stood more in need of defence against foreign invasions and injuries, than of multiplicity of laws. The equality of a simple poor way of living, confining their desires within the narrow bounds of each man's small property, made few controversies, and so no need of many laws to decide them, or variety of officers to superintend the process, or look after the execution of justice, where there were but few trespasses, and few offenders. Since then those, who liked one another so well as to join into society, cannot but be supposed to have some acquaintance and friendship together, and some trust one in another; they could not but have greater apprehensions of others, than of one another: and therefore their first care and thought cannot but be supposed to be, how to secure themselves against foreign force. It was natural for them to put themselves under a frame of government which might best serve to that end, and chuse the wisest and bravest man to conduct them in their wars, and lead them out against their enemies, and in this chiefly be their ruler.

Thus we see, that the kings of the Indians in America, which is still a pattern of the first ages in Asia and Europe, whilst the inhabitants were too few for the country, and want of people and money gave men no temptation to enlarge their possessions of land, or contest for wider extent of ground, are little more than generals of their armies; and though they command absolutely in war, yet at home and in time of peace they exercise very little dominion, and have but a very moderate sovereignty, the resolutions of peace and war being ordinarily either in the people, or in a council. Tho' the war itself, which admits not of plurality of governors, naturally devolves the command into the king's sole authority.

§. 109.

And thus in Israel itself, the chief business of their judges, and first kings, seems to have been to be captains in war, and leaders of their armies; which (besides what is signified by going out and in before the people, which was, to march forth to war, and home again in the heads of their forces) appears plainly in the story of Jephtha. The Ammonites making war upon Israel, the Gileadites in fear send to Jephtha, a bastard of their family whom they had cast off, and article with him, if he will assist them against the Ammonites, to make him their ruler; which they do in these words, And the people made him head and captain over them, Judg. xi. 11. which was, as it seems, all one as to be judge. And he judged Israel, Judg. xii. 7. that is, was their captain-general six years. So when Jotham upbraids the Shechemites with the obligation they had to Gideon, who had been their judge and ruler, he tells them, He fought for you, and adventured his life far, and delivered you out of the hands of Midian, Judg. ix. 17. Nothing mentioned of him, but what he did as a general: and indeed that is all is found in his history, or in any of the rest of the judges. And Abimelech particularly is called king, though at most he was but their general. And when, being weary of the ill conduct of Samuel's sons, the children of Israel desired a king, like all the nations to judge them, and to go out before them, and to fight their battles, 1 Sam. viii. 20. God granting their desire, says to Samuel, I will send thee a man, and thou shalt anoint him to be captain over my people Israel, that he may save my people out of the hands of the Philistines, ix. 16. As if the only business of a king had been to lead out their armies, and fight in their defence; and accordingly at his inauguration pouring a vial of oil upon him,

declares to Saul, that the Lord had anointed him to be captain over his inheritance, x. 1. And therefore those, who after Saul's being solemnly chosen and saluted king by the tribes at Mispah, were unwilling to have him their king, made no other objection but this, How shall this man save us? v. 27. as if they should have said, this man is unfit to be our king, not having skill and conduct enough in war, to be able to defend us. And when God resolved to transfer the government to David, it is in these words, But now thy kingdom shall not continue: the Lord hath sought him a man after his own heart, and the Lord hath commanded him to be captain over his people, xiii. 14. As if the whole kingly authority were nothing else but to be their general: and therefore the tribes who had stuck to Saul's family, and opposed David's reign, when they came to Hebron with terms of submission to him, they tell him, amongst other arguments they had to submit to him as to their king, that he was in effect their king in Saul's time, and therefore they had no reason but to receive him as their king now. Also (say they) in time past, when Saul was king over us, thou wast he that leddest out and broughtest in Israel, and the Lord said unto thee, Thou shalt feed my people Israel, and thou shalt be a captain over Israel.

§. 110.

Thus, whether a family by degrees grew up into a common-wealth, and the fatherly authority being continued on to the elder son, every one in his turn growing up under it, tacitly submitted to it, and the easiness and equality of it not offending any one, every one acquiesced, till time seemed to have confirmed it, and settled a right of succession by prescription: or whether several families, or the descendants of several families, whom chance, neighbourhood, or business brought together, uniting into society, the need of a general, whose conduct might defend them against their enemies in war, and the great confidence the innocence and sincerity of that poor but virtuous age, (such as are almost all those which begin governments, that ever come to last in the world) gave men one of another, made the first beginners of common-wealths generally put the rule into one man's hand, without any other express limitation or restraint, but what the nature of the thing, and the end of government required: which ever of those it was that at first put the rule into the hands of a single person, certain it is no body was intrusted with it but for the public good and safety, and to those ends, in

the infancies of common-wealths, those who had it commonly used it. And unless they had done so, young societies could not have subsisted; without such nursing fathers tender and careful of the public weal, all governments would have sunk under the weakness and infirmities of their infancy, and the prince and the people had soon perished together.

§. 111.

But though the golden age (before vain ambition, and amor sceleratus habendi, evil concupiscence, had corrupted men's minds into a mistake of true power and honour) had more virtue, and consequently better governors, as well as less vicious subjects; and there was then no stretching prerogative on the one side, to oppress the people; nor consequently on the other, any dispute about privilege, to lessen or restrain the power of the magistrate, and so no contest betwixt rulers and people about governors or government: yet, when ambition and luxury in future ages would retain and increase the power, without doing the business for which it was given; and aided by slattery, taught princes to have distinct and separate interests from their people, men found it necessary to examine more carefully the original and rights of government; and to find out ways to restrain the exorbitances, and prevent the abuses of that power, which they having intrusted in another's hands only for their own good, they found was made use of to hurt them.

§. 112.

Thus we may see how probable it is, that people that were naturally free, and by their own consent either submitted to the government of their father, or united together out of different families to make a government, should generally put the rule into one man's hands, and chuse to be under the conduct of a single person, without so much as by express conditions limiting or regulating his power, which they thought safe enough in his honesty and prudence; though they never dreamed of monarchy being *Jure Divino*, which we never heard of among mankind, till it was revealed to us by the divinity of this last age; nor ever allowed paternal power to have a right to dominion, or to be the foundation of all government. And thus much may suffice to shew, that as far as we have any light from history, we have reason to conclude, that all peaceful beginnings of government have been laid in the consent of the people. I say peaceful, because I shall have

occasion in another place to speak of conquest, which some esteem a way of beginning of governments.

The other objection I find urged against the beginning of polities, in the way I have mentioned, is this, viz.

§. 113.

That all men being born under government, some or other, it is impossible any of them should ever be free, and at liberty to unite together, and begin a new one, or ever be able to erect a lawful government.

If this argument be good; I ask, how came so many lawful monarchies into the world? for if any body, upon this supposition, can shew me any one man in any age of the world free to begin a lawful monarchy, I will be bound to shew him ten other free men at liberty, at the same time to unite and begin a new government under a regal, or any other form; it being demonstration, that if any one, born under the dominion of another, may be so free as to have a right to command others in a new and distinct empire, every one that is born under the dominion of another may be so free too, and may become a ruler, or subject, of a distinct separate government. And so by this their own principle, either all men, however born, are free, or else there is but one lawful prince, one lawful government in the world. And then they have nothing to do, but barely to shew us which that is; which when they have done, I doubt not but all mankind will easily agree to pay obedience to him.

§. 114.

Though it be a sufficient answer to their objection, to shew that it involves them in the same difficulties that it doth those they use it against; yet I shall endeavour to discover the weakness of this argument a little farther.

All men, say they, are born under government, and therefore they cannot be at liberty to begin a new one. Every one is born a subject to his father, or his prince, and is therefore under the perpetual tie of subjection and allegiance. It is plain mankind never owned nor considered any such natural subjection that they were born in, to one or to the other that tied them, without their own consents, to a subjection to them and their heirs.

§. 115.

For there are no examples so frequent in history, both sacred and profane, as those of men withdrawing themselves, and their obedience, from the jurisdiction they were born under, and the family or community they were bred up in, and setting up new governments in other places; from whence sprang all that number of petty commonwealths in the beginning of ages, and which always multiplied, as long as there was room enough, till the stronger, or more fortunate, swallowed the weaker; and those great ones again breaking to pieces, dissolved into lesser dominions. All which are so many testimonies against paternal sovereignty, and plainly prove, that it was not the natural right of the father descending to his heirs, that made governments in the beginning, since it was impossible, upon that ground, there should have been so many little kingdoms; all must have been but only one universal monarchy, if men had not been at liberty to separate themselves from their families, and the government, be it what it will, that was set up in it, and go and make distinct common-wealths and other governments, as they thought fit.

§. 116.

This has been the practice of the world from its first beginning to this day; nor is it now any more hindrance to the freedom of mankind, that they are born under constituted and ancient polities, that have established laws, and set forms of government, than if they were born in the woods, amongst the unconfined inhabitants, that run loose in them: for those, who would persuade us, that by being born under any government, we are naturally subjects to it, and have no more any title or pretence to the freedom of the state of nature, have no other reason (bating that of paternal power, which we have already answered) to produce for it, but only, because our fathers or progenitors passed away their natural liberty, and thereby bound up themselves and their posterity to a perpetual subjection to the government, which they themselves submitted to. It is true, that whatever engagements or promises any one has made for himself, he is under the obligation of them, but cannot, by any compact whatsoever, bind his children or posterity: for his son, when a man, being altogether as free as the father, any act of the father can no more give away the liberty of the son, than it can of any body else: he may indeed annex such conditions to the land, he enjoyed as a subject of any common-wealth, as may oblige his son to be of that

community, if he will enjoy those possessions which were his father's; because that estate being his father's property, he may dispose, or settle it, as he pleases.

§. 117.

And this has generally given the occasion to mistake in this matter; because common-wealths not permitting any part of their dominions to be dismembered, nor to be enjoyed by any but those of their community, the son cannot ordinarily enjoy the possessions of his father, but under the same terms his father did, by becoming a member of the society; whereby he puts himself presently under the government he finds there established, as much as any other subject of that common-wealth. And thus the consent of freemen, born under government, which only makes them members of it, being given separately in their turns, as each comes to be of age, and not in a multitude together; people take no notice of it, and thinking it not done at all, or not necessary, conclude they are naturally subjects as they are men.

§. 118.

But, it is plain, governments themselves understand it otherwise; they claim no power over the son, because of that they had over the father; nor look on children as being their subjects, by their fathers being so. If a subject of England have a child, by an English woman in France, whose subject is he? Not the king of England's; for he must have leave to be admitted to the privileges of it: nor the king of France's; for how then has his father a liberty to bring him away, and breed him as he pleases? and who ever was judged as a traytor or deserter, if he left, or warred against a country, for being barely born in it of parents that were aliens there? It is plain then, by the practice of governments themselves, as well as by the law of right reason, that a child is born a subject of no country or government. He is under his father's tuition and authority, till he comes to age of discretion; and then he is a freeman, at liberty what government he will put himself under, what body politic he will unite himself to: for if an Englishman's son, born in France, be at liberty, and may do so, it is evident there is no tie upon him by his father's being a subject of this kingdom; nor is he bound up by any compact of his ancestors. And why then hath not his son, by the same reason, the same liberty, though he be born any where else? Since the

power that a father hath naturally over his children, is the same, where-ever they be born, and the ties of natural obligations, are not bounded by the positive limits of kingdoms and common-wealths.

§. 119.

Every man being, as has been shewed, naturally free, and nothing being able to put him into subjection to any earthly power, but only his own consent; it is to be considered, what shall be understood to be a sufficient declaration of a man's consent, to make him subject to the laws of any government. There is a common distinction of an express and a tacit consent, which will concern our present case. No body doubts but an express consent, of any man entering into any society, makes him a perfect member of that society, a subject of that government. The difficulty is, what ought to be looked upon as a tacit consent, and how far it binds, i. e. how far any one shall be looked on to have consented, and thereby submitted to any government, where he has made no expressions of it at all. And to this I say, that every man, that hath any possessions, or enjoyment, of any part of the dominions of any government, doth thereby give his tacit consent, and is as far forth obliged to obedience to the laws of that government, during such enjoyment, as any one under it; whether this his possession be of land, to him and his heirs for ever, or a lodging only for a week; or whether it be barely travelling freely on the highway; and in effect, it reaches as far as the very being of any one within the territories of that government.

§. 120.

To understand this the better, it is fit to consider, that every man, when he at first incorporates himself into any common-wealth, he, by his uniting himself thereunto, annexed also, and submits to the community, those possessions, which he has, or shall acquire, that do not already belong to any other government: for it would be a direct contradiction, for any one to enter into society with others for the securing and regulating of property; and yet to suppose his land, whose property is to be regulated by the laws of the society, should be exempt from the jurisdiction of that government, to which he himself, the proprietor of the land, is a subject. By the same act therefore, whereby any one unites his person, which was before free, to any common-wealth; by the same he unites his possessions, which were before

free, to it also; and they become, both of them, person and possession, subject to the government and dominion of that common-wealth, as long as it hath a being. Whoever therefore, from thenceforth, by inheritance, purchase, permission, or otherways, enjoys any part of the land, so annexed to, and under the government of that common-wealth, must take it with the condition it is under; that is, of submitting to the government of the common-wealth, under whose jurisdiction it is, as far forth as any subject of it.

§. 121.

But since the government has a direct jurisdiction only over the land, and reaches the possessor of it, (before he has actually incorporated himself in the society) only as he dwells upon, and enjoys that; the obligation any one is under, by virtue of such enjoyment, to submit to the government, begins and ends with the enjoyment; so that whenever the owner, who has given nothing but such a tacit consent to the government, will, by donation, sale, or otherwise, quit the said possession, he is at liberty to go and incorporate himself into any other common-wealth; or to agree with others to begin a new one, in vacuis locis, in any part of the world, they can find free and unpossessed: whereas he, that has once, by actual agreement, and any express declaration, given his consent to be of any common-wealth, is, perpetually and indispensibly obliged to be, and remain unalterably a subject to it, and can never be again in the liberty of the state of nature; unless, by any calamity, the government he was under comes to be dissolved; or else by some public act cuts him off from being any longer a member of it.

§. 122.

But submitting to the laws of any country, living quietly, and enjoying privileges and protection under them, makes not a man a member of that society: this is only a local protection and homage due to and from all those, who, not being in a state of war, come within the territories belonging to any government, to all parts whereof the force of its laws extends. But this no more makes a man a member of that society, a perpetual subject of that common-wealth, than it would make a man a subject to another, in whose family he found it convenient to abide for some time; though, whilst he

continued in it, he were obliged to comply with the laws, and submit to the government he found there. And thus we see, that foreigners, by living all their lives under another government, and enjoying the privileges and protection of it, though they are bound, even in conscience, to submit to its administration, as far forth as any denison; yet do not thereby come to be subjects or members of that common-wealth. Nothing can make any man so, but his actually entering into it by positive engagement, and express promise and compact. This is that, which I think, concerning the beginning of political societies, and that consent which makes any one a member of any common-wealth.

CHAPTER IX. OF THE ENDS OF POLITICAL SOCIETY AND GOVERNMENT.

§. 123.

IF man in the state of nature be so free, as has been said; if he be absolute lord of his own person and possessions, equal to the greatest, and subject to no body, why will he part with his freedom? why will he give up this empire, and subject himself to the dominion and controul of any other power? To which it is obvious to answer, that though in the state of nature he hath such a right, yet the enjoyment of it is very uncertain, and constantly exposed to the invasion of others: for all being kings as much as he, every man his equal, and the greater part no strict observers of equity and justice, the enjoyment of the property he has in this state is very unsafe, very unsecure. This makes him willing to quit a condition, which, however free, is full of fears and continual dangers: and it is not without reason, that he seeks out, and is willing to join in society with others, who are already united, or have a mind to unite, for the mutual preservation of their lives, liberties and estates, which I call by the general name, property.

§. 124.

The great and chief end, therefore, of men's uniting into common-wealths, and putting themselves under government, is the preservation of their property. To which in the state of nature there are many things wanting.

First, There wants an established, settled, known law, received and allowed by common consent to be the standard of right and wrong, and the common measure to decide all controversies between them: for though the law of nature be plain and intelligible to all rational creatures; yet men being biassed by their interest, as well as ignorant for want of study of it, are not apt to allow of it as a law binding to them in the application of it to their particular cases.

§. 125.

Secondly, In the state of nature there wants a known and indifferent judge, with authority to determine all differences according to the established law: for every one in that state being both judge and executioner of the law of nature, men being partial to themselves, passion and revenge is very apt to carry them too far, and with too much heat, in their own cases; as well as negligence, and unconcernedness, to make them too remiss in other men's.

§. 126.

Thirdly, In the state of nature there often wants power to back and support the sentence when right, and to give it due execution. They who by any injustice offended, will seldom fail, where they are able, by force to make good their injustice; such resistance many times makes the punishment dangerous, and frequently destructive, to those who attempt it.

§. 127.

Thus mankind, notwithstanding all the privileges of the state of nature, being but in an ill condition, while they remain in it, are quickly driven into society. Hence it comes to pass, that we seldom find any number of men live any time together in this state. The inconveniencies that they are therein exposed to, by the irregular and uncertain exercise of the power every man has of punishing the transgressions of others, make them take sanctuary under the established laws of government, and therein seek the preservation of their property. It is this makes them so willingly give up every one his single power of punishing, to be exercised by such alone, as shall be appointed to it amongst them; and by such rules as the community, or those authorized by them to that purpose, shall agree on. And in this we have the original right and rise of both the legislative and executive power, as well as of the governments and societies themselves.

§. 128.

For in the state of nature, to omit the liberty he has of innocent delights, a man has two powers.

The first is to do whatsoever he thinks fit for the preservation of himself, and others within the permission of the law of nature: by which law, common to them all, he and all the rest of mankind are one community,

make up one society, distinct from all other creatures. And were it not for the corruption and viciousness of degenerate men, there would be no need of any other; no necessity that men should separate from this great and natural community, and by positive agreements combine into smaller and divided associations.

The other power a man has in the state of nature, is the power to punish the crimes committed against that law. Both these he gives up, when he joins in a private, if I may so call it, or particular politic society, and incorporates into any common-wealth, separate from the rest of mankind.

§. 129.

The first power, viz. of doing whatsoever be thought for the preservation of himself, and the rest of mankind, he gives up to be regulated by laws made by the society, so far forth as the preservation of himself, and the rest of that society shall require; which laws of the society in many things confine the liberty he had by the law of nature.

§. 130.

Secondly, The power of punishing he wholly gives up, and engages his natural force, (which he might before employ in the execution of the law of nature, by his own single authority, as he thought fit) to assist the executive power of the society, as the law thereof shall require: for being now in a new state, wherein he is to enjoy many conveniencies, from the labour, assistance, and society of others in the same community, as well as protection from its whole strength; he is to part also with as much of his natural liberty, in providing for himself, as the good, prosperity, and safety of the society shall require; which is not only necessary, but just, since the other members of the society do the like.

§. 131.

But though men, when they enter into society, give up the equality, liberty, and executive power they had in the state of nature, into the hands of the society, to be so far disposed of by the legislative, as the good of the society shall require; yet it being only with an intention in every one the better to preserve himself, his liberty and property; (for no rational creature can be

supposed to change his condition with an intention to be worse) the power of the society, or legislative constituted by them, can never be supposed to extend farther, than the common good; but is obliged to secure every one's property, by providing against those three defects above mentioned, that made the state of nature so unsafe and uneasy. And so whoever has the legislative or supreme power of any common-wealth, is bound to govern by established standing laws, promulgated and known to the people, and not by extemporary decrees; by indifferent and upright judges, who are to decide controversies by those laws; and to employ the force of the community at home, only in the execution of such laws, or abroad to prevent or redress foreign injuries, and secure the community from inroads and invasion. And all this to be directed to no other end, but the peace, safety, and public good of the people.

CHAPTER X. OF THE FORMS OF A COMMON-WEALTH.

§. 132.

THE majority having, as has been shewed, upon men's first uniting into society, the whole power of the community naturally in them, may employ all that power in making laws for the community from time to time, and executing those laws by officers of their own appointing; and then the form of the government is a perfect democracy: or else may put the power of making laws into the hands of a few select men, and their heirs or successors; and then it is an oligarchy: or else into the hands of one man, and then it is a monarchy: if to him and his heirs, it is an hereditary monarchy: if to him only for life, but upon his death the power only of nominating a successor to return to them; an elective monarchy. And so accordingly of these the community may make compounded and mixed forms of government, as they think good. And if the legislative power be at first given by the majority to one or more persons only for their lives, or any limited time, and then the supreme power to revert to them again; when it is so reverted, the community may dispose of it again anew into what hands they please, and so constitute a new form of government: for the form of government depending upon the placing the supreme power, which is the legislative, it being impossible to conceive that an inferior power should prescribe to a superior, or any but the supreme make laws, according as the power of making laws is placed, such is the form of the common-wealth.

§. 133.

By common-wealth, I must be understood all along to mean, not a democracy, or any form of government, but any independent community, which the Latines signified by the word *civitas*, to which the word which best answers in our language, is common-wealth, and most properly expresses such a society of men, which community or city in English does not; for there may be subordinate communities in a government; and city amongst us has a quite different notion from common-wealth: and therefore,

to avoid ambiguity, I crave leave to use the word common-wealth in that sense, in which I find it used by king James the first; and I take it to be its genuine signification; which if any body dislike, I consent with him to change it for a better.

CHAPTER XI. OF THE EXTENT OF THE LEGISLATIVE POWER.

§. 134.

THE great end of men's entering into society, being the enjoyment of their properties in peace and safety, and the great instrument and means of that being the laws established in that society; the first and fundamental positive law of all common-wealths is the establishing of the legislative power; as the first and fundamental natural law, which is to govern even the legislative itself, is the preservation of the society, and (as far as will consist with the public good) of every person in it. This legislative is not only the supreme power of the common-wealth, but sacred and unalterable in the hands where the community have once placed it; nor can any edict of any body else, in what form soever conceived, or by what power soever backed, have the force and obligation of a law, which has not its sanction from that legislative which the public has chosen and appointed: for without this the law could not have that, which is absolutely necessary to its being a law, the consent of the society, over whom no body can have a power to make laws, but by their own consent, and by authority received from them; and therefore all the obedience, which by the most solemn ties any one can be obliged to pay, ultimately terminates in this supreme power, and is directed by those laws which it enacts: nor can any oaths to any foreign power whatsoever, or any domestic subordinate power, discharge any member of the society from his obedience to the legislative, acting pursuant to their trust; nor oblige him to any obedience contrary to the laws so enacted, or farther than they do allow; it being ridiculous to imagine one can be tied ultimately to obey any power in the society, which is not the supreme.

§. 135.

Though the legislative, whether placed in one or more, whether it be always in being, or only by intervals, though it be the supreme power in every common-wealth; yet,

First, It is not, nor can possibly be absolutely arbitrary over the lives and fortunes of the people: for it being but the joint power of every member of the society given up to that person, or assembly, which is legislator; it can be no more than those persons had in a state of nature before they entered into society, and gave up to the community: for no body can transfer to another more power than he has in himself; and no body has an absolute arbitrary power over himself, or over any other, to destroy his own life, or take away the life or property of another. A man, as has been proved, cannot subject himself to the arbitrary power of another; and having in the state of nature no arbitrary power over the life, liberty, or possession of another, but only so much as the law of nature gave him for the preservation of himself, and the rest of mankind; this is all he doth, or can give up to the commonwealth, and by it to the legislative power, so that the legislative can have no more than this. Their power, in the utmost bounds of it, is limited to the public good of the society. It is a power, that hath no other end but preservation, and therefore can never have a right to destroy, enslave, or designedly to impoverish the subjects. The obligations of the law of nature cease not in society, but only in many cases are drawn closer, and have by human laws known penalties annexed to them, to inforce their observation. Thus the law of nature stands as an eternal rule to all men, legislators as well as others. The rules that they make for other men's actions, must, as well as their own and other men's actions, be conformable to the law of nature, i. e. to the will of God, of which that is a declaration, and the fundamental law of nature being the preservation of mankind, no human sanction can be good, or valid against it.

§. 136.

Secondly, The legislative, or supreme authority, cannot assume to its self a power to rule by extemporary arbitrary decrees, but is bound to dispense justice, and decide the rights of the subject by promulgated standing laws, and known authorized judges: for the law of nature being unwritten, and so no where to be found but in the minds of men, they who through passion or interest shall miscite, or misapply it, cannot so easily be convinced of their mistake where there is no established judge: and so it serves not, as it ought, to determine the rights, and fence the properties of those that live under it, especially where every one is judge, interpreter, and executioner of it too,

and that in his own case: and he that has right on his side, having ordinarily but his own single strength, hath not force enough to defend himself from injuries, or to punish delinquents. To avoid these inconveniencies, which disorder men's properties in the state of nature, men unite into societies, that they may have the united strength of the whole society to secure and defend their properties, and may have standing rules to bound it, by which every one may know what is his. To this end it is that men give up all their natural power to the society which they enter into, and the community put the legislative power into such hands as they think fit, with this trust, that they shall be governed by declared laws, or else their peace, quiet, and property will still be at the same uncertainty, as it was in the state of nature.

§. 137.

Absolute arbitrary power, or governing without settled standing laws, can neither of them consist with the ends of society and government, which men would not quit the freedom of the state of nature for, and tie themselves up under, were it not to preserve their lives, liberties and fortunes, and by stated rules of right and property to secure their peace and quiet. It cannot be supposed that they should intend, had they a power so to do, to give to any one, or more, an absolute arbitrary power over their persons and estates, and put a force into the magistrate's hand to execute his unlimited will arbitrarily upon them. This were to put themselves into a worse condition than the state of nature, wherein they had a liberty to defend their right against the injuries of others, and were upon equal terms of force to maintain it, whether invaded by a single man, or many in combination. Whereas by supposing they have given up themselves to the absolute arbitrary power and will of a legislator, they have disarmed themselves, and armed him, to make a prey of them when he pleases; he being in a much worse condition, who is exposed to the arbitrary power of one man, who has the command of 100,000, than he that is exposed to the arbitrary power of 100,000 single men; no body being secure, that his will, who has such a command, is better than that of other men, though his force be 100,000 times stronger. And therefore, whatever form the commonwealth is under, the ruling power ought to govern by declared and received laws, and nor by extemporary dictates and undetermined resolutions: for then mankind will be in a far worse condition than in the state of nature, if they shall have

armed one, or a few men with the joint power of a multitude, to force them to obey at pleasure the exorbitant and unlimited decrees of their sudden thoughts, or unrestrained, and till that moment unknown wills, without having any measures set down which may guide and justify their actions: for all the power the government has, being only for the good of the society, as it ought not to be arbitrary and at pleasure, so it ought to be exercised by established and promulgated laws; that both the people may know their duty, and be safe and secure within the limits of the law; and the rulers too kept within their bounds, and not be tempted, by the power they have in their hands, to employ it to such purposes, and by such measures, as they would not have known, and own not willingly.

§. 138.

Thirdly, The supreme power cannot take from any man any part of his property without his own consent: for the preservation of property being the end of government, and that for which men enter into society, it necessarily supposes and requires, that the people should have property, without which they must be supposed to lose that, by entering into society, which was the end for which they entered into it; too gross an absurdity for any man to own. Men therefore in society having property, they have such a right to the goods, which by the law of the community are their's, that no body hath a right to take their substance or any part of it from them, without their own consent: without this they have no property at all; for I have truly no property in that, which another can by right take from me, when he pleases, against my consent. Hence it is a mistake to think, that the supreme or legislative power of any common-wealth, can do what it will, and dispose of the estates of the subject arbitrarily, or take any part of them at pleasure. This is not much to be feared in governments where the legislative consists, wholly or in part, in assemblies which are variable, whose members, upon the dissolution of the assembly, are subjects under the common laws of their country, equally with the rest. But in governments, where the legislative is in one lasting assembly always in being, or in one man, as in absolute monarchies, there is danger still, that they will think themselves to have a distinct interest from the rest of the community; and so will be apt to increase their own riches and power, by taking what they think fit from the people: for a man's property is not at all secure, tho' there be good and

equitable laws to set the bounds of it between him and his fellow subjects, if he who commands those subjects have power to take from any private man, what part he pleases of his property, and use and dispose of it as he thinks good.

§. 139.

But government, into whatsoever hands it is put, being, as I have before shewed, intrusted with this condition, and for this end, that men might have and secure their properties; the prince, or senate, however it may have power to make laws, for the regulating of property between the subjects one amongst another, yet can never have a power to take to themselves the whole, or any part of the subjects property, without their own consent: for this would be in effect to leave them no property at all. And to let us see, that even absolute power, where it is necessary, is not arbitrary by being absolute, but is still limited by that reason, and confined to those ends, which required it in some cases to be absolute, we need look no farther than the common practice of martial discipline: for the preservation of the army, and in it of the whole common-wealth, requires an absolute obedience to the command of every superior officer, and it is justly death to disobey or dispute the most dangerous or unreasonable of them; but yet we see, that neither the serjeant, that could command a soldier to march up to the mouth of a cannon, or stand in a breach, where he is almost sure to perish, can command that soldier to give him one penny of his money; nor the general, that can condemn him to death for deserting his post, or for not obeying the most desperate orders, can yet, with all his absolute power of life and death, dispose of one farthing of that soldier's estate, or seize one jot of his goods; whom yet he can command any thing, and hang for the least disobedience; because such a blind obedience is necessary to that end, for which the commander has his power, viz. the preservation of the rest; but the disposing of his goods has nothing to do with it.

§. 140.

It is true, governments cannot be supported without great charge, and it is fit every one who enjoys his share of the protection, should pay out of his estate his proportion for the maintenance of it. But still it must be with his own consent, i. e. the consent of the majority, giving it either by themselves,

or their representatives chosen by them: for if any one shall claim a power to lay and levy taxes on the people, by his own authority, and without such consent of the people, he thereby invades the fundamental law of property, and subverts the end of government: for what property have I in that, which another may by right take, when he pleases, to himself?

§. 141.

Fourthly, The legislative cannot transfer the power of making laws to any other hands: for it being but a delegated power from the people, they who have it cannot pass it over to others. The people alone can appoint the form of the common-wealth, which is by constituting the legislative, and appointing in whose hands that shall be. And when the people have said, We will submit to rules, and be governed by laws made by such men, and in such forms, no body else can say other men shall make laws for them; nor can the people be bound by any laws, but such as are enacted by those whom they have chosen, and authorized to make laws for them. The power of the legislative, being derived from the people by a positive voluntary grant and institution, can be no other than what that positive grant conveyed, which being only to make laws, and not to make legislators, the legislative can have no power to transfer their authority of making laws, and place it in other hands.

§. 142.

These are the bounds which the trust, that is put in them by the society, and the law of God and nature, have set to the legislative power of every common-wealth, in all forms of government.

First, They are to govern by promulgated established laws, not to be varied in particular cases, but to have one rule for rich and poor, for the favourite at court, and the country man at plough.

Secondly, These laws also ought to be designed for no other end ultimately, but the good of the people.

Thirdly, They must not raise taxes on the property of the people, without the consent of the people, given by themselves, or their deputies. And this properly concerns only such governments where the legislative is always in being, or at least where the people have not reserved any part of the legislative to deputies, to be from time to time chosen by themselves.

Fourthly, The legislative neither must nor can transfer the power of making laws to any body else, or place it any where, but where the people have.

CHAPTER XII. OF THE LEGISLATIVE, EXECUTIVE, AND FEDERATIVE POWER OF THE COMMON-WEALTH.

§. 143.

THE legislative power is that, which has a right to direct how the force of the common-wealth shall be employed for preserving the community and the members of it. But because those laws which are constantly to be executed, and whose force is always to continue, may be made in a little time; therefore there is no need, that the legislative should be always in being, not having always business to do. And because it may be too great a temptation to human frailty, apt to grasp at power, for the same persons, who have the power of making laws, to have also in their hands the power to execute them, whereby they may exempt themselves from obedience to the laws they make, and suit the law, both in its making, and execution, to their own private advantage, and thereby come to have a distinct interest from the rest of the community, contrary to the end of society and government: therefore in well-ordered common-wealths, where the good of the whole is so considered, as it ought, the legislative power is put into the hands of divers persons, who duly assembled, have by themselves, or jointly with others, a power to make laws, which when they have done, being separated again, they are themselves subject to the laws they have made; which is a new and near tie upon them, to take care, that they make them for the public good.

§. 144.

But because the laws, that are at once, and in a short time made, have a constant and lasting force, and need a perpetual execution, or an attendance thereunto; therefore it is necessary there should be a power always in being, which should see to the execution of the laws that are made, and remain in force. And thus the legislative and executive power come often to be separated.

§. 145.

There is another power in every common-wealth, which one may call natural, because it is that which answers to the power every man naturally had before he entered into society: for though in a common-wealth the members of it are distinct persons still in reference to one another, and as such are governed by the laws of the society; yet in reference to the rest of mankind, they make one body, which is, as every member of it before was, still in the state of nature with the rest of mankind. Hence it is, that the controversies that happen between any man of the society with those that are out of it, are managed by the public; and an injury done to a member of their body, engages the whole in the reparation of it. So that under this consideration, the whole community is one body in the state of nature, in respect of all other states or persons out of its community.

§. 146.

This therefore contains the power of war and peace, leagues and alliances, and all the transactions, with all persons and communities without the common-wealth, and may be called federative, if any one pleases. So the thing be understood, I am indifferent as to the name.

§. 147.

These two powers, executive and federative, though they be really distinct in themselves, yet one comprehending the execution of the municipal laws of the society within its self, upon all that are parts of it; the other the management of the security and interest of the public without, with all those that it may receive benefit or damage from, yet they are always almost united. And though this federative power in the well or ill management of it be of great moment to the common-wealth, yet it is much less capable to be directed by antecedent, standing, positive laws, than the executive; and so must necessarily be left to the prudence and wisdom of those, whose hands it is in, to be managed for the public good: for the laws that concern subjects one amongst another, being to direct their actions, may well enough precede them. But what is to be done in reference to foreigners, depending much upon their actions, and the variation of designs and interests, must be left in great part to the prudence of those, who have this

power committed to them, to be managed by the best of their skill, for the advantage of the common-wealth.

§. 148.

Though, as I said, the executive and federative power of every community be really distinct in themselves, yet they are hardly to be separated, and placed at the same time, in the hands of distinct persons: for both of them requiring the force of the society for their exercise, it is almost impracticable to place the force of the common-wealth in distinct, and not subordinate hands; or that the executive and federative power should be placed in persons, that might act separately, whereby the force of the public would be under different commands: which would be apt some time or other to cause disorder and ruin.

CHAPTER XIII. OF THE SUBORDINATION OF THE POWERS OF THE COMMON-WEALTH.

§. 149.

THOUGH in a constituted common-wealth, standing upon its own basis, and acting according to its own nature, that is, acting for the preservation of the community, there can be but one supreme power, which is the legislative, to which all the rest are and must be subordinate, yet the legislative being only a fiduciary power to act for certain ends, there remains still in the people a supreme power to remove or alter the legislative, when they find the legislative act contrary to the trust reposed in them: for all power given with trust for the attaining an end, being limited by that end, whenever that end is manifestly neglected, or opposed, the trust must necessarily be forfeited, and the power devolve into the hands of those that gave it, who may place it anew where they shall think best for their safety and security. And thus the community perpetually retains a supreme power of saving themselves from the attempts and designs of any body, even of their legislators, whenever they shall be so foolish, or so wicked, as to lay and carry on designs against the liberties and properties of the subject: for no man or society of men, having a power to deliver up their preservation, or consequently the means of it, to the absolute will and arbitrary dominion of another; when ever any one shall go about to bring them into such a slavish condition, they will always have a right to preserve, what they have not a power to part with; and to rid themselves of those, who invade this fundamental, sacred, and unalterable law of self-preservation, for which they entered into society. And thus the community may be said in this respect to be always the supreme power, but not as considered under any form of government, because this power of the people can never take place till the government be dissolved.

§. 150.

In all cases, whilst the government subsists, the legislative is the supreme power: for what can give laws to another, must needs be superior to him;

and since the legislative is no otherwise legislative of the society, but by the right it has to make laws for all the parts, and for every member of the society, prescribing rules to their actions, and giving power of execution, where they are transgressed, the legislative must needs be the supreme, and all other powers, in any members or parts of the society, derived from and subordinate to it.

§. 151.

In some common-wealths, where the legislative is not always in being, and the executive is vested in a single person, who has also a share in the legislative; there that single person in a very tolerable sense may also be called supreme: not that he has in himself all the supreme power, which is that of law-making; but because he has in him the supreme execution, from whom all inferior magistrates derive all their several subordinate powers, or at least the greatest part of them: having also no legislative superior to him, there being no law to be made without his consent, which cannot be expected should ever subject him to the other part of the legislative, he is properly enough in this sense supreme. But yet it is to be observed, that tho' oaths of allegiance and fealty are taken to him, it is not to him as supreme legislator, but as supreme executor of the law, made by a joint power of him with others; allegiance being nothing but an obedience according to law, which when he violates, he has no right to obedience, nor can claim it otherwise than as the public person vested with the power of the law, and so is to be considered as the image, phantom, or representative of the common-wealth, acted by the will of the society, declared in its laws; and thus he has no will, no power, but that of the law. But when he quits this representation, this public will, and acts by his own private will, he degrades himself, and is but a single private person without power, and without will, that has any right to obedience; the members owing no obedience but to the public will of the society.

§. 152.

The executive power, placed any where but in a person that has also a share in the legislative, is visibly subordinate and accountable to it, and may be at pleasure changed and displaced; so that it is not the supreme executive power, that is exempt from subordination, but the supreme executive power

vested in one, who having a share in the legislative, has no distinct superior legislative to be subordinate and accountable to, farther than he himself shall join and consent; so that he is no more subordinate than he himself shall think fit, which one may certainly conclude will be but very little. Of other ministerial and subordinate powers in a common-wealth, we need not speak, they being so multiplied with infinite variety, in the different customs and constitutions of distinct common-wealths, that it is impossible to give a particular account of them all. Only thus much, which is necessary to our present purpose, we may take notice of concerning them, that they have no manner of authority, any of them, beyond what is by positive grant and commission delegated to them, and are all of them accountable to some other power in the common-wealth.

§. 153.

It is not necessary, no, nor so much as convenient, that the legislative should be always in being; but absolutely necessary that the executive power should, because there is not always need of new laws to be made, but always need of execution of the laws that are made. When the legislative hath put the execution of the laws, they make, into other hands, they have a power still to resume it out of those hands, when they find cause, and to punish for any mal-administration against the laws. The same holds also in regard of the federative power, that and the executive being both ministerial and subordinate to the legislative, which, as has been shewed, in a constituted common-wealth is the supreme. The legislative also in this case being supposed to consist of several persons, (for if it be a single person, it cannot but be always in being, and so will, as supreme, naturally have the supreme executive power, together with the legislative) may assemble, and exercise their legislature, at the times that either their original constitution, or their own adjournment, appoints, or when they please; if neither of these hath appointed any time, or there be no other way prescribed to convoke them: for the supreme power being placed in them by the people, it is always in them, and they may exercise it when they please, unless by their original constitution they are limited to certain seasons, or by an act of their supreme power they have adjourned to a certain time; and when that time comes, they have a right to assemble and act again.

§. 154.

If the legislative, or any part of it, be made up of representatives chosen for that time by the people, which afterwards return into the ordinary state of subjects, and have no share in the legislature but upon a new choice, this power of chusing must also be exercised by the people, either at certain appointed seasons, or else when they are summoned to it; and in this latter case, the power of convoking the legislative is ordinarily placed in the executive, and has one of these two limitations in respect of time: that either the original constitution requires their assembling and acting at certain intervals, and then the executive power does nothing but ministerially issue directions for their electing and assembling, according to due forms; or else it is left to his prudence to call them by new elections, when the occasions or exigencies of the public require the amendment of old, or making of new laws, or the redress or prevention of any inconveniencies, that lie on, or threaten the people.

§. 155.

It may be demanded here, What if the executive power, being possessed of the force of the common-wealth, shall make use of that force to hinder the meeting and acting of the legislative, when the original constitution, or the public exigencies require it? I say, using force upon the people without authority, and contrary to the trust put in him that does so, is a state of war with the people, who have a right to reinstate their legislative in the exercise of their power: for having erected a legislative, with an intent they should exercise the power of making laws, either at certain set times, or when there is need of it, when they are hindered by any force from what is so necessary to the society, and wherein the safety and preservation of the people consists, the people have a right to remove it by force. In all states and conditions, the true remedy of force without authority, is to oppose force to it. The use of force without authority, always puts him that uses it into a state of war, as the aggressor, and renders him liable to be treated accordingly.

§. 156.

The power of assembling and dismissing the legislative, placed in the executive, gives not the executive a superiority over it, but is a fiduciary trust placed in him, for the safety of the people, in a case where the uncertainty and variableness of human affairs could not bear a steady fixed rule: for it not being possible, that the first framers of the government should, by any foresight, be so much masters of future events, as to be able to prefix so just periods of return and duration to the assemblies of the legislative, in all times to come, that might exactly answer all the exigencies of the common-wealth; the best remedy could be found for this defect, was to trust this to the prudence of one who was always to be present, and whose business it was to watch over the public good. Constant frequent meetings of the legislative, and long continuations of their assemblies, without necessary occasion, could not but be burdensome to the people, and must necessarily in time produce more dangerous inconveniencies, and yet the quick turn of affairs might be sometimes such as to need their present help: any delay of their convening might endanger the public; and sometimes too their business might be so great, that the limited time of their sitting might be too short for their work, and rob the public of that benefit which could be had only from their mature deliberation. What then could be done in this case to prevent the community from being exposed some time or other to eminent hazard, on one side or the other, by fixed intervals and periods, set to the meeting and acting of the legislative, but to intrust it to the prudence of some, who being present, and acquainted with the state of public affairs, might make use of this prerogative for the public good? and where else could this be so well placed as in his hands, who was intrusted with the execution of the laws for the same end? Thus supposing the regulation of times for the assembling and sitting of the legislative, not settled by the original constitution, it naturally fell into the hands of the executive, not as an arbitrary power depending on his good pleasure, but with this trust always to have it exercised only for the public weal, as the occurrences of times and change of affairs might require. Whether settled periods of their convening, or a liberty left to the prince for convoking the legislative, or perhaps a mixture of both, hath the least inconvenience attending it, it is not my business here to inquire, but only to shew, that though the executive power may have the prerogative of convoking and dissolving such conventions of the legislative, yet it is not thereby superior to it.

§. 157.

Things of this world are in so constant a flux, that nothing remains long in the same state. Thus people, riches, trade, power, change their stations, flourishing mighty cities come to ruin, and prove in times neglected desolate corners, whilst other unfrequented places grow into populous countries, filled with wealth and inhabitants. But things not always changing equally, and private interest often keeping up customs and privileges, when the reasons of them are ceased, it often comes to pass, that in governments, where part of the legislative consists of representatives chosen by the people, that in tract of time this representation becomes very unequal and disproportionate to the reasons it was at first established upon. To what gross absurdities the following of custom, when reason has left it, may lead, we may be satisfied, when we see the bare name of a town, of which there remains not so much as the ruins, where scarce so much housing as a sheepcote, or more inhabitants than a shepherd is to be found, sends as many representatives to the grand assembly of law-makers, as a whole county numerous in people, and powerful in riches. This strangers stand amazed at, and every one must confess needs a remedy; tho' most think it hard to find one, because the constitution of the legislative being the original and supreme act of the society, antecedent to all positive laws in it, and depending wholly on the people, no inferior power can alter it. And therefore the people, when the legislative is once constituted, having, in such a government as we have been speaking of, no power to act as long as the government stands; this inconvenience is thought incapable of a remedy.

§. 158.

Salus populi suprema lex, is certainly so just and fundamental a rule, that he, who sincerely follows it, cannot dangerously err. If therefore the executive, who has the power of convoking the legislative, observing rather the true proportion, than fashion of representation, regulates, not by old custom, but true reason, the number of members, in all places that have a right to be distinctly represented, which no part of the people however incorporated can pretend to, but in proportion to the assistance which it affords to the public, it cannot be judged to have set up a new legislative, but to have restored the old and true one, and to have rectified the disorders

which succession of time had insensibly, as well as inevitably introduced: For it being the interest as well as intention of the people, to have a fair and equal representative; whoever brings it nearest to that, is an undoubted friend to, and establisher of the government, and cannot miss the consent and approbation of the community; prerogative being nothing but a power, in the hands of the prince, to provide for the public good, in such cases, which depending upon unforeseen and uncertain occurrences, certain and unalterable laws could not safely direct; whatsoever shall be done manifestly for the good of the people, and the establishing the government upon its true foundations, is, and always will be, just prerogative. The power of erecting new corporations, and therewith new representatives, carries with it a supposition, that in time the measures of representation might vary, and those places have a just right to be represented which before had none; and by the same reason, those cease to have a right, and be too inconsiderable for such a privilege, which before had it. 'Tis not a change from the present state, which perhaps corruption or decay has introduced, that makes an inroad upon the government, but the tendency of it to injure or oppress the people, and to set up one part or party, with a distinction from, and an unequal subjection of the rest. Whatsoever cannot but be acknowledged to be of advantage to the society, and people in general, upon just and lasting measures, will always, when done, justify itself; and whenever the people shall chuse their representatives upon just and undeniably equal measures, suitable to the original frame of the government, it cannot be doubted to be the will and act of the society, whoever permitted or caused them so to do.

CHAPTER XIV. OF PREROGATIVE.

§. 159.

WHERE the legislative and executive power are in distinct hands, (as they are in all moderated monarchies, and well-framed governments) there the good of the society requires, that several things should be left to the discretion of him that has the executive power: for the legislators not being able to foresee, and provide by laws, for all that may be useful to the community, the executor of the laws, having the power in his hands, has by the common law of nature a right to make use of it for the good of the society, in many cases, where the municipal law has given no direction, till the legislative can conveniently be assembled to provide for it. Many things there are, which the law can by no means provide for; and those must necessarily be left to the discretion of him that has the executive power in his hands, to be ordered by him as the public good and advantage shall require: nay, it is fit that the laws themselves should in some cases give way to the executive power, or rather to this fundamental law of nature and government, viz. That as much as may be, all the members of the society are to be preserved: for since many accidents may happen, wherein a strict and rigid observation of the laws may do harm; (as not to pull down an innocent man's house to stop the fire, when the next to it is burning) and a man may come sometimes within the reach of the law, which makes no distinction of persons, by an action that may deserve reward and pardon; 'tis fit the ruler should have a power, in many cases, to mitigate the severity of the law, and pardon some offenders: for the end of government being the preservation of all, as much as may be, even the guilty are to be spared, where it can prove no prejudice to the innocent.

§. 160.

This power to act according to discretion, for the public good, without the prescription of the law, and sometimes even against it, is that which is called prerogative: for since in some governments the lawmaking power is not always in being, and is usually too numerous, and so too slow, for the dispatch requisite to execution; and because also it is impossible to foresee,

and so by laws to provide for, all accidents and necessities that may concern the public, or to make such laws as will do no harm, if they are executed with an inflexible rigour, on all occasions, and upon all persons that may come in their way; therefore there is a latitude left to the executive power, to do many things of choice which the laws do not prescribe.

§. 161.

This power, whilst employed for the benefit of the community, and suitably to the trust and ends of the government, is undoubted prerogative, and never is questioned: for the people are very seldom or never scrupulous or nice in the point; they are far from examining prerogative, whilst it is in any tolerable degree employed for the use it was meant, that is, for the good of the people, and not manifestly against it: but if there comes to be a question between the executive power and the people, about a thing claimed as a prerogative; the tendency of the exercise of such prerogative to the good or hurt of the people, will easily decide that question.

§. 162.

It is easy to conceive, that in the infancy of governments, when commonwealths differed little from families in number of people, they differed from them too but little in number of laws: and the governors, being as the fathers of them, watching over them for their good, the government was almost all prerogative. A few established laws served the turn, and the discretion and care of the ruler supplied the rest. But when mistake or flattery prevailed with weak princes to make use of this power for private ends of their own, and not for the public good, the people were fain by express laws to get prerogative determined in those points wherein they found disadvantage from it: and thus declared limitations of prerogative were by the people found necessary in cases which they and their ancestors had left, in the utmost latitude, to the wisdom of those princes who made no other but a right use of it, that is, for the good of their people.

§. 163.

And therefore they have a very wrong notion of government, who say, that the people have incroached upon the prerogative, when they have got any

part of it to be defined by positive laws: for in so doing they have not pulled from the prince any thing that of right belonged to him, but only declared, that that power which they indefinitely left in his or his ancestors hands, to be exercised for their good, was not a thing which they intended him when he used it otherwise: for the end of government being the good of the community, whatsoever alterations are made in it, tending to that end, cannot be an incroachment upon any body, since no body in government can have a right tending to any other end: and those only are incroachments which prejudice or hinder the public good. Those who say otherwise, speak as if the prince had a distinct and separate interest from the good of the community, and was not made for it; the root and source from which spring almost all those evils and disorders which happen in kingly governments. And indeed, if that be so, the people under his government are not a society of rational creatures, entered into a community for their mutual good; they are not such as have set rulers over themselves, to guard, and promote that good; but are to be looked on as an herd of inferior creatures under the dominion of a master, who keeps them and works them for his own pleasure or profit. If men were so void of reason, and brutish, as to enter into society upon such terms, prerogative might indeed be, what some men would have it, an arbitrary power to do things hurtful to the people.

§. 164.

But since a rational creature cannot be supposed, when free, to put himself into subjection to another, for his own harm; (though, where he finds a good and wise ruler, he may not perhaps think it either necessary or useful to set precise bounds to his power in all things) prerogative can be nothing but the people's permitting their rulers to do several things, of their own free choice, where the law was silent, and sometimes too against the direct letter of the law, for the public good; and their acquiescing in it when so done: for as a good prince, who is mindful of the trust put into his hands, and careful of the good of his people, cannot have too much prerogative, that is, power to do good; so a weak and ill prince, who would claim that power which his predecessors exercised without the direction of the law, as a prerogative belonging to him by right of his office, which he may exercise at his pleasure, to make or promote an interest distinct from that of the public, gives the people an occasion to claim their right, and limit that power,

which, whilst it was exercised for their good, they were content should be tacitly allowed.

§. 165.

And therefore he that will look into the history of England, will find, that prerogative was always largest in the hands of our wisest and best princes; because the people, observing the whole tendency of their actions to be the public good, contested not what was done without law to that end: or, if any human frailty or mistake (for princes are but men, made as others) appeared in some small declinations from that end; yet 'twas visible, the main of their conduct tended to nothing but the care of the public. The people therefore, finding reason to be satisfied with these princes, whenever they acted without, or contrary to the letter of the law, acquiesced in what they did, and, without the least complaint, let them enlarge their prerogative as they pleased, judging rightly, that they did nothing herein to the prejudice of their laws, since they acted conformable to the foundation and end of all laws, the public good.

§. 166.

Such god-like princes indeed had some title to arbitrary power by that argument, that would prove absolute monarchy the best government, as that which God himself governs the universe by; because such kings partake of his wisdom and goodness. Upon this is founded that saying, That the reigns of good princes have been always most dangerous to the liberties of their people: for when their successors, managing the government with different thoughts, would draw the actions of those good rulers into precedent, and make them the standard of their prerogative, as if what had been done only for the good of the people was a right in them to do, for the harm of the people, if they so pleased; it has often occasioned contest, and sometimes public disorders, before the people could recover their original right, and get that to be declared not to be prerogative, which truly was never so; since it is impossible that any body in the society should ever have a right to do the people harm; though it be very possible, and reasonable, that the people should not go about to set any bounds to the prerogative of those kings, or rulers, who themselves transgressed not the bounds of the public good: for prerogative is nothing but the power of doing public good without a rule.

§. 167.

The power of calling parliaments in England, as to precise time, place, and duration, is certainly a prerogative of the king, but still with this trust, that it shall be made use of for the good of the nation, as the exigencies of the times, and variety of occasions, shall require: for it being impossible to foresee which should always be the fittest place for them to assemble in, and what the best season; the choice of these was left with the executive power, as might be most subservient to the public good, and best suit the ends of parliaments.

§. 168.

The old question will be asked in this matter of prerogative, But who shall be judge when this power is made a right use of? I answer: between an executive power in being, with such a prerogative, and a legislative that depends upon his will for their convening, there can be no judge on earth; as there can be none between the legislative and the people, should either the executive, or the legislative, when they have got the power in their hands, design, or go about to enslave or destroy them. The people have no other remedy in this, as in all other cases where they have no judge on earth, but to appeal to heaven: for the rulers, in such attempts, exercising a power the people never put into their hands, (who can never be supposed to consent that any body should rule over them for their harm) do that which they have not a right to do. And where the body of the people, or any single man, is deprived of their right, or is under the exercise of a power without right, and have no appeal on earth, then they have a liberty to appeal to heaven, whenever they judge the cause of sufficient moment. And therefore, though the people cannot be judge, so as to have, by the constitution of that society, any superior power, to determine and give effective sentence in the case; yet they have, by a law antecedent and paramount to all positive laws of men, reserved that ultimate determination to themselves which belongs to all mankind, where there lies no appeal on earth, viz. to judge, whether they have just cause to make their appeal to heaven. And this judgment they cannot part with, it being out of a man's power so to submit himself to another, as to give him a liberty to destroy him; God and nature never allowing a man so to abandon himself, as to neglect his own preservation:

and since he cannot take away his own life, neither can he give another power to take it. Nor let any one think, this lays a perpetual foundation for disorder; for this operates not, till the inconveniency is so great, that the majority feel it, and are weary of it, and find a necessity to have it amended. But this the executive power, or wise princes, never need come in the danger of: and it is the thing, of all others, they have most need to avoid, as of all others the most perilous.

CHAPTER XV. OF PATERNAL, POLITICAL, AND DESPOTICAL POWER, CONSIDERED TOGETHER.

§. 169.

THOUGH I have had occasion to speak of these separately before, yet the great mistakes of late about government, having, as I suppose, arisen from confounding these distinct powers one with another, it may not, perhaps, be amiss to consider them here together.

§. 170.

First, then, Paternal or parental power is nothing but that which parents have over their children, to govern them for the children's good, till they come to the use of reason, or a state of knowledge, wherein they may be supposed capable to understand that rule, whether it be the law of nature, or the municipal law of their country, they are to govern themselves by: capable, I say, to know it, as well as several others, who live as freemen under that law. The affection and tenderness which God hath planted in the breast of parents towards their children, makes it evident, that this is not intended to be a severe arbitrary government, but only for the help, instruction, and preservation of their offspring. But happen it as it will, there is, as I have proved, no reason why it should be thought to extend to life and death, at any time, over their children, more than over any body else; neither can there be any pretence why this parental power should keep the child, when grown to a man, in subjection to the will of his parents, any farther than having received life and education from his parents, obliges him to respect, honour, gratitude, assistance and support, all his life, to both father and mother. And thus, 'tis true, the paternal is a natural government, but not at all extending itself to the ends and jurisdictions of that which is political. The power of the father doth not reach at all to the property of the child, which is only in his own disposing.

§. 171.

Secondly, Political power is that power, which every man having in the state of nature, has given up into the hands of the society, and therein to the governors, whom the society hath set over itself, with this express or tacit trust, that it shall be employed for their good, and the preservation of their property: now this power, which every man has in the state of nature, and which he parts with to the society in all such cases where the society can secure him, is to use such means, for the preserving of his own property, as he thinks good, and nature allows him; and to punish the breach of the law of nature in others, so as (according to the best of his reason) may most conduce to the preservation of himself, and the rest of mankind. So that the end and measure of this power, when in every man's hands in the state of nature, being the preservation of all of his society, that is, all mankind in general, it can have no other end or measure, when in the hands of the magistrate, but to preserve the members of that society in their lives, liberties, and possessions; and so cannot be an absolute, arbitrary power over their lives and fortunes, which are as much as possible to be preserved; but a power to make laws, and annex such penalties to them, as may tend to the preservation of the whole, by cutting off those parts, and those only, which are so corrupt, that they threaten the sound and healthy, without which no severity is lawful. And this power has its original only from compact and agreement, and the mutual consent of those who make up the community.

§. 172.

Thirdly, Despotical power is an absolute, arbitrary power one man has over another, to take away his life, whenever he pleases. This is a power, which neither nature gives, for it has made no such distinction between one man and another; nor compact can convey: for man not having such an arbitrary power over his own life, cannot give another man such a power over it; but it is the effect only of forfeiture, which the aggressor makes of his own life, when he puts himself into the state of war with another: for having quitted reason, which God hath given to be the rule betwixt man and man, and the common bond whereby human kind is united into one fellowship and society; and having renounced the way of peace which that teaches, and made use of the force of war, to compass his unjust ends upon another, where he has no right; and so revolting from his own kind to that of beasts,

by making force, which is their's, to be his rule of right, he renders himself liable to be destroyed by the injured person, and the rest of mankind, that will join with him in the execution of justice, as any other wild beast, or noxious brute, with whom mankind can have neither society nor security. And thus captives, taken in a just and lawful war, and such only, are subject to a despotical power, which, as it arises not from compact, so neither is it capable of any, but is the state of war continued: for what compact can be made with a man that is not master of his own life? what condition can he perform? and if he be once allowed to be master of his own life, the despotical, arbitrary power of his master ceases. He that is master of himself, and his own life, has a right too to the means of preserving it; so that as soon as compact enters, slavery ceases, and he so far quits his absolute power, and puts an end to the state of war, who enters into conditions with his captive.

§. 173.

Nature gives the first of these, viz. paternal power to parents for the benefit of their children during their minority, to supply their want of ability, and understanding how to manage their property. (By property I must be understood here, as in other places, to mean that property which men have in their persons as well as goods.) Voluntary agreement gives the second, viz. political power to governors for the benefit of their subjects, to secure them in the possession and use of their properties. And forfeiture gives the third despotical power to lords for their own benefit, over those who are stripped of all property.

§. 174.

He, that shall consider the distinct rise and extent, and the different ends of these several powers, will plainly see, that paternal power comes as far short of that of the magistrate, as despotical exceeds it; and that absolute dominion, however placed, is so far from being one kind of civil society, that it is as inconsistent with it, as slavery is with property. Paternal power is only where minority makes the child incapable to manage his property; political, where men have property in their own disposal; and despotical, over such as have no property at all.

CHAPTER XVI. OF CONQUEST.

§. 175.

THOUGH governments can originally have no other rise than that before mentioned, nor polities be founded on any thing but the consent of the people; yet such have been the disorders ambition has filled the world with, that in the noise of war, which makes so great a part of the history of mankind, this consent is little taken notice of: and therefore many have mistaken the force of arms for the consent of the people, and reckon conquest as one of the originals of government. But conquest is as far from setting up any government, as demolishing an house is from building a new one in the place. Indeed, it often makes way for a new frame of a commonwealth, by destroying the former; but, without the consent of the people, can never erect a new one.

§. 176.

That the aggressor, who puts himself into the state of war with another, and unjustly invades another man's right, can, by such an unjust war, never come to have a right over the conquered, will be easily agreed by all men, who will not think, that robbers and pyrates have a right of empire over whomsoever they have force enough to master; or that men are bound by promises, which unlawful force extorts from them. Should a robber break into my house, and with a dagger at my throat make me seal deeds to convey my estate to him, would this give him any title? Just such a title, by his sword, has an unjust conqueror, who forces me into submission. The injury and the crime is equal, whether committed by the wearer of a crown, or some petty villain. The title of the offender, and the number of his followers, make no difference in the offence, unless it be to aggravate it. The only difference is, great robbers punish little ones, to keep them in their obedience; but the great ones are rewarded with laurels and triumphs, because they are too big for the weak hands of justice in this world, and have the power in their own possession, which should punish offenders. What is my remedy against a robber, that so broke into my house? Appeal to the law for justice. But perhaps justice is denied, or I am crippled and

cannot stir, robbed and have not the means to do it. If God has taken away all means of seeking remedy, there is nothing left but patience. But my son, when able, may seek the relief of the law, which I am denied: he or his son may renew his appeal, till he recover his right. But the conquered, or their children, have no court, no arbitrator on earth to appeal to. Then they may appeal, as Jephtha did, to heaven, and repeat their appeal till they have recovered the native right of their ancestors, which was, to have such a legislative over them, as the majority should approve, and freely acquiesce in. If it be objected, This would cause endless trouble; I answer, no more than justice does, where she lies open to all that appeal to her. He that troubles his neighbour without a cause, is punished for it by the justice of the court he appeals to: and he that appeals to heaven must be sure he has right on his side; and a right too that is worth the trouble and cost of the appeal, as he will answer at a tribunal that cannot be deceived, and will be sure to retribute to every one according to the mischiefs he hath created to his fellow subjects; that is, any part of mankind: from whence it is plain, that he that conquers in an unjust war can thereby have no title to the subjection and obedience of the conquered.

§. 177.

But supposing victory favours the right side, let us consider a conqueror in a lawful war, and see what power he gets, and over whom.

First, It is plain he gets no power by his conquest over those that conquered with him. They that fought on his side cannot suffer by the conquest, but must at least be as much freemen as they were before. And most commonly they serve upon terms, and on condition to share with their leader, and enjoy a part of the spoil, and other advantages that attend the conquering sword; or at least have a part of the subdued country bestowed upon them. And the conquering people are not, I hope, to be slaves by conquest, and wear their laurels only to shew they are sacrifices to their leaders triumph. They that found absolute monarchy upon the title of the sword, make their heroes, who are the founders of such monarchies, arrant Draw-can-sirs, and forget they had any officers and soldiers that fought on their side in the battles they won, or assisted them in the subduing, or shared in possessing, the countries they mastered. We are told by some, that the English monarchy is founded in the Norman conquest, and that our princes have thereby a title to absolute dominion: which if it were true, (as by the

history it appears otherwise) and that William had a right to make war on this island; yet his dominion by conquest could reach no farther than to the Saxons and Britons, that were then inhabitants of this country. The Normans that came with him, and helped to conquer, and all descended from them, are freemen, and no subjects by conquest; let that give what dominion it will. And if I, or any body else, shall claim freedom, as derived from them, it will be very hard to prove the contrary: and it is plain, the law, that has made no distinction between the one and the other, intends not there should be any difference in their freedom or privileges.

§. 178.

But supposing, which seldom happens, that the conquerors and conquered never incorporate into one people, under the same laws and freedom; let us see next what power a lawful conqueror has over the subdued: and that I say is purely despotical. He has an absolute power over the lives of those who by an unjust war have forfeited them; but not over the lives or fortunes of those who engaged not in the war, nor over the possessions even of those who were actually engaged in it.

§. 179.

Secondly, I say then the conqueror gets no power but only over those who have actually assisted, concurred, or consented to that unjust force that is used against him: for the people having given to their governors no power to do an unjust thing, such as is to make an unjust war, (for they never had such a power in themselves) they ought not to be charged as guilty of the violence and injustice that is committed in an unjust war, any farther than they actually abet it; no more than they are to be thought guilty of any violence or oppression their governors should use upon the people themselves, or any part of their fellow subjects, they having impowered them no more to the one than to the other. Conquerors, it is true, seldom trouble themselves to make the distinction, but they willingly permit the confusion of war to sweep all together: but yet this alters not the right; for the conquerors power over the lives of the conquered, being only because they have used force to do, or maintain an injustice, he can have that power only over those who have concurred in that force; all the rest are innocent; and he has no more title over the people of that country, who have done him

no injury, and so have made no forfeiture of their lives, than he has over any other, who, without any injuries or provocations, have lived upon fair terms with him.

§. 180.

Thirdly, The power a conqueror gets over those he overcomes in a just war, is perfectly despotal: he has an absolute power over the lives of those, who, by putting themselves in a state of war, have forfeited them; but he has not thereby a right and title to their possessions. This I doubt not, but at first sight will seem a strange doctrine, it being so quite contrary to the practice of the world; there being nothing more familiar in speaking of the dominion of countries, than to say such an one conquered it; as if conquest, without any more ado, conveyed a right of possession. But when we consider, that the practice of the strong and powerful, how universal soever it may be, is seldom the rule of right, however it be one part of the subjection of the conquered, not to argue against the conditions cut out to them by the conquering sword.

§. 181.

Though in all war there be usually a complication of force and damage, and the aggressor seldom fails to harm the estate, when he uses force against the persons of those he makes war upon; yet it is the use of force only that puts a man into the state of war: for whether by force he begins the injury, or else having quietly, and by fraud, done the injury, he refuses to make reparation, and by force maintains it, (which is the same thing, as at first to have done it by force) it is the unjust use of force that makes the war: for he that breaks open my house, and violently turns me out of doors; or having peaceably got in, by force keeps me out, does in effect the same thing; supposing we are in such a state, that we have no common judge on earth, whom I may appeal to, and to whom we are both obliged to submit: for of such I am now speaking. It is the unjust use of force then, that puts a man into the state of war with another; and thereby he that is guilty of it makes a forfeiture of his life: for quitting reason, which is the rule given between man and man, and using force, the way of beasts, he becomes liable to be destroyed by him he uses force against, as any savage ravenous beast, that is dangerous to his being.

§. 182.

But because the miscarriages of the father are no faults of the children, and they may be rational and peaceable, notwithstanding the brutishness and injustice of the father; the father, by his miscarriages and violence, can forfeit but his own life, but involves not his children in his guilt or destruction. His goods, which nature, that willeth the preservation of all mankind as much as is possible, hath made to belong to the children to keep them from perishing, do still continue to belong to his children: for supposing them not to have joined in the war, either thro' infancy, absence, or choice, they have done nothing to forfeit them: nor has the conqueror any right to take them away, by the bare title of having subdued him that by force attempted his destruction; though perhaps he may have some right to them, to repair the damages he has sustained by the war, and the defence of his own right; which how far it reaches to the possessions of the conquered, we shall see by and by. So that he that by conquest has a right over a man's person to destroy him if he pleases, has not thereby a right over his estate to possess and enjoy it: for it is the brutal force the aggressor has used, that gives his adversary a right to take away his life, and destroy him if he pleases, as a noxious creature; but it is damage sustained that alone gives him title to another man's goods: for though I may kill a thief that sets on me in the high-way, yet I may not (which seems less) take away his money, and let him go: this would be robbery on my side. His force, and the state of war he put himself in, made him forfeit his life, but gave me no title to his goods. The right then of conquest extends only to the lives of those who joined in the war, not to their estates, but only in order to make reparation for the damages received, and the charges of the war, and that too with reservation of the right of the innocent wife and children.

§. 183.

Let the conqueror have as much justice on his side, as could be supposed, he has no right to seize more than the vanquished could forfeit: his life is at the victor's mercy; and his service and goods he may appropriate, to make himself reparation; but he cannot take the goods of his wife and children; they too had a title to the goods he enjoyed, and their shares in the estate he possessed: for example, I in the state of nature (and all common-wealths are

in the state of nature one with another) have injured another man, and refusing to give satisfaction, it comes to a state of war, wherein my defending by force what I had gotten unjustly, makes me the aggressor. I am conquered: my life, it is true, as forfeit, is at mercy, but not my wife's and children's. They made not the war, nor assisted in it. I could not forfeit their lives; they were not mine to forfeit. My wife had a share in my estate; that neither could I forfeit. And my children also, being born of me, had a right to be maintained out of my labour or substance. Here then is the case: the conqueror has a title to reparation for damages received, and the children have a title to their father's estate for their subsistence: for as to the wife's share, whether her own labour, or compact, gave her a title to it, it is plain, her husband could not forfeit what was her's. What must be done in the case? I answer; the fundamental law of nature being, that all, as much as may be, should be preserved, it follows, that if there be not enough fully to satisfy both, viz. for the conqueror's losses, and children's maintenance, he that hath, and to spare, must remit something of his full satisfaction, and give way to the pressing and preferable title of those who are in danger to perish without it.

§. 184.

But supposing the charge and damages of the war are to be made up to the conqueror, to the utmost farthing; and that the children of the vanquished, spoiled of all their father's goods, are to be left to starve and perish; yet the satisfying of what shall, on this score, be due to the conqueror, will scarce give him a title to any country he shall conquer: for the damages of war can scarce amount to the value of any considerable tract of land, in any part of the world, where all the land is possessed, and none lies waste. And if I have not taken away the conqueror's land, which, being vanquished, it is impossible I should; scarce any other spoil I have done him can amount to the value of mine, supposing it equally cultivated, and of an extent any way coming near what I had over-run of his. The destruction of a year's product or two (for it seldom reaches four or five) is the utmost spoil that usually can be done: for as to money, and such riches and treasure taken away, these are none of nature's goods, they have but a fantastical imaginary value: nature has put no such upon them: they are of no more account by her standard, than the wampompeke of the Americans to an European prince, or

the silver money of Europe would have been formerly to an American. And five years product is not worth the perpetual inheritance of land, where all is possessed, and none remains waste, to be taken up by him that is disseized: which will be easily granted, if one do but take away the imaginary value of money, the disproportion being more than between five and five hundred; though, at the same time, half a year's product is more worth than the inheritance, where there being more land than the inhabitants possess and make use of, any one has liberty to make use of the waste: but there conquerors take little care to possess themselves of the lands of the vanquished. No damage therefore, that men in the state of nature (as all princes and governments are in reference to one another) suffer from one another, can give a conqueror power to dispossess the posterity of the vanquished, and turn them out of that inheritance, which ought to be the possession of them and their descendants to all generations. The conqueror indeed will be apt to think himself master: and it is the very condition of the subdued not to be able to dispute their right. But if that be all, it gives no other title than what bare force gives to the stronger over the weaker: and, by this reason, he that is strongest will have a right to whatever he pleases to seize on.

§. 185.

Over those then that joined with him in the war, and over those of the subdued country that opposed him not, and the posterity even of those that did, the conqueror, even in a just war, hath, by his conquest, no right of dominion: they are free from any subjection to him, and if their former government be dissolved, they are at liberty to begin and erect another to themselves.

§. 186.

The conqueror, it is true, usually, by the force he has over them, compels them, with a sword at their breasts, to stoop to his conditions, and submit to such a government as he pleases to afford them; but the enquiry is, what right he has to do so? If it be said, they submit by their own consent, then this allows their own consent to be necessary to give the conqueror a title to rule over them. It remains only to be considered, whether promises extorted by force, without right, can be thought consent, and how far they bind. To

which I shall say, they bind not at all; because whatsoever another gets from me by force, I still retain the right of, and he is obliged presently to restore. He that forces my horse from me, ought presently to restore him, and I have still a right to retake him. By the same reason, he that forced a promise from me, ought presently to restore it, i. e. quit me of the obligation of it; or I may resume it myself, i. e. chuse whether I will perform it: for the law of nature laying an obligation on me only by the rules the prescribes, cannot oblige me by the violation of her rules: such is the extorting any thing from me by force. Nor does it at all alter the case to say, I gave my promise, no more than it excuses the force, and passes the right, when I put my hand in my pocket, and deliver my purse myself to a thief, who demands it with a pistol at my breast.

§. 187.

From all which it follows, that the government of a conqueror, imposed by force on the subdued, against whom he had no right of war, or who joined not in the war against him, where he had right, has no obligation upon them.

§. 188.

But let us suppose, that all the men of that community, being all members of the same body politic, may be taken to have joined in that unjust war wherein they are subdued, and so their lives are at the mercy of the conqueror.

§. 189.

I say, this concerns not their children who are in their minority: for since a father hath not, in himself, a power over the life or liberty of his child, no act of his can possibly forfeit it. So that the children, whatever may have happened to the fathers, are freemen, and the absolute power of the conqueror reaches no farther than the persons of the men that were subdued by him, and dies with them: and should he govern them as slaves, subjected to his absolute arbitrary power, he has no such right of dominion over their children. He can have no power over them but by their own consent, whatever he may drive them to say or do; and he has no lawfull authority, whilst force, and not choice, compels them to submission.

§. 190.

Every man is born with a double right: first, a right of freedom to his person, which no other man has a power over, but the free disposal of it lies in himself. Secondly, a right, before any other man, to inherit with his brethren his father's goods.

§. 191.

By the first of these, a man is naturally free from subjection to any government, tho' he be born in a place under its jurisdiction; but if he disclaim the lawful government of the country he was born in, he must also quit the right that belonged to him by the laws of it, and the possessions there descending to him from his ancestors, if it were a government made by their consent.

§. 192.

By the second, the inhabitants of any country, who are descended, and derive a title to their estates from those who are subdued, and had a government forced upon them against their free consents, retain a right to the possession of their ancestors, though they consent not freely to the government, whose hard conditions were by force imposed on the possessors of that country: for the first conqueror never having had a title to the land of that country, the people who are the descendants of, or claim under those who were forced to submit to the yoke of a government by constraint, have always a right to shake it off, and free themselves from the usurpation or tyranny which the sword hath brought in upon them, till their rulers put them under such a frame of government as they willingly and of choice consent to. Who doubts but the Grecian christians, descendants of the ancient possessors of that country, may justly cast off the Turkish yoke, which they have so long groaned under, whenever they have an opportunity to do it? For no government can have a right to obedience from a people who have not freely consented to it; which they can never be supposed to do, till either they are put in a full state of liberty to chuse their government and governors, or at least till they have such standing laws, to which they have by themselves or their representatives given their free consent, and also till they are allowed their due property, which is so to be proprietors of

what they have, that no body can take away any part of it without their own consent, without which, men under any government are not in the state of freemen, but are direct slaves under the force of war.

§. 193.

But granting that the conqueror in a just war has a right to the estates, as well as power over the persons, of the conquered; which, it is plain, he hath not: nothing of absolute power will follow from hence, in the continuance of the government; because the descendants of these being all freemen, if he grants them estates and possessions to inhabit his country, (without which it would be worth nothing) whatsoever he grants them, they have, so far as it is granted, property in. The nature whereof is, that without a man's own consent it cannot be taken from him.

§. 194.

Their persons are free by a native right, and their properties, be they more or less, are their own, and at their own dispose, and not at his; or else it is no property. Supposing the conqueror gives to one man a thousand acres, to him and his heirs for ever, to another he lets a thousand acres for his life, under the rent of 50l. or 500l. per ann. has not the one of these a right to his thousand acres for ever, and the other, during his life, paying the said rent? and hath not the tenant for life a property in all that he gets over and above his rent, by his labour and industry during the said term, supposing it be double the rent? Can any one say, the king, or conqueror, after his grant, may by his power of conqueror take away all, or part of the land from the heirs of one, or from the other during his life, he paying the rent? or can he take away from either the goods or money they have got upon the said land, at his pleasure? If he can, then all free and voluntary contracts cease, and are void in the world; there needs nothing to dissolve them at any time, but power enough: and all the grants and promises of men in power are but mockery and collusion: for can there be any thing more ridiculous than to say, I give you and your's this for ever, and that in the surest and most solemn way of conveyance can be devised; and yet it is to be understood, that I have right, if I please, to take it away from you again to morrow?

§. 195.

I will not dispute now whether princes are exempt from the laws of their country; but this I am sure, they owe subjection to the laws of God and nature, No body, no power, can exempt them from the obligations of that eternal law. Those are so great, and so strong, in the case of promises, that omnipotency itself can be tied by them. Grants, promises, and oaths, are bonds that hold the Almighty: whatever some flatterers say to princes of the world, who all together, with all their people joined to them, are, in comparison of the great God, but as a drop of the bucket, or a dust on the balance, inconsiderable, nothing!

§. 196.

The short of the case in conquest is this: the conqueror, if he have a just cause, has a despotical right over the persons of all, that actually aided, and concurred in the war against him, and a right to make up his damage and cost out of their labour and estates, so he injure not the right of any other. Over the rest of the people, if there were any that consented not to the war, and over the children of the captives themselves, or the possessions of either, he has no power; and so can have, by virtue of conquest, no lawful title himself to dominion over them, or derive it to his posterity; but is an aggressor, if he attempts upon their properties, and thereby puts himself in a state of war against them, and has no better a right of principality, he, nor any of his successors, than Hingar, or Hubba, the Danes, had here in England; or Spartacus, had he conquered Italy, would have had; which is to have their yoke cast off, as soon as God shall give those under their subjection courage and opportunity to do it. Thus, notwithstanding whatever title the kings of Assyria had over Judah, by the sword, God assisted Hezekiah to throw off the dominion of that conquering empire. And the lord was with Hezekiah, and he prospered; wherefore he went forth, and he rebelled against the king of Assyria, and served him not, 2 Kings xviii. 7. Whence it is plain, that shaking off a power, which force, and not right, hath set over any one, though it hath the name of rebellion, yet is no offence before God, but is that which he allows and countenances, though even promises and covenants, when obtained by force, have intervened: for it is very probable, to any one that reads the story of Ahaz and Hezekiah attentively, that the Assyrians subdued Ahaz, and deposed him, and made

Hezekiah king in his father's lifetime; and that Hezekiah by agreement had done him homage, and paid him tribute all this time.

CHAPTER XVII. OF USURPATION.

§. 197.

AS conquest may be called a foreign usurpation, so usurpation is a kind of domestic conquest, with this difference, that an usurper can never have right on his side, it being no usurpation, but where one is got into the possession of what another has right to. This, so far as it is usurpation, is a change only of persons, but not of the forms and rules of the government: for if the usurper extend his power beyond what of right belonged to the lawful princes, or governors of the commonwealth, it is tyranny added to usurpation.

§. 198.

In all lawful governments, the designation of the persons, who are to bear rule, is as natural and necessary a part as the form of the government itself, and is that which had its establishment originally from the people; the anarchy being much alike, to have no form of government at all; or to agree, that it shall be monarchical, but to appoint no way to design the person that shall have the power, and be the monarch. Hence all commonwealths, with the form of government established, have rules also of appointing those who are to have any share in the public authority, and settled methods of conveying the right to them: for the anarchy is much alike, to have no form of government at all; or to agree that it shall be monarchical, but to appoint no way to know or design the person that shall have the power, and be the monarch. Whoever gets into the exercise of any part of the power, by other ways than what the laws of the community have prescribed, hath no right to be obeyed, though the form of the commonwealth be still preserved; since he is not the person the laws have appointed, and consequently not the person the people have consented to. Nor can such an usurper, or any deriving from him, ever have a title, till the people are both at liberty to consent, and have actually consented to allow, and confirm in him the power he hath till then usurped.

CHAPTER XVIII. OF TYRANNY.

§. 199.

AS usurpation is the exercise of power, which another hath a right to; so tyranny is the exercise of power beyond right, which no body can have a right to. And this is making use of the power any one has in his hands, not for the good of those who are under it, but for his own private separate advantage. When the governor, however intitled, makes not the law, but his will, the rule; and his commands and actions are not directed to the preservation of the properties of his people, but the satisfaction of his own ambition, revenge, covetousness, or any other irregular passion.

§. 200.

If one can doubt this to be truth, or reason, because it comes from the obscure hand of a subject, I hope the authority of a king will make it pass with him. King James the first, in his speech to the parliament, 1603, tells them thus, I will ever prefer the weal of the public, and of the whole commonwealth, in making of good laws and constitutions, to any particular and private ends of mine; thinking ever the wealth and weal of the commonwealth to be my greatest weal and worldly felicity; a point wherein a lawful king doth directly differ from a tyrant: for I do acknowledge, that the special and greatest point of difference that is between a rightful king and an usurping tyrant, is this, that whereas the proud and ambitious tyrant doth think his kingdom and people are only ordained for satisfaction of his desires and unreasonable appetites, the righteous and just king doth by the contrary acknowledge himself to be ordained for the procuring of the wealth and property of his people. And again, in his speech to the parliament, 1609, he hath these words, The king binds himself by a double oath, to the observation of the fundamental laws of his kingdom; tacitly, as by being a king, and so bound to protect as well the people, as the laws of his kingdom; and expresly, by his oath at his coronation; so as every just king, in a settled kingdom, is bound to observe that paction made to his people, by his laws, in framing his government agreeable thereunto, according to that paction which God made with Noah after the deluge.

Hereafter, seed-time and harvest, and cold and heat, and summer and winter, and day and night, shall not cease while the earth remaineth. And therefore a king governing in a settled kingdom, leaves to be a king, and degenerates into a tyrant, as soon as he leaves off to rule according to his laws. And a little after, Therefore all kings that are not tyrants, or perjured, will be glad to bound themselves within the limits of their laws; and they that persuade them the contrary, are vipers, and pests both against them and the commonwealth. Thus that learned king, who well understood the notion of things, makes the difference betwixt a king and a tyrant to consist only in this, that one makes the laws the bounds of his power, and the good of the public, the end of his government; the other makes all give way to his own will and appetite.

§. 201.

It is a mistake, to think this fault is proper only to monarchies; other forms of government are liable to it, as well as that: for wherever the power, that is put in any hands for the government of the people, and the preservation of their properties, is applied to other ends, and made use of to impoverish, harass, or subdue them to the arbitrary and irregular commands of those that have it; there it presently becomes tyranny, whether those that thus use it are one or many. Thus we read of the thirty tyrants at Athens, as well as one at Syracuse; and the intolerable dominion of the Decemviri at Rome was nothing better.

§. 202.

Where-ever law ends, tyranny begins, if the law be transgressed to another's harm; and whosoever in authority exceeds the power given him by the law, and makes use of the force he has under his command, to compass that upon the subject, which the law allows not, ceases in that to be a magistrate; and, acting without authority, may be opposed, as any other man, who by force invades the right of another. This is acknowledged in subordinate magistrates. He that hath authority to seize my person in the street, may be opposed as a thief and a robber, if he endeavours to break into my house to execute a writ, notwithstanding that I know he has such a warrant, and such a legal authority, as will impower him to arrest me abroad. And why this should not hold in the highest, as well as in the most

inferior magistrate, I would gladly be informed. Is it reasonable, that the eldest brother, because he has the greatest part of his father's estate, should thereby have a right to take away any of his younger brothers portions? or that a rich man, who possessed a whole country, should from thence have a right to seize, when he pleased, the cottage and garden of his poor neighbour? The being rightfully possessed of great power and riches, exceedingly beyond the greatest part of the sons of Adam, is so far from being an excuse, much less a reason, for rapine and oppression, which the endamaging another without authority is, that it is a great aggravation of it: for the exceeding the bounds of authority is no more a right in a great, than in a petty officer; no more justifiable in a king than a constable; but is so much the worse in him, in that he has more trust put in him, has already a much greater share than the rest of his brethren, and is supposed, from the advantages of his education, employment, and counsellors, to be more knowing in the measures of right and wrong.

§. 203.

May the commands then of a prince be opposed? may he be resisted as often as any one shall find himself aggrieved, and but imagine he has not right done him? This will unhinge and overturn all polities, and, instead of government and order, leave nothing but anarchy and confusion.

§. 204.

To this I answer, that force is to be opposed to nothing, but to unjust and unlawful force; whoever makes any opposition in any other case, draws on himself a just condemnation both from God and man; and so no such danger or confusion will follow, as is often suggested: for,

§. 205.

First, As, in some countries, the person of the prince by the law is sacred; and so, whatever he commands or does, his person is still free from all question or violence, not liable to force, or any judicial censure or condemnation. But yet opposition may be made to the illegal acts of any inferior officer, or other commissioned by him; unless he will, by actually putting himself into a state of war with his people, dissolve the government,

and leave them to that defence which belongs to every one in the state of nature: for of such things who can tell what the end will be? and a neighbour kingdom has shewed the world an odd example. In all other cases the sacredness of the person exempts him from all inconveniencies, whereby he is secure, whilst the government stands, from all violence and harm whatsoever; than which there cannot be a wiser constitution: for the harm he can do in his own person not being likely to happen often, nor to extend itself far; nor being able by his single strength to subvert the laws, nor oppress the body of the people, should any prince have so much weakness, and ill nature as to be willing to do it, the inconveniency of some particular mischiefs, that may happen sometimes, when a heady prince comes to the throne, are well recompensed by the peace of the public, and security of the government, in the person of the chief magistrate, thus set out of the reach of danger: it being safer for the body, that some few private men should be sometimes in danger to suffer, than that the head of the republic should be easily, and upon slight occasions, exposed.

§. 206.

Secondly, But this privilege, belonging only to the king's person, hinders not, but they may be questioned, opposed, and resisted, who use unjust force, though they pretend a commission from him, which the law authorizes not; as is plain in the case of him that has the king's writ to arrest a man, which is a full commission from the king; and yet he that has it cannot break open a man's house to do it, nor execute this command of the king upon certain days, nor in certain places, though this commission have no such exception in it; but they are the limitations of the law, which if any one transgress, the king's commission excuses him not: for the king's authority being given him only by the law, he cannot empower any one to act against the law, or justify him, by his commission, in so doing; the commission, or command of any magistrate, where he has no authority, being as void and insignificant, as that of any private man; the difference between the one and the other, being that the magistrate has some authority so far, and to such ends, and the private man has none at all: for it is not the commission, but the authority, that gives the right of acting; and against the laws there can be no authority. But, notwithstanding such resistance, the

king's person and authority are still both secured, and so no danger to governor or government.

§. 207.

Thirdly, Supposing a government wherein the person of the chief magistrate is not thus sacred; yet this doctrine of the lawfulness of resisting all unlawful exercises of his power, will not upon every slight occasion indanger him, or imbroid the government: for where the injured party may be relieved, and his damages repaired by appeal to the law, there can be no pretence for force, which is only to be used where a man is intercepted from appealing to the law: for nothing is to be accounted hostile force, but where it leaves not the remedy of such an appeal; and it is such force alone, that puts him that uses it into a state of war, and makes it lawful to resist him. A man with a sword in his hand demands my purse in the high-way, when perhaps I have not twelve pence in my pocket: this man I may lawfully kill. To another I deliver 100 l. to hold only whilst I alight, which he refuses to restore me, when I am got up again, but draws his sword to defend the possession of it by force, if I endeavour to retake it. The mischief this man does me is a hundred, or possibly a thousand times more than the other perhaps intended me (whom I killed before he really did me any); and yet I might lawfully kill the one, and cannot so much as hurt the other lawfully. The reason whereof is plain; because the one using force, which threatened my life, I could not have time to appeal to the law to secure it: and when it was gone, it was too late to appeal. The law could not restore life to my dead carcass: the loss was irreparable; which to prevent, the law of nature gave me a right to destroy him, who had put himself into a state of war with me, and threatened my destruction. But in the other case, my life not being in danger, I may have the benefit of appealing to the law, and have reparation for my 100 l. that way.

§. 208.

Fourthly, But if the unlawful acts done by the magistrate be maintained (by the power he has got), and the remedy which is due by law, be by the same power obstructed; yet the right of resisting, even in such manifest acts of tyranny, will not suddenly, or on slight occasions, disturb the government: for if it reach no farther than some private men's cases, though they have a

right to defend themselves, and to recover by force what by unlawful force is taken from them; yet the right to do so will not easily engage them in a contest, wherein they are sure to perish; it being as impossible for one, or a few oppressed men to disturb the government, where the body of the people do not think themselves concerned in it, as for a raving mad-man, or heady mal-content to overturn a well-settled state; the people being as little apt to follow the one, as the other.

§. 209.

But if either these illegal acts have extended to the majority of the people; or if the mischief and oppression has lighted only on some few, but in such cases, as the precedent, and consequences seem to threaten all; and they are persuaded in their consciences, that their laws, and with them their estates, liberties, and lives are in danger, and perhaps their religion too; how they will be hindered from resisting illegal force, used against them, I cannot tell. This is an inconvenience, I confess, that attends all governments whatsoever, when the governors have brought it to this pass, to be generally suspected of their people; the most dangerous state which they can possibly put themselves in; wherein they are the less to be pitied, because it is so easy to be avoided; it being as impossible for a governor, if he really means the good of his people, and the preservation of them, and their laws together, not to make them see and feel it, as it is for the father of a family, not to let his children see he loves, and takes care of them.

§. 210.

But if all the world shall observe pretences of one kind, and actions of another; arts used to elude the law, and the trust of prerogative (which is an arbitrary power in some things left in the prince's hand to do good, not harm to the people) employed contrary to the end for which it was given: if the people shall find the ministers and subordinate magistrates chosen suitable to such ends, and favoured, or laid by, proportionably as they promote or oppose them: if they see several experiments made of arbitrary power, and that religion underhand favoured, (tho' publicly proclaimed against) which is readiest to introduce it; and the operators in it supported, as much as may be; and when that cannot be done, yet approved still, and liked the better: if a long train of actions shew the councils all tending that

way; how can a man any more hinder himself from being persuaded in his own mind, which way things are going; or from casting about how to save himself, than he could from believing the captain of the ship he was in, was carrying him, and the rest of the company, to Algiers, when he found him always steering that course, though cross winds, leaks in his ship, and want of men and provisions did often force him to turn his course another way for some time, which he steadily returned to again, as soon as the wind, weather, and other circumstances would let him?

CHAPTER XIX. OF THE DISSOLUTION OF GOVERNMENT.

§. 211.

HE that will with any clearness speak of the dissolution of government, ought in the first place to distinguish between the dissolution of the society and the dissolution of the government. That which makes the community, and brings men out of the loose state of nature, into one politic society, is the agreement which every one has with the rest to incorporate, and act as one body, and so be one distinct common-wealth. The usual, and almost only way whereby this union is dissolved, is the inroad of foreign force making a conquest upon them: for in that case, (not being able to maintain and support themselves, as one intire and independent body) the union belonging to that body which consisted therein, must necessarily cease, and so every one return to the state he was in before, with a liberty to shift for himself, and provide for his own safety, as he thinks fit, in some other society. Whenever the society is dissolved, it is certain the government of that society cannot remain. Thus conquerors swords often cut up governments by the roots, and mangle societies to pieces, separating the subdued or scattered multitude from the protection of, and dependence on, that society which ought to have preserved them from violence. The world is too well instructed in, and too forward to allow of, this way of dissolving of governments, to need any more to be said of it; and there wants not much argument to prove, that where the society is dissolved, the government cannot remain; that being as impossible, as for the frame of an house to subsist when the materials of it are scattered and dissipated by a whirl-wind, or jumbled into a confused heap by an earthquake.

§. 212.

Besides this over-turning from without, governments are dissolved from within,

First, When the legislative is altered. Civil society being a state of peace, amongst those who are of it, from whom the state of war is excluded by the

umpirage, which they have provided in their legislative, for the ending all differences that may arise amongst any of them, it is in their legislative, that the members of a common-wealth are united, and combined together into one coherent living body. This is the soul that gives form, life, and unity, to the common-wealth: from hence the several members have their mutual influence, sympathy, and connexion: and therefore, when the legislative is broken, or dissolved, dissolution and death follows: for the essence and union of the society consisting in having one will, the legislative, when once established by the majority, has the declaring, and as it were keeping of that will. The constitution of the legislative is the first and fundamental act of society, whereby provision is made for the continuation of their union, under the direction of persons, and bonds of laws, made by persons authorized thereunto, by the consent and appointment of the people, without which no one man, or number of men, amongst them, can have authority of making laws that shall be binding to the rest. When any one, or more, shall take upon them to make laws, whom the people have not appointed so to do, they make laws without authority, which the people are not therefore bound to obey; by which means they come again to be out of subjection, and may constitute to themselves a new legislative, as they think best, being in full liberty to resist the force of those, who without authority would impose any thing upon them. Every one is at the disposure of his own will, when those who had, by the delegation of the society, the declaring of the public will, are excluded from it, and others usurp the place, who have no such authority or delegation.

§. 213.

This being usually brought about by such in the common-wealth who misuse the power they have; it is hard to consider it aright, and know at whose door to lay it, without knowing the form of government in which it happens. Let us suppose then the legislative placed in the concurrence of three distinct persons.

A single hereditary person, having the constant, supreme, executive power, and with it the power of convoking and dissolving the other two within certain periods of time.

An assembly of hereditary nobility.

An assembly of representatives chosen, pro tempore, by the people. Such a form of government supposed, it is evident,

§. 214.

First, That when such a single person, or prince, sets up his own arbitrary will in place of the laws, which are the will of the society, declared by the legislative, then the legislative is changed: for that being in effect the legislative, whose rules and laws are put in execution, and required to be obeyed; when other laws are set up, and other rules pretended, and enforced, than what the legislative, constituted by the society, have enacted, it is plain that the legislative is changed. Whoever introduces new laws, not being thereunto authorized by the fundamental appointment of the society, or subverts the old, disowns and overturns the power by which they were made, and so sets up a new legislative.

§. 215.

Secondly, When the prince hinders the legislative from assembling in its due time, or from acting freely, pursuant to those ends for which it was constituted, the legislative is altered: for it is not a certain number of men, no, nor their meeting, unless they have also freedom of debating, and leisure of perfecting, what is for the good of the society, wherein the legislative consists: when these are taken away or altered, so as to deprive the society of the due exercise of their power, the legislative is truly altered; for it is not names that constitute governments, but the use and exercise of those powers that were intended to accompany them; so that he, who takes away the freedom, or hinders the acting of the legislative in its due seasons, in effect takes away the legislative, and puts an end to the government.

§. 216.

Thirdly, When, by the arbitrary power of the prince, the electors, or ways of election, are altered, without the consent, and contrary to the common interest of the people, there also the legislative is altered: for, if others than those whom the society hath authorized thereunto, do chuse, or in another way than what the society hath prescribed, those chosen are not the legislative appointed by the people.

§. 217.

Fourthly, The delivery also of the people into the subjection of a foreign power, either by the prince, or by the legislative, is certainly a change of the legislative, and so a dissolution of the government: for the end why people entered into society being to be preserved one intire, free, independent society, to be governed by its own laws; this is lost, whenever they are given up into the power of another.

§. 218.

Why, in such a constitution as this, the dissolution of the government in these cases is to be imputed to the prince, is evident; because he, having the force, treasure and offices of the state to employ, and often persuading himself, or being flattered by others, that as supreme magistrate he is uncapable of controul; he alone is in a condition to make great advances toward such changes, under pretence of lawful authority, and has it in his hands to terrify or suppress opposers, as factious, seditious, and enemies to the government: whereas no other part of the legislative, or people, is capable by themselves to attempt any alteration of the legislative, without open and visible rebellion, apt enough to be taken notice of, which, when it prevails, produces effects very little different from foreign conquest. Besides, the prince in such a form of government, having the power of dissolving the other parts of the legislative, and thereby rendering them private persons, they can never in opposition to him, or without his concurrence, alter the legislative by a law, his consent being necessary to give any of their decrees that sanction. But yet, so far as the other parts of the legislative any way contribute to any attempt upon the government, and do either promote, or not, what lies in them, hinder such designs, they are guilty, and partake in this, which is certainly the greatest crime men can be guilty of one towards another.

§. 219.

There is one way more whereby such a government may be dissolved, and that is, when he who has the supreme executive power, neglects and abandons that charge, so that the laws already made can no longer be put in execution. This is demonstratively to reduce all to anarchy, and so

effectually to dissolve the government: for laws not being made for themselves, but to be, by their execution, the bonds of the society, to keep every part of the body politic in its due place and function; when that totally ceases, the government visibly ceases, and the people become a confused multitude, without order or connexion. Where there is no longer the administration of justice, for the securing of men's rights, nor any remaining power within the community to direct the force, or provide for the necessities of the public, there certainly is no government left. Where the laws cannot be executed, it is all one as if there were no laws; and a government without laws is, I suppose, a mystery in politics, unconceivable to human capacity, and inconsistent with human society.

§. 220.

In these and the like cases, when the government is dissolved, the people are at liberty to provide for themselves, by erecting a new legislative, differing from the other, by the change of persons, or form, or both, as they shall find it most for their safety and good: for the society can never, by the fault of another, lose the native and original right it has to preserve itself, which can only be done by a settled legislative, and a fair and impartial execution of the laws made by it. But the state of mankind is not so miserable that they are not capable of using this remedy, till it be too late to look for any. To tell people they may provide for themselves, by erecting a new legislative, when by oppression, artifice, or being delivered over to a foreign power, their old one is gone, is only to tell them, they may expect relief when it is too late, and the evil is past cure. This is in effect no more than to bid them first be slaves, and then to take care of their liberty; and when their chains are on, tell them, they may act like freemen. This, if barely so, is rather mockery than relief; and men can never be secure from tyranny, if there be no means to escape it till they are perfectly under it: and therefore it is, that they have not only a right to get out of it, but to prevent it.

§. 221.

There is therefore, secondly, another way whereby governments are dissolved, and that is, when the legislative, or the prince, either of them, act contrary to their trust.

First, The legislative acts against the trust reposed in them, when they endeavour to invade the property of the subject, and to make themselves, or any part of the community, masters, or arbitrary disposers of the lives, liberties, or fortunes of the people.

§. 222.

The reason why men enter into society, is the preservation of their property; and the end why they chuse and authorize a legislative, is, that there may be laws made, and rules set, as guards and fences to the properties of all the members of the society, to limit the power, and moderate the dominion, of every part and member of the society: for since it can never be supposed to be the will of the society, that the legislative should have a power to destroy that which every one designs to secure, by entering into society, and for which the people submitted themselves to legislators of their own making; whenever the legislators endeavour to take away, and destroy the property of the people, or to reduce them to slavery under arbitrary power, they put themselves into a state of war with the people, who are thereupon absolved from any farther obedience, and are left to the common refuge, which God hath provided for all men, against force and violence. Whensoever therefore the legislative shall transgress this fundamental rule of society; and either by ambition, fear, folly or corruption, endeavour to grasp themselves, or put into the hands of any other, an absolute power over the lives, liberties, and estates of the people; by this breach of trust they forfeit the power the people had put into their hands for quite contrary ends, and it devolves to the people, who have a right to resume their original liberty, and, by the establishment of a new legislative, (such as they shall think fit) provide for their own safety and security, which is the end for which they are in society. What I have said here, concerning the legislative in general, holds true also concerning the supreme executor, who having a double trust put in him, both to have a part in the legislative, and the supreme execution of the law, acts against both, when he goes about to set up his own arbitrary will as the law of the society. He acts also contrary to his trust, when he either employs the force, treasure, and offices of the society, to corrupt the representatives, and gain them to his purposes; or openly pre-engages the electors, and prescribes to their choice, such, whom he has, by solicitations, threats, promises, or otherwise, won to his designs; and employs them to bring in

such, who have promised before-hand what to vote, and what to enact. Thus to regulate candidates and electors, and new-model the ways of election, what is it but to cut up the government by the roots, and poison the very fountain of public security? for the people having reserved to themselves the choice of their representatives, as the fence to their properties, could do it for no other end, but that they might always be freely chosen, and so chosen, freely act, and advise, as the necessity of the common-wealth, and the public good should, upon examination, and mature debate, be judged to require. This, those who give their votes before they hear the debate, and have weighed the reasons on all sides, are not capable of doing. To prepare such an assembly as this, and endeavour to set up the declared abettors of his own will, for the true representatives of the people, and the law-makers of the society, is certainly as great a breach of trust, and as perfect a declaration of a design to subvert the government, as is possible to be met with. To which, if one shall add rewards and punishments visibly employed to the same end, and all the arts of perverted law made use of, to take off and destroy all that stand in the way of such a design, and will not comply and consent to betray the liberties of their country, it will be past doubt what is doing. What power they ought to have in the society, who thus employ it contrary to the trust went along with it in its first institution, is easy to determine; and one cannot but see, that he, who has once attempted any such thing as this, cannot any longer be trusted.

§. 223.

To this perhaps it will be said, that the people being ignorant, and always discontented, to lay the foundation of government in the unsteady opinion and uncertain humour of the people, is to expose it to certain ruin; and no government will be able long to subsist, if the people may set up a new legislative, whenever they take offence at the old one. To this I answer, Quite the contrary. People are not so easily got out of their old forms, as some are apt to suggest. They are hardly to be prevailed with to amend the acknowledged faults in the frame they have been accustomed to. And if there be any original defects, or adventitious ones introduced by time, or corruption; it is not an easy thing to get them changed, even when all the world sees there is an opportunity for it. This slowness and aversion in the people to quite their old constitutions, has, in the many revolutions which

have been seen in this kingdom, in this and former ages, still kept us to, or, after some interval of fruitless attempts, still brought us back again to our old legislative of king, lords and commons: and whatever provocations have made the crown be taken from some of our princes heads, they never carried the people so far as to place it in another line.

§. 224.

But it will be said, this hypothesis lays a ferment for frequent rebellion. To which I answer,

First, No more than any other hypothesis: for when the people are made miserable, and find themselves exposed to the ill usage of arbitrary power, cry up their governors, as much as you will, for sons of Jupiter; let them be sacred and divine, descended, or authorized from heaven; give them out for whom or what you please, the same will happen. The people generally ill treated, and contrary to right, will be ready upon any occasion to ease themselves of a burden that sits heavy upon them. They will wish, and seek for the opportunity, which in the change, weakness and accidents of human affairs, seldom delays long to offer itself. He must have lived but a little while in the world, who has not seen examples of this in his time; and he must have read very little, who cannot produce examples of it in all sorts of governments in the world.

§. 225.

Secondly, I answer, such revolutions happen not upon every little mismanagement in public affairs. Great mistakes in the ruling part, many wrong and inconvenient laws, and all the slips of human frailty, will be born by the people without mutiny or murmur. But if a long train of abuses, prevarications and artifices, all tending the same way, make the design visible to the people, and they cannot but feel what they lie under, and see whither they are going; it is not to be wondered, that they should then rouse themselves, and endeavour to put the rule into such hands which may secure to them the ends for which government was at first erected; and without which, ancient names, and specious forms, are so far from being better, that they are much worse, than the state of nature, or pure anarchy; the inconveniencies being all as great and as near, but the remedy farther off and more difficult.

§. 226.

Thirdly, I answer, that this doctrine of a power in the people of providing for their safety a-new, by a new legislative, when their legislators have acted contrary to their trust, by invading their property, is the best fence against rebellion, and the probablest means to hinder it: for rebellion being an opposition, not to persons, but authority, which is founded only in the constitutions and laws of the government; those, whoever they be, who by force break through, and by force justify their violation of them, are truly and properly rebels: for when men, by entering into society and civil-government, have excluded force, and introduced laws for the preservation of property, peace, and unity amongst themselves, those who set up force again in opposition to the laws, do rebellare, that is, bring back again the state of war, and are properly rebels: which they who are in power, (by the pretence they have to authority, the temptation of force they have in their hands, and the flattery of those about them) being likeliest to do; the properest way to prevent the evil, is to shew them the danger and injustice of it, who are under the greatest temptation to run into it.

§. 227.

In both the fore-mentioned cases, when either the legislative is changed, or the legislators act contrary to the end for which they were constituted; those who are guilty are guilty of rebellion: for if any one by force takes away the established legislative of any society, and the laws by them made, pursuant to their trust, he thereby takes away the umpirage, which every one had consented to, for a peaceable decision of all their controversies, and a bar to the state of war amongst them. They, who remove, or change the legislative, take away this decisive power, which no body can have, but by the appointment and consent of the people; and so destroying the authority which the people did, and no body else can set up, and introducing a power which the people hath not authorized, they actually introduce a state of war, which is that of force without authority: and thus, by removing the legislative established by the society, (in whose decisions the people acquiesced and united, as to that of their own will) they untie the knot, and expose the people a-new to the state of war. And if those, who by force take away the legislative, are rebels, the legislators themselves, as has been

shewn, can be no less esteemed so; when they, who were set up for the protection, and preservation of the people, their liberties and properties, shall by force invade and endeavour to take them away; and so they putting themselves into a state of war with those who made them the protectors and guardians of their peace, are properly, and with the greatest aggravation, rebellantes, rebels.

§. 228.

But if they, who say it lays a foundation for rebellion, mean that it may occasion civil wars, or intestine broils, to tell the people they are absolved from obedience when illegal attempts are made upon their liberties or properties, and may oppose the unlawful violence of those who were their magistrates, when they invade their properties contrary to the trust put in them; and that therefore this doctrine is not to be allowed, being so destructive to the peace of the world: they may as well say, upon the same ground, that honest men may not oppose robbers or pirates, because this may occasion disorder or bloodshed. If any mischief come in such cases, it is not to be charged upon him who defends his own right, but on him that invades his neighbours. If the innocent honest man must quietly quit all he has, for peace sake, to him who will lay violent hands upon it, I desire it may be considered, what a kind of peace there will be in the world, which consists only in violence and rapine; and which is to be maintained only for the benefit of robbers and oppressors. Who would not think it an admirable peace betwixt the mighty and the mean, when the lamb, without resistance, yielded his throat to be torn by the imperious wolf? Polyphemus's den gives us a perfect pattern of such a peace, and such a government, wherein Ulysses and his companions had nothing to do, but quietly to suffer themselves to be devoured. And no doubt Ulysses, who was a prudent man, preached up passive obedience, and exhorted them to a quiet submission, by representing to them of what concernment peace was to mankind; and by shewing the inconveniences might happen, if they should offer to resist Polyphemus, who had now the power over them.

§. 229.

The end of government is the good of mankind; and which is best for mankind, that the people should be always exposed to the boundless will of

tyranny, or that the rulers should be sometimes liable to be opposed, when they grow exorbitant in the use of their power, and employ it for the destruction, and not the preservation of the properties of their people?

§. 230.

Nor let any one say, that mischief can arise from hence, as often as it shall please a busy head, or turbulent spirit, to desire the alteration of the government. It is true, such men may stir, whenever they please; but it will be only to their own just ruin and perdition: for till the mischief be grown general, and the ill designs of the rulers become visible, or their attempts sensible to the greater part, the people, who are more disposed to suffer than right themselves by resistance, are not apt to stir. The examples of particular injustice, or oppression of here and there an unfortunate man, moves them not. But if they universally have a persuasion, grounded upon manifest evidence, that designs are carrying on against their liberties, and the general course and tendency of things cannot but give them strong suspicions of the evil intention of their governors, who is to be blamed for it? Who can help it, if they, who might avoid it, bring themselves into this suspicion? Are the people to be blamed, if they have the sense of rational creatures, and can think of things no otherwise than as they find and feel them? And is it not rather their fault, who put things into such a posture, that they would not have them thought to be as they are? I grant, that the pride, ambition, and turbulency of private men have sometimes caused great disorders in common-wealths, and factions have been fatal to states and kingdoms. But whether the mischief hath oftener begun in the peoples wantonness, and a desire to cast off the lawful authority of their rulers, or in the rulers insolence, and endeavours to get and exercise an arbitrary power over their people; whether oppression, or disobedience, gave the first rise to the disorder, I leave it to impartial history to determine. This I am sure, whoever, either ruler or subject, by force goes about to invade the rights of either prince or people, and lays the foundation for overturning the constitution and frame of any just government, is highly guilty of the greatest crime, I think, a man is capable of, being to answer for all those mischiefs of blood, rapine, and desolation, which the breaking to pieces of governments bring on a country. And he who does it, is justly to be

esteemed the common enemy and pest of mankind, and is to be treated accordingly.

§. 231.

That subjects or foreigners, attempting by force on the properties of any people, may be resisted with force, is agreed on all hands. But that magistrates, doing the same thing, may be resisted, hath of late been denied: as if those who had the greatest privileges and advantages by the law, had thereby a power to break those laws, by which alone they were set in a better place than their brethren: whereas their offence is thereby the greater, both as being ungrateful for the greater share they have by the law, and breaking also that trust, which is put into their hands by their brethren.

§. 232.

Whosoever uses force without right, as every one does in society, who does it without law, puts himself into a state of war with those against whom he so uses it; and in that state all former ties are cancelled, all other rights cease, and every one has a right to defend himself, and to resist the aggressor. This is so evident, that Barclay himself, that great assertor of the power and sacredness of kings, is forced to confess, That it is lawful for the people, in some cases, to resist their king; and that too in a chapter, wherein he pretends to shew, that the divine law shuts up the people from all manner of rebellion. Whereby it is evident, even by his own doctrine, that, since they may in some cases resist, all resisting of princes is not rebellion. His words are these. *Quod si quis dicat, Ergone populus tyrannicæ crudelitati & furori jugulum semper præbehit? Ergone multitudo civitates suas fame, ferro, & flammâ vastari, seque, conjuges, & liberos fortunæ ludibrio & tyranni libidini exponi, inque omnia vitæ pericula omnesque misérias & molestias á rege deduci patientur? Num illis quod omni animantium generi est á naturâ tributum, denegari debet, ut sc. vim vi repellant, seseq; ab injuriâ tueantur? Huic breviter responsum sit, Populo universo negari defensionem, quæ juris naturalis est, neque ultionem quæ præter naturam est adversus regem concedi debere. Quapropter si rex non in singulares tantum personas aliquot privatum odium exerceat, sed corpus etiam reipublicæ, cujus ipse caput est, i. e. totum populum, vel insignem aliquam ejus partem immani & intolerandâ seu tyrannide divexet; populo, quidem*

hoc casu resistendi ac tuendi se ab injuriâ potestas competit, sed tuendi se tantum, non enim in principem invadendi: & restituendæ injuriæ illatæ, non recedendi à debitâ reverentiâ propter acceptam injuriam. Præsentem denique impetum propulsandi non vim præteritam ulciscendi jus habet. Horum enim alterum à naturâ est, ut vitam scilicet corpusque tueamur. Alterum vero contra naturam, ut inferior de superiori supplicium sumat. Quod itaque populus malum, antequam factum sit, impedire potest, ne fiat, id postquam factum est, in regem authorem sceleris vindicare non potest: populus igitur hoc ampliùs quam privatus quispiam habet: quod huic, vel ipsis adversariis judicibus, excepto Buchanano, nullum nisi in patientia remedium superest. Cùm ille si intolerabilis tyrannus est (modicum enim ferre omnino debet) resistere cum reverentiâ possit, Barclay contra Monarchom. l. iii. c. 8.

In English thus.

§. 233.

But if any one should ask, Must the people then always lay themselves open to the cruelty and rage of tyranny? Must they see their cities pillaged, and laid in ashes, their wives and children exposed to the tyrant's lust and fury, and themselves and families reduced by their king to ruin, and all the miseries of want and oppression, and yet sit still? Must men alone be debarred the common privilege of opposing force with force, which nature allows so freely to all other creatures for their preservation from injury? I answer: Self-defence is a part of the law of nature; nor can it be denied the community, even against the king himself: but to revenge themselves upon him, must by no means be allowed them: it being not agreeable to that law. Wherefore if the king shall shew an hatred, not only to some particular persons, but sets himself against the body of the common-wealth, whereof he is the head, and shall, with intolerable ill usage, cruelly tyrannize over the whole, or a considerable part of the people, in this case the people have a right to resist and defend themselves from injury: but it must be with this caution, that they only defend themselves, but do not attack their prince: they may repair the damages received, but must not for any provocation exceed the bounds of due reverence and respect. They may repulse the present attempt, but must not revenge past violences: for it is natural for us to defend life and limb, but that an inferior should punish a superior, is

against nature. The mischief which is designed them, the people may prevent before it be done; but when it is done, they must not revenge it on the king, though author of the villany. This therefore is the privilege of the people in general, above what any private person hath; that particular men are allowed by our adversaries themselves (Buchanan only excepted) to have no other remedy but patience; but the body of the people may with respect resist intolerable tyranny; for when it is but moderate, they ought to endure it.

§. 234.

Thus far that great advocate of monarchical power allows of resistance.

§. 235.

It is true, he has annexed two limitations to it, to no purpose:

First, He says, it must be with reverence.

Secondly, It must be without retribution, or punishment; and the reason he gives is, because an inferior cannot punish a superior.

First, How to resist force without striking again, or how to strike with reverence, will need some skill to make intelligible. He that shall oppose an assault only with a shield to receive the blows, or in any more respectful posture, without a sword in his hand, to abate the confidence and force of the assailant, will quickly be at an end of his resistance, and will find such a defence serve only to draw on himself the worse usage. This is as ridiculous a way of resisting, as Juvenal thought it of fighting; *ubi tu pulsas, ego vapulo tantum*. And the success of the combat will be unavoidably the same he there describes it:

— *Libertas pauperis hæc est:*
Pulsatus rogat, & pugnæ concisus, adorat,
Ut liceat paucis cum dentibus inde reverti.

This will always be the event of such an imaginary resistance, where men may not strike again. He therefore who may resist, must be allowed to strike. And then let our author, or any body else, join a knock on the head, or a cut on the face, with as much reverence and respect as he thinks fit. He

that can reconcile blows and reverence, may, for aught I know, desire for his pains, a civil, respectful cudgeling where-ever he can meet with it.

Secondly, As to his second, An inferior cannot punish a superior; that is true, generally speaking, whilst he is his superior. But to resist force with force, being the state of war that levels the parties, cancels all former relation of reverence, respect, and superiority: and then the odds that remains, is, that he, who opposes the unjust aggressor, has this superiority over him, that he has a right, when he prevails, to punish the offender, both for the breach of the peace, and all the evils that followed upon it. Barclay therefore, in another place, more coherently to himself, denies it to be lawful to resist a king in any case. But he there assigns two cases, whereby a king may un-king himself. His words are,

Quid ergo, nulline casus incidere possunt quibus populo sese erigere atque in regem impotentius dominantem arma capere & invadere jure suo suâque autoritate liceat? Nulli certe quamdiu rex manet. Semper enim ex divinis id obstat, Regem honorificato; & qui potestati resistit, Dei ordinationi resistit: non aliàs igitur in eum populo potestas est quam si id committat propter quod ipso jure rex esse desinat. Tunc enim se ipse principatu exuit atque in privatis constituit liber: hoc modo populus & superior efficitur, reverso ad eum sc. jure illo quod ante regem inauguratum in interregno habuit. At sunt paucorum generum commissa ejusmodi quæ hunc effectum pariunt. At ego cum plurima animo perlustrem, duo tantum invenio, duos, inquam, casus quibus rex ipso facto ex rege non regem se facit & omni honore & dignitate regali atque in subditos potestate destituit; quorum etiam meminit Winzerus. Horum unus est, Si regnum disperdat, quemadmodum de Nerone fertur, quod is nempe senatum populumque Romanum, atque adeo urbem ipsam ferro flammaque vastare, ac novas sibi sedes quærere decrevisset. Et de Caligula, quod palam denunciarit se neque civem neque principem senatui amplius fore, inque animo habuerit interempto utriusque ordinis electissimo quoque Alexandriam commigrare, ac ut populum uno ictu interimeret, unam ei cervicem optavit. Talia cum rex aliquis meditatur & molitur serio, omnem regnandi curam & animum ilico abjicit, ac proinde imperium in subditos amittit, ut dominus servi pro derelicto habiti dominium.

Alter casus est, Si rex in alicujus clientelam se contulit; ac regnum quod liberum à majoribus & populo traditum accepit, alienæ ditioni mancipavit. Nam tunc quamvis forte non eâ mente id agit populo plane ut incommodet: tamen quia quod præcipuum est regiæ dignitatis amisit, ut summus scilicet in regno secundum Deum sit, & solo Deo inferior, atque populum etiam totum ignorantem vel invitum, cujus libertatem sartam & tectam conservare debuit, in alterius gentis ditionem & potestatem dedit; hâc velut quadam regni ab alienatione effecit, ut nec quod ipse in regno imperium habuit retineat, nec in eum cui collatum voluit, juris quicquam transferat; atque ita eo facto liberum jam & suæ potestatis populum relinquit, cujus rei exemplum unum annales Scotici suppeditant. Barclay contra Monarchom. l. iii. c. 16.

Which in English runs thus.

§. 237.

What then, can there no case happen wherein the people may of right, and by their own authority, help themselves, take arms, and set upon their king, imperiously domineering over them? None at all, whilst he remains a king. Honour the king, and he that resists the power, resists the ordinance of God; are divine oracles that will never permit it. The people therefore can never come by a power over him, unless he does something that makes him cease to be a king: for then he divests himself of his crown and dignity, and returns to the state of a private man, and the people become free and superior, the power which they had in the interregnum, before they crowned him king, devolving to them again. But there are but few miscarriages which bring the matter to this state. After considering it well on all sides, I can find but two. Two cases there are, I say, whereby a king, ipso facto, becomes no king, and loses all power and regal authority over his people; which are also taken notice of by Winzerus.

The first is, If he endeavour to overturn the government, that is, if he have a purpose and design to ruin the kingdom and common-wealth, as it is recorded of Nero, that he resolved to cut off the senate and people of Rome, lay the city waste with fire and sword, and then remove to some other place. And of Caligula, that he openly declared, that he would be no longer a head to the people or senate, and that he had it in his thoughts to cut off the worthiest men of both ranks, and then retire to Alexandria: and he wisht that

the people had but one neck, that he might dispatch them all at a blow. Such designs as these, when any king harbours in his thoughts, and seriously promotes, he immediately gives up all care and thought of the commonwealth; and consequently forfeits the power of governing his subjects, as a master does the dominion over his slaves whom he hath abandoned.

§. 238.

The other case is, When a king makes himself the dependent of another, and subjects his kingdom which his ancestors left him, and the people put free into his hands, to the dominion of another: for however perhaps it may not be his intention to prejudice the people; yet because he has hereby lost the principal part of regal dignity, viz. to be next and immediately under God, supreme in his kingdom; and also because he betrayed or forced his people, whose liberty he ought to have carefully preserved, into the power and dominion of a foreign nation. By this, as it were, alienation of his kingdom, he himself loses the power he had in it before, without transferring any the least right to those on whom he would have bestowed it; and so by this act sets the people free, and leaves them at their own disposal. One example of this is to be found in the Scotch Annals.

§. 239.

In these cases Barclay, the great champion of absolute monarchy, is forced to allow, that a king may be resisted, and ceases to be a king. That is, in short, not to multiply cases, in whatsoever he has no authority, there he is no king, and may be resisted: for wheresoever the authority ceases, the king ceases too, and becomes like other men who have no authority. And these two cases he instances in, differ little from those above mentioned, to be destructive to governments, only that he has omitted the principle from which his doctrine flows; and that is, the breach of trust, in not preserving the form of government agreed on, and in not intending the end of government itself, which is the public good and preservation of property. When a king has dethroned himself, and put himself in a state of war with his people, what shall hinder them from prosecuting him who is no king, as they would any other man, who has put himself into a state of war with them; Barclay, and those of his opinion, would do well to tell us. This farther I desire may be taken notice of out of Barclay, that he says, The

mischiefe that is designed them, the people may prevent before it be done: whereby he allows resistance when tyranny is but in design. Such designs as these (says he) when any king harbours in his thoughts and seriously promotes, he immediately gives up all care and thought of the commonwealth; so that, according to him, the neglect of the public good is to be taken as an evidence of such design, or at least for a sufficient cause of resistance. And the reason of all, he gives in these words, Because he betrayed or forced his people, whose liberty he ought carefully to have preserved. What he adds, into the power and dominion of a foreign nation, signifies nothing, the fault and forfeiture lying in the loss of their liberty, which he ought to have preserved, and not in any distinction of the persons to whose dominion they were subjected. The peoples right is equally invaded, and their liberty lost, whether they are made slaves to any of their own, or a foreign nation; and in this lies the injury, and against this only have they the right of defence. And there are instances to be found in all countries, which shew, that it is not the change of nations in the persons of their governors, but the change of government, that gives the offence. Bilson, a bishop of our church, and a great stickler for the power and prerogative of princes, does, if I mistake not, in his treatise of Christian subjection, acknowledge, that princes may forfeit their power, and their title to the obedience of their subjects; and if there needed authority in a case where reason is so plain, I could send my reader to Bracton, Fortescue, and the author of the Mirrour, and others, writers that cannot be suspected to be ignorant of our government, or enemies to it. But I thought Hooker alone might be enough to satisfy those men, who relying on him for their ecclesiastical polity, are by a strange fate carried to deny those principles upon which he builds it. Whether they are herein made the tools of cunninger workmen, to pull down their own fabric, they were best look. This I am sure, their civil policy is so new, so dangerous, and so destructive to both rulers and people, that as former ages never could bear the broaching of it; so it may be hoped, those to come, redeemed from the impositions of these Egyptian under-task-masters, will abhor the memory of such servile flatterers, who, whilst it seemed to serve their turn, resolved all government into absolute tyranny, and would have all men born to, what their mean souls fitted them for, slavery.

Here, it is like, the common question will be made, Who shall be judge, whether the prince or legislative act contrary to their trust? This, perhaps, ill-affected and factious men may spread amongst the people, when the prince only makes use of his due prerogative. To this I reply, The people shall be judge; for who shall be judge whether his trustee or deputy acts well, and according to the trust reposed in him, but he who deposes him, and must, by having deposed him, have still a power to discard him, when he fails in his trust? If this be reasonable in particular cases of private men, why should it be otherwise in that of the greatest moment, where the welfare of millions is concerned, and also where the evil, if not prevented, is greater, and the redress very difficult, dear, and dangerous?

§. 141.

But farther, this question, (Who shall be judge?) cannot mean, that there is no judge at all: for where there is no judicature on earth, to decide controversies amongst men, God in heaven is judge. He alone, it is true, is judge of the right. But every man is judge for himself, as in all other cases, so in this, whether another hath put himself into a state of war with him, and whether he should appeal to the Supreme Judge, as Jephtha did.

§. 242.

If a controversy arise betwixt a prince and some of the people, in a matter where the law is silent, or doubtful, and the thing be of great consequence, I should think the proper umpire, in such a case, should be the body of the people: for in cases where the prince hath a trust reposed in him, and is dispensed from the common ordinary rules of the law; there, if any men find themselves aggrieved, and think the prince acts contrary to, or beyond that trust, who so proper to judge as the body of the people, (who, at first, lodged that trust in him) how far they meant it should extend? But if the prince, or whoever they be in the administration, decline that way of determination, the appeal then lies no where but to heaven; force between either persons, who have no known superior on earth, or which permits no appeal to a judge on earth, being properly a state of war, wherein the appeal lies only to heaven; and in that state the injured party must judge for himself, when he will think fit to make use of that appeal, and put himself upon it.

§. 243.

To conclude, The power that every individual gave the society, when he entered into it, can never revert to the individuals again, as long as the society lasts, but will always remain in the community; because without this there can be no community, no common-wealth, which is contrary to the original agreement: so also when the society hath placed the legislative in any assembly of men, to continue in them and their successors, with direction and authority for providing such successors, the legislative can never revert to the people whilst that government lasts; because having provided a legislative with power to continue for ever, they have given up their political power to the legislative, and cannot resume it. But if they have set limits to the duration of their legislative, and made this supreme power in any person, or assembly, only temporary; or else, when by the miscarriages of those in authority, it is forfeited; upon the forfeiture, or at the determination of the time set, it reverts to the society, and the people have a right to act as supreme, and continue the legislative in themselves; or erect a new form, or under the old form place it in new hands, as they think good.

FINIS.

SOME CONSIDERATIONS ON THE CONSEQUENCES OF THE LOWERING OF INTEREST AND THE RAISING OF THE VALUE OF MONEY

SIR,

These notions concerning coinage having, for the main, as you know, been put into writing, above twelve months since; as those other, concerning interest, a great deal above so many years: I put them now again into your hands, with a liberty (since you will have it so) to communicate them farther, as you please. If, upon a review, you continue your favourable opinion of them, and nothing less than publishing will satisfy you, I must desire you to remember, that you must be answerable to the world for the style, which is such as a man writes carelessly to his friend, when he seeks truth, not ornament; and studies only to be in the right, and to be understood. I have, since you saw them last year, met with some new objections in print, which I have endeavoured to remove; and particularly I have taken into consideration a printed sheet, entitled, “Remarks upon a Paper given in to the Lords, &c.” Because one may naturally suppose, that he, that was so much a patron of that cause, would omit nothing that could be said in favour of it. To this I must here add, that I am just now told from Holland, “That the States, finding themselves abused, by coining a vast quantity of their base [shillings] money, made of their own ducatoons, and other finer silver, melted down, have put a stop to the minting of any but fine silver coin, till they should settle a mint upon a new foot.”

I know the sincere love and concern you have for your country puts you constantly upon casting about, on all hands, for any means to serve it; and will not suffer you to overlook any thing you conceive may be of any the least use, though offered you from the meanest capacities: you could not else have put me upon looking out my old papers, concerning the reducing of interest of 4 per cent. which have so long lain by forgotten. Upon this new survey of them, I find not my thoughts now to differ from those I had near twenty years since: they have to me still the appearance of truth; nor should I otherwise venture them so much as to your sight. If my notions are

wrong, my intention I am sure is right; and whatever I have failed in, I shall at least let you see with what obedience I am,

Sir,

Your most humble servant.

Nov. 7, 1691.

SIR,

I HAVE so little concern in paying or receiving of “interest,” that were I in no more danger to be misled by inability and ignorance, than I am to be biassed by interest and inclination, I might hope to give you a very perfect and clear account of the consequences of a law to reduce interest to 4 per cent. But since you are pleased to ask my opinion, I shall endeavour fairly to state this matter of use, with the best of my skill.

The first thing to be considered is, “Whether the price of the hire of money can be regulated by law?” And to that I think, generally speaking, one may say, it is manifest it cannot. For since it is impossible to make a law that shall hinder a man from giving away his money or estate to whom he pleases, it will be impossible, by any contrivance of law, to hinder men, skilled in the power they have over their own goods, and the ways of conveying them to others, to purchase money to be lent them, at what rate soever their occasions shall make it necessary for them to have it; for it is to be remembered, that no man borrows money, or pays use, out of mere pleasure: it is the want of money drives men to that trouble and charge of borrowing; and proportionably to this want, so will every one have it, whatever price it cost him. Wherein the skilful, I say, will always so manage it, as to avoid the prohibition of your law, and keep out of its penalty, do what you can. What then will be the unavoidable consequences of such a law?

It will make the difficulty of borrowing and lending much greater, whereby trade (the foundation of riches) will be obstructed.

It will be a prejudice to none, but those who most need assistance and help; I mean widows and orphans, and others uninstructed in the arts and management of more skilful men, whose estates lying in money, they will be sure, especially orphans, to have no more profit of their money, than what interest the law barely allows.

It will mightily increase the advantage of bankers and scriveners, and other such expert brokers, who, skilled in the arts of putting out money, according to the true and natural value, which the present state of trade,

money, and debts, shall always raise interest to, they will infallibly get what the true value of interest shall be above the legal; for men, finding the convenience of lodging their money in hands where they can be sure of it, at short warning, the ignorant and lazy will be forwardest to put it into these men's hands, who are known willingly to receive it, and where they can readily have the whole, or part, upon any sudden occasion, that may call for it.

I fear I may reckon it as one of the probable consequences of such a law, that it is likely to cause great perjury in the nation; a crime, than which nothing is more carefully to be prevented by law-makers, not only by penalties, that shall attend apparent and proved perjury, but by avoiding and lessening, as much as may be, the temptations to it; for where those are strong, (as they are, where men shall swear for their own advantage) there the fear of penalties to follow will have little restraint, especially if the crime be hard to be proved: all which, I suppose, will happen in this case, where ways will be found out to receive money upon other pretences than for use, to evade the rule and rigour of the law: and there will be secret trusts and collusions amongst men, that though they may be suspected, can never be proved, without their own confession. I have heard very sober and observing persons complain of the danger men's lives and properties are in, by the frequency and fashionableness of perjury amongst us. Faith and truth, especially in all occasions of attesting it, upon the solemn appeal to heaven by an oath, is the great bond of society. This it becomes the wisdom of magistrates carefully to support, and render as sacred and awful, in the minds of the people, as they can. But, if ever frequency of oaths shall make them be looked on as formalities of law, or the custom of straining of truth, (which men's swearing in their own cases is apt to lead them to) has once dipped men in perjury, and the guilt, with the temptation, has spread itself very wide, and made it almost fashionable in some cases, it will be impossible for the society (these bonds being dissolved) to subsist. All must break in pieces, and run to confusion. That swearing in their own cases is apt by degrees to lead men into as little regard of such oaths, as they have of their ordinary talk, I think there is reason to suspect, from what has been observed, in something of that kind. Masters of ships are a sort of men generally industrious and sober, and I suppose may be thought for their number and rank, to be equally honest to any other sort of men; and yet, by the discourse I have had with merchants in other countries, I find that they

think, in those parts, they take a great liberty in their custom-house oaths, to that degree, that I remember I was once told, in a trading town beyond sea, of a master of a vessel, there esteemed a sober and fair man, who yet could not hold saying, "God forbid that a custom-house oath should be a sin." I say not this to make any reflection upon a sort of men that I think as uncorrupt as any other, and who, I am sure, ought in England to be cherished and esteemed as the most industrious and most beneficial of any of its subjects: but I could not forbear to give this here as an instance how dangerous a temptation it is to bring men customarily to swear, where they may have any concernment of their own. And it will always be worthy the care and consideration of law-makers to keep up the opinion of an oath high and sacred, as it ought to be, in the minds of the people: which can never be done, where frequency of oaths, biassed by interest, has established a neglect of them; and fashion (which it seldom fails to do) has given countenance to what profit rewards.

But that law cannot keep men from taking more use than you set (the want of money being that alone which regulates its price) will perhaps appear, if we consider how hard it is to set a price upon wine, or silks, or other unnecessary commodities; but how impossible it is to set a rate upon victuals in a time of famine; for money being an universal commodity, and as necessary to trade as food is to life, every body must have it, at what rate they can get it, and unavoidably pay dear, when it is scarce; and debts, no less than trade, have made borrowing in fashion. The bankers are a clear instance of this: for some years since, the scarcity of money having made it in England worth really more than six per cent. most of those that had not the skill to let it for more than six per cent. and secure themselves from the penalty of the law, put it in the banker's hands, where it was ready at their call, when they had an opportunity of greater improvement; so that the rate you set, profits not the lenders; and very few of the borrowers, who are fain to pay the price for money, that commodity would bear, were it left free; and the gain is only to the banker: and should you lessen the use to four per cent. the merchant or tradesman that borrows would not have it one jot cheaper than he has now; but probably these two ill effects would follow: first, that he would pay dearer; and, secondly, that there would be less money left in the country to drive the trade: for the bankers, paying at most but four per cent. and receiving from six to ten per cent. or more, at that low rate could be content to have more money lie dead by them, than now, when

it is higher: by which means there would be less money stirring in trade, and a greater scarcity, which would raise it upon the borrower by this monopoly; and what a part of our treasure their skill and management, joined with others' laziness, or want of skill, is apt to draw into their hands, is to be known by those vast sums of money they were found to owe at shutting up of the Exchequer: and though it be very true, yet it is almost beyond belief, that one private goldsmith of London should have credit, upon his single security, (being usually nothing but a note, under one of his servant's hands) for above eleven hundred thousand pounds at one. The same reasons, I suppose, will still keep on the same trade; and when you have taken it down by law to that rate, nobody will think of having more than four per cent. of the banker; though those who have need of money, to employ it in trade, will not then, any more than now, get it under five or six, or, as some pay, seven or eight. And if they had then, when the law permitted men to make more profit of their money, so large a proportion of the cash of the nation in their hands, who can think but that, by this law, it should be more driven into Lombard-street now? there being many now, who lend them at four or five per cent. who would not lend to others at six. It would therefore, perhaps, bring down the rate of money to the borrower, and certainly distribute it better to the advantage of trade in the country, if the legal use were kept pretty near to the natural; (by natural use, I mean that rate of money which the present scarcity of it makes it naturally at, upon an equal distribution of it) for then men, being licensed by the law to take near the full natural use, will not be forward to carry it to London, to put it into the banker's hands; but will lend it to their neighbours in the country, where it is convenient for trade it should be. But, if you lessen the rate of use, the lender, whose interest it is to keep up the rate of money, will rather lend it to the banker, at the legal interest, than to the tradesman, or gentleman, who, when the law is broken, shall be sure to pay the full natural interest, or more; because of the engrossing by the banker, as well as the risque in transgressing the law: whereas, were the natural use, suppose seven per cent. and the legal six; first the owner would not venture the penalty of the law, for the gaining one in seven, that being the utmost his money would yield: nor would the banker venture to borrow, where his gains would be but one per cent. nor the moneyed man lend him, what he could make better profit of legally at home. All the danger lies in this; that your trade should suffer, if your being behind-hand has made the natural use

so high that your tradesman cannot live upon his labour, but that your rich neighbours will so undersell you, that the return you make will not amount to pay the use, and afford a livelihood. There is no way to recover from this, but by a general frugality and industry; or by being masters of the trade of some commodity, which the world must have from you at your rate, because it cannot be otherwise supplied.

Now, I think, the natural interest of money is raised two ways: first, When the money of a country is but little, in proportion to the debts of the inhabitants, one amongst another. For, suppose ten thousand pounds were sufficient to manage the trade of Bermudas, and that the ten first planters carried over twenty thousand pounds, which they lent to the several tradesmen and inhabitants of the country, who living above their gains, had spent ten thousand pounds of this money, and it were gone out of the island: it is evident, that, should all the creditors at once call in their money, there would be a great scarcity of money, when that, employed in trade, must be taken out of the tradesman's hands to pay debts; or else the debtors want money, and be exposed to their creditors, and so interest will be high. But this seldom happening, that all, or the greatest part, of the creditors do at once call for their money, unless it be in some great and general danger, is less and seldomer felt than the following, unless where the debts of the people are grown to a greater proportion; for that, constantly causing more borrowers than there can be lenders, will make money scarce, and consequently interest high. Secondly, That, which constantly raises the natural interest of money, is, when money is little, in proportion to the trade of a country. For, in trade every body calls for money, according as he wants it, and this disproportion is always felt. For, if Englishmen owed in all but one million, and there were a million of money in England, the money would be well enough proportioned to the debts: but if two millions were necessary to carry on the trade, there would be a million wanting, and the price of money would be raised, as it is of any other commodity in a market, where the merchandize will not serve half the customers, and there are two buyers for one seller.

It is in vain, therefore, to go about effectually to reduce the price of interest by a law; and you may as rationally hope to set a fixed rate upon the hire of houses, or ships, as of money. He that wants a vessel, rather than lose his market, will not stick to have it at the market-rate, and find ways to do it with security to the owner, though the rate were limited by law: and he

that wants money, rather than lose his voyage, or his trade, will pay the natural interest for it; and submit to such ways of conveyance, as shall keep the lender out of the reach of the law. So that your act, at best, will serve only to increase the arts of lending, but not at all lessen the charge of the borrower; he, it is likely, shall, with more trouble, and going farther about, pay also the more for his money: unless you intend to break in only upon mortgages and contracts already made, and (which is not to be supposed) by a law, post factum, void bargains lawfully made, and give to Richard what is Peter's due, for no other reason, but because one was borrower, and the other lender.

But, supposing the law reached the intention of the promoters of it; and that this act be so contrived, that it fixed the natural price of money, and hindered its being, by any body, lent at a higher use than four per cent. which is plain it cannot: let us, in the next place, see what will be the consequences of it.

It will be a loss to widows, orphans, and all those who have their estates in money, one-third of their estates; which will be a very hard case upon a great number of people: and it is warily to be considered, by the wisdom of the nation, whether they will thus, at one blow, fine and impoverish a great and innocent part of the people, who having their estates in money, have as much right to make as much of the money as it is worth, (for more they cannot) as the landlord has to let his land for as much as it will yield. To fine men one-third of their estates, without any crime, or offence committed, seems very hard.

As it will be a considerable loss and injury to the moneyed man, so it will be no advantage at all to the kingdom. For, so trade be not cramped, and exportation of our native commodities and manufactures not hindered, it will be no matter to the kingdom, who amongst ourselves gets or loses: only common charity teaches, that those should be most taken care of by the law, who are least capable of taking care for themselves.

It will be a gain to the borrowing merchant. For if he borrow at four per cent. and his returns be twelve per cent. he will have eight per cent. and the lender four: whereas now they divide the profit equally at six per cent. But this neither gets, nor loses, to the kingdom, in your trade, supposing the merchant and lender to be both Englishmen: only it will, as I have said, transfer a third part of the moneyed man's estate, who had nothing else to live on, into the merchant's pocket; and that without any merit in the one, or

transgression in the other. Private men's interests ought not thus to be neglected, nor sacrificed to any thing, but the manifest advantage of the public. But, in this case, it will be quite the contrary. This loss to the moneyed men will be a prejudice to trade; since it will discourage lending at such a disproportion of profit, to risque; as we shall see more by and by, when we come to consider of what consequence it is to encourage lending, that so none of the money of the nation may lie dead, and thereby prejudice trade.

It will hinder trade. For, there being a certain proportion of money, necessary for driving such a proportion of trade, so much money of this as lies still, lessens so much of the trade. Now it cannot be rationally expected, but that, where the venture is great, and the gains small, (as it is in lending in England, upon low interest) many will choose rather to hoard up their money than venture it abroad, on such terms. This will be a loss to the kingdom, and such a loss as, here in England, ought chiefly to be looked after: for, we having no mines, nor any other way of getting, or keeping of riches amongst us, but by trade; so much of our trade as is lost, so much of our riches must necessarily go with it; and the over-balancing of trade, between us and our neighbours, must inevitably carry away our money, and quickly leave us poor and exposed. Gold and silver, though they serve for few, yet they command all the conveniences of life, and therefore in a plenty of them consist riches.

Every one knows that mines alone furnish these; but withal it is observable, that most countries, stored with them by nature, are poor; the digging and refining of these metals taking up the labour, and wasting the number of the people. For which reason the wise policy of the Chinese will not suffer the mines, they have, to be wrought. Nor indeed, things rightly considered, do gold and silver, drawn out of the mine, equally enrich, with what is got by trade. He that would make the lighter scale preponderate to the opposite, will not so soon do it, by adding increase of new weight to the emptier, as if he took out of the heavier what he adds to the lighter, for then half so much will do it. Riches do not consist in having more gold and silver, but in having more in proportion than the rest of the world, or than our neighbours, whereby we are enabled to procure to ourselves a greater plenty of the conveniencies of life, than comes within the reach of neighbouring kingdoms and states, who, sharing the gold and silver of the world in a less proportion, want the means of plenty and power, and so are

poorer. Nor would they be one jot the richer, if, by the discovery of new mines, the quantity of gold and silver in the world becoming twice as much as it is, their shares of them should be doubled. By gold and silver in the world, I must be understood to mean, not what lies hid in the earth, but what is already out of the mine, in the hands and possessions of men. This, if well considered, would be no small encouragement to trade, which is a surer and shorter way to riches, than any other, where it is managed with skill and industry.

In a country not furnished with mines, there are but two ways of growing rich, either conquest or commerce. By the first the Romans made themselves masters of the riches of the world; but I think that, in our present circumstances, nobody is vain enough to entertain a thought of our reaping the profits of the world with our swords, and making the spoil and tribute of vanquished nations the fund for the supply of the charges of the government, with an overplus for the wants, and equally-craving luxury, and fashionable vanity of the people.

Commerce, therefore, is the only way left to us, either for riches, or subsistence: for this the advantages of our situation, as well as the industry and inclination of our people, bold and skilful at sea, do naturally fit us: by this the nation of England has been hitherto supported, and trade left almost to itself, and assisted only by the natural advantages above-mentioned, brought us in plenty of riches, and always set this kingdom in a rank equal, if not superior to any of its neighbours; and would, no doubt, without any difficulty, have continued it so, if the more enlarged and better-understood interest of trade, since the improvement of navigation, had not raised us many rivals; and the amazing politics of some late reigns let in other competitors with us for the sea, who will be sure to seize to themselves whatever parts of trade our mismanagement, or want of money, shall let slip out of our hands: and when it is once lost, it will be too late to hope, by a mis-timed care, easily to retrieve it again. For the currents of trade, like those of waters, make themselves channels, out of which they are afterwards as hard to be diverted, as rivers that have worn themselves deep within their banks.

Trade, then, is necessary to the producing of riches, and money necessary to the carrying on of trade. This is principally to be looked after, and taken care of. For if this be neglected, we shall in vain by contrivances amongst ourselves, and shuffling the little money we have from one

another's hands, endeavour to prevent our wants: decay of trade will quickly waste all the remainder; and then the landed-man, who thinks, perhaps, by the fall of interest to raise the value of his land, will find himself cruelly mistaken; when the money being gone, (as it will be, if our trade be not kept up) he can get neither farmer to rent, nor purchaser to buy his land. Whatsoever, therefore, hinders the lending of money, injures trade: and so the reducing of money to four per cent. which will discourage men from lending, will be a loss to the kingdom in stopping so much of the current money, which turns the wheels of trade. But all this upon a supposition, that the lender and borrower are both Englishmen.

If the lender be a foreigner, by lessening interest from six to four, you get to the kingdom one-third part of the interest we pay yearly to foreigners, which let any one, if he please, think considerable; but then, upon lessening interest to four per cent. it is likely one of these things will happen: that either you fall the price of your native commodities, or lessen your trade, or else prevent not the high use, as you intended: for at the time of lessening your interest, you want money for your trade, or you do not. If you do not, there is no need to prevent borrowing at a high rate of your neighbours. For no country borrows of its neighbours, but where there is need of money for trade: nobody will borrow money of a foreigner to let it lie still. And, if you do want money, necessity will still make you borrow where you can, and at the rates your necessity, not your laws, shall set: or else, if there be a scarcity of money, it must hinder the merchant's buying and exportation, and the artizan's manufacture. Now the kingdom gets, or loses by this (for no question the merchant, by low interest, gets all the while) only proportionably (allowing the consumption of foreign commodities to be still the same) as the paying of use to foreigners carries away more, or less, of our money, than want of money, and stopping our trade keeps us from bringing in, by hindering our gains, which can be only estimated by those who know how much money we borrow of foreigners, and at what rate; and too, what profit in trade we make of that money.

Borrowing of foreigners upon interest, it is true, carries away some of our gain: but yet, upon examination it will be found, that our growing rich or poor depends not at all upon our borrowing upon interest, or not; but only, which is greater or less, our importation or exportation of consumable commodities. For, supposing two millions of money will drive the trade of England, and that we have money enough of our own to do it; if we

consume of our own product and manufacture, and what we purchase by it of foreign commodities, one million, but of the other million consume nothing, but make a return of ten per cent. per annum, we must then every year be one hundred thousand pounds richer, and our stock be so much increased: but, if we import more consumable commodities, than we export, our money must go out to pay for them, and we grow poorer. Suppose, therefore, ill-husbandry hath brought us to one million stock, and we borrow the other million (as we must, or lose half our trade) at six per cent. If we consume one moiety, and make still ten per cent. per ann. return of the other million, the kingdom gets forty thousand pounds per ann. though it pay sixty thousand pounds per ann. use. So that, if the merchant's return be more than his use (which it is certain it is, or else he will not trade), and all that is so traded for, on borrowed money, be but the over-balance of our exportation to our importation; the kingdom gets, by this borrowing, so much as the merchant's gain is above his use. But, if we borrow only for our own expences, we grow doubly poor, by paying money for the commodity we consume, and use for that money; though the merchant gets all this while, by making returns greater than his use. And therefore, borrowing of foreigners, in itself, makes not the kingdom rich or poor; for it may do either: but spending more than our fruits, or manufactures, will pay for, brings in poverty, and poverty borrowing.

For money, as necessary to trade, may be doubly considered. First, as in his hands that pays the labourer and landholder, (for here its motion terminates, and through whose hands soever it passes between these, he is but a broker) and if this man want money, (as for example, the clothier) the manufacture is not made: and so the trade stops, and is lost. Or secondly, money may be considered as in the hands of the consumer, under which name I here reckon the merchant who buys the commodity, when made, to export; and, if he want money, the value of the commodity, when made, is lessened, and so the kingdom loses in the price. If, therefore, use be lessened, and you cannot tie foreigners to your terms, then the ill effects fall only upon your landholders and artizans: if foreigners can be forced, by your law, to lend you money, only at your own rate, or not lend at all, is it not more likely they will rather take it home, and think it safer in their own country at four per cent. than abroad, in a decaying country? Nor can their overplus of money bring them to lend to you, on your terms: for, when your merchants' want of money shall have sunk the price of your market, a

Dutchman will find it more gain to buy your commodity himself, than lend his money at four per cent. to an English merchant to trade with. Nor will the act of navigation hinder their coming, by making them come empty, since even already there are those who think that many who go for English merchants are but Dutch factors, and trade for others in their own names. The kingdom, therefore, will lose by this lowering of interest, if it makes foreigners withdraw any of their money, as well as if it hinders any of your people from lending theirs, where trade has need of it.

In a treatise, writ on purpose for the bringing down of interest, I find this argument of foreigners calling away their money to the prejudice of our trade, thus answered: "That the money of foreigners is not brought into the land by ready coin, or bullion, but by goods, or bills of exchange, and, when it is paid, must be returned by goods, or bills of exchange; and there will not be the less money in the land." I could not but wonder to see a man, who undertook to write of money and interest, talk so directly besides the matter, in the business of trade. "Foreigners' money," he says, "is not brought into the land by ready coin, or bullion, but by goods, or bills of exchange." How then do we come by bullion or money? For gold grows not, that I know, in our country, and silver so little, that one hundred thousandth part of the silver we have now in England, was not drawn out of any mines in this island. If he means that the monied man in Holland, who puts out his money at interest here, did not send it over in bullion, or specie hither: that may be true or false; but either way helps not that author's purpose. For, if he paid his money to a merchant, his neighbour, and took his bills for it here in England, he did the same thing as if he had sent over that money; since he does but make that merchant leave in England the money, which he has due to him there, and otherwise would carry away. "No," says our author, "he cannot carry it away; for," says he, "when it is paid, it must be returned by goods, or bills of exchange." It must not be paid and exported in ready money; so says our law indeed, but that is a law to hedge in the cuckoo, and serves to no purpose; for, if we export not goods for which our merchants have money due to them in Holland, how can it be paid by bills of exchange? And for goods, one hundred pounds worth of goods can nowhere pay two hundred pounds in money. This being that which I find many men deceive themselves with, in trade, it may be worth while to make it a little plainer.

Let us suppose England, peopled as it is now; and its woollen manufacture in the same state and perfection, that it is at present; and that we, having no money at all, trade with this our woollen manufacture, for the value of two hundred thousand pounds yearly to Spain, where there actually is a million in money: farther, let us suppose that we bring back from Spain yearly in oil, wine, and fruit, to the value of one hundred thousand pounds, and continue to do this ten years together: it is plain that we have had for our two millions value in woollen manufacture, carried thither, one million returned in wine, oil, and fruit: but what is become of the other million? Will the merchants be content to lose it? That you may be sure they would not, nor have traded on, if they had not, every year, returns made, answering their exportation. How then were the returns made? In money it is evident; for the Spaniards having, in such a trade, no debts, nor the possibility of any debts in England, cannot pay one farthing of that other million, by bills of exchange: and having no commodities, that we will take off, above the value of one hundred thousand pounds per ann. they cannot pay us in commodities. From whence it necessarily follows, that the hundred thousand pounds per ann. wherein we over-balance them in trade, must be paid us in money; and so, at the ten years end, their million of money, (though their law make it death to export it) will be all brought into England; as, in truth, by this over-balance of trade, the greatest part of our money hath been brought into England, out of Spain.

Let us suppose ourselves now possessed of this million of money, and exporting yearly out of England, to the several parts of the world, consumable commodities, to the value of a million, but importing yearly in commodities, which we consume amongst us, to the value of eleven hundred thousand pounds. If such a trade as this be managed amongst us, and continue ten years, it is evident that our million of money will, at the end of the ten years, be inevitably all gone from us to them, by the same way that it came to us; that is, by their over-balance of trade: for we, importing every year one hundred thousand pounds worth of commodities, more than we export, and there being no foreigners that will give us one hundred thousand pounds every year for nothing, it is unavoidable that one hundred thousand pounds of our money must go out every year, to pay for that overplus, which our commodities do not pay for. It is ridiculous to say, that bills of exchange shall pay our debts abroad: that cannot be, till scrips of paper can be made current coin. The English merchant who has no

money owing him abroad, cannot expect to have his bills paid there; or, if he has credit enough with a correspondent to have his bills answered, this pays none of the debt of England, but only changes the creditor: and if, upon the general balance of trade, English merchants owe to foreigners one hundred thousand pounds, or a million; if commodities do not, our money must go out to pay it, or else our credit be lost, and our trade stop, and be lost too.

A kingdom grows rich, or poor, just as a farmer doth, and no otherwise. Let us suppose the whole isle of Portland one farm; and that the owner, besides what serves his family, carries to market to Weymouth and Dorchester, &c. cattle, corn, butter, cheese, wool or cloth, lead and tin, all commodities, produced and wrought within his farm of Portland, to the value of a thousand pounds yearly; and for this brings home in salt, wine, oil, spice, linen, and silks, to the value of nine hundred pounds, and the remaining hundred pounds in money. It is evident he grows every year a hundred pounds richer, and so at the end of ten years, will have clearly got a thousand pounds. If the owner be a better husband, and, contenting himself with his native commodities, buy less wine, spice, and silk, at market, and so bring home five hundred pounds in money yearly; instead of a thousand pounds at the end of ten years he will have five thousand pounds by him, and be so much richer. He dies, and his son succeeds, a fashionable young gentleman, that cannot dine without champagne and burgundy, nor sleep but in a damask bed; whose wife must spread a long train of brocade, and his children be always in the newest French cut and stuff; he, being come to the estate, keeps on a very busy family; the markets are weekly frequented, and the commodities of his farm carried out, and sold, as formerly, but the returns are made something different; the fashionable way of eating, drinking, furniture, and clothing, for himself and family, requires more sugar and spice, wine and fruit, silk and ribbons, than in his father's time; so that instead of nine hundred pounds per annum, he now brings home of consumable commodities to the value of eleven hundred pounds yearly. What comes of this? He lives in splendour, it is true, but this unavoidably carries away the money his father got, and he is every year an hundred pounds poorer. To his expences beyond his income, add debauchery, idleness, and quarrels amongst his servants, whereby his manufactures are disturbed, and his business neglected, and a general disorder and confusion through his whole family and farm. This will tumble him down the hill the

faster, and the stock, which the industry, frugality, and good order of his father had laid up, will be quickly brought to an end, and he fast in prison. A farm and a kingdom in this respect differ no more, than as greater or less. We may trade, and be busy, and grow poor by it, unless we regulate our expences: if to this we are idle, negligent, dishonest, malicious, and disturb the sober and industrious in their business, let it be upon what pretence it will, we shall ruin the faster.

So that, whatever this author, or any one else may say, money is brought into England by nothing but spending here less of foreign commodities, than what we carry to market can pay for; nor can debts, we owe to foreigners, be paid by bills of exchange, till our commodities exported, and sold beyond sea, have produced money, or debts, due there to some of our merchants; for nothing will pay debts but money, or money's worth, which three or four lines writ in paper cannot be. If such bills have an intrinsic value, and can serve instead of money, why do we not send them to market, instead of our cloth, lead and tin, and at an easier rate purchase the commodities we want? All that a bill of exchange can do, is to direct to whom money due, or taken up upon credit, in a foreign country, shall be paid; and if we trace it, we shall find, that what is owing already, became so for commodities, or money carried from hence: and, if it be taken upon credit, it must (let the debt be shifted from one creditor to another, as often as you will) at last be paid by money, or goods, carried from hence, or else the merchant here must turn bankrupt.

We have seen how riches and money are got, kept or lost, in any country: and that is, by consuming less of foreign commodities, than what by commodities, or labour, is paid for. This is in the ordinary course of things: but where great armies and alliances are to be maintained abroad, by supplies sent out of any country, there often, by a shorter and more sensible way, the treasure is diminished. But this, since the holy war, or at least since the improvement of navigation and trade, seldom happening to England, whose princes have found the enlarging their power by sea, and the securing our navigation and trade, more the interest of this kingdom than wars, or conquests, on the continent: expences in arms beyond sea have had little influence on our riches or poverty. The next thing to be considered is, how money is necessary to trade.

The necessity of a certain proportion of money to trade (I conceive) lies in this, that money, in its circulation, driving the several wheels of trade,

whilst it keeps in that channel (for some of it will unavoidably be drained into standing pools), is all shared between the landholder, whose land affords the materials; the labourer, who works them; the broker, i. e. the merchant and shopkeeper, who distributes them to those that want them; and the consumer, who spends them. Now money is necessary to all these sorts of men, as serving both for counters and for pledges, and so carrying with it even reckoning and security, that he that receives it shall have the same value for it again, of other things that he wants, whenever he pleases. The one of these it does by its stamp and denomination; the other by its intrinsic value, which is its quantity.

For mankind, having consented to put an imaginary value upon gold and silver, by reason of their durableness, scarcity, and not being very liable to be counterfeited, have made them, by general consent, the common pledges, whereby men are assured, in exchange for them, to receive equally valuable things, to those they parted with, for any quantity of these metals; by which means it comes to pass, that the intrinsic value regarded in these metals, made the common barter, is nothing but the quantity which men give or receive of them; for they having, as money, no other value, but as pledges to procure what one wants or desires, and they procuring what we want or desire, only by their quantity, it is evident that the intrinsic value of silver and gold used, in commerce, is nothing but their quantity.

The necessity, therefore, of a proportion of money to trade, depends on money, not as counters, for the reckoning may be kept, or transferred by writing, but on money as a pledge, which writing cannot supply the place of: since the bill, bond, or other note of debt, I receive from one man, will not be accepted as security by another, he not knowing that the bill or bond is true or legal, or that the man bound to me is honest or responsible, and so is not valuable enough to become a current pledge, nor can by public authority be well made so, as in the case of assigning of bills; because a law cannot give to bills that intrinsic value, which the universal consent of mankind has annexed to silver and gold; and hence foreigners can never be brought to take your bills or writings, for any part of payment, though perhaps they might pass as valuable considerations among your own people, did not this very much hinder it, viz. that they are liable to unavoidable doubt, dispute, and counterfeiting, and require other proofs to assure us that they are true and good security, than our eyes, or a touchstone. And, at best, this course, if practicable, will not hinder us from

being poor; but may be suspected to help to make us so, by keeping us from feeling our poverty, which, in distress, will be sure to find us with greater disadvantage. Though it be certain it is better than letting any part of our trade fall for want of current pledges; and better too than borrowing money of our neighbours upon use, if this way of assigning bills can be made so easy, safe, and universal at home, as to hinder it.

To return to the business in hand, and show the necessity of a proportion of money to trade. Every man must have at least so much money, or so timely recruits, as may in hand, or in a short distance of time, satisfy his creditor who supplies him with the necessaries of life, or of his trade. For nobody has any longer these necessary supplies, than he has money, or credit, which is nothing else but an assurance of money, in some short time. So that it is requisite to trade, that there should be so much money as to keep up the landholder's, labourer's, and broker's credit; and therefore ready money must be constantly exchanged for wares and labour, or follow within a short time after.

This shows the necessity of some proportion of money to trade: but what proportion that is, is hard to determine; because it depends not barely on the quantity of money, but the quickness of its circulation. The very same shilling may, at one time, pay twenty men in twenty days: at another, rest in the same hands one hundred days together. This makes it impossible exactly to estimate the quantity of money needful in trade; but, to make some probable guess, we are to consider how much money it is necessary to suppose must rest constantly in each man's hands, as requisite to the carrying on of trade.

First, therefore, the labourers, living generally but from hand to mouth; and, indeed, considered as labourers in order to trade, may well enough carry on their part, if they have but money enough to buy victuals, clothes, and tools: all which may very well be provided, without any great sum of money lying still in their hands. The labourers, therefore, being usually paid once a week, (if the times of payment be seldomer there must be more money for the carrying on this part of trade) we may suppose there is constantly amongst them, one with another, or those who are to pay them, always one week's wages in ready money; for it cannot be thought, that all or most of the labourers pay away all their wages constantly, as soon as they receive it, and live upon trust till next pay-day. This the farmer and tradesman could not well bear, were it every labourer's case, and every one

to be trusted: and, therefore, they must of necessity keep some money in their hands, to go to market for victuals, and to other tradesmen as poor as themselves, for tools; and lay up money too to buy clothes, or pay for those they bought upon credit; which money, thus necessarily resting in their hands, we cannot imagine to be, one with another, much less than a week's wages, that must be in their pockets, or ready in the farmer's hands; for he, who employs a labourer at a shilling per day, and pays him on Saturday nights, cannot be supposed constantly to receive that six shillings, just the same Saturday: it must ordinarily be in his hands one time with another, if not a whole week, yet several days before.

This was the ordinary course, whilst we had money running in the several channels of commerce: but that now very much failing, and the farmer not having money to pay the labourer, supplies him with corn, which, in this great plenty, the labourer will have at his own rate, or else not take it off his hands for wages. And as for the workmen, who are employed in our manufactures, especially the woollen one, these the clothier, not having ready money to pay, furnishes with the necessaries of life, and so trucks commodities for work; which, such as they are, good or bad, the workman must take at his master's rate, or sit still and starve: whilst by this means this new sort of engrossers, or forestallers, having the feeding and supplying this numerous body of workmen out of their warehouses (for they have now magazines of all sorts of wares), set the price upon the poor landholder. So that the markets, now being destroyed, and the farmer not finding vent there for his butter, cheese, bacon, and corn, &c. for which he was wont to bring home ready money, must sell it to these engrossers on their own terms of time and rate, and allow it to their own day-labourers under the true market price. What kind of influence this is like to have upon land, and how this way rents are like to be paid at quarter-day, is easy to apprehend: and it is no wonder to hear every day of farmers breaking and running away; for if they cannot receive money for their goods at market, it will be impossible for them to pay their landlord's rent. If any one doubt whether this be so, I desire him to inquire how many farmers in the west are broke, and gone, since Michaelmas last. Want of money, being to this degree, works both ways upon the landholder. For, first, the engrossing forestaller lets not the money come to market, but supplying the workman, who is employed by him in manufacture, with necessaries, imposes his price, and forbearance on the farmer, who cannot sell to the others; and the

labourer who is employed by the landholder in husbandry, imposes also his rate on him for the commodities he takes; for there being a want of day-labourers in the country, they must be humoured, or else they will neither work for you, nor take your commodities for their labour.

Secondly, As for the landholder, since his tenants cannot coin their rent just at quarter-day, but must gather it up by degrees, and lodge it with them till payday; or borrow it of those who have it lying by them, or do gather it up by degrees, which is the same thing, and must be necessarily so much money for some time lying still; for all that is paid in great sums, must somewhere be gathered up by the retail incomes of a trade, or else lie still too in great sums, which is the same stop of money, or a greater. Add to this, that to pay the creditor that lent him his rent, he must gather up money by degrees, as the sale of his commodities shall bring it in, and so makes a greater stop, and greater want of money: since the borrowed money, that paid the landholder the 25th of March, must be supposed to lie still some time in the creditor's hand, before he lent it the tenant; and the money that pays the creditor, three months after, must lie still some time in the tenant's. Nor does the landlord pay away his rent usually as soon as he receives it, but by degrees, as his occasions call for it. All this considered, we cannot but suppose that between the landlord and tenant, there must necessarily be at least a quarter of the yearly revenue of the land constantly in their hands. Indeed, considering that most part of the rents of England are paid at Lady-day and Michaelmas, and that the same money which pays me my rent from my tenant the 25th of March, or thereabouts, cannot pay my next neighbour his rent from his tenant at the same time, much less one more remote in another country, it might seem requisite to suppose half the yearly revenue of the land to be necessarily employed in paying of rent: for to say that some tenants break, and pay not their rent at all, and others pay not till two, three, four, five, six, &c. months after quarter-day, and so the rent is not all paid at one time, is no more than to say, that there is money wanting to the trade; for if the tenant fail the landlord, he must fail his creditor, and he his, and so on, till somebody break, and so trade decay for want of money. But since a considerable part of the land of England is in the owners' hands, who neither pay nor receive great sums for it at a certain day; because too (which is the chief reason) we are not to consider here how much money is in any one man's, or any one sort of men's hands, at one time: for that at other times may be distributed into other hands, and serve other parts of

trade; but how much money is necessary to be in each man's hands all the year round, taking one time with another, i. e. having three hundred pounds in his hand one month, is to be reckoned as one hundred pounds in his hand three months (and so proportionably), I think we may well suppose a quarter of the yearly revenue to be constantly in the landlord's or tenant's hands.

Here by the by, we may observe, that it were better for trade, and consequently for every body (for more money would be stirring, and less would do the business), if rents were paid by shorter intervals than six months; for, supposing I let a farm at fifty-two pounds per ann. if my rent be paid half-yearly, there are twenty-six pounds to be employed in the payment of it in one entire sum (if it be paid well, and if it be not paid well, for want of so much money to be spared to that purpose, there is so much want of money, and trade is still endamaged by it) a great part whereof must necessarily lie still, before it come out of my tenant's chest to my hands: if it be paid once a quarter, thirteen pounds alone will do it, and less money is laid up for it, and stopped a less while in its course: but should it be paid every week, one single twenty shillings will pay the rent of fifty-two pounds per ann. whence would follow this double benefit: first, that a great deal less money would serve for the trade of a country; and, secondly, that less of the money would lie still; the contrary whereof must needs happen, where growing debts are to be paid at larger distances, and in greater sums.

Thirdly, As for the brokers, since they too must lay up the money, coming in by retail, either to go to market, and buy wares, or to pay at the day appointed, which is often six months, for those wares which they have already; we cannot suppose them to have less by them, one with another, than one-twentieth part of their yearly returns. Whether the money be their own, or they be indebted so much, or more, it matters not, if it be necessary they should have constantly by them, comparing one time with another, at least one-twentieth part of their yearly return.

Indeed, in some great towns, where the bankers are ready at hand to buy bills, or any other way to lend money for a short time at great interest, there perhaps the merchant is not forced to keep so much money by him, as in other places, where they have not such a supply; but if you consider what money to do this must necessarily be constantly lodged in the banker's hands, the case will be much the same.

To these sums, if you add what part of the money of a country scholars of all sorts, women, gamesters, and great men's menial servants, and all such that do not contribute at all to trade, either as landholders, labourers, or brokers, will unavoidably have constantly in their hands; it cannot well be thought that less than one-fiftieth part of the labourer's wages, one-fourth part of the landholder's yearly revenue, and one-twentieth part of the broker's yearly returns in ready money, will be enough to drive the trade of any country. At least to put it beyond exception low enough, it cannot be imagined that less than one moiety of this, i. e. less than one-hundredth part of the labourer's yearly wages, one-eighth part of the landholder's yearly revenue, and one-fortieth part of the broker's yearly returns, in ready money, can be enough to move the several wheels of trade, and keep up commerce, in that life and thriving posture it should be; and how much the ready cash of any country is short of this proportion, so much must the trade be impaired and hindered for want of money.

But however these measures may be mistaken, this is evident, that the multiplying of brokers hinders the trade of any country, by making the circuit, which the money goes, larger; and in that circuit more stops, so that the returns must necessarily be slower and scantier, to the prejudice of trade: besides that, they eat up too great a share of the gains of trade: by that means starving the labourer, and impoverishing the landholder, whose interest is chiefly to be taken care of, it being a settled, unmovable concernment in the commonwealth.

If this be so, it is past question that all encouragement should be given to artificers; and things so ordered, as much as might be, that those who make should also vend and retail out their own commodities, and they be hindered, as much as possible, from passing here at home, through divers hands to the last buyer. Lazy and unworking shopkeepers in this being worse than gamesters, that they do not only keep so much of the money of a country constantly in their hands, but also make the public pay them for their keeping of it. Though gaming too, upon the account of trade (as well as other reasons) may well deserve to be restrained; since gamesters, in order to their play, keep great sums of money by them, which there lies dead; for though gamester's money shifts masters oftener than any, and is tumbled up and down with every cast of a die, yet as to the public it lies perfectly still, and no more of it comes into trade, than they spend in eating or wearing.

Here too we may observe, how much manufacture deserves to be encouraged; since that part of trade, though the most considerable, is driven with the least money, especially if the workmanship be more worth than the materials; for to the trade that is driven by labour and handicraftsmen, one two-and-fiftieth part of the yearly money paid them will be sufficient; but to a trade of our commodities, of our bare, native growth, much greater proportion of money is required.

Perhaps it will be wondered why, having given some estimate (how wide I know not) of the money, necessary in the hands of the landholder, labourer, and broker, to carry on trade, I have said nothing of the consumer, whom I had mentioned before. To this I answer, there are so few consumers, who are not either labourers, brokers, or landholders, that they make a very inconsiderable part in the account; for those who immediately depend on the landholder, as his children and servants, come in under that title, being maintained by the rent of his lands; and so of the rest.

By what has been said, we may see what injury the lowering of interest is like to do us, by hindering trade, when it shall either make the foreigner call home his money, or your own people backward to lend, the reward not being judged proportionable to the risque.

There is another seeming consequence of the reducing of money to a low price, which at first sight has such an appearance of truth in it, that I have known it to impose upon very able men, and I guess it has no small influence, at this time, in the promoting this alteration; and that is, that the lowering of interest will raise the value of all other things in proportion. For money being the counter-balance to all other things purchaseable by it, and lying, as it were, in the opposite scale of commerce, it looks like a natural consequence, that as much as you take off from the value of money, so much you add to the price of other things which are exchanged for it; the raising of the price of any thing being no more but the addition to its value in respect of money, or, which is all one, lessening the value of money. For example: should the value of gold be brought down to that of silver, one hundred guineas would purchase little more corn, wool, or land, than one hundred shillings; and so, the value of money being brought lower, say they, the price of other things will rise, and the falling of interest from six pounds to four pounds per cent. is taking away so much of the price of money, and so consequently the lessening its value.

The mistake of this plausible way of reasoning will be easily discovered, when we consider that the measure of the value of money, in proportion to any thing purchaseable by it, is the quantity of the ready money we have in comparison with the quantity of that thing, and its vent; or, which amounts to the same thing, the price of any commodity rises or falls by the proportion of the number of buyers and sellers: this rule holds universally in all things that are to be bought and sold, bating now and then an extravagant fancy of some particular person, which never amounts to so considerable a part of trade, as to make any thing in the account worthy to be thought an exception to this rule.

The vent of any thing depends upon its necessity or usefulness; as convenience or opinion, guided by fancy, or fashion, shall determine.

The vent of any commodity comes to be increased, or decreased, as a greater part of the running cash of the nation is designed to be laid out, by several people at the same time, rather in that, than another; as we see in the change of fashions.

I shall begin first with the necessities, or conveniencies of life, and the consumable commodities subservient thereunto; and show, that the value of money, in respect of those, depends only on the plenty, or scarcity of money, in proportion to the plenty and scarcity of those things; and not on what interest shall, by necessity, law, or contract, be at that time laid on the borrowing of money: and then afterwards I shall show that the same holds in land.

There is nothing more confirmed, by daily experience, than that men give any portion of money for whatsoever is absolutely necessary, rather than go without it. And in such things, the scarcity of them alone makes their prices. As for example: let us suppose half an ounce of silver, or half a crown now in England, is worth a bushel of wheat: but should there be next year a great scarcity of wheat in England, and a proportionable want of all other food, five ounces of silver would, perhaps, in exchange purchase but one bushel of wheat: so that money would be then nine-tenths less worth in respect of food, though at the same value it was before, in respect of other things, that kept their former proportion, in their quantity and consumption.

By the like proportions, of increase and decrease, does the value of things, more or less convenient, rise and fall, in respect of money; only with this difference, that things absolutely necessary for life must be had at any rate; but things convenient will be had only as they stand in preference with

other conveniencies: and therefore in any one of these commodities, the value rises only as its quantity is less, and vent greater, which depends upon its being preferred to other things, in its consumption. For supposing that, at the same time, that there is a great scarcity of wheat, and other grain, there were a considerable quantity of oats, men, no question, would give far more for wheat than oats, as being the healthier, pleasanter, and more convenient food: but, since oats would serve to supply that absolute necessity of sustaining life, men would not rob themselves of all other conveniencies of life, by paying all their money for wheat, when oats, that are cheaper, though with some inconvenience, would supply that defect. It may then so happen at the same time, that half an ounce of silver, that the year before would buy one bushel of wheat, will this year buy but one-tenth of a bushel: half an ounce of silver, that the year before would have bought three bushels of oats, will this year still buy one: and at the same time half an ounce of silver, that would the year before have bought fifteen pounds of lead, will still buy the same quantity. So that at the same time silver, in respect of wheat, is nine-tenths less worth than it was, in respect of oats two-thirds less worth, and in respect of lead as much worth as before.

The fall, therefore, or rise of interest, making immediately, by its change, neither more, nor less land, money, or any sort of commodity in England, than there was before, alters not at all the value of money, in reference to commodities. Because the measure of that is only the quantity and vent, which are not immediately changed by the change of interest. So far as the change of interest conduces, in trade, to the bringing in, or carrying out money, or commodities, and so in time to the varying their proportions here in England, from what it was before; so far the change of interest, as all other things that promote, or hinder trade, may alter the value of money, in reference to commodities. But that is not in this place to be considered.

This is perfectly the value of money, in respect of consumable commodities: but the better to understand it, in its full latitude, in respect both of consumable commodities, and land too, we must consider, first, That the value of land consists in this, that, by its constant production of saleable commodities, it brings in a certain yearly income. Secondly, The value of commodities consists in this, that, as portable and useful things, they, by their exchange or consumption, supply the necessities or conveniencies of life. Thirdly, In money there is a double value, answering to both of these, first, as it is capable, by its interest, to yield us such a

yearly income: and in this it has the nature of land, (the income of one being called rent, of the other use) only with this difference, that the land, in its soil being different, as some fertile, some barren, and the products of it very various, both in their sorts, goodness, and vent, is not capable of any fixed estimate by its quantity: but money being constantly the same, and by its interest giving the same sort of product, through the whole country, is capable of having a fixed yearly rate set upon it by the magistrate; but land is not. But though in the uniformity of its legal worth, one hundred pounds of lawful money being all through England equal in its current value to any other one hundred pounds of lawful money, (because by virtue of the law it will every where pass for as much ware, or debt, as any other hundred pounds) is capable to have its yearly hire valued better than land; yet in respect of the varying need, and necessity of money, (which changes with the increase, or decay of money, or trade in a country) it is as little capable to have its yearly hire fixed by law, as land itself. For were all the land in Rumney-marsh, acre for acre, equally good, that is, did constantly produce the same quantity of equally good hay, or grass, one as another, the rent of it, under that consideration, of every acre being of an equal worth, would be capable of being regulated by law; and one might as well enact, that no acre of land in Rumney-marsh shall be let for above forty shillings per annum, as that no hundred pounds shall be let for above four pounds per annum. But nobody can think it fit (since by reason of the equal value of that land it can) that therefore the rent of the land in Rumney-marsh should be regulated by law. For supposing all the land in Rumney-marsh, or in England, were all of so equal a worth, that any one acre, compared at the same time to any one other, were equally good, in respect of its product; yet the same acre, compared with itself in different times, would not, in respect of rent, be of equal value. And therefore, it would have been an unreasonable thing, if in the time of Henry VII. the rent of land in Rumney-marsh had been settled by a law, according to the judged value of it at that time, and the same law, limiting the rent perhaps to 5s. per acre, have continued still. The absurdity and impracticableness of this every one sees at the first proposal, and readily concludes within himself, that things must be left to find their own price; and it is impossible, in this their constant mutability, for human foresight to set rules and bounds to their constantly varying proportion and use, which will always regulate their value.

They, who consider things beyond their names, will find, that money, as well as all other commodities, is liable to the same changes and inequalities: nay, in this respect of the variety of its value, brought in by time, in the succession of affairs, the rate of money is less capable of being regulated by a law, in any country than the rent of land. Because, to the quick changes, that happen in trade, this too must be added, that money may be brought in, or carried out of the kingdom, which land cannot; and so that be truly worth six or eight per cent. this year, which would yield but four the last.

2. Money has a value, as it is capable, by exchange, to procure us the necessaries or conveniencies of life, and in this it has the nature of a commodity; only with this difference, that it serves us commonly by its exchange, never almost by its consumption. But though the use men make of money be not in its consumption, yet it has not at all a more standing, settled value, in exchange with any other thing, than any other commodity has; but a more known one, and better fixed by name, number, and weight, to enable us to reckon what the proportion of scarcity and vent of one commodity is to another. For supposing, as before, that half an ounce of silver would last year exchange for one bushel of wheat, or for 15lb. weight of lead; if this year wheat be ten times scarcer, and lead in the same quantity to its vent, as it was, is it not evident, that half an ounce of silver will still exchange for 15lb. of lead, though it will exchange but for one-tenth of a bushel of wheat? and he that has use of lead, will as soon take 15lb. weight of lead, as half an ounce of silver, for one-tenth of a bushel of wheat, and no more. So that if you say that money now is nine-tenths less worth than it was the former year, you must say so of lead too, and all other things that keep the same proportion to money which they had before. The variation, indeed, is first and most taken notice of in money: because that is the universal measure, by which people reckon, and used by every body in the valuing of all things. For calling that half an ounce of silver half-a-crown, they speak properly, and are readily understood, when they say, half-a-crown, or two shillings and sixpence, will now buy one-tenth of a bushel of wheat, but do not say, that 15lb. of lead will now buy one-tenth of a bushel of wheat, because it is not generally used to this sort of reckoning: nor do they say, lead is less worth than it was, though in respect of wheat, lead be nine-tenths worse than it was, as well as silver: only by the tale of shillings, we are better enabled to judge of it; because these are measures, whose ideas by constant use are settled in every Englishman's mind.

This, I suppose, is the true value of money, when it passes from one to another, in buying and selling; where it runs the same changes of higher or lower, as any other commodity doth: for one equal quantity whereof, you shall receive in exchange more, or less of another commodity, at one time, than you do at another. For a farmer that carries a bushel of wheat to market, and a labourer that carries half-a-crown, shall find that the money of one, as well as corn of the other, shall at some times purchase him more or less leather, or salt, according as they are in greater plenty, and scarcity, one to another. So that in exchanging coined silver for any other commodity, (which is buying and selling) the same measure governs the proportion you receive, as if you exchanged lead, or wheat, or any other commodity. That which regulates the price, i. e. the quantity given for money (which is called buying and selling) for another commodity, (which is called bartering) is nothing else but their quantity in proportion to their vent. If then lowering of use makes not your silver more in specie, or your wheat, or other commodities less, it will not have any influence at all to make it exchange for less of wheat, or any other commodity, than it will have on lead, to make it exchange for less wheat, or any other commodity.

Money, therefore, in buying and selling, being perfectly in the same condition with other commodities, and subject to all the same laws of value, let us next see how it comes to be of the same nature with land, by yielding a certain yearly income, which we call use, or interest. For land produces naturally something new and profitable, and of value to mankind; but money is a barren thing, and produces nothing; but by compact transfers that profit, that was the reward of one man's labour, into another man's pocket. That which occasions this, is the unequal distribution of money; which inequality has the same effect too upon land, that it has upon money. For my having more money in my hand than I can, or am disposed to use in buying and selling, makes me able to lend: and another's want of so much money as he could employ in trade, makes him willing to borrow. But why then, and for what consideration doth he pay use? For the same reason, and upon as good consideration, as the tenant pays rent for your land. For as the unequal distribution of land, (you having more than you can, or will manure, and another less) brings you a tenant for your land; and the same unequal distribution of money, (I having more than I can, or will employ, and another less) brings me a tenant for my money; so my money is apt in trade, by the industry of the borrower, to produce more than six per cent. to

the borrower, as well as your land, by the labour of the tenant, is apt to produce more fruits than his rent comes to; and therefore deserves to be paid for, as well as land, by a yearly rent. For though the usurer's money would bring him in no yearly profit, if he did not lend it, (supposing, he employs it not himself) and so his six per cent. may seem to be the fruit of another man's labour, yet he shares not near so much of the profit of another man's labour, as he that lets land to a tenant. For, without the tenant's industry, (supposing as before, the owner would not manage it himself) his land would yield him little, or no profit. So that the rent he receives is a greater portion of the fruit of his tenant's labour, than the use is at six per cent. For generally, he that borrows one thousand pounds at six per cent. and so pays sixty pounds per annum use, gets more above his use in one year, by his industry, than he that rents a farm of sixty pounds per annum gets in two, above his rent, though his labour be harder.

It being evident therefore, that he that has skill in traffic, but has not money enough to exercise it, has not only reason to borrow money to drive his trade and get a livelihood; but has much reason to pay use for that money, as he, who having skill in husbandry, but no land of his own to employ it in, has not only reason to rent land, but to pay money for the use of it: it follows, that borrowing money upon use is not only, by the necessity of affairs, and the constitution of human society, unavoidable to some men; but that also to receive profit from the loan of money, is as equitable and lawful, as receiving rent for land, and more tolerable to the borrower, notwithstanding the opinion of some over-scrupulous men.

This being so, one would expect, that the rate of interest should be the measure of the value of land in number of years purchase, for which the fee is sold; for 100l. per annum being equal to 100l. per annum, and so to perpetuity; and 100l. per annum being the product to 1000l. when interest is at ten per cent. of 1250l. when interest is at eight per cent. of 1666l. or thereabouts, when interest is at six per cent. of 2000l. when money is at five per cent. of 2500l. when money is at four per cent. One would conclude, I say, that land should sell in proportion to use, according to these following rates, viz.

$$\text{When money is at } \left\{ \begin{array}{c} 10 \\ 8 \\ 6 \\ 5 \\ 4 \end{array} \right\} \text{ per cent. for } \left\{ \begin{array}{c} 10 \\ 12\frac{1}{2} \\ 16\frac{2}{3} \\ 20 \\ 25 \end{array} \right\} \text{ years purchase.}$$

But experience tells us, that neither in queen Elizabeth nor king James the first's reigns, when interest was at ten per cent. was land sold for ten; or when it was at eight per cent. for twelve and a half years purchase or any thing near the low rate, that high use required (if it were true, that the rate of interest governed the price of land) any more than land now yields twenty-five years purchase, because a great part of the monied men will now let their money upon good security, at four per cent. Thus we see in fact how little this rule has held at home: and he that will look into Holland, will find, that the purchase of land was raised there, when their interest fell. This is certain, and past doubt, that the legal interest can never regulate the price of land, since it is plain, that the price of land has never changed with it, in the several changes that have been made, in the rate of interest by law: nor now that the rate of interest is by law the same through all England, is the price of land every where the same, it being in some parts constantly sold for four or five years purchase, more than in others. Whether you, or I, can tell the reason of this, it matters not to the question in hand: but it being really so, this is plain demonstration against those who pretend to advance and regulate the price of land by a law concerning the interest of money.

But yet I will give you some of my guesses, why the price of land is not regulated (as, at first sight, it seems it should be) by the interest of money. Why it is not regulated by the legal use is manifest, because the rate of money does not follow the standard of the law, but the price of the market: and men, not observing the legal and forced, but the natural and current interest of money, regulate their affairs by that. But why the rate of land does not follow the current interest of money, requires a farther consideration.

All things, that are bought and sold, raise and fall their price, in proportion as there are more buyers or sellers. Where there are a great many sellers to a few buyers, there use what art you will, the thing to be sold will be cheap. On the other side, turn the tables, and raise up a great many buyers for a few sellers, and the same thing will immediately grow dear. This rule holds in land, as well as all other commodities, and is the reason, why in England, at the same time, that land in some places is at seventeen or eighteen years purchase, it is about others, where there are profitable manufactures, at two or three and twenty years purchase: because there (men thriving and getting money, by their industry, and willing to leave

their estates to their children in land, as the surest and most lasting provision, and not so liable to casualties as money in untrading or unskilful hands) are many buyers ready always to purchase, but few sellers. For, the land thereabout being already possessed by that sort of industrious and thriving men, they have neither need, nor will, to sell. In such places of manufacture, the riches of the one not arising from the squandering and waste of another, (as it doth in other places, where men live lazily upon the product of the land) the industry of the people, bringing in increase of wealth from remote parts, makes plenty of money there, without the impoverishing of their neighbours. And when the thriving tradesman has got more than he can well employ in trade, his next thoughts are to look out for a purchase; but it must be a purchase in the neighbourhood, where the estate may be under his eye, and within convenient distance, that the care and pleasure of his farm may not take him off from the engagements of his calling, nor remove his children too far from him, or the trade he breeds them up in. This seems to be the reason, why in places, wherein thriving manufactures have erected themselves, land has been observed to sell quicker, and for more years purchase than in other places, as about Halifax in the north, Taunton and Exeter in the west.

This is that then, which makes land, as well as other things, dear: plenty of buyers, and but few sellers; and so, by the rule of contraries, plenty of sellers and few buyers makes land cheap.

He, that will justly estimate the value of any thing, must consider its quantity in proportion to its vent, for this alone regulates the price. The value of any thing, compared with itself or with a standing measure, is greater, as its quantity is less in proportion to its vent; but, in comparing it, or exchanging it with any other thing, the quantity and vent of that thing too must be allowed for, in the computation of their value. But, because the desire of money is constantly almost every-where the same, its vent varies very little, but as its greater scarcity enhances its price, and increases the scramble: there being nothing else that does easily supply the want of it; the lessening its quantity, therefore, always increases its price, and makes an equal portion of its exchange for a greater of any other thing. Thus it comes to pass, that there is no manner of settled proportion between the value of an ounce of silver and any other commodity; for, either varying its quantity in that country, or the commodity changing its quantity in proportion to its vent, their respective values change, i. e. less of one will barter for more of

the other: though, in the ordinary way of speaking, it is only said, that the price of the commodity, not of the money, is changed. For example, half an ounce of silver in England, will exchange sometimes for a whole bushel of wheat, sometimes for half, sometimes but a quarter, and this it does equally, whether by use it be apt to bring in to the owner six in the hundred of its own weight per annum, or nothing at all: it being only the change of the quantity of wheat to its vent, supposing we have still the same sum of money in the kingdom; or else the change of the quantity of our money in the kingdom, supposing the quantity of wheat, in respect to its vent, be the same too, that makes the change in the price of wheat. For if you alter the quantity, or vent, on either side, you presently alter the price, but no other way in the world.

For it is not the being, adding, increasing, or diminishing of any good quality in any commodity, that makes its price greater or less; but only as it makes its quantity, or vent, greater or less, in proportion one to another. This will easily appear by two or three instances.

The being of any good, and useful quantity in any thing, neither increases its price, nor indeed makes it have any price at all, but only as it lessens its quantity, or increases its vent; each of these in proportion to one another. What more useful or necessary things are there to the being, or well being of men, than air and water? and yet these have generally no price at all, nor yield any money: because their quantity is immensely greater than their vent, in most places of the world. But, as soon as ever water (for air still offers itself every-where, without restraint, or inclosure, and therefore is no-where of any price) comes any where to be reduced into any proportion to its consumption, it begins presently to have a price, and is sometimes sold dearer than wine. Hence it is, that the best and most useful things are commonly the cheapest: because, though their consumption be great, yet the bounty of providence has made their production large, and suitable to it.

Nor does the adding an excellency to any commodity raise its price, unless it increase its consumption. For, suppose there should be taught a way (which should be published to the knowledge of every one) to make a medicine of wheat alone, that should infallibly cure the stone: it is certain the discovery of this quality in that grain would give it an excellency very considerable: and yet this would not increase the price of it one farthing in

twenty bushels, because its quantity, or vent, would not hereby, to any sensible degree, be altered.

Neither does the increasing of any good quality, in any sort of things, make it yield more. For though teasels be much better this year than any were last, they are not one jot dearer, unless they be fewer too, or the consumption of them greater.

Nor does the lessening the good qualities of any sort of commodity lessen its price; which is evident in hops, that are usually dearest those years they are worst. But, if it happen to be a species of commodity, whose defects may be supplied by some other, the making of it worse does lessen its price, because it hinders its vent. For, if rye should any year prove generally smutty, or grown, no question it would yield less money than otherwise, because the deficiency of that might be, in some measure, made up by wheat, and other grain. But, if it be a sort of commodity, whose use no other known thing can supply, it is not its being better, or worse, but its quantity, and vent, is that alone which regulates, and determines its value.

To apply it now to money, as capable of different rates of interest. To money, considered in its proper use as a commodity passing in exchange from one to another, all that is done by interest, is but the adding to it by agreement, or public authority, a faculty, which naturally it has not, of increasing every year six per cent. Now, if public authority sink use to four per cent. it is certain it diminishes this good quality in money one-third. But yet this making the money of England not one farthing more than it was, it alters not the measures upon which all changeable commodities increase, or sink their price; and so makes not money exchange for less of any commodity, than it would without this alteration of its interest. If lessening use to four per cent. should at all alter the quantity of money, and make it less, it would make money, as it has the nature of a commodity, dearer, i. e. a less quantity of money, would exchange for a greater quantity of another commodity, than it would before. This perhaps will appear a little plainer by these following particulars:

1. That the intrinsic, natural worth of any thing, consists in its fitness to supply the necessities, or serve the conveniences of human life; and the more necessary it is to our being, or the more it contributes to our well-being, the greater is its worth. But yet,

2. That there is no such intrinsic, natural settled value in any thing, as to make any assigned quantity of it constantly worth any assigned quantity of

another.

3. The marketable value of any assigned quantities of two, or more commodities, are (*pro hic et nunc*) equal, when they will exchange one for another. As supposing one bushel of wheat, two bushels of barley, thirty pounds of lead, and one ounce of silver, will now in the market be taken one for another, they are then of equal worth: and, our coin being that which Englishmen reckon by, an Englishman would say, that now one bushel of wheat, two bushels of barley, thirty pounds of lead, and one ounce of silver, were equally worth five shillings.

4. The change of this marketable value of any commodity, in respect of another commodity, or in respect of a standing, common measure, is not the altering of any intrinsic value, or quality, in the commodity; (for musty and smutty corn will sell dearer at one time, than the clean and sweet at another) but the alteration of some proportion, which that commodity bears to something else.

5. This proportion in all commodities, whereof money is one, is the proportion of their quantity to the vent. The vent is nothing else but the passing of commodities from one owner to another, in exchange: and is then called quicker, when a greater quantity of any species of commodity is taken off from the owners of it, in an equal space of time.

6. This vent is regulated, i. e. made quicker or slower, as greater or less quantities of any saleable commodity are removed out of the way and course of trade; separated from public commerce; and no longer lie within the reach of exchange. For, though any commodity should shift hands ever so fast, and be exchanged from one man to another; yet, if they were not thereby exempted from trade and sale, and did not cease to be any longer traffic, this would not at all make, or quicken their vent. But this, seldom or never happening, makes very little or no alteration.

7. Things are removed out of the market, or hands of commerce, and so their vent altered three ways: 1. By consumption, when the commodity in its use is destroyed, as, meat, drink, and clothes, &c. all that is so consumed is quite gone out of the trade of the world. 2. By exportation; and all that is so carried away, is gone out of the trade of England, and concerns Englishmen no more in the price of their commodities among themselves for their own use, than if it were out of the world. 3. By buying and laying up for a man's private use. For what is by any of these ways shut out of the market, and no longer moveable, by the hand of commerce, makes no

longer any part of merchantable ware, and so, in respect of trade, and the quantity of any commodity, is not more considerable than if it were not in being. All these three terminating at last in consumption of all commodities, (excepting only jewels and plate, and some few others, which wear out but insensibly) may properly enough pass under that name. Engrossing too has some influence on the present vent: but this inclosing some considerable part of any commodity, (for if the engrossing be of all the commodity, and it be of general use, the price is at the will of the engrosser) out of the free common of trade, only for some time, and afterwards returning again to sale, makes not usually so sensible and general an alteration in the vent, as the others do: but yet influences the price, and the vent more, according as it extends itself to a larger portion of the commodity, and hoards it up longer.

8. Most other portable commodities (excepting jewels, plate, &c.) decaying quickly in their use, but money being less consumed, or increased, i. e. by slower degrees removed from, or brought into the free commerce of any country, than the greatest part of other merchandize; and so the proportion between its quantity and vent, altering slower than in most other commodities; it is commonly looked on as a standing measure, to judge of the value of all things, especially being adapted to it by its weight and denomination in coinage.

9. Money, whilst the same quantity of it is passing up and down the kingdom in trade, is really a standing measure of the falling and rising value of other things, in reference to one another: and the alteration of price is truly in them only. But if you increase, or lessen, the quantity of money, current in traffic, in any place, then the alteration of value is in the money: and, if at the same time wheat keep its proportion of vent to quantity, money, to speak truly, alters its worth, and wheat does not, though it sell for a greater, or less price, than it did before. For money, being looked upon as the standing measure of other commodities, men consider and speak of it still, as if it were a standing measure, though when it has varied its quantity, it is plain it is not.

10. But the value or price of all commodities, amongst which money passing in trade is truly one, consisting in proportion, you alter this, as you do all other proportions, whether you increase one, or lessen the other.

11. In all other commodities, the owners, when they design them for traffic, endeavour, as much as they can, to have them vented and gone, i. e. removed out of the reach of commerce, by consumption, exportation, or

laying up: but money never lying upon people's hands, or wanting vent, (for any one may part with it in exchange, when he pleases;) the provident public and private care is to keep it from venting, or consuming, i. e. from exportation, which is its proper consumption: and from hoarding up by others, which is a sort of engrossing. Hence it is that other commodities have sometimes a quicker, sometimes a slower vent: for nobody lays out his money in them, but according to the use he has of them, and that has bounds. But every body being ready to receive money without bounds, and keep it by him, because it answers all things: therefore the vent of money is always sufficient, or more than enough. This being so, its quantity alone is enough to regulate and determine its value, without considering any proportion between its quantity and vent, as in other commodities.

12. Therefore the lessening of use, not bringing one penny of money more into the trade, or exchange of any country, but rather drawing it away from trade, and so making it less, does not at all sink its value, and make it buy less of any commodity, but rather more.

13. That which raises the natural interest of money, is the same that raises the rent of land, i. e. its aptness to bring in yearly to him that manages it a greater overplus of income above his rent, as a reward to his labour. That which causes this in land, is the greater quantity of its product, in proportion to the same vent to that particular fruit, or the same quantity of product, in proportion to a greater vent of that single commodity; but that which causes increase of profit to the borrower of money, is the less quantity of money, in proportion to trade, or to the vent of all commodities, taken together, and vice versa.

14. The natural value of money, as it is apt to yield such a yearly income by interest, depends on the whole quantity of the then passing money of the kingdom, in proportion to the whole trade of the kingdom, i. e. the general vent of all the commodities. But the natural value of money, in exchanging for any one commodity, is the quantity of the trading money of the kingdom, designed for that commodity, in proportion to that single commodity and its vent. For though any single man's necessity and want, either of money, or any species of commodity, being known, may make him pay dearer for money, or that commodity, yet this is but a particular case, that does not at the same time alter this constant and general rule.

15. That supposing wheat a standing measure, that is, that there is constantly the same quantity of it, in proportion to its vent, we shall find

money to run the same variety of changes in its value, as all other commodities do. Now that wheat in England does come nearest to a standing measure, is evident by comparing wheat with other commodities, money, and the yearly income of land in Henry the Seventh's time, and now; for, supposing that primo Hen. VII. N. let 100 acres of land to A. for 6d. per annum per acre, rack-rent, and to B. another 100 acres of land, of the same soil and yearly worth with the former, for a bushel of wheat per acre, rack-rent, (a bushel of wheat about that time being probably sold for about 6d.) it was then an equal rent. If, therefore, these leases were for years yet to come, it is certain that he that paid but 6d. per acre, would pay now 50s. per annum, and he that paid a bushel of wheat per acre, would now pay about 25l. per annum, which would be near about the yearly value of the land, were it to be let now. The reason whereof is this, that there being ten times as much silver now in the world (the discovery of the West-Indies having made the plenty) as there was then, it is nine-tenths less worth now, than it was at that time; that is, it will exchange for nine-tenths less of any commodity now, which bears the same proportion to its vent, as it did 200 years since, which, of all other commodities, wheat is likeliest to do; for in England, and this part of the world, wheat being the constant and most general food, not altering with the fashion, not growing by chance; but as the farmers sow more, or less of it, which they endeavour to proportion, as near as can be guessed, to the consumption, abstracting the overplus of the precedent year, in their provision for the next, and vice versa; it must needs fall out, that it keeps the nearest proportion to its consumption, (which is more studied and designed in this, than other commodities) of any thing, if you take it for seven or twenty years together: though perhaps the plenty, or scarcity of one year, caused by the accidents of the season, may very much vary it from the immediately precedent, or following. Wheat, therefore, in this part of the world, (and that grain, which is the constant general food of any other country) is the fittest measure to judge of the altered value of things, in any long tract of time: and therefore, wheat here, rice in Turkey, &c. is the fittest thing to reserve a rent in, which is designed to be constantly the same for all future ages. But money is the best measure of the altered value of things in a few years: because its vent is the same, and its quantity alters slowly. But wheat, or any other grain, cannot serve instead of money, because of its bulkiness, and too quick change of its quantity: for had I a bond, to pay me 100 bushels of wheat next year, it might be a fourth

part loss, or gain to me; too great an inequality and uncertainty to be ventured in trade: besides the different goodness of several parcels of wheat in the same year.

16. That, supposing any island separate from the commerce of the rest of mankind; if gold and silver, or whatever else, (so it be lasting) be their money, if they have but a certain quantity of it, and can give no more, that will be a steady, standing measure of the value of all other things.

17. That, if in any country they use for money any, lasting material, whereof there is not any more to be got, and so cannot be increased, or being of no other use, the rest of the world does not value it, and so it is not like to be diminished, this also would be a steady, standing measure of the value of other commodities.

18. That, in a country, where they had such a standing measure, any quantity of that money (if it were but so much that every body might have some) would serve to drive any proportion of trade, whether more or less; there being counters enough to reckon by, and the value of the pledges being still sufficient, as constantly increasing with the plenty of the commodity. But these three last being built on suppositions, that are not like to be found in the practice of mankind since navigation and commerce have brought all parts acquainted with one another, and introduced the use of gold and silver money, into all trading parts of the world; they serve rather to give us some light into the nature of money, than to teach here a new measure of traffic. Though it be certain, that that part of the world which bred most of our gold and silver, used least of it in exchange, and used it not for money at all.

19. That therefore, in any country, that hath commerce with the rest of the world, it is almost impossible now to be without the use of silver coin; and having money of that, and accounts kept in such money, it is impossible to have any standing, unalterable measure of the value of things: for whilst the mines supply to mankind more than wastes and consumes in its use, the quantity of it will daily grow greater, in respect of other commodities, and its value less.

20. That in a country, that hath open commerce with the rest of the world, and uses money, made of the same materials with their neighbours, any quantity of that money will not serve to drive any quantity of trade; but there must be a certain proportion between their money and trade. The reason whereof is this, because to keep your trade going without loss, your

commodities amongst you must keep an equal, or at least near the price of the same species of commodities in the neighbouring countries; which they cannot do, if your money be far less than in other countries: for then either your commodities must be sold very cheap, or a great part of your trade must stand still, there not being money enough in the country to pay for them (in their shifting of hands) at that high price, which the plenty, and consequently low value of money, makes them at in another country; for the value of money, in general, is the quantity of all the money in the world, in proportion to all the trade; but the value of money in any one country, is the present quantity of the current money in that country, in proportion to the present trade. Supposing then, that we had now in England but half as much money as we had seven years ago, and yet had still as much yearly product of commodities, as many hands to work them, and as many brokers to disperse them, as before; and that the rest of the world we trade with had as much money as they had before, (for it is likely they should have more by our moiety shared amongst them) it is certain that either half our rents should not be paid, half our commodities not vented, and half our labourers not employed, and so half the trade be clearly lost; or else, that every one of these must receive but half the money for their commodities and labour they did before, and but half so much as our neighbours do receive, for the same labour, and the same natural product at the same time. Such a state of poverty as this, though it will make no scarcity of our native commodities amongst us, yet it will have these ill consequences.

1. It will make our native commodities vent very cheap.

2. It will make all foreign commodities very dear, both which will make us poor; for the merchant making silver and gold his measure, and considering what the foreign commodity costs him, (i. e. how many ounces of silver) in the country where money is more plenty, i. e. cheaper; and considering too, how many ounces of silver it will yield him in another country, will not part with it here, but for the same quantity of silver, or as much as that silver will buy here of our commodity, which will be a great deal more than in another place; so that, in all our exchange of native for foreign commodities, we shall pay double the value that any other country does, where money is in greater plenty. This indeed will make a dearness, and in time a scarcity of foreign commodities; which is not the worst inconveniency that it brings upon us, supposing them not absolutely necessary. But,

3. It endangers the drawing away our people, both handicrafts, mariners, and soldiers, who are apt to go where their pay is best, which will always be where there is greatest plenty of money, and in time of war must needs bring great distress.

21. Upon this measure too it is, that the variation of exchange of money between several countries does somewhat depend; for it is certain that one ounce of silver is always of equal value to another ounce of silver, considered in its intrinsic worth, or in reference to the universal trade of the world: but it is not of the same value at the same time in several parts of the world, but is of the most worth in that country where there is the least money in proportion to its trade: and therefore men may afford to give twenty ounces of silver in one place, to receive eighteen or nineteen ounces of silver in another. But this is not all: to this then, (to find out the alteration of the exchange) the over-balance of the trade must be taken into consideration. These two together regulate the exchange, in all the commerce of the world, and in both the higher rate of exchange depends upon one and the same thing, viz. the greater plenty of money in one country than in the other; only with this difference, that where the over-balance of trade raises the exchange above the par, there it is the plenty of money which private merchants have in one country, which they desire to remove in another: but where the riches of the country raise the exchange above the par, there it is the plenty of the money in the whole country. In one, the merchant has more money (or debts, which is all one) in a foreign country, than his trade there will employ, and so is willing to allow upon exchange to him abroad, that shall pay him ready money at home, 1, 2, 3, &c. per cent. more or less, proportionably as his, or his countryman's plenty of ready money abroad, the danger of leaving it there, or the difficulty of bringing it home in specie, and his present need of money at home, is greater or less: in the other, the whole country has more money, than can well be employed in the trade thereof, or at least the proportion of the money to the trade is greater than in the neighbouring country, where the exchange is below the par.

For, supposing the balance of trade to be equal between England and Holland, but that there is in Holland a greater plenty of money than in England, (which will appear by the lowness of the natural use in Holland, and the height of the natural use in England, and also by the dearness of food and labour in general in Holland, and the cheapness of it in England.)

If N. has 10,000l. in Holland, which the greater advantage he could make of it in England, either by use or purchase, tempts him to transfer into England, it is probable he will give as much to a merchant in England, to pay him 10,000l. in England, as the insurance at that time between Holland and England is worth. If this happens to be in a country, where the exportation of bullion is prohibited, he must pay the more, because his venture, if he carry it in specie, will be greater; and upon this ground, perhaps, the prohibiting the exportation of money out of England, under penalties, may be of some use, by making the rate of the exchange greater to those countries, which import upon us more than they export in commodities; and so retain some part of the money, which their over-balance of trade would carry away from us, though, after all, if we are over-balanced in trade, it must go.

But, since the Holland merchant cannot receive N.'s 10,000l. in money in Holland, and pay him 10,000l. in England, unless his over-balance of trade make Englishmen indebted to him 10,000l. in money, which he is not like to take in commodities, I think the over-balance of trade is that, which chiefly raises the exchange in any country, and that plenty of money in any country does it only for so much of the money as is transferred, either to be let out to use, or to be spent there; and though lending to foreigners upon use doth not at all alter the balance of trade between those countries, yet it does alter the exchange between those countries, for so much as is lent upon use, by not calling away the money that should follow the over-balance of trade, but letting it rest there, as if it were accounted for; all one as if the balance of trade were for so much altered. But this being not much, in comparison of the general traffic between two nations, or at least varying slower, the merchant too regulating the exchange, and not the usurer. I suppose it is the present balance of trade, on which the exchange immediately and chiefly depends, unless some accident shall make a great deal of money be remitted at the same time from one place to another, which will for that time raise the exchange all one as an over-balance of trade; and indeed, when examined, is generally very little different from it.

To be able to estimate the par, with the rise and fall of the exchange, it is necessary to know the intrinsic value, i. e. how much silver is in the coins of the two countries, by which you reckon and charge the bill of exchange.

Sir, if I have been led a little too far from one thing to another, in the consideration of money, I beg your pardon, hoping that these particulars

will afford some light to our present subject.

To return to the price of land. It is evident by what has been above said, that the years purchase of land does not increase with the fall of interest; and the abating of that good quality in money, of yielding yearly six per cent. to four, does not presently so sink its value, in respect of land, that one-third more is required in exchange: falling of interest from six to four, will not raise land from twenty to thirty years purchase; the rising and falling of the price of land, as of other things, depends much on the quantity of land set to sale, compared with the quantity of money designed for that traffic, or, which amounts to the same thing, upon the number of buyers and sellers; for where there are many sellers and few purchasers, though interest be lessened, land will be cheap, as I have already showed. At least this is certain, that making a law to reduce interest, will not raise the price of land; it will only, by driving it more into the banker's hands, leave the country barer of money; whereby, if the price of land about London should be accidentally raised, that of remoter countries would thereby have fewer purchasers, and at lower rates.

This being so, that the low rate of land depends much on the great number of sellers in proportion to purchasers, the next thing to be enquired into is, what makes plenty of sellers? And to that the answer is obvious, general ill husbandry, and the consequence of it, debts. If a neglect of government and religion, ill examples, and depraved education, have introduced debauchery, and art, or chance, has made it fashionable for men to live beyond their estates, debts will increase and multiply, and draw with them a necessity on men, first of encumbering, and then selling their estates. This is generally the cause why men part with their land: and I think there is scarce one in an hundred that thinks of selling his patrimony, till mortgages have pretty well eat into the freehold: and the weight of growing debts force a man, whether he will or no, out of his possessions. When almost is there ever a clear and unencumbered estate set to sale? It is seldom a thriving man turns his land into money, to make the greater advantage: the examples of it are so rare, that they are scarce of any consideration in the number of sellers.

This, I think, may be the reason, why in queen Elizabeth's days (when sobriety, frugality, and industry, brought in daily increase to the growing wealth of the kingdom) land kept up its price, and sold for more years purchase than corresponded to the interest of money, then busily employed

in a thriving trade, which made the natural interest much higher than it is now, as well as the parliament then set it higher by law.

On the contrary side, what makes scarcity of purchasers?

The same reason, ill husbandry. When the tradesman lives up to the height of his income, and the vanity of expences either drains the merchant's coffers, or keeps them from overflowing, he seldom thinks of purchasing. Buying of land is the result of a full and satiated gain: and men in trade seldom think of laying out their money upon land, till their profit has brought them in more than their trade can well employ; and their idle bags, cumbering their counting-houses, put them upon emptying them on a purchase.

Another thing that makes a scarcity of buyers of land, are doubtful and ill titles: where these are frequent and fatal, one can no more expect that men, who have money, should be forward to purchase, than ships, richly laden, to venture themselves amongst rocks and quicksands. It is no wonder such seas should not be much frequented, where the examples and remains of daily wrecks show the folly and hazard of the venture, in the number of those who have miscarried.

A general decay of trade discourages men from purchasing: for this threatens an universal poverty, which is sure to fall first and heaviest upon land. The merchant who furnishes the improvident landholder, will not fail to have money for his wares with gain, whether the kingdom get by his trade or no, and he will keep his money rather employed in trade, which brings him in profit (for the merchant may get by a trade that makes the kingdom poor) than lay it out in land, whose rent he sees sinking, and foresees, by the course of trade, is likely to continue to do so. When a nation is running to decay and ruin, the merchant and monied man, do what you can, will be sure to starve last: observe it where you will, the decays that come upon, and bring to ruin any country, do constantly first fall upon the land: and though the country gentleman (who usually securely relies upon so much a year as was given in at his marriage settlement, and thinks his land an unmoveable fund for such an income) be not very forward to think so; yet this nevertheless is an undoubted truth, that he is more concerned in trade, and ought to take a greater care, that it be well managed, and preserved, than even the merchant himself. For he will certainly find, when a decay of trade has carried away one part of our money out of the kingdom, and the other is kept in the merchant and tradesman's hands, that

no laws he can make, nor any little arts of shifting property amongst ourselves, will bring it back to him again: but his rents will fall, and his income every day lessen, till general industry and frugality, joined to a well-ordered trade, shall restore to the kingdom the riches and wealth it had formerly.

This by the way, if well considered, might let us see, that taxes, however contrived, and out of whose hands soever immediately taken, do, in a country, where their great fund is in land, for the most part terminate upon land. Whatsoever the people is chiefly maintained by, that the government supports itself on: nay, perhaps it will be found, that those taxes which seem least to affect land, will most surely of all other fall the rents. This would deserve to be well considered, in the raising of taxes, lest the neglect of it bring upon the country gentleman an evil, which he will be sure quickly to feel, but not be able very quickly to remedy. For rents once fallen are not easily raised again. A tax laid upon land seems hard to the landholder, because it is so much money going visibly out of his pocket: and therefore, as an ease to himself, the landholder is always forward to lay it upon commodities. But, if he will thoroughly consider it, and examine the effects, he will find he buys this seeming ease at a very dear rate: and though he pays not this tax immediately out of his own purse, yet his purse will find it by a greater want of money there, at the end of the year, than that comes to, with the lessening of his rents to boot: which is a settled and lasting evil, that will stick upon him beyond the present payment.

To make this clear, let us suppose in the present state of affairs in England, that the rents of England are twelve millions, and that the charge and necessities of the government require a supply of three millions from the parliament, which is laid on land. Here is one fourth part of his yearly income goes immediately out of the landlord's and landholder's pocket. This is a burden very apt to be felt. The country gentleman, who actually pays the money out of his pocket, or finds it deducted out of his rent at quarter-day for taxes, sees and very sensibly observes what goes thus out of his estate. But though this be a quarter of his yearly income, and, out of an estate of four hundred pounds a year, the public tax now openly takes away one hundred; yet this influences not at all the yearly rent of the land, which the rack-renter, or under-tenant, pays: it being the same thing to him, whether he pays all his rent to the king, or his landlord; or half, or a quarter, or none at all to the king; the case is all one to him, what hand receives his

rent, when due: so trade flourishes, and his commodities go off well, he will be able to pay his rent on. This lessens not any more the value of his farm, than an high or a low chief rent does, paid out of it to the lord of the fee: the tenant's bargain and profit are the same, whether the land be charged, or not charged, with an annuity payable to another man. We see this in college leases, where though the college tenant pays for it to the college some years five times as much as he does others, upon the varying rate of corn; yet the under-tenant feels not this alteration in the least, nor finds a reason to have his rent abated, because a greater part of it is diverted from his landlord. All this is but changing the hand that receives the rent, without any influence at all upon the yearly value of the estate; which will not be let for one penny more, or less, to the renter, however, or amongst whomsoever, the rent he pays be divided. From hence it is evident, that taxes laid on land do not in the least make rents fall.

But suppose, to shift off the burden from the land, some country gentleman should think fit to raise these three millions upon commodities, to let the land go free. First, it is to be considered, That since the public wants require three millions (for that we supposed for argument's sake; let it be three millions, or one million, that is all one;) and so much must go into the king's coffers, or else the necessities of the government will not be supplied: that for raising these three millions on commodities, and bringing so much into the exchequer, there must go a great deal more than three millions out of the subjects pockets. For a tax of that nature cannot be levied by officers, to watch every little rivulet of trade, without a great charge, especially at first trial. But supposing no more charges in raising it, than of a land-tax, and that there are only three millions to be paid, it is evident that, to do this, out of commodities, they must, to the consumer, be raised a quarter in their price; so that every thing, to him that uses it, must be a quarter dearer. Let us see now who, at long-run, must pay this quarter, and where it will light. It is plain, the merchant and broker neither will, nor can; for, if he pays a quarter more for commodities than he did, he will sell them at a price proportionably raised. The poor labourer and handicraftsman cannot: for he just lives from hand to mouth already, and all his food, clothing and utensils, costing a quarter more than they did before, either his wages must rise with the price of things, to make him live; or else, not being able to maintain himself and family by his labour, he comes to the parish; and then the land bears the burthen a heavier way. If the labourer's

wages be raised in proportion to the increased rates of things, the farmer who pays a quarter more for wages, as well as all other things, whilst he sells his corn and wool, either at the same rate, or lower, at the market (since the tax laid upon it makes people less forward to buy) must either have his rent abated, or else break and run away in his landlord's debt: and so the yearly value of the land is brought down. And who then pays the tax at the year's end, but the landlord? when the tenant, not able to raise his rent by his commodities, either runs away in his landlord's debt, or cannot be continued in the farm, without abatement of rent: for, when the yearly charge in his farm is greater by the increase of the labourer's wages, and yet his product sells cheaper by reason of the tax laid on his commodities; how will the farmer be able to make up his rent at quarter-day? For this may be worth our notice, that any tax laid on foreign commodities in England, raises its price, and makes the importer get more for his commodity: but, on the contrary, a tax laid on your native product, and home-made commodities, lessens their price, and makes them yield less to the first seller.

The reason whereof is plain. For the merchant importing no commodity, but what the necessity, or fashionable wantonness, of your people gives him vent for, will not only proportion his gain to the cost and risque, which he has been at before landing; but will expect profit of his money paid here, for any tax laid on it; and take advantage from thence to raise his price, above what his tax comes to; and if he cannot do that, he will trade no more in that commodity. For it being not the product of his farm, he is not tied to bring it to market, if he finds his price not answer his expectation there, but turns himself to other wares, which he finds your markets to take off better. A merchant will never continue to trade in wares, which the change of fashion, or humour amongst your people has made less vendible, though he may be sometimes caught by a sudden alteration. But that seldom happens in the course of trade, so as to influence the great bulk of it. For things of necessity must still be had, and things of fashion will be had, as long as men have money, or credit, whatever rates they cost, and the rather because they are dear. For, it being vanity, not use, that makes the expensive fashion of your people, the emulation is, who shall have the finest, that is, the dearest things, not the most convenient, or useful. How many things do we value, or buy, because they come at dear rates, from Japan and China, which if they were our own manufacture, or product, common to be had, and for a

little money, would be contemned and neglected? Have not several of our own commodities, offered to sale at reasonable rates, been despised, and the very same eagerly bought and bragged of, when sold for French, at a double price? You must not think, therefore, that the raising their price will lessen the vent of fashionable, foreign commodities amongst you, as long as men have any way to purchase them, but rather increase it. French wine is become a modish drink amongst us, and a man is ashamed to entertain his friend, or almost to dine himself without it. The price is in the memory of man raised from 6d. to 2s. and does this hinder the drinking of it? No, the quite contrary: a man's way of living is commended, because he will give any rate for it: and a man will give any rate rather than pass for a poor wretch, or a penurious curmudgeon, that is not able, or knows not how to live well, nor use his friends civilly. Fashion is, for the most part, nothing but the ostentation of riches, and therefore the high price of what serves to that, rather increases than lessens its vent. The contest and glory is in the expence, not the usefulness of it; and people are then thought and said to live well, when they can make a show of rare and foreign things, and such as their neighbours cannot go to the price of.

Thus we see how foreign commodities fall not in their price, by taxes laid on them, because the merchant is not necessitated to bring to your market any but fashionable commodities, and those go off the better for their high rate. But, on the contrary, your landholder being forced to bring his commodities to market, such as his land and industry afford him, common and known things, he must sell them there at such price as he can get. This the buyer knows; and these home-bred commodities being seldom the favourites of your people, or any farther acceptable, than as great conveniency recommends them to the vulgar, or downright necessity to all; as soon as a tax is laid on them, every one makes as sparing an use of them as he can, that he may save his money for other necessary or creditable expences. Thus the price, which our native commodities yield the first seller, is mightily abated, and so the yearly value of the land, which produces them, lessened too.

If, therefore, the laying of taxes upon commodities does, as it is evident, affect the land that is out at a rack-rent, it is plain it does equally affect all the other land in England too, and the gentry will, but the worst way, increase their own charges, that is, by lessening the yearly value of their estates, if they hope to ease their land, by charging commodities. It is in

vain, in a country whose great fund is land, to hope to lay the public charge of the government on any thing else; there at last it will terminate. The merchant (do what you can) will not bear it, the labourer cannot, and therefore the landholder must; and whether he were best to do it, by laying it directly where it will at last settle, or by letting it come to him by the sinking of his rents, which when they are once fallen, every one knows are not easily raised again, let him consider.

Holland is brought as an instance of laying the charge of the public upon trade, and it is possibly (excepting some few small free towns) the only place in the world that could be brought to favour this way. But yet, when examined, will be found to show the quite contrary, and be a clear proof, that lay the taxes how you will, land every-where, in proportion, bears the greater share of the burthen. The public charge of the government, it is said, is, in the United Provinces, laid on trade. I grant it is, the greatest part of it; but is the land excused, or eased by it? By no means; but, on the contrary, so loaded, that in many places half, in others a quarter, in others one-eighth of the yearly value does not come into the owner's pocket: and if I have not been misinformed, the land in some places will not pay the taxes: so that we may say, that the charge of the government came not upon commodities, till the land could not bear it. The burthen unavoidably settles upon the land first, and when it has pressed it so, that it can yield no more, trade must be brought in aid, to help to support the government rather than let all sink: but the first stress is always upon land, and as far as that will reach, it is unavoidably carried, lay your taxes how you will. It is known what a share of the public charges of the government is supported by the trade of Amsterdam alone; as I remember that one town pays thirty-six in the hundred of all the public taxes raised in the United Provinces. But are the lands of Guelderland eased by it? Let any one see, in that country of land more than trade, what they make clear of their revenues, and whether the country gentlemen there grow rich on their land, whilst the merchant, having the taxes laid on his commerce, is impoverished? On the contrary, Guelderland is so low and out of cash, that Amsterdam has been fain, for many years, to lay down the taxes for them; which is, in effect, to pay the taxes of Guelderland too.

Struggle and contrive as you will, lay your taxes as you please, the traders will shift it off from their own gain; the merchants will bear the least part of it, and grow poor last. In Holland itself, where trade is so loaded,

who, I pray, grows richest, the landholder, or the trader? Which of them is pinched, and wants money most? A country may thrive, the country gentleman grow rich, and his rents increase (for so it has been here) whilst the land is taxed: but I challenge any one to show me a country, wherein there is any considerable public charge raised, where the land does not most sensibly feel it, and, in proportion, bear much the greater part of it.

We must not, therefore, impute the falling of the rents, or of the price of land, to high interest; nor, if ill husbandry has wasted our riches, hope by such kind of laws to raise them to their former value. I humbly conceive we shall in vain endeavour it, by the fall of interest. The number of buyers must be increased, and sellers lessened, which must be done by other ways, than regulating of interest, or else the landed-man will neither find chapmen for his land, nor for the corn that grows on it, at the rate he desires.

But, could an act of parliament bring down interest to four per cent. and the lowering of that immediately raise the purchaser's fine from 20 to 25 years purchase; yet it may be doubted, whether this be fit to be made into a law, because it would be of no advantage to the kingdom. For what profit would it be to the nation to make a law, that he who sells land, should instead of four have five hundred pounds of the purchaser? This, indeed, a little alters the distribution of the money we have amongst us Englishmen here at home, but neither helps to continue what we have, nor brings in more from abroad: which, being the only concernment of the kingdom, in reference to its wealth, is apt to be supposed by us without doors to be the only care of a parliament. For it matters not, so it be here amongst us, whether the money be in Thomas, or Richard's hands, provided it be so ordered, that whoever has it may be encouraged to let it go into the current of trade, for the improvement of the general stock and wealth of the nation.

As this increase of the fine, in the purchase of land, is not an advantage to the kingdom; so neither is it to the landholder, who is the person, that, bearing the greatest part of the burdens of the kingdom, ought, I think, to have the greatest care taken of him, and enjoy as many privileges, and as much wealth, as the favour of the law can (with regard to the public-weal) confer upon him. But pray consider: the raising the price of land in sale, by increasing the number of years purchase to be paid for it, gives the advantage, not to the landholder, but to him that ceases to be so. He, that has no longer the land, has the more money: and he, who has the land, is the poorer. The true advantage of the landholder is, that his corn, flesh, and

wool, sell better, and yield a greater price; this, indeed, is a profit that benefits the owner of the land, and goes along with it; it is this alone raises the rent, and makes the possessor richer: and this can only be done by increasing our wealth, and drawing more money into England. Which the falling of interest, and thereby (if it could effect it) raising the purchase of land, is so far from doing, that it does visibly and directly one way hinder our increase of wealth, that is, by hindering foreigners to come here, and buy land, and settle amongst us. Whereby we have this double loss; first, we lose their persons, increase of people being the increase both of strength and riches. Secondly, we lose so much money; for, though whatever an Englishman gives to another for land, though raised to forty years purchase, be not one farthing advantage to the kingdom; yet whatever a foreigner, who purchases land here, gives for it, is so much every farthing clear gain to the nation: for that money comes clear in, without carrying out any thing for it, and is every farthing of it as perfect gain to the nation, as if it dropped down from the clouds.

But farther, if consideration be to be had only of sellers of land, the lowering of interest to four per cent. will not be in their favour, unless by it you can raise land to thirty years purchase, which is not at all likely: and I think nobody, by falling of interest to four per cent. hopes to get chapmen for their land at that rate. Whatsoever they have less, if law can regulate interest, they lose of their value of land, money being thus abased. So that the landed-man will scarce find his account neither, by this law when it comes to trial. And at last, I imagine, this will be the result of all such attempts, that experience will show that the price of things will not be regulated by laws, though the endeavours after it will be sure to prejudice and inconvenience trade, and put your affairs out of order.

If this be so, that interest cannot be regulated by law, or that if it could, yet the reducing of it to four per cent. would do more harm than good: what then should there (you will say) be no law at all to regulate interest? I say not so. For,

It is necessary that there should be a stated rate of interest, and in debts and forbearances, where contract has not settled it between the parties, the law might give a rule, and courts of judicature might know what damages to allow. This may, and therefore should, be regulated.

That in the present current of running cash, which now takes its course almost all to London, and is engrossed by a very few hands in comparison,

young men, and those in want, might not too easily be exposed to extortion and oppression: and the dexterous and combining money-jobbers not have too great and unbounded a power, to prey upon the ignorance and necessity of borrowers. There would not be much danger of this, if money were more equally distributed into the several quarters of England, and into a greater number of hands, according to the exigencies of trade.

If money were to be hired, as land is; or to be had as corn, or wool, from the owner himself, and known good security be given for it; it might then probably be had at the market (which is the true) rate, and that rate of interest would be a constant gauge of your trade and wealth. But, when a kind of monopoly, by consent, has put this general commodity into a few hands, it may need regulation, though what the stated rate of interest should be, in the constant change of affairs, and flux of money, is hard to determine. Possibly it may be allowed, as a reasonable proposal, that it should be within such bounds, as should not, on the one side, quite eat up the merchant's and tradesman's profit, and discourage their industry; nor, on the other hand, so low, as should hinder men from risking their money in other men's hands, and so rather choose to keep it out of trade, than venture it upon so small profit. When it is too high, it so hinders the merchant's gain, that he will not borrow; when too low, it so hinders the monied-man's profit, that he will not lend; and both these ways it is an hindrance to trade.

But this being, perhaps, too general and loose a rule, let me add, that if one would consider money and land alone, in relation one to another, perhaps it is now at six per cent. in as good a proportion as is possible; six per cent. being a little higher than land at twenty years purchase, which is the rate pretty near, that land has generally carried in England, it never being much over, nor under. For supposing 100l. in money, and land of 5l. per annum be of equal value, which is land at twenty years purchase; it is necessary for the making their value truly equal, that they should produce an equal income, which the 100l. at 5l. per cent. interest is not likely to do.

Because of the many, and sometimes long intervals of barrenness, which happen to money more than land. Money at use, when returned into the hands of the owner, usually lies dead there, till he gets a new tenant for it, and can put it out again; and all this time it produces nothing. But this happens not to land, the growing product whereof turns to account to the owner, even when it is in his hands, or is allowed for by the tenant, antecedently to his entering upon the farm. For though a man, that borrows

money at Midsummer, never begins to pay his interest from our Lady-day, or one moment backwards; yet he, who rents a farm, at Midsummer, may have as much reason to begin his rent from our Lady-day, as if he had then entered upon it.

Besides the dead intervals of ceasing profit, which happen to money more than land, there is another reason why the profit and income of money let out, should be a little higher than that of land; and that is, because money out at interest runs a greater risque than land does. The borrower may break, and run away with the money, and then not only the interest due, but all the future profit, with the principal, is lost for ever. But in land a man can lose but the rent due, for which usually too the stock upon the land is sufficient security: and, if a tenant run away in arrear of some rent, the land remains; that cannot be carried away or lost. Should a man purchase good land in Middlesex of 5l. per ann. at twenty years purchase, and other land in Rumney-marsh, or elsewhere, of the same yearly value, but so situated, that it were in danger to be swallowed of the sea, and be utterly lost, it would not be unreasonable, that he should expect to have it under twenty years purchase; suppose sixteen and an half: this is to bring it to just the case of land at twenty years purchase; and money at six per cent. where the uncertainty of securing one's money may well be allowed that advantage of greater profit; and therefore, perhaps, the legal interest now in England at six per cent. is as reasonable and convenient a rate as can well be set by a standing rule, especially if we consider that the law requires not a man to pay six per cent. but ties up the lender from taking more. So that if ever it falls of itself, the monied man is sure to find it, and his interest will be brought down to it.

High interest is thought by some a prejudice to trade: but if we look back, we shall find, that England never throve so well, nor was there ever brought into England so great an increase of wealth since, as in queen Elizabeth's and king James I. and Charles I. time, when money was at ten and eight per cent. I will not say high interest was the cause of it. For I rather think, that our thriving trade was the cause of high interest, every one craving money to employ in a profitable commerce. But this, I think, I may reasonably infer from it, That lowering of interest is not a sure way to improve either our trade or wealth.

To this I hear some say, That the Dutch, skilful in all arts of promoting trade, to out-do us in this, as well as all other advancements of it, have

observed this rule, viz. That, when we fell interest in England from ten to eight, they presently sunk interest in Holland to four per cent. And again, when we lowered it to six, they fell it to three per cent. thereby to keep the advantage which the lowness of interest gives to trade. From whence these men readily conclude, that the falling of interest will advance trade in England. To which I answer,

That this looks like an argument rather made for the present occasion, to mislead those who are credulous enough to swallow it, than arising from true reason, and matter of fact. For, if lowering of interest were so advantageous to trade, why did the Dutch so constantly take their measures only by us, and not as well by some other of their neighbours, with whom they have as great, or greater commerce, than with us? This is enough, at first sight, to make one suspect this to be dust, only raised to throw in people's eyes, and as suggestion made to serve a purpose. For,

It will not be found true, That, when we abated interest here in England to eight, the Dutch sunk it in Holland to four per cent. by law; or that there was any law made in Holland to limit the rate of interest to three per cent. when we reduced it in England to six. It is true John de Witt, when he managed the affairs of Holland, setting himself to lessen the public debts, and having actually paid some, and getting money in a readiness to pay others, sent notice to all the creditors, that those who would not take four per cent. should come and receive their money. The creditors finding him in earnest, and knowing not how otherwise to employ their money, accepted his terms, and changed their obligations into four per cent. whereas before they were at five, and so (the great loans of the country being to the state) it might be said in this sense, That the rate of interest was reduced lower at that time: but that it was done by a law, forbidding to take higher interest than four per cent. that I deny, and require any one to show. Indeed, upon good security, one might lately have borrowed money in Holland at three, and three and a half per cent. but not by virtue of any law, but the natural rate of interest. And I appeal to the men, learned in the law of Holland, whether last year (and I doubt not but it is so still) a man might not lawfully lend his money for what interest he could get, and whether in the courts he should not recover the interest he contracted for, if it were ten per cent. So that, if money be to be borrowed by honest and responsible men, at three, or three and half per cent. it is not by the force of statutes and edicts, but by the natural course of things; which will always bring interest upon good

security low, where there is a great deal of money to be lent, and little good security, in proportion, to be had. Holland is a country, where the land makes a very little part of the stock of the country. Trade is their great fund; and their estates lie generally in money: so that all, who are not traders, generally speaking, are lenders: of which there are so many, whose income depends upon interest, that if the States were not mightily in debt, but paid every one their principal, instead of the four per cent. use which they give, there would be so much more money than could be used, or would be ventured in trade, that money there would be at two per cent. or under, unless they found a way to put it out in foreign countries.

Interest, I grant these men, is low in Holland: but it is so, not as an effect of law, or the politic contrivance of the government, to promote trade: but as the consequence of great plenty of ready money, when their interest first fell. I say when it first fell: for being once brought low, and the public having borrowed a great part of private men's money, and continuing in debt, it must continue so, though the plenty of money, which first brought interest low, were very much decayed, and a great part of their wealth were really gone. For the debt of the state affording to the creditors a constant yearly income, that is looked on as a safe revenue, and accounted as valuable as if it were in land; and accordingly they buy it one of another: and whether there be any money in the public coffers or no, he, who has to the value of ten thousand pounds owing him from the States, may sell it every day in the week, and have ready money for it; this credit is so great an advantage to private men, who know not else what to do with their stocks, that, were the States now in a condition to begin to pay their debts, the creditors, rather than take their money out, to lie dead by them, would let it stay in, at lower interest, as they did some years since, when they were called on to come and receive their money. This is the state of interest in Holland: their plenty of money, and paying their public debts, some time since lowered their interest. But it was not done by the command and limitation of a law, nor in consequence of our reducing it here by law to six per cent. For I deny, that there is any law there yet, to forbid lending of money for above three, or six, or ten per cent. Whatever some here suggest, every one there may hire out his money, as freely as he does any thing else, for what rate he can get; and, the bargain being made, the law will enforce the borrower to pay it.

I grant low interest, where all men consent to it, is an advantage to trade, if merchants will regulate their gains accordingly, and men be persuaded to lend to them: but can it be expected, when the public gives seven or eight, or ten per cent. that private men, whose security is certainly no better, shall have for four! And can there be any thing stranger, than that the same men, who look on, and therefore allow high use as an encouragement to lending to the Chequer, should think low use should bring money into trade? The States of Holland, some few years since, paid but four per cent. for the money they owed: if you propose them for an example, and interest to be regulated by a law, try whether you can do so here, and bring men to lend it to the public at that rate. This would be a benefit to the kingdom, and abate a great part of our public charge. If you cannot do that, confess that it is not the law in Holland has brought the interest there so low, but something else, and that which will make the States, or any body else, pay dearer, now, if either their credit be less, or money there scarcer.

An infallible sign of your decay of wealth is the falling of rents, and the raising of them would be worth the nation's care, for in that, and not in the falling of interest, lies the true advantage of the landed man, and with him of the public. It may be therefore not besides our present business to inquire into the cause of the falling of rents in England.

Either the land is grown barrener, and so the product is less; and consequently the money to be received for that product is less; for it is evident, that he whose land was wont to produce 100 bushels of wheat, communibus annis, if by long tillage and husbandry it will now produce but 50 bushels, the rent will be abated half. But this cannot be supposed general.

Or the rent of that land is lessened. 1. Because the use of the commodity ceases: as the rents must fall in Virginia, were taking of tobacco forbid in England. 2. Or, because something else supplies the room of that product: as the rate of coppice lands will fall upon the discovery of coal mines. 3. Or, because the markets are supplied with the same commodity cheaper from another place: as the breeding counties of England must needs fall their rents by the importation of Irish cattle. 4. Or, because a tax laid on your native commodities, makes what the farmer sells cheaper, and labour, and what he buys, dearer.

Or, the money in the country is less; for the exigencies and uses of money not lessening with its quantity, and it being in the same proportion to

be employed and distributed still, in all the parts of its circulation, so much as its quantity is lessened, so much must the share of every one that has a right to this money be the less; whether he be landholder, for his goods; or labourer, for his hire; or merchant, for his brokerage. Though the landholder usually finds it first; because money failing, and falling short, people have not so much money as formerly to lay out, and so less money is brought to market, by which the price of things must necessarily fall. The labourer feels it next; for, when the landholder's rent falls, he must either bate the labourer's wages, or not employ, or not pay him; which either way makes him feel the want of money. The merchant feels it last; for though he sells less, and at a lower rate, he buys also our native commodities, which he exports at a lower rate too, and will be sure to leave our native commodities unbought, upon the hands of the farmer and manufacturer, rather than export them to a market, which will not afford him returns with profit.

If one-third of the money employed in trade were locked up, or gone out of England, must not the landholders necessarily receive one-third less for their goods, and consequently rents fall; a less quantity of money by one-third being to be distributed amongst an equal number of receivers? Indeed, people not perceiving the money to be gone, are apt to be jealous one of another; and each suspecting another's inequality of gain to rob him of his share, every one will be employing his skill and power the best he can to retrieve it again, and to bring money into his pocket in the same plenty as formerly. But this is but scrambling amongst ourselves, and helps no more against our want, than the pulling off a short coverlet will, amongst children that lie together, preserve them all from the cold. Some will starve, unless the father of the family provide better, and enlarge the scanty covering. This pulling and contest is usually between the landed man and the merchant: for the labourer's share, being seldom more than a bare subsistence, never allows that body of men time or opportunity to raise their thoughts above that, or struggle with the richer for theirs, (as one common interest) unless when some common and great distress, uniting them in one universal ferment, makes them forget respect, and emboldens them to carve to their wants with armed force; and then sometimes they break in upon the rich, and sweep all like a deluge. But this rarely happens but in the male-administration of neglected, or mismanaged government.

The usual struggle and contest, as I said before, in the decays of wealth and riches, is between the landed man and the merchant, with whom I may

here join the monied man. The landed man finds himself aggrieved by the falling of his rents, and the straitening of his fortune, whilst the monied man keeps up his gain, and the merchant thrives and grows rich by trade. These, he thinks, steals his income into their pockets, build their fortunes upon his ruin, and engross more of the riches of the nation than comes to their share. He therefore endeavours, by laws, to keep up the value of lands, which he suspects lessened by the other's excess of profit; but all in vain. The cause is mistaken, and the remedy too. It is not the merchant's nor monied man's gains that makes land fall: but the want of money, and lessening of our treasure, wasted by extravagant expenses, and a mismanaged trade, which the land always first feels. If the landed gentleman will have, and by his example makes it fashionable to have, more claret, spice, silk, and other foreign consumable wares, than our exportation of commodities does exchange for, money must unavoidably follow to balance the account, and pay the debt; and therefore, I fear that another proposal I hear talked of, to hinder the exportation of money and bullion, will show more our need of care to keep our money from going from us, than a way and method how to preserve it here.

It is death in Spain to export money: and yet they, who furnish all the world with gold and silver, have least of it amongst themselves. Trade fetches it away from that lazy and indigent people, notwithstanding all their artificial and forced contrivances to keep it there. It follows trade, against the rigour of their laws; and their want of foreign commodities makes it openly be carried out at noon-day. Nature has bestowed mines on several parts of the world: but their riches are only for the industrious and frugal. Whomsoever else they visit, it is with the diligent and sober only they stay; and if the virtue and provident way of living of our ancestors (content with our native conveniencies of life, without the costly itch after the materials of pride and luxury from abroad) were brought in fashion and countenance again amongst us; this alone would do more to keep and increase our wealth, and enrich our land, than all our paper helps, about interest, money, bullion, &c. which however eagerly we may catch at, will not, I fear, without better husbandry, keep us from sinking, whatever contrivances we may have recourse to. It is with a kingdom as with a family. Spending less than our own commodities will pay for, is the sure and only way for the nation to grow rich; and when that begins once seriously to be considered, and our faces and steps are in earnest turned that way, we may hope to have

our rents rise, and the public stock thrive again. Till then, we in vain, I fear, endeavour with noise, and weapons of law, to drive the wolf from our own to one another's doors: the breed ought to be extirpated out of the island; for want, brought in by ill management, and nursed up by expensive vanity, will make the nation poor, and spare nobody.

If three millions were necessary for the carrying on the trade of England, whereof one million were for the landholder to maintain him; another were for the payment of the labourer and handicraftsman; and the third were the share of the brokers, coming to them for their care and pains in distributing; if one million of this money were gone out of the kingdom, must there not be one-third less to be shared amongst them for the product of their land, their labour and their distribution? I do not say they will feel it at the same time. But the landholder having nothing, but what the product of his land will yield; and the buyer, according to the plenty or scarcity of money he has, always setting the price upon what is offered to sale; the landholder must be content to take the market-rate for what he brings thither; which always following the scarcity or plenty of money, if any part of our money be gone, he is sure first to find it in the price of his commodities; for the broker and merchant, though he sell cheaper, yet he buys cheaper too: and he will be sure to get his returns, or let alone a commodity which will not produce him gain: and whatsoever is so let alone, and left in hand, always turns to the landholder's loss.

Supposing that of our woollen manufacture, foreign markets took off one-half, and the other half were consumed amongst ourselves; if a sensible part (as one-third) of our coin were gone, and so men had equally one-third less money than they had, (for it is certain it must be tantamount, and what I escape of one-third less, another must make up) it would follow, that they would have less to lay out in clothes, as well as other things, and so would wear them longer, or pay less for them. If a clothier finds a want of vent, he must either sell cheaper, or not at all; if he sell cheaper, he must also pay less, both for wool and labour; and if the labourer hath less wages, he must also pay less for corn, butter, cheese, flesh, or else forbear some of these quite. In all which cases the price of wool, corn, flesh, and the other products of land are brought down, and the land bears the greatest part of the loss; for wherever the consumption, or vent of any commodity is stopt, there the stop continues on, till it comes to the landholder; and, wherever the price of any commodity begins to fall, how many hands soever there be

between that and the landholder, they all take reprisals one upon another, till at last it comes to the landholder; and there the abatement of price of any of his commodities lessens his income and is a clear loss. The owner of land, which produces the commodity, and the last buyer who consumes it, are the two extremes in commerce; and through the falling of any sort of commodity in the landholder's hand does not prove so to the last consumer, the arts of intervening brokers and engrossers keeping up the price to their own advantage, yet, whenever want of money, or want of desire in the consumer, makes the price low, that immediately reaches the first producer, nobody between having any interest to keep it up.

Now as to the two first causes of falling of rents, falling of interest has no influence at all. In the latter it has a great part, because it makes the money of England less, by making both Englishmen and foreigners withdraw, or withhold their money; for that which is not let loose into trade, is all one, whilst hoarded up, as if it were not in being.

I have heard it brought for a reason, why interest should be reduced to four per cent. "that thereby the landholder, who bears the burthen of the public charge, may be in some degree eased by the falling of interest."

This argument will be but right, if you say it will ease the borrower, and lay the loss on the lender. But it concerns not the land in general, unless you will suppose all landholders in debt. But I hope we may yet think that men in England, who have land, have money too; and that landed men, as well as others, by their providence and good husbandry, accommodating their expences to their income, keep themselves from going backwards in the world.

That which is urged, as most deserving consideration and remedy in the case is, "that it is hard and unreasonable, that one, who has mortgaged half his land, should yet pay taxes for the whole, whilst the mortgage goes away with the clear profit of an high interest." To this I answer,

That, if any man has run himself in debt for the service of his country, it is fit the public should reimburse him, and set him free. This is a care that becomes the public justice, that men, if they receive no rewards, should at least be kept from suffering, in having served their country. But I do not remember the polity of any nation, who altered their constitution in favour of those whose mismanagement had brought them behindhand; possibly, as thinking the public little beholden to those who had misemployed the stock of their country in the excess of their private expences, and by their

example spread a fashion that carries ruin with it. Men's paying taxes of mortgaged lands, is a punishment for ill husbandry, which ought to be discouraged: but it concerns very little the frugal and the thrifty.

Another thing to be said in reply to this, is, that it is with gentlemen in the country, as with tradesmen in the city. If they will own titles to greater estates than really they have, it is their own faults, and there is no way left to help them from paying for them. The remedy is in their own hands, to discharge themselves when they please; and when they have once sold their land, and paid their debts, they will no longer pay taxes, for what they own without being really theirs. There is another way also whereby they may be relieved, as well as a great many other inconveniencies remedied; and that is by a registry: for if the mortgages were registered, land-taxes might reach them, and order the lender to pay his proportion.

I have met with patrons of four per cent. who (amongst many other fine things they tell us of) affirm, "That if interest were reduced to four per cent. then some men would borrow money at this low rate, and pay their debts; others would borrow more than they now do, and improve their land; others would borrow more, and employ it in trade and manufacture." Gilded words indeed, were there any thing substantial in them! These men talk as if they meant to show us not only the wisdom, but the riches of Solomon, and would make gold and silver as common as stones in the street: but at last, I fear, it will be but wit without money, and I wish it amount to that. It is without question, that could the countryman and the tradesman take up money cheaper than now they do, every man would be forward to borrow, and desire that he might have other men's money to employ to his advantage. I confess, those who contend for four per cent. have found out a way to set men's mouths a watering for money at that rate, and to increase the number of borrowers in England, if any body can imagine it would be an advantage to increase them. But to answer all their fine projects, I have but this one short question to ask them: Will four per cent. increase the number of the lenders? If it will not, as any man at the very first hearing will shrewdly suspect it will not, then all the plenty of money, these conjurers bestow upon us, for improvement of land, paying of debts, and advancement of trade, is but like the gold and silver, which old women believe other conjurers bestow sometimes, by whole lapfuls, on poor credulous girls, which, when they bring to the light, is found to be nothing

but withered leaves; and the possessors of it are still as much in want of money as ever.

Indeed, I grant it would be well for England, and I wish it were so, that the plenty of money were so great amongst us, that every man could borrow as much as he could use in trade for four per cent.; nay, that men could borrow as much as they could employ for six per cent. But even at that rate, the borrowers already are far more than the lenders. Why else doth the merchant, upon occasion, pay six per cent. and often above that rate, for brokerage? And why doth the country gentleman of 1000l. per ann. find it so difficult, with all the security he can bring, to take up 1000l.? All which proceeds from the scarcity of money and bad security; two causes which will not be less powerful to hinder borrowing, after the lowering of interest; and I do not see how any one can imagine that reducing use to four per cent. should abate their force, or how lessening the reward of the lender, without diminishing his risque, should make him more forward and ready to lend. So that these men, whilst they talk that at four per cent. men would take up and employ more money to the public advantage, do but pretend to multiply the number of borrowers among us, of which it is certain we have too many already. While they thus set men a longing for the golden days of four per cent. methinks they use the poor indigent debtor, and needy tradesman, as I have seen prating jackdaws do sometimes their young, who, kawing and fluttering about the nest, set all their young ones a gaping, but having nothing in their empty mouths but noise and air, leave them as hungry as before.

It is true these men have found out by a cunning project, how, by the restraint of a law, to make the price of money one-third cheaper, and then they tell John a Nokes that he shall have 10,000l. of it to employ in merchandize, or clothing; and John a Stiles shall have 20,000l. more to pay his debts; and so distribute this money as freely as Diego did his legacies, which they are to have, even where they can get them. But till these men can instruct the forward borrowers, where they shall be furnished, they have perhaps done something to increase men's desire, but not made money one jot easier to come by; and, till they do that, all this sweet jingling of money, in their discourses, goes just to the tune of "If all the world were oatmeal." Methinks these undertakers, whilst they have put men in hopes of borrowing more plentifully, at easier rates, for the supply of their wants and trades, had done better to have bethought themselves of a way how men

need not borrow upon use at all: for this would be much more advantageous, and altogether as feasible. It is as easy to distribute twenty pair of shoes amongst thirty men, if they pay nothing for them at all, as if they paid 4s. a pair; ten of them (notwithstanding the statute-rate should be reduced from 6s. to 4s. a pair) will be necessitated to sit still barefoot, as much as if they were to pay nothing for shoes at all. Just so it is in a country, that wants money in proportion to trade. It is as easy to contrive how every man shall be supplied with what money he needs (i. e. can employ in improvement of land, paying his debts, and returns of his trade) for nothing, as for four per cent. Either we have already more money than the owners will lend, or we have not. If part of the money which is now in England, will not be let at the rate interest is at present at, will men be more ready to lend, and borrowers be furnished for all those brave purposes more plentifully, when money is brought to four per cent.? If people do already lend all the money they have, above their own occasions, whence are those, who will borrow more at four per cent. to be supplied? Or is there such plenty of money, and scarcity of borrowers, that there needs the reducing of interest to four per cent. to bring men to take it?

All the imaginable ways of increasing money in any country are these two; either to dig it in the mines of our own, or get it from our neighbours. That four per cent. is not of the nature of the deusing-rod, or virgula divina, able to discover mines of gold and silver, I believe will easily be granted me. The way of getting from foreigners, is either by force, borrowing, or trade. And whatever ways, besides these, men may fancy, or propose, for increasing of money, (except they intend to set up for the philosopher's stone) would be much the same with a distracted man's device, that I knew, who, in the beginning of his distemper, first discovered himself to be out of his wits, by getting together and boiling a great number of groats, with a design, as he said, to make them plim, i. e. grow thicker. That four per cent. will raise armies, discipline soldiers, and make men valiant, and fitter to conquer countries, and enrich themselves with the spoils, I think was never pretended. And that it will not bring in more of our neighbour's money upon loan, than we have at present among us, is so visible in itself, that it will not need any proof; the contenders for four per cent. looking upon it as an undeniable truth, and making use of it as an argument, to show the advantage it will be to the nation, by lessening the use paid to foreigners, who upon falling of use will take home their money. And, for the last way

of increasing our money, by promoting of trade, how much lowering of interest is the way to that, I have, I suppose, showed you already.

HAVING LATELY MET WITH A LITTLE TRACT, ENTITLED, “A LETTER TO A FRIEND CONCERNING USURY,” PRINTED THIS PRESENT YEAR, 1660; WHICH GIVES, IN SHORT, THE ARGUMENTS OF SOME TREATISES, PRINTED MANY YEARS SINCE, FOR THE LOWERING OF INTEREST; IT MAY NOT BE AMISS BRIEFLY TO CONSIDER THEM.

“An high interest decays trade. The advantage from interest is greater than the profit from trade, which makes the rich merchants give over, and put out their stock to interest, and the lesser merchants break.”

Answ. This was printed in 1621, when interest was at ten per cent. And whether England had ever a more flourishing trade than at that time, must be left to the judgment of those who have considered the growing strength and riches of this kingdom in queen Elizabeth’s and king James I.’s reigns. Not that I impute it to high interest, but to other causes, I have mentioned, wherein usury had nothing to do. But if this be thought an argument now in 1690, when the legal interest is six per cent. I desire those, who think fit to make use of it, to name those rich merchants, who have given over, and put out their stocks to interest.

“Interest being at ten per cent. and in Holland at six, our neighbour-merchants undersell us.”

Answ. The legal interest being here now at six per cent. and in Holland not limited by law, our neighbour merchants undersell us, because they live more frugally, and are content with less profit.

“Interest being lower in Holland than in England, their contributions to war, works of piety, and all charges of the state, are cheaper to them than to us.”

Answ. This needs a little explication. Contributions, greater or less, I understand; but contributions cheaper or dearer, I confess I do not. If they manage their wars and charges cheaper than we, the blame is not to be laid on high or low interest.

“Interest being so high, prevents the building of shipping, which is the strength and safety of our island, most merchant-ships being built in Holland.”

Answ. Though this argument be now gone, such ships being prohibited by a law, I will help the author to one as good. The Dutch buy our rape-seed, make it into oil, bring it back to us, and sell it with advantage. This may be as well said to be from high interest here, and low there. But the truth is, the industry and frugality of that people, makes them content to work cheaper, and sell at less profit than their neighbours, and so get the trade from them.

“The high rate of usury makes land sell so cheap, being not worth more than fourteen or fifteen years purchase; whereas in Holland, where interest is at six, it is worth above twenty-five. So that a low interest raises the price of land. Where money is dear, land is cheap.”

Answ. This argument plainly confesses, that there is something else, regulates the price of land, besides the rate of interest; else, when money was at ten per cent. here, should land have been at ten years purchase, whereas he confesses it then to have been at fourteen or fifteen. One may suppose, to favour his hypothesis, he was not forward to speak the most of it. And interest, as he says, being at six per cent. in Holland, land there should have sold, by that rule, for sixteen and an half year's purchase; whereas he says it was worth about twenty-five. And Mr. Manly says, . “That money in France being at seven per cent. noble land sells for thirty-four and thirty-five years purchase, and ordinary land for twenty-five.” So that the true conclusion from hence is, not what our author makes, but this, That it is not the legal interest, but something else, that governs the rate of land. I grant his position, That where money is dear, land is cheap, and vice versa. But it must be so by the natural, not legal interest. For, where money will be lent on good security, at four or five per cent. it is a demonstration that there is more than will be ventured on ordinary credit in trade. And when this plenty becomes general, it is a sign there is more money than can be employed in trade; which cannot but put many upon seeking purchases, to lay it out in land, and so raise the price of land, by making more buyers than sellers.

“It is not probable lenders will call in their money, when they cannot make greater interest any where. Besides, their security upon land will be better.”

Answ. Some unskilful and timorous men will call in their money; others put it into the bankers hands. But the bankers, and skilful will keep it up, and not lend it, but at the natural use, as we have shown. But how securities

will be mended, by lowering of interest, is, I confess, beyond my comprehension.

OF RAISING OUR COIN.

Being now upon the consideration of interest and money, give me leave to say one word more on this occasion, which may not be wholly unseasonable at this time. I hear a talk up and down of raising our money, as a means to retain our wealth, and keep our money from being carried away. I wish those, that use the phrase of raising our money, had some clear notion annexed to it; and that then they would examine, “Whether, that being true, it would at all serve to those ends, for which it is proposed?”

The raising of money, then, signifies one of these two things; either raising the value of our money, or raising the denomination of our coin.

The raising the value of money, or any thing else, is nothing, but the making a less quantity of it exchange for any other thing, than would have been taken for it before; v. g. If 5s. will exchange for, or, (as we call it) buy a bushel of wheat; if you can make 4s. buy another bushel of the same wheat, it is plain the value of your money is raised, in respect of wheat, one fifth. But thus nothing can raise, or fall the value of your money, but the proportion of its plenty or scarcity, in proportion to the plenty, scarcity, or vent of any other commodity, with which you compare it, or for which you would exchange it. And thus silver, which makes the intrinsic value of money, compared with itself, under any stamp, or denomination of the same, or different countries, cannot be raised. For an ounce of silver, whether in pence, groats, or crown-pieces, stivers, or ducatoons, or in bullion, is, and always eternally will be, of equal value to any other ounce of silver, under what stamp or denomination soever; unless it can be shown that any stamp can add any new or better qualities to one parcel of silver, which another parcel of silver wants.

Silver, therefore, being always of equal value to silver, the value of coin, compared with coin, is greater, less, or equal, only as it has more, less, or equal silver in it: and in this respect, you can by no manner of way raise, or fall your money. Indeed most of the silver of the world, both in money and vessels, being alloyed, (i. e. mixed with some baser metals) fine silver, (i. e. silver separated from all alloy) is usually dearer than so much silver alloyed, or mixed with baser metals. Because, besides the weight of the

silver, those who have need of fine (i. e. unmixed silver; as gilders, wire-drawers, &c.) must, according to their need, besides an equal weight of silver, mixed with other metals, give an overplus to reward the refiner's skill and pains. And in this case, fine silver and alloyed or mixed silver, are considered as two distinct commodities. But no money being coined here, or almost any where, of pure, fine silver, this concerns not the value of money at all; wherein an equal quantity of silver is always of the same value with an equal quantity of silver, let the stamp or denomination be what it will.

All then, that can be done in this great mystery of raising money, is only to alter the denomination, and call that a crown now, which before, by the law, was but a part of a crown. For example: supposing, according to the standard of our law, 5s. or a crown, were to weigh an ounce, (as it does now, wanting about 16 grains) whereof one twelfth were copper, and eleven twelfths silver, for thereabouts it is) it is plain here, it is the quantity of silver gives the value to it. For let another piece be coined of the same weight, wherein half the silver is taken out, and copper, or other alloy, put into the place, every one knows it will be worth but half as much. For the value of the alloy is so inconsiderable as not to be reckoned. This crown now must be raised, and from henceforth our crown-pieces coined one twentieth lighter; which is nothing but changing the denomination, calling that a crown now, which yesterday was but a part, viz. nineteen twentieths of a crown; whereby you have only raised 19 parts to the denomination formerly given to 20. For I think nobody can be so senseless as to imagine, that 19 grains or ounces of silver can be raised to the value of 20; or that 19 grains or ounces of silver shall at the same time exchange for, or buy as much corn, oil, or wine, as 20; which is to raise it to the value of 20. For if 19 ounces of silver can be worth 20 ounces of silver, or pay for as much of any other commodity, then 18, 10, or one ounce may do the same. For, if the abating one twentieth of the quantity of the silver of any coin, does not lessen its value, the abating nineteen twentieths of the quantity of the silver of any coin, will not abate its value. And so a single three-pence, or a single penny, being called a crown, will buy as much spice, or silk, or any other commodity, as a crown-piece, which contains 20 or 60 times as much silver: which is an absurdity so great, that I think nobody will want eyes to see, and sense to disown.

Now this raising your money, or giving a less quantity of silver the stamp and denomination of a greater, may be done two ways.

By raising one species of your money.

By raising all your silver coin, at once proportionably; which is the thing, I suppose, now proposed.

The raising of one species of your coin, beyond its intrinsic value, is done by coining any one species, (which in account bears such a proportion to the other species of your coin) with less silver in it, than is required by that value it bears in your money.

For example: a crown with us goes for 60 pence, a shilling for 12 pence, a tester for 6 pence, and a groat for 4 pence: and accordingly, the proportion of silver in each of them ought to be as 60, 12, 6, and 4. Now, if in the mint there should be coined groats, or testers, that, being of the same alloy with our other money, had but two thirds of the weight, that those species are coined at now; or else, being of the same weight, were so alloyed, as to have one third of the silver, required by the present standard, changed into copper, and should thus, by law, be made current; (the rest of your silver money being kept to the present standard in weight and fineness) it is plain, those species would be raised one third part; that passing for 6d. which had but the silver of 4d. in it; and would be all one, as if a groat should by law be made current for 6d. and every 6d. in payment pass for 9d. This is truly raising these species: but is no more in effect, than if the mint should coin clipped money; and has, besides the cheat that is put by such base, or light money, on every particular man that receives it, that he wants one third of that real value, which the public ought to secure him, in the money it obliges him to receive, as lawful and current. It has, I say, this great and unavoidable inconvenience to the public, that, besides the opportunity it gives to domestic coiners to cheat you with lawful money, it puts it into the hands of foreigners to fetch away your money, without any commodities for it. For if they find that two-penny weight of silver, marked with a certain impression, shall here in England be equivalent to 3d. weight marked with another impression, they will not fail to stamp pieces of that fashion; and so importing that base and low coin, will, here in England, receive 3d. for 2d. and quickly carry away your silver in exchange for copper, or barely the charge of coinage.

This is unavoidable in all countries, where any one species of their money is disproportionate in its intrinsic value, (i. e. in its due proportion of

silver to the rest of the money of that country) an inconvenience so certainly attending the allowance of any base species of money to be current, that the king of France could not avoid it, with all his watchfulness. For though, by edict, he made his 4 sols pieces (whereof 15 were to pass for a French crown, though 20 of them had not so much silver in them, as was in a French crown-piece) pass in the inland parts of his kingdom, 15 for a crown in all payments; yet he durst not make them current in the sea-port towns, for fear that should give an opportunity to their importation. But yet this caution served not the turn; they were still imported: and by this means a great loss and damage brought upon his country. So that he was forced to cry them down, and sink them to near their intrinsic value. Whereby a great many particular men, who had quantities of that species in their hands, lost a great part of their estates; and every one, that had any, lost proportionably by it.

If we had groats, or six-pences, current by law amongst us, that wanted one third of the silver, which they now have by the standard, to make them of equal value to our other species of money; who can imagine, that our neighbours would not presently pour in quantities of such money upon us, to the great loss and prejudice of the kingdom? The quantity of silver, that is in each piece, or species of coin, being that which makes its real and intrinsic value, the due proportions of silver ought to be kept in each species, according to the respective rate, set on each of them by law. And, when this is ever varied from, it is but a trick to serve some present occasion; but is always with loss to the country, where the trick is played.

The other way of raising money is by raising all your silver coin at once, the proportion of a crown, a shilling, and a penny, in reference to one another, being still kept, (viz. That a shilling shall weigh one fifth of a crown-piece, and a penny-weight one twelfth of a shilling, in standard silver) but out of every one of these, you abate one twentieth of the silver, they were wont to have in them.

If all the species of money be, as it is called, raised, by making each of them to have one twentieth less of silver in them than formerly: and so your whole money be lighter than it was: these following will be some of the consequences of it.

It will rob all creditors of one twentieth (or 5 per cent.) of their debts, and all landlords one twentieth of their quit-rents for ever; and in all other rents, as far as their former contracts reach, (of 5 per cent.) of their yearly

income; and this without any advantage to the debtor, or farmer. For he, receiving no more pounds sterling for his land or commodities, in this new lighter coin, than he should have done of your old and weightier money, gets nothing by it. If you say, Yes, he will receive more crown, half-crown, and shilling pieces, for what he now sells for new money, than he should have done if the money of the old standard had continued; you confess your money is not raised in value, but in denomination: since what your new pieces want in weight must now be made up in their number. But, which way soever this falls, it is certain, the public (which most men think ought to be the only reason of changing a settled law, and disturbing the common current course of things) receives not the least profit by it. Nay, as we shall see by and by, it will be a great charge and loss to the kingdom. But this, at first sight, is visible, That in all payments to be received upon precedent contracts, if your money be in effect raised, the receiver will lose 5 per cent. For money having been lent, and leases and other bargains made, when money was of the same weight and fineness, that it is now, upon confidence that under the same names of pounds, shillings, and pence, they should receive the same value, i. e. the same quantity of silver, by giving the denomination now to less quantities of silver by one twentieth, you take from them 5 per cent. of their due.

When men go to market, to buy any other commodities with their new, but lighter money, they will find 20s. of their new money will buy no more of any commodity than 19 would before. For it not being the denomination, but the quantity of silver, that gives the value to any coin, 19 grains or parts, of silver, however denominated or marked, will no more be worth, or pass for, or buy so much of any other commodity, as 20 grains of silver will, than 19s. will pass for 20s. If any one thinks a shilling, or a crown in name, has its value from the denomination, and not from the quantity of silver in it, let it be tried; and hereafter let a penny be called a shilling, or a shilling be called a crown. I believe nobody would be content to receive his debts, or rents in such money: which, though the law should raise thus, yet he foresees he should lose eleven twelfths by the one, and by the other four fifths of the value he received; and would find his new shilling, which had no more silver in it than one twelfth of what a shilling had before, would buy him of corn, cloth, or wine, but one twelfth of what an old shilling would. This is as plainly so in the raising, as you call it, your crown to 5s. and 3d. or (which is the same thing) making your crown one twentieth

lighter in silver. The only difference is, that the loss is so great (it being eleven twelfths), that every body sees, and abhors it at first proposal; but, in the other (it being but one twentieth, and covered with the deceitful name of raising our money) people do not readily observe it. If it be good to raise the crown-piece this way, one twentieth this week, I suppose it will be as good and profitable to raise it as much again the next week. For there is no reason, why it will not be as good to raise it again, another one twentieth, the next week, and so on; wherein, if you proceed but ten weeks successively, you will, by new-year's day next, have every half-crown raised to a crown, to the loss of one half of people's debts and rents, and the king's revenue, besides the confusion of all your affairs: and, if you please to go on in this beneficial way of raising your money, you may, by the same art, bring a penny-weight of silver to be a crown.

Silver, i. e. the quantity of pure silver, separable from the alloy, makes the real value of money. If it does not, coin copper with the same stamp and denomination, and see whether it will be of the same value. I suspect your stamp will make it of no more worth than the copper money of Ireland is, which is its weight in copper, and no more. That money lost so much to Ireland, as it passed for, above the rate of copper. But yet I think nobody suffered so much by it as he by whose authority it was made current.

If silver give the value, you will say, what need is there then of the charge of coinage? May not men exchange silver by weight for other things; make their bargains, and keep their accounts in silver by weight? This might be done, but it has these inconveniences:

1. The weighing of silver to every one we had occasion to pay it to would be very troublesome, for every one must carry about scales in his pocket.

2. Scales would not do the business; for in the next place every one cannot distinguish between fine and mixed silver: so that though he received the full weight, he was not sure he received the full weight of silver, since there might be a mixture of some of the baser metals, which he was not able to discern. Those who have had the care and government of politic societies, introduced coinage, as a remedy to those two inconveniencies. The stamp was a warrantry of the public, that, under such a denomination, they should receive a piece of such a weight, and such a fineness; that is, they should receive so much silver. And this is the reason why the counterfeiting the stamp is made the highest crime, and has the

weight of treason laid upon it: because the stamp is the public voucher of the intrinsic value. The royal authority gives the stamp, the law allows and confirms the denomination, and both together give, as it were, the public faith as a security, that sums of money contracted for under such denominations shall be of such a value, that is, shall have in them so much silver; for it is silver, and not names, that pays debts, and purchases commodities. If therefore I have contracted for twenty crowns, and the law then has required, that each of those crowns should have an ounce of silver; it is certain my bargain is not made good, I am defrauded (and whether the public faith be not broken with me, I leave to be considered) if, paying me twenty crowns, the law allots them to be such as have but nineteen twentieths of the silver they ought to have, and really had in them, when I made my contract.

It diminishes all the king's revenue 5 per cent. For though the same number of pounds, shillings, and pence are paid into the exchequer, as were wont, yet these names being given to coin that have each of them one twentieth less of silver in them; and that being not a secret concealed from strangers, no more than from his own subjects; they will sell the king no more pitch, tar, or hemp, for 20 shillings, after the raising your money, than they would before for 19: or, to speak in the ordinary phrase, they will raise their commodities 5 per cent. as you have raised your money 5 per cent. And it is well if they stop there. For usually in such changes, an outcry being made of your lessening your coin, those, who have to deal with you, taking the advantage of the alarm, to secure themselves from any loss by your new trick, raise their price even beyond the par of your lessening your coin.

I hear of two inconveniences complained of, which it is proposed by this project to remedy.

The one is, the melting down of our coin: the other, the carrying away of our bullion. These are both inconveniencies which, I fear, we lie under: but neither of them will be in the least removed, or prevented, by the proposed alteration of our money.

It is past doubt that our money is melted down The reason whereof is evidently the cheapness of coinage. For a tax on wine paying the coinage, the particular owners pay nothing for it. So that 100 ounces of silver coined comes to the owner at the same rate, as 100 ounces of standard silver in bullion. For delivering into the mint his silver in bars, he has the same

quantity of silver delivered out to him again in coin, without any charges to him. Whereby, if at any time he has occasion for bullion, it is the same thing to melt down our milled money, as to buy bullion from abroad, or take it in exchange for other commodities. Thus our mint, to the only advantage of our officers, but at the public cost, labours in vain, as will be found. But yet this makes you not have one jot less money in England, than you would have otherwise; but only makes you coin that, which otherwise would not have been coined, nor perhaps been brought hither: and, being not brought hither by an over-balance of your exportation, cannot stay when it is here. It is not any sort of coinage does, or can keep your money here; that wholly and only depends upon the balance of your trade. And had all the money in king Charles the II. and king James the II.'s time been minted, according to this new proposal, this raised money would have been gone, as well as the other, and the remainder been no more, nor no less than it is now. Though I doubt not but the mint would have coined as much of it, as it has of our present milled money. The short is this: an over-balance of trade with Spain brings you in bullion; cheap coinage, when it is here, carries it into the mint, and money is made of it; but, if your exportation will not balance your importation in other parts of your trade, away must your silver go again, whether monied, or not monied. For where goods do not, silver must, pay for the commodities you spend.

That this is so will appear by the books of the mint, where may be seen how much milled money has been coined in the two last reigns. And in a paper I have now in my hands (supposed written by a man not wholly ignorant in the mint) it is confessed, that whereas one third of the current payments were some time since of milled money, there is not now one twentieth. Gone then it is: but let not any one mistake and think it gone, because in our present coinage an ounce wanting about 16 grains, is denominated a crown: or that (as is now proposed) an ounce wanting about 40 grains, being coined in one piece, and denominated a crown, would have stopped it, or will (if our money be so altered) for the future fix it here. Coin what quantity of silver you please in one piece, and give it the denomination of a crown; when your money is to go, to pay your foreign debts (or else it will not go out at all), your heavy money (i. e. that which is weight according to its denomination, by the standard of the mint) will be that which will be melted down, or carried away in coin by the exporter, whether the pieces of each species be by the law bigger, or less. For, whilst

coinage is wholly paid for by a tax, whatever your size of money be, he that has need of bullion to send beyond sea, or of silver to make plate, need but take milled money and melt it down, and he has it as cheap as if it were in pieces of eight, or other silver coming from abroad; the stamp, which so well secures the weight of the milled money, costing nothing at all.

To this perhaps will be said, That if this be the effect of milled money, that it is so apt to be melted down, it were better to return to the old way of coining by the hammer. To which I answer, By no means. For,

Coinage by the hammer less secures you from having a great part of your money melted down. For in that way there being a greater inequality in the weight of the pieces, some being too heavy, and some too light; those, who know how to make their advantage of it, cull out the heavy pieces, melt them down, and make a benefit of the over-weight.

Coinage by the hammer exposes you much more to the danger of false coin. Because the tools are easily made and concealed, and the work carried on with fewer hands, and less noise than a mill; whereby false coiners are less liable to discovery.

The pieces not being so round, even, and fairly stamped, nor marked on the edges, are exposed to clipping, which milled money is not.

Milled money is, therefore, certainly best for the public. But, whatever be the cause of melting down our milled money, I do not see how raising our money (as they call it) will at all hinder its being melted down. For if our crown-pieces should be coined one twentieth lighter, why should that hinder them from being melted down, more than now? The intrinsic value of the silver is not altered, as we have shown already: therefore that temptation to melt them down remains the same as before.

“But they are lighter by one twentieth.” That cannot hinder them from being melted down. For half-crowns are lighter by half, and yet that preserves them not.

“But they are of less weight under the same denomination, and therefore they will not be melted down.” That is true, if any of these present crowns, that are one twentieth heavier, are current for crowns at the same time. For then they will no more melt down the new light crowns, than they will the old clipped ones, which are no more worth in coin and tale, than in weight and bullion. But it cannot be supposed, that men will part with their old and heavier money, at the same rate that the lighter new coin goes at, and pay away their old crowns for 5s. in tale, when at the mint they will yield them

5s. 3d. And then if an old milled crown goes for 5s. 3d. and a new milled crown (being so much lighter) goes for a crown, What, I pray, will be the odds of melting down the one, or the other? The one has one twentieth less silver in it, and goes for one twentieth less; and so being weight, they are melted down upon equal terms. If it be a convenience to melt one, it will be as much a convenience to melt the other; just as it is the same convenience to melt milled half-crowns as milled crowns, the one having, with half the quantity of silver, half the value. When the money is all brought to the new rate, i. e. to be one twentieth lighter, and commodities raised as they will proportionably, what shall hinder the melting down of your money then, more than now, I would fain know? If it be coined then, as it is now, gratis, a crown-piece, (let it be of what weight soever) will be, as it is now, just worth its own weight in bullion of the same fineness; for the coinage which is the manufactory about it, and makes all the difference, costing nothing, what can make the difference of value? And therefore, whoever wants bullion, will as cheaply melt down these new crowns, as buy bullion with them. The raising of your money cannot then (the act for free coinage standing) hinder its being melted down.

Nor, in the next place, much less can it, as it is pretended, hinder the exportation of our bullion. Any denomination, or stamp, we shall give to silver here, will neither give silver a higher value in England, nor make it less prized abroad. So much silver will always be worth (as we have already showed) so much silver, given in exchange one for another. Nor will it, when in your mint a less quantity of it is raised to a higher denomination (as when nineteen twentieths of an ounce has the denomination of a crown, which formerly belonged only to the whole 20) be one jot raised, in respect of any other commodity.

You have raised the denomination of your stamped silver one twentieth, or, which is all one, 5 per cent. And men will presently raise their commodities 5 per cent. So that if yesterday 20 crowns would exchange for twenty bushels of wheat, or 20 yards of a certain sort of cloth, if you will to-day coin current crowns one-twentieth lighter, and make them the standard, you will find 20 crowns will exchange for but 19 bushels of wheat, or 19 yards of that cloth, which will be just as much silver for a bushel, as yesterday. So that silver being of no more real value, by your giving the same denomination to a less quantity of it; this will no more bring in, or keep your bullion here, than if you had done nothing. If this were otherwise,

you would be beholden (as some people foolishly imagine) to the clippers for keeping your money. For if keeping the old denomination to a less quantity of silver be raising your money (as in effect it is all that is, or can be done in it, by this project of making your coin lighter) the clippers have sufficiently done that: and if their trade go on a little while longer, at the rate it has of late, and your milled money be melted down and carried away, and no more coined; your money will, without the charge of new coinage, be, by that sort of artificers, raised above five per cent. when all your current money shall be clipped, and made above one twentieth lighter than the standard, preserving still its former denomination.

It will possibly be here objected to me, That we see 100l. of clipped money, above 5 per cent. lighter than the standard, will buy as much corn, cloth, or wine, as 100l. in milled money, which is above one twentieth heavier: whereby it is evident that my rule fails, and that it is not the quantity of silver that gives the value to money, but its stamp and denomination. To which I answer, That men make their estimate and contracts according to the standard, upon supposition they shall receive good and lawful money, which is that of full weight: and so in effect they do, whilst they receive the current money of the country. For since 100l. of clipped money will pay a debt of 100l. as well as the weightiest milled money; and a new crown out of the mint will pay for no more flesh, fruit, or cloth, than five clipped shillings; it is evident that they are equivalent as to the purchase of any thing here at home, whilst nobody scruples to take five clipped shillings, in exchange for a weighty milled crown. But this will be quite otherwise as soon as you change your coin, and (to raise it as you call it) make your money one twentieth lighter in the mint; for then nobody will any more give an old crown of the former standard for one of the new, than he will now give you 5s. and 3d. for a crown: for so much then his old crown will yield him at the mint.

Clipped and unclipped money will always buy an equal quantity of any thing else, as long as they will without scruple change one for another. And this makes, that the foreign merchant, who comes to sell his goods to you, always counts upon the value of your money, by the silver that is in it, and estimates the quantity of silver by the standard of your mint; though perhaps by reason of clipped, or worn money amongst it, any sum that is ordinarily received is much lighter than the standard, and so has less silver in it than what is in a like sum, new coined in the mint. But whilst clipped and

weighty money will equally change one for another, it is all one to him, whether he receives his money in clipped money or no, so it be but current. For if he buy other commodities here with his money, whatever sum he contracts for, clipped as well as weighty money equally pays for it. If he would carry away the price of his commodity in ready cash, it is easily changed into weighty money: and then he has not only the sum in tale that he contracted for, but the quantity of silver he expected, for his commodities, according to the standard of our mint. If the quantity of your clipped money be once grown so great, that the foreign merchant cannot (if he has a mind to it) easily get weighty money for it, but having sold his merchandize, and received clipped money, finds a difficulty to procure what is weight for it; he will, in selling his goods, either contract to be paid in weighty money, or else raise the price of his commodity, according to the diminished quantity of silver, in your current coin.

In Holland (ducatoons being the best money of the country, as well as the largest coin) men in payments received and paid those indifferently with the other money of the country; till of late the coining of other species of money, of baser alloy, and in greater quantities, having made the ducatoons, either by melting down, or exportation, scarcer than formerly, it became difficult to change the baser money into ducatoons; and since that, nobody will pay a debt in ducatoons, unless he be allowed half per cent. or more, above the value they were coined for.

To understand this, we must take notice, That guilders is the denomination, that in Holland they usually compute by, and make their contracts in. A ducatoon formerly passed at three guilders and three stuyvers, or sixty-three stuyvers. There were then (some years since) begun to be coined another piece, which was called a three guilders piece, and was ordered to pass for three guilders, or sixty stuyvers. But 21 three guilders pieces, which were to pass for 63 guilders, not having so much silver in them as 20 ducatoons, which passed for the same sum of 63 guilders, the ducatoons were either melted down in their mints (for the making of these three guilders pieces, or yet baser money, with profit) or were carried away by foreign merchants; who, when they carried back the product of their sale in money, would be sure to receive their payment of the number of guilders they contracted for in ducatoons, or change the money they received into ducatoons: whereby they carried home more silver, than if they had taken their payment in three guilders pieces, or any other species. Thus ducatoons

became scarce. So that now, he that will be paid in ducatoons, must allow half per cent. for them. And therefore the merchants, when they sell any thing now, either make their bargain to be paid in ducatoons; or if they contract for guilders in general, (which will be sure to be paid them in the baser money of the country) they raise the price of their commodities accordingly.

By this example, in a neighbour country, we may see how our new milled money goes away. When foreign trade imports more than our commodities will pay for, it is certain we must contract debts beyond sea, and those must be paid with money, when either we cannot furnish, or they will not take our goods to discharge them. To have money beyond sea to pay our debts, when our commodities do not raise it, there is no other way but to send it thither. And since a weighty crown costs no more here than a light one, and our coin beyond sea is valued no otherwise than according to the quantity of silver it has in it, whether we send it in specie, or whether we melt it down here to send it in bullion, (which is the safest way, as not being prohibited) the weightiest is sure to go. But when so great a quantity of your money is clipped, or so great a part of your weighty money is carried away, that the foreign merchant, or his factor here, cannot have his price paid in weighty money, or such as will easily be changed into it, then every one will see (when men will no longer take five clipped shillings for a milled, or weighty crown) that it is the quantity of silver that buys commodities and pays debts, and not the stamp and denomination which is put upon it. And then too it will be seen what a robbery is committed on the public by clipping. Every grain diminished from the just weight of our money, is so much loss to the nation, which will one time or other be sensibly felt; and which, if it be not taken care of, and speedily stopped, will in that enormous course it is now in, quickly, I fear, break out into open ill effects, and at one blow deprive us of a great part (perhaps near one fourth) of our money. For that will be really the case, when the increase of clipped money makes it hard to get weighty: when men begin to put a difference of value between that which is weighty, and light money; and will not sell their commodities, but for money that is weight, and will make their bargains accordingly.

Let the country gentleman, when it comes to that pass, consider, what the decay of his estate will be? When, receiving his rent in the tale of clipped shillings, according to his bargain, he cannot get them to pass at market for more than their weight. And he that sells him salt, or silk, will bargain for

5s. such a quantity, if he pays him in fair weighty coin, but in clipped money he will not take under 5s. 3d. Here you see you have your money, without this new trick of coinage, raised five per cent. But whether to any advantage of the kingdom, I leave every one to judge.

Hitherto we have only considered the raising of silver coin, and that has been, only by coining it, with less silver in it, under the same denomination. There is another way yet of raising money, which has something more of reality, though as little good in it as the former. This too, now that we are upon the chapter of raising money, it may not be unseasonable to open a little. The raising I mean, is, when either of the two richer metals, (which money is usually made of) is by law raised above its natural value, in respect of the other. Gold and silver have, in almost all ages and parts of the world (where money was used) generally been thought the fittest materials to make it of. But there being a great disproportion in the plenty of these metals in the world, one has always been valued much higher than the other; so that one ounce of gold has exchanged for several ounces of silver: as at present, our guinea passing for 21s. 6d. in silver, gold is now about fifteen and an half times more worth than silver: there being about fifteen and an half times more silver in 21s. 6d. than there is gold in a guinea. This being now the market-rate of gold to silver; if by an established law the rate of guineas should be set higher, (as to 22s. 6d.) they would be raised indeed, but to the loss of the kingdom. For by this law, gold being raised five per cent. above its natural true value, foreigners would find it worth while to send their gold hither, and so fetch away our silver at five per cent. profit, and so much loss to us. For when so much gold as would purchase but 100 ounces of silver any where else, will in England purchase the merchant 105 ounces, what shall hinder him from bringing his gold to so good a market; and either selling it at the mint, where it will yield so much, or having it coined into guineas? And then (going to market with his guineas) he may buy our commodities at the advantage of five per cent. in the very sort of his money; or change them into silver, and carry that away with him.

On the other side, if by a law you would raise your silver money, and make four crowns, or 20s. in silver, equal to a guinea, at which rate I suppose it was first coined, so that by your law a guinea should pass but for 20s. the same inconveniency would follow. For then strangers would bring in silver and carry away your gold, which was to be had here at a lower rate than any where else.

If you say, that this inconvenience is not to be feared; for that as soon as people found, that gold began to grow scarce, or that it was more worth than the law set upon it, they would not then part with it at the statute rate, as we see the broad pieces that were coined in king James the first's time for 20s. nobody will now part with under 23s. or more, according to the market value: this I grant is true, and it does plainly confess the foolishness of making a law, which cannot produce the effect it is made for: as indeed it will not, when you would raise the price of silver, in respect of gold, above its natural market value: for then, as we see in our gold, the price of it will raise itself. But on the other side, if you should by a law set the value of gold above its par; then people would be bound to receive it at that high rate, and so part with their silver at an under value. But supposing, that having a mind to raise your silver in respect of gold, you make a law to do it, what comes of that? If your law prevail, only this; that, as much as you raise silver, you debase gold, (for they are in the condition of two things, put in opposite scales, as much as the one rises the other falls) and then your gold will be carried away with so much clear loss to the kingdom, as you raise silver and debase gold by your law, below their natural value. If you raise gold in proportion to silver, the same effect follows.

I say, raise silver in respect of gold, and gold in proportion to silver. For when you would raise the value of money, fancy what you will, it is but in respect of something you would change it for; and is done only when you can make a less quantity of the metal, which your money is made of, change for a greater quantity of that thing which you would raise it to.

The effect indeed, and ill consequence of raising either of these two metals, in respect of the other, is more easily observed, and sooner found in raising gold than silver coin; because your accounts being kept, and your reckonings all made in pounds, shillings, and pence, which are denominations of silver coins, or numbers of them; if gold be made current at a rate above the free and market value of those two metals, every one will easily perceive the inconvenience. But there being a law for it, you cannot refuse the gold in payment for so much. And all the money, or bullion people will carry beyond sea from you, will be in silver; and the money, or bullion, brought in, will be in gold. And just the same will happen, when your silver is raised and gold debased, in respect of one another, beyond their true and natural proportion: (natural proportion or value I call that respective rate they find, any where, without the prescription of law.) For

then silver will be that which is brought in, and gold will be carried out; and that still with loss to the kingdom, answerable to the over-value set by the law. Only as soon as the mischief is felt, people will (do what you can) raise the gold to its natural value. For your accounts and bargains being made in the denomination of silver money; if, when gold is raised above its proportion, by the law, you cannot refuse it in payment (as if the law should make a guinea current at 22s. 6d.) you are bound to take it at that rate in payment. But if the law should make guineas current at 20s. he that has them is not bound to pay them away at that rate, but may keep them if he pleases, or get more for them, if he can: yet, from such a law, one of these things will follow. Either, 1st, The law forces them to go at 20s. and then being found passing at that rate, foreigners make their advantage of it: Or, 2dly, People keep them up, and will not part with them at the legal rate, understanding them really to be worth more, and then all your gold lies dead, and is of no more use to trade, than if it were all gone out of the kingdom: Or, 3dly, It passes for more than the law allows, and then your law signifies nothing, and had been better let alone. Which way soever it succeeds, it proves either prejudicial, or ineffectual. If the design of your law takes place, the kingdom loses by it: if the inconvenience be felt and avoided, your law is eluded.

Money is the measure of commerce, and of the rate of every thing, and therefore, ought to be kept (as all other measures) as steady and invariable as may be. But this cannot be, if your money be made of two metals, whose proportion, and, consequently, whose price, constantly varies in respect of one another. Silver, for many reasons, is the fittest of all metals to be this measure; and therefore generally made use of for money. But then it is very unfit and inconvenient that gold, or any other metal, should be made current, legal money, at a standing, settled rate. This is to set a rate upon the varying value of things by law, which justly cannot be done; and is, as I have showed, as far as it prevails, a constant damage and prejudice to the country, where it is practised. Suppose fifteen to one be now the exact par between gold and silver, what law can make it lasting; and establish it so, that next year, or twenty years hence, this shall be the just value of gold to silver; and that one ounce of gold shall be just worth fifteen ounces of silver, neither more or less? It is possible, the East-India trade sweeping away great sums of gold, may make it scarcer in Europe. Perhaps the Guinea trade, and mines of Peru, affording it in greater abundance, may

make it more plentiful; and so its value, in respect of silver, come on the one side to be as sixteen, or, on the other, as fourteen to one. And can any law you shall make alter this proportion here, when it is so every-where else, round about you? If your law set it at fifteen, when it is at the free market rate, in the neighbouring countries, as sixteen to one; will they not send hither their silver to fetch away your gold, at one-sixteen loss to you? Or if you will keep its rate to silver as fifteen to one, when in Holland, France, and Spain, its market value is but fourteen; will they not send hither their gold, and fetch away your silver, at one-fifteen loss to you? This is unavoidable, if you will make money of both gold and silver, at the same time, and set rates upon them by law, in respect of one another.

What then! (will you be ready to say) Would you have gold kept out of England? Or, being here, would you have it useless to trade; and must there be no money made of it? I answer, quite the contrary. It is fit the kingdom should make use of the treasure it has. It is necessary your gold should be coined, and have the king's stamp upon it, to secure men in receiving it, that there is so much gold in each piece. But it is not necessary that it should have a fixed value set on it, by public authority: it is not convenient that it should, in its varying proportion, have a settled price. Let gold, as other commodities, find its own rate. And when, by the king's image and description, it carries with it a public assurance of its weight and fineness; the gold money, so coined, will never fail to pass at the known market rates, as readily as any other species of your money. Twenty guineas, though designed at first for 20*l.* go now as current for 21*l.* 10*s.* as any other money, and sometimes for more, as the rate varies. The value or price, of any thing, being only the respective estimate it bears to some other, which it comes in competition with, can only be known by the quantity of the one, which will exchange for a certain quantity of the other. There being no two things in nature, whose proportion and use does not vary, it is impossible to set a standing, regular price between them. The growing plenty, or scarcity, if either in the market, (whereby I mean the ordinary place, where they are to be had in traffic) or the real use, or changing fashion of the place, bringing either of them more into demand than formerly, presently varies the respective value of any two things. You will as fruitlessly endeavour to keep two different things steadily at the same price one with another, as to keep two things in an æquilibrium, where their varying weights depend on different causes. Put a piece of sponge in one scale, and an exact

counterpoise of silver in the other; you will be mightily mistaken if you imagine, that because they are to-day equal, they shall always remain so. The weight of the sponge varying with every change of moisture in the air, the silver, in the opposite scale, will sometimes rise, and sometimes fall. This is just the state of silver and gold, in regard of their mutual value. Their proportion, or use, may, nay, constantly does vary, and with it their price. For, being estimated one, in reference to the other, they are, as it were, put in opposite scales; and as the one rises the other falls, and so on the contrary.

Farthings, made of a baser metal, may on this account too deserve your consideration. For whatsoever coin you make current above the intrinsic value, will always be damage to the public, whoever get by it. But of this I shall not, at present, enter into a more particular inquiry; only this I will confidently affirm, that it is the interest of every country, that all the current money of it should be of one and the same metal; that the several species should be of the same alloy, and none of a baser mixture: and that the standard, once thus settled, should be inviolably and immutably kept to perpetuity. For, whenever that is altered, upon what pretence soever, the public will lose by it.

Since then it will neither bring us in more money, bullion, or trade; nor keep what we have here, nor hinder our weighty money, of what denomination soever, from being melted; to what purpose should the kingdom be at the charge of coining all our money anew? For I do not suppose any body can propose, that we should have two sorts of money, at the same time, one heavier, and the other lighter, as it comes from the mint; that is very absurd to imagine. So that if all your old money must be coined over again; it will indeed be some advantage, and that a very considerable one, to the officers of the mint. For they being allowed 3s. 6d. (it should be sixteen-pence half-penny), for the coinage of every pound troy, which is very near five and a half per cent. if our money be six millions, and must be coined all over again, it will cost the nation to the mint three hundred thirty thousand pounds. One hundred thirty thousand pounds, if the clipped money must escape, because it is already as light as your new standard; do you not own, that this design of new coinage is just of the nature of clipping?

This business of money and coinage is by some men, and amongst them some very ingenious persons, thought a great mystery, and very hard to be

understood. Not that truly in itself it is so, but because interested people, that treat of it, wrap up the secret, they make advantage of, in a mystical, obscure, and unintelligible way of talking: which men, from a pre-conceived opinion of the difficulty of the subject, taking for sense, in a matter not easy to be penetrated, but by the men of art, let pass for current, without examination. Whereas, would they look into those discourses, and inquire what meaning their words have, they would find, for the most part, either their positions to be false, their deductions to be wrong, or (which often happens) their words to have no distinct meaning at all. Where none of these be, there their plain, true, honest sense, would prove very easy and intelligible, if expressed in ordinary and direct language.

That this is so, I shall show, by examining a printed sheet on this subject: intituled, "Remarks on a paper given in to the lords, &c."

Rem. "It is certain, that what place soever will give most for silver by weight, it will thither be carried and sold: and if of the money which now passes in England, there can be 5s. 5d. the ounce given for standard silver at the mint, when but 5s. 4d. of the very same can be given elsewhere for it, it will certainly be brought to the mint; and when coined, cannot be sold (having one penny over-value set upon it by the ounce) for the same that other plate may be bought for, so will be left unmelted; at least it will be the interest of any exporter to buy plate to send out, before money; whereas now it is his interest to buy money to send out before plate."

Answ. The author would do well to make it intelligible, how, "of the money that now passes in England at the mint can be given 5s. 5d. the ounce for standard silver, when but 5s. 4d. of the same money can be given elsewhere for it." Next, "How it has one penny over-value set upon it by the ounce, so that, when coined, it cannot be sold." This, to an ordinary reader, looks very mysterious; and, I fear, is so, as either signifying nothing at all, or nothing that will hold. For,

I ask, Who it is at the mint, that "can give 5s. 5d. the ounce for standard silver, when nobody else can give above 5s. 4d.?" Is it the king, or is it the master-worker, or any of the officers? For to give 5s. 5d. for what will yield but 5s. 4d. to any body else, is to give one sixty-fifth part more than it is worth. For so much every thing is worth, as it will yield. And I do not see how this can turn to account to the king, or be borne by any body else.

I ask, how a penny over-value can be set upon it by the ounce, "so that it cannot be sold?" This is so mysterious, that I think it near impossible. For

an equal quantity of standard silver will always be just worth an equal quantity of standard silver. And it is utterly impossible to make sixty-four parts of standard silver equal to, or worth, sixty-five parts of the same standard silver; which is meant by “setting a penny over-value upon it by the ounce,” if that has any meaning at all. Indeed, by the workmanship of it, sixty-four ounces of standard silver may be made not only worth sixty-five ounces, but seventy or eighty. But the coinage, which is all the workmanship here, being paid for by a tax, I do not see how that can be reckoned at all; or if it be, it must raise every 5s. 4d. coined to above 5s. 5d. If I carry sixty-four ounces of standard silver in bullion to the mint to be coined, shall I not have just sixty-four ounces back again for it in coin? And if so, can these sixty-four ounces of coined standard silver be possibly made worth sixty-five ounces of the same standard silver uncoined, when they cost me no more; and I can, for barely going to the mint, have sixty-four ounces of standard silver in bullion turned into coin? Cheapness of coinage in England, where it costs nothing, will indeed make money be sooner brought to the mint, than any where else; because there I have the convenience of having it made into money for nothing. But this will no more keep it in England than if it were perfect bullion. Nor will it hinder it from being melted down, because it cost no more in coin than in bullion: and this equally, whether your pieces of the same denomination be lighter, heavier, or just as they were before. This being explained, it will be easy to see, whether the other things said in the same paragraph be true or false, and particularly, whether “it will be the interest of every exporter to buy plate to send out before money.”

Rem. “It is only barely asserted, That if silver be raised at the mint, that it will rise elsewhere above it; but can never be known till it be tried.”

Ans. The author tells us, in the last paragraph, that silver, that is worth “but 5s. 2d. per ounce at the mint, is worth 5s. 4d. elsewhere.” This how true, or what inconvenience it hath, I will not here examine. But, be the inconvenience of it what it will, this raising the money he proposes as a remedy: and to those who say, upon raising our money, silver will rise too, he makes this answer, that “it can never be known whether it will or no, till it be tried.” To which I reply, That it may be known as certainly without trial, as it can, that two pieces of silver that weighed equally yesterday, will weigh equally again to-morrow in the same scales.

“There is silver,” says our author, “whereof an ounce (i. e. 480 grains) will change for 5s. 4d.” (i. e. 496 grains) of our standard silver coined. To-morrow you coin your money lighter; so that then 5s. 4d. will have but 472 grains of coined standard silver in it. Can it not then be known, without trial, whether that ounce of silver, which to-day will change for 496 grains of standard silver coined, will change to-morrow but for 472 grains of the same standard silver coined? Or can any one imagine that 480 grains of the same silver, which to-day are worth 496 grains of our coined silver, will to-morrow be worth but 472 grains of the same silver, a little differently coined? He that can have a doubt about this till it be tried, may as well demand a trial to be made, to prove, that the same thing is æquiponderant, or equivalent to itself. For I think it is as clear, that 472 grains of silver are æquiponderant to 496 grains of silver, as that an ounce of silver, that is to-day worth 496 grains of standard silver, should to-morrow be worth but 472 grains of the same standard silver, all circumstances remaining the same, but the different weight of the pieces stamped: which is that our author asserts, when he says, That it is only barely asserted, &c. What has been said to this, may serve also for an answer to the next paragraph. Only I desire it may be taken notice of, that the author seems to insinuate, that silver goes not in England, as in foreign parts, by weight; which is a very dangerous, as well as false position; and which, if allowed, may let into our mint what corruption and debasing of our money one pleases.

Rem. “That our trade hath heretofore furnished us with an overplus, brought home in gold and silver, it is true: but that we bring home from any place more goods than we now export to it, I do not conceive to be so. And more goods might be sent to those parts; but by reason of the great value of silver in this part of the world, more money is to be got by exporting silver, than by any other thing that can be sent; and that is the reason of it. And for its being melted down, and sent out, because it is so heavy, is not by their paper denied.”

Answ. “That we bring home from any place more goods than we now export, (the author tells us) he doth not conceive.”

Would he had told us a reason for his conceit. But since the money of any country is not presently to be changed, upon any private man’s groundless conceit, I suppose this argument will not be of much weight with many men. I make bold to call it a groundless conceit: for if the author please to remember the great sums of money are carried every year to the

East-Indies, for which we bring home consumable commodities; (though I must own it pays us again with advantage) or if he will examine, how much only two commodities, wholly consumed here, cost us yearly in money, (I mean Canary wine and currants) more than we pay for, with goods exported to the Canaries and Zant; besides the over-balance of trade upon us in several other places, he will have little reason to say, “he doth not conceive we bring home from any place more goods than we now export to it.”

“As to what he says concerning the melting down and exporting our money, because it is heavy:” if by heavy he means, because our crown-pieces (and the rest of our species of money in proportion) are 23 or 24 grains heavier than he would have them coined: this whoever grants it, I deny, upon grounds, which, I suppose, when examined, will be found clear and evident.

Indeed, when your debts beyond sea, to answer the over-balance of foreign importations, call for your money, it is certain the heavy money, which has the full standard weight, will be melted down and carried away: because foreigners value not your stamp, or denomination, but your silver.

He would do well to tell us what he means by “the great value of silver in this part of the world.” For he speaks of it as a cause that draws away our money more now than formerly, or else it might as well have been omitted as mentioned in this place: and if he mean by this part of the world, England; it is scarce sense to say, that the great value of silver in England should draw silver out of England. If he means the neighbouring countries to England, he should have said it, and not doubtfully this part of the world. But let him, by this part of the world, mean what he will, I dare say every one will agree, that silver is not more valued in this, than any other part of the world; nor in this age, more than in our grandfathers days.

I am sorry, if it be true, what he tells us, That “more money is to be got by exportation of silver, than by any other thing that can be sent.” This is an evidence, that “we bring home more goods than we export.” For till that happens, and has brought us in debt beyond sea, silver will not be exported; but the overplus of people’s gain, being generally laid up in silver, it will be brought home in silver: and so our people will value it as much as any other, in this part of the world.

The truth of the case in short is this. Whenever we, by a losing trade, contract debts with our neighbours, they will put a great value on our silver, and “more money will be got by transporting silver than any thing can be

sent;" which comes about thus: Suppose that by an over-balance of their trade (whether by a sale of pepper, spices, and other East-India commodities, it matters not) we have received great quantities of goods, within these two or three months from Holland, and sent but little thither; so that the accounts balanced between the inhabitants of England and the United Provinces, we of England were a million in their debt; what would follow from hence? This: That these Dutch creditors, desiring to have what is due to them, give orders to their factors and correspondents here to return it to them. For inquiring as we do, what are the effects of an over-balance of trade, we must not suppose they invest their debts in commodities, and return their effects that way. A million then being to be returned from England to Holland in money, every one seeks bills of exchange; but Englishmen not having debts in Holland to answer this million, or any the least part of it, bills are not to be got. This presently makes the exchange very high; upon which the bankers, &c. who have the command of great quantities of money and bullion, send that away to Holland in specie, and so take money here to pay it again there, upon their bills, at such a rate of exchange as gives them five, ten, fifteen, &c. per cent. profit: and thus, sometimes a 5s. piece of our milled money may truly be said to be worth 5s. 3d. 4d. 6d. 9d. in Holland. And if this be "the great value of silver in this part of the world," I easily grant it him. But this great value is to be remedied, not by the alteration of our mint, but by the regulation and balance of our trade. For be your coin what it will, our neighbours, if they over-balance us in trade, will not only have a great value for our silver, but get it too; and there will be "more to be got, by exporting silver to them, than by any other thing can be sent."

Rem. "The alterations of the coins in Spain and Portugal are no way at all like this. For there they altered in denomination near half, to deceive those they paid, with paying those to whom they owed one ounce of silver, but half an ounce for it. But, in the alteration here designed, to whoever an ounce of silver was owing, an ounce will be paid in this money; it being here only designed, that an ounce of money should equal an ounce of silver in value, at home, as well as abroad, which now it does not."

Answ. In this paragraph the author confesses the alteration of the coin in Spain and Portugal was a cheat; but the "alteration here designed, he says, is not:" but the reason he gives for it is admirable: viz. "Because they there altered in denomination near half," and here denomination is altered but

five per cent. for so in truth it is, whatever be designed. As if fifty per cent. were a cheat, but, five per cent. were not; because perhaps less perceivable. For the two things, that are pretended to be done here by this new coinage, I fear will both fail, viz. 1. That “to whomsoever an ounce of silver is owing, an ounce of silver shall be paid in this money.” For when an ounce of silver is coined, as is proposed, into 5s. 5d. (which is to make our money five per cent. lighter than it is now) I that am to receive 100l. per ann. fee-farm rent; shall I in this new money receive 105l. or barely 100l.? The first I think will not be said. For if by law you have made it 100l. it is certain the tenant will pay me no more. If you do not mean that 400 crowns, or 2000 shillings of your new coin shall be 100l. but there must be five per cent in tale added to every 100, you are at the charge of new coinage to no other purpose but to breed confusion. If I must receive 100l. by tale of this new money for my fee-farm rent, it is demonstration that I lose five ounces per cent. of the silver that was due to me. This a little lower he confesses in these words, “That where a man has a rent-sec, that can never be more, this may somewhat affect it, but so very little that it will scarce ever at all be perceived.” This very little is five per cent. and if a man be cheated of that, so he perceives it not, it goes for nothing. But this loss will not affect only such rents as can never be more, but all payments whatsoever, that are contracted for, before this alteration of our money.

If it be true what he affirms, “That an ounce of money doth equal an ounce of silver in value abroad, but not at home;” then this part of the undertaking will also fail. For I deny that the stamp on our money does any more debase it here at home, than abroad, or make the silver in our money not equal in value to the same weight of silver every-where. The author would have done well to have made it out, and not left so great a paradox only to the credit of a single assertion.

Rem. “And for what is said in this bill to prevent exportation, relates only to the keeping in our coin and bullion, and leaves all foreign to be exported still.”

Answ. What the author means by our own and foreign bullion, will need some explication.

Rem. There is now no such thing as payments in “weighty and milled money.”

Answ. I believe there are very few in town who do not very often receive a milled crown for 5s. and a milled half-crown for 2s. 6d. But he means, I

suppose, in great and entire sums of milled money. But I ask, if all the clipped money were called in, whether then all the payments would not be in weighty money; and that not being called in, whether if it be lighter than your new milled money, the new milled money will not be melted down as much as the old? Which I think the author there confesses, or else I understand him not.

Rem. "Nor will this any way interrupt trade; for trade will find its own course; the denomination of money in any country no way concerning that."

Answ. The denomination to a certain weight of money, in all countries, concerns trade; and the alteration of that necessarily brings disturbance to it.

Rem. "For if so be it occasions the coining more money."

Answ. He talks as if it would be "the occasion of coining more money." Out of what? out of money already coined, or out of bullion? For I would be glad to know where it is.

Rem. "It may be some gain to those that will venture to melt down the coin, but very small loss (if any) to those that shall be paid in the new: it is not to be denied, but that where any man has a rent-sec, that can never be more, this may somewhat affect it; but so very little, it will scarce ever at all be perceived."

Answ. As much as it will be gain to melt down their coin, so much loss will it be to those who are paid in new, viz. five per cent. which, I suppose, is more than the author would be willing to lose, unless he get by it another way.

Rem. "And if the alteration designed should have the effect of making our native commodities any ways dearer —."

Answ. Here our author confesses, that proportionably as your money is raised, the price of other things will be raised too. But to make amends, he says,

Rem. "It does at the same time make the land which produces them of more than so much more in value."

Answ. This "more than so much more in value," is more than our author, or any body else for him, will ever be able to make out.

The price of things will always be estimated by the quantity of silver given in exchange for them. And if you make your money less in weight, it must be made up in tale. This is all this great mystery of raising money, and raising land. For example, the manor of Blackacre would yesterday have yielded one hundred thousand crowns, which crown pieces, let us suppose

numero rotundo to weigh each of them an ounce of standard silver. To-day, your new coin comes in play, which is five per cent. lighter. There is your money raised: the land now at sale yields one hundred and five thousand crowns, which is just the same one hundred thousand ounces of standard silver. There is the land raised. And is not this an admirable invention, for which the public ought to be at above one hundred thousand pounds charge for new coinage, and all your commerce put in disorder? And then to recommend this invention, you are told, as a great secret, That, "had not money, from time to time, been raised in its denomination, lands had not so risen too:" which is to say, Had not your money been made lighter, fewer pieces of it would have bought as much land as a greater number does now.

Rem. "The loss of payments, there spoken of, will, in no sort, be so great, as if the parties, to whom these debts are owing, were now bound to receive them in the money that now passes, and then to melt the same down; so at this they will have no cause to complain."

Answ. A very good argument! the clippers have robbed the public of a good part of their money (which men will, some time or other, find in the payments they receive) and it is desired the mint may have a liberty to be beforehand with those, to whom debts are owing. They are told, they will have no reason to complain of it, who suffer this loss, because it is not so great as the other. The damage is already done to the public, by clipping. Where at last it will light, I cannot tell. But men who receive clipped money, not being forced to melt it down, do not yet receive any loss by it. When clipped money will no longer change for weighty, then those who have clipped money in their hands, will find the loss of it.

Rem. "It will make the customs better paid, because there will be more money."

Answ. That there will be more money in tale, it is possible: that there will be more money in weight and worth, the author ought to show. And then, whatever becomes of the customs, (which I do not hear are unpaid now) the king will lose in the excise above thirty thousand pounds per annum. For in all taxes where so many pounds, shillings, or pence are determined by the law to be paid, there the king will lose five per cent. The author here, as in other places, gives a good reason for it: for, "his majesty being to pay away this money by tale, as he receives it, it will be to him no loss at all."

As if my receiving my rents in full tale, but in money of undervalue five per cent. were not so much loss to me, because I was to pay it away again by tale. Try it at 50 per cent. the odds only is, That one being greater than the other, would make more noise. But the author's great refuge in this is, That it will not be perceived.

Rem. "If all foreign commodities were to be purchased with this new species of money sent out; we agree, That with 100l. of it there could not be so much silver, or other commodities bought, as with 100l. in crown-pieces as now coined, because they would be heavier; and all coin, in any kingdom but where it is coined, only goes by weight; and for the same weight of silver, the same every where still will be bought; and so there will, with the same quantity of goods. And if those goods should cost five per cent. more here in England than heretofore, and yield but the same money (we mean by the ounce abroad) the same money, brought home and coined, will yield the importer five per cent. more at the mint than it heretofore could do, and so no damage to the trader at all."

Answ. Here truth forces from the author a confession of two things, which demonstrate the vanity and uselessness of the project. 1. That upon this change of your coin, foreign goods will be raised. Your own goods will cost five per cent. more. So that goods of all kinds being thereupon raised; wherein consists the raising of your money, when an ounce of standard silver, however minced, stamped, or denominated, will buy no more commodities than it did before? This confession also shows the falsehood of that dangerous supposition, That money, "in the kingdom where it is coined, goes not by weight," i. e. is not valued by its weight.

Rem. "It is true, the owners of silver will find a good market for it, and no others will be damaged; but, on the contrary, the making plenty of money will be an advantage to all."

Answ. I grant it true that if your money were really raised five per cent. the owners of silver would get so much by it, by bringing it to the mint to be coined. But since, as is confessed, commodities will (upon this raising your money) be raised to five per cent. this alteration will be an advantage to nobody, but the officers of the mint, and hoarders of money.

Rem. "When standard silver was last raised at the mint, (which it was from 5s. to 5s. and 2d. the ounce, in the 43d of Eliz.) and for above forty years after, silver uncoined was not worth above 4s. 10d. the ounce, which occasioned much coining; and of money, none in those days was exported: whereas silver now is worth but the very same 5s. 2d. the ounce still at the mint, and is worth 5s. 4d. elsewhere. So that if this bill now with the lords does not happen to pass, there can never any silver be ever any more coined at the mint; and all the milled money will, in a very little time more, be destroyed."

Answ. The reason of so much money coined in queen Elizabeth's time, and afterwards, was not the lessening of your crown pieces from 480 to 462 grains, and so proportionably all the rest of your money, (which is that the author calls raising standard silver from 5s. to 5s. 2d. the ounce) but from the over-balance of your trade, bringing them in plenty of bullion, and keeping it here.

How standard silver (for if the author speaks of other silver, it is a fallacy) should be worth its own weight in standard silver at the mint, (i. e. 5s. 2d. the ounce) and be worth more than its own weight in standard silver, (i. e. 5s. 4d. the ounce) in Lombard-street, is a paradox that nobody, I think, will be able to comprehend, till it be better explained. It is time to give off coining, if the value of standard silver be lessened by it; as really it is, if an ounce of coined standard silver will not exchange for an ounce of uncoined standard silver, unless you add 15 or 16 grains overplus to it: which is what the author would have taken upon his word, when he says, "Silver is worth five shillings four-pence elsewhere."

Five shillings four-pence of money coined at the mint, the author must allow to be at least 495 grains. An ounce is but 480 grains. How then an ounce of uncoined standard silver can be worth five shillings four-pence (i. e. how 480 grains of uncoined standard silver can be worth 495 grains of the same standard silver, coined into money) is unintelligible; unless the coinage of our mint lessens the value of standard silver.

"SIR,

"COIN and interest are two things of so great moment to the public, and of so great concernment in trade, that they ought very accurately to be examined into, and very nicely weighed, upon any proposal of alteration to be made in them. I pretend not to have treated of them here as they deserve. That must be the work of an abler hand; I have said something on these subjects, because you required it. And, I hope, the readiness of my obedience will excuse to you the faults I have committed, and assure you that I am,

"SIR,

"Your most humble servant,
JOHN LOCKE."

FURTHER CONSIDERATIONS CONSIDERING RAISING THE VALUE OF MONEY

WHEREIN

MR. LOWNDES'S ARGUMENTS FOR IT, IN HIS LATE REPORT
CONTAINING AN "ESSAY FOR THE AMENDMENT OF THE SILVER
COINS," ARE PARTICULARLY EXAMINED.

CONTENTS

TO THE RIGHT HONOURABLE SIR JOHN SOMMERS, KNT.

THE PREFACE.

FURTHER CONSIDERATIONS CONCERNING RAISING THE VALUE
OF MONEY.

TO THE RIGHT HONOURABLE SIR JOHN SOMMERS, KNT.

LORD KEEPER OF THE GREAT SEAL OF ENGLAND AND ONE OF
HIS MAJESTY'S MOST HONOURABLE PRIVY-COUNCIL.

MY LORD,

The papers I here present your lordship, are in substance the same with one which I delivered to you, in obedience to the commands I received, by your lordship, from their excellencies, the lords justices; and with another, which I writ in answer to some questions your lordship was pleased to propose to me, concerning our coin. The approbation your lordship was pleased to give them then, has been an encouragement to me to revise them now, and put them in an order, fitter to comply with their desires, who will needs have me print something at this time on this subject: and could any thing of this nature be received with indifferency in this age, the allowance they have had from your lordship, whose great and clear judgment is, with general consent and applause, acknowledged to be the just measure of right and wrong amongst us, might make me hope that they might pass in the world without any great dislike.

However, since your lordship thought they might be of use to clear some difficulties, and rectify some wrong notions that are taken up about money, I have ventured them into the world, desiring no mercy to any erroneous positions, or wrong reasonings, which shall be found in them. I shall never knowingly be of any, but truth's and my country's side; the former I shall always gladly embrace and own, whoever shows it me; and in these papers, I am sure, I have no other aim, but to do what little I can for the service of my country. Your lordship's so evidently preferring that to all other considerations, does, in the eyes of all men, sit so well upon you, that my ambition will not be blamed, if I in this propose to myself so great an example, and in my little sphere am moved by the same principle.

I have a long time foreseen the mischief and ruin coming upon us by clipped money, if it were not timely stopped: and had concern enough for the public, to make me print some thoughts touching our coin, some years since. The principles I there went on, I see no reason to alter: they have, if I

mistake not, their foundation in nature, and will stand; they have their foundation in nature, and are clear: and will be so, in all the train of their consequences, throughout this whole (as it is thought) mysterious business of money, to all those, who will but be at the easy trouble of stripping this subject of hard, obscure, and doubtful words, where-with men are often misled, and mislead others. And now the disorder is come to extremity, and can no longer be played with, I wish it may find a sudden and effectual cure, not a remedy in sound and appearance, which may flatter us on to ruin, in continuation of a growing mischief, that calls for present help.

I wish too, that the remedy may be as easy as possible; and that the cure of this evil be not ordered so, as to lay a great part of the burden unequally on those who have had no particular hand in it. Westminsterhall is so great a witness of your lordship's unbiassed justice, and steady care to preserve to every one their right, that the world will not wonder you should not be for such a lessening our coin, as will, without any reason, deprive great numbers of blameless men of a fifth part of their estates, beyond the relief of Chancery. I hope this age will escape so great a blemish. I doubt not but there are many, who, for the service of their country, and for the support of the government, would gladly part with, not only one fifth, but a much larger portion of their estates. But, when it shall be taken from them, only to be bestowed on men, in their and the common opinion, no better deserving of their country than themselves, unless growing exceedingly rich by the public necessities, whilst every body else finds his fortune straitened by them, be a public merit, that deserves a public and signal reward; this loss of one fifth of their debts and income will sit heavy on them, who shall feel it, without the alleviation of any profit, or credit, that will thereby accrue to the nation, by such a lessening of our coin.

If any one ask, how I, a retired, private man, come at this time to meddle with money and trade, for they are inseparable? I reply that your lordship, and the other great men, that put me upon it, are answerable for it; whether what I say be to the purpose, or no, that I myself am answerable for. This I can answer to all the world, that I have not said any thing here without a full persuasion of its truth; nor with any other motive, or purpose, than the clearing of this artificially perplexed, rather than in itself mysterious, subject, as far as my poor talent reaches. That which, perhaps, I shall not be so well able to answer to your lordship and myself, is the liberty I have taken, in such an address as this, to profess that I am,

MY LORD,
Your lordship's most humble, and most obedient servant,
JOHN LOCKE.

THE PREFACE.

Though Mr. Lowndes and I differ in the way, yet, I assure myself, our end is the same; and that we both propose to ourselves the service of our country. He is a man known so able in the post he is in, to which the business of money peculiarly belongs; and has showed himself so learned in the records and matters of the mint, and so exact in calculations and combinations of numbers relating to our coin, either already in use, or designed by him, that I think I should have troubled the public no more on this subject, had not he himself engaged me in it; and brought it to that pass, that either I must be thought to renounce my own opinion, or must publicly oppose his.

Whilst his treatise was yet a manuscript, and before it was laid before those great persons, to whom it was afterwards submitted, he did me the favour to show it to me; and made me the compliment, to ask me my opinion of it. Though we had some short discourse on the subject, yet the multiplicity of his business whilst I staid in town, and my health, which soon after forced me out of it, allowed us not an occasion to debate any one point thoroughly, and bring it to an issue. Before I returned to town, his book was in the press, and finished, before I had an opportunity to see Mr. Lowndes again. And here he laid a new obligation on me, not only in giving me one of them, but telling me when I received it from his hands, that it was the first he had parted with to any body. I then went over it a second time, and having more leisure to consider it, I found there were a great many particulars in it drawn out of ancient records, not commonly known, wherewith he had obliged the world. These, which very pleasingly entertained me, though they prevailed not on me to be of his opinion everywhere, yet, joined with the great civilities he had shown me, left me in a disposition so little inclined to oppose any thing in it, that I should rather have chosen to acknowledge myself in print, to be his convert, if his arguments had convinced me, than to have troubled the world with the reasons why I dissent from him.

In this disposition, my pen rested from meddling any farther with this subject whilst I was in town; soon after, my own health, and the death of a friend, forced me into the country; and the business occasioned thereby, and my own private affairs, took up all my time at my first coming thither; and had continued to do so, had not several repeated intimations and instances

from London, not without some reproaches of my backwardness, made me see, that the world concerned me particularly in Mr. Lowndes's postscript, and expected something from me on that occasion.

Though possibly I was not wholly out of his mind when Mr. Lowndes writ that invitation, yet I shall not make myself the compliment, to think I alone am concerned in it. The great importance of the matter, made him desire every one to contribute what he could to the clearing of it, and setting it in a true light. And I must do him this right, to think, that he prefers the public good to his private opinion; and therefore is willing his proposals and arguments should with freedom be examined to the bottom; that, if there be any mistake in them, nobody may be misled by his reputation and authority, to the prejudice of his country. Thus I understand his postscript, and thus I shall endeavour to comply with it. I shall, to the best of my skill, examine his arguments with all respect to him, and fidelity to truth, as far as I can discover it. The frankness of his proceeding in particular with me, assures me he is so great a lover of truth and right, that he will not think himself injured when that is defended; and will be glad, when it is made plain, by whose hand soever it be.

This is what has made me publish these papers, without any derogation to Mr. Lowndes, or so much as a suspicion that he will take it amiss. I judge of him by myself. For I shall think myself obliged to any one, who shall show me, or the public, any material mistake in any thing I have here said, whereon any part of the question turns.

FURTHER CONSIDERATIONS CONCERNING RAISING THE VALUE OF MONEY.

Silver is the instrument and measure of commerce in all the civilized and trading parts of the world.

It is the instrument of commerce by its intrinsic value.

The intrinsic value of silver, considered as money, is that estimate which common consent has placed on it, whereby it is made equivalent to all other things, and consequently is the universal barter, or exchange, which men give and receive for other things they would purchase or part with, for a valuable consideration; and thus, as the wise man tells us, money answers all things.

Silver is the measure of commerce by its quantity, which is the measure also of its intrinsic value. If one grain of silver has an intrinsic value in it, two grains of silver has double that intrinsic value, and three grains treble, and so on proportionably. This we have daily experience of, in common buying and selling; for if one ounce of silver will buy, i. e. is of equal value to, one bushel of wheat, two ounces of silver will buy two bushels of the same wheat, i. e. has double the value.

Hence it is evident, that an equal quantity of silver is always of equal value to an equal quantity of silver.

This, common sense, as well as the market, teaches us; for silver being all of the same nature and goodness, having all the same qualities, it is impossible, but it should in the same quantity have the same value; for if a less quantity of any commodity be allowed to be equal in value to a greater quantity of the same sort of commodity, it must be for some good quality it has which the other wants. But silver to silver has no such difference.

Here it will be asked, is not some silver finer than other?

I answer, one mass of mixed metal not discerned by the eye to be any thing but silver, and therefore called silver, may have a less mixture of baser metal in it than another, and so in common speech is said to be finer silver; so ducatoons, having a less mixture of copper in them than our English coin has, are said to be finer silver. But the truth is, the silver that is in each is equally fine, as will appear when the baser metal is separate from it; and it is of this pure, or finer silver, I must be understood, when I mention silver;

not regarding the copper or lead, which may chance to be mixed with it. For example: Take an ounce of silver, and one fourth of an ounce of copper, and melt them together; one may say of the whole mass, that it is not fine silver; but it is true, there is an ounce of fine silver in it; and though this mass, weighing one ounce and a quarter, be not of equal value to one ounce and a quarter of fine silver, yet the ounce of fine silver in it is, when separate from the copper, of equal value to any other ounce of silver.

By this measure of commerce, viz. the quantity of silver, men measure the value of all other things. Thus to measure what the value of lead is to wheat, and of either of them to a certain sort of linen cloth, the quantity of silver that each is valued at, or sells for, needs only be known; for if a yard of cloth be sold for half an ounce of silver, a bushel of wheat for one ounce, and a hundred weight of lead for two ounces; any one presently sees and says, that a bushel of wheat is double the value of a yard of that cloth, and but half the value of an hundred weight of lead.

Some are of opinion, that this measure of commerce, like all other measures, is arbitrary, and may at pleasure be varied, by putting more or fewer grains of silver, in pieces of a known denomination, v. g. by making a penny, or a shilling lighter, or heavier in silver, in a country where these are known denominations of pieces of silver money. But they will be of another mind, when they consider, that silver is a measure of a nature quite different from all other. The yard or quart men measure by, may rest indifferently in the buyer's or seller's, or a third person's hands, it matters not whose it is. But it is not so in silver: it is the thing bargained for, as well as the measure of the bargain; and in commerce passes from the buyer to the seller, as being in such a quantity, equivalent to the thing sold: and so it not only measures the value of the commodity it is applied to, but is given in exchange for it, as of equal value. But this it does (as is visible) only by its quantity, and nothing else; for it must be remembered, that silver is the instrument, as well as measure of commerce, and is given in exchange for the things traded for: and, every one desiring to get as much as he can of it, for any commodity he sells, it is by the quantity of silver he gets for it in exchange, and by nothing else, that he measures the value of the commodity he sells.

The coining of silver, or making money of it, is the ascertaining of its quantity by a public mark, the better to fit it for commerce.

In coined silver or money, there are these three things which are wanting in other silver. 1. Pieces of exactly the same weight and fineness. 2. A stamp set on those pieces by the public authority of that country. 3. A known denomination given to these pieces by the same authority.

The stamp is a mark, and as it were, a public voucher, that a piece of such denomination is of such a weight, and of such a fineness, i. e. has so much silver in it.

That precise weight and fineness, by law appropriated to the pieces of each denomination, is called the standard.

Fine silver is silver without the mixture of any baser metal.

Alloy is baser metal mixed with it.

The fineness of any metal appearing to be silver, and so called, is the proportion of silver in it, compared with what there is in it of baser metals.

The fineness of standard silver in England, is eleven parts silver and one part copper, near: or, to speak more exactly, the proportion of silver to copper, is as 111 to 9. Whatever piece, or mass, has in it, of baser metal, above the proportion of 9 to 111, is worse, or coarser than standard. Whatever mass of metal has a less proportion than 9 to 111, of baser metal in it, is better or finer than standard.

Since silver is the thing sought for, and would better serve for the measure of commerce, if it were unmixed, it will possibly be asked, “why any mixture of baser metal is allowed in money, and what use is there of such alloy, which serves to make the quantity of silver less known in the several coins of different countries?”

Perhaps it would have been better for commerce in general, and more convenient for all their subjects, if the princes every-where, or at least in this part of the world, would at first have agreed on the fineness of the standard to have been just one-twelfth alloy, in round numbers; without those minuter fractions which are to be found in the alloy of most of the coin of the several distinct dominions of this part of the world. Which broken proportion of baser metal to silver, in the standard of the several mints, seems to have been introduced by the skill of men employed in coining, to keep that art (as all trades are called) a mystery, rather than for any use or necessity there was of such broken numbers. But, be that as it will, the standard in our mint being now settled by authority, and established by custom, known at home and abroad, and the rules and methods of assaying suited to it, and all the wrought plate, as well as coin of

England, being made by that measure, it is of great concernment that it should remain invariable.

But to the question, "What need is there of any mixture of baser metal with silver in money or plate?" I answer, there is great reason for it; for,

Copper mixed with silver makes it harder, and so wears and wastes less in use, than if it were fine silver. 2. It melts easier. 3. Silver, as it is drawn and melted from the mine, being seldom perfectly fine, it would be a great charge by refining to separate all the baser metals from it, and reduce it to perfectly unmixed silver.

The use of coined silver, or money, is, that every man in the country, where it is current by public authority, may, without the trouble of refining, assaying, or weighing, be assured what quantity of silver he gives, receives, or contracts for, under such and such denominations.

If this security goes not along with the public stamp, coining is labour to no purpose, and puts no difference between coined money, and uncoined bullion. This is so obvious, that I think no government, where money is coined, ever overlooks it; and therefore the laws every where, when the quantity of silver has been lessened in any piece carrying the public stamp, by clipping, washing, rounding, &c. have taken off the authority of the public stamp, and declared it not to be lawful money. This is known to be so in England, and every one may not only refuse any money bearing the public stamp, if it be clipped, or any ways robbed of the due weight of its silver, but he that offers it in payment is liable to indictment, fine and imprisonment. From whence we may see, that the use and end of the public stamp is only to be a guard and voucher of the quantity of silver, which men contract for; and the injury done to the public faith, in this point, is that which in clipping and false coining heightens the robbery into treason.

Men in their bargains contract not for denominations or sounds, but for the intrinsic value, which is the quantity of silver, by public authority warranted to be in pieces of such denominations; and it is by having a greater quantity of silver, that men thrive and grow richer, and not by having a greater number of denominations; which, when they come to have need of their money, will prove but empty sounds, if they do not carry with them the real quantity of silver expected.

The standard once settled by public authority, the quantity of silver established under the several denominations (I humbly conceive) should not

be altered till there were an absolute necessity shown of such a change, which I think can never be.

The reason why it should not be changed is this; because the public authority is guarantee for the performance of all legal contracts. But men are absolved from the performance of their legal contracts, if the quantity of silver under settled and legal denominations be altered; as is evident, if borrowing 100l. or 400 ounces of silver, to repay the same quantity of silver (for that is understood by the same sum, and so the law warrants it) or taking a lease of lands for years to come, at the like rent of 100l. they shall pay both the one and the other, in money coined under the same denominations, with one fifth less silver in it, than at the time of the bargain; the landlord here and creditor are each defrauded of twenty per cent. of what they contracted for, and is their due. And I ask, how much juster it would be thus to dissolve the contracts they had made, than to make a law, that from henceforth all landlords and creditors should be paid their past debts, and the rents for leases already made, in clipped money, twenty per cent. lighter than it should be? Both ways they lose twenty per cent. of their due, and with equal justice.

The case would be the same, and legal contracts be avoided, if the standard should be altered, on the other side, and each species of our coin be made one fifth heavier; for then he that had borrowed, or contracted for any sum, could not be discharged, by paying the quantity he agreed for, but be liable to be forced to pay twenty per cent. more than he bargained for, that is, more than he ought.

On the other side: Whether the creditor be forced to receive less, or the debtor be forced to pay more than his contract, the damage and injury is the same, whenever a man is defrauded of his due; and whether this will not be a public failure of justice thus arbitrarily to give one man's right and possession to another, without any fault on the suffering man's side, and without any the least advantage to the public, I shall leave to be considered.

Raising of coin is but a specious word to deceive the unwary. It only gives the usual denomination of a greater quantity of silver to a less, (v. g. calling four grains of silver a penny to-day, when five grains of silver made a penny yesterday) but adds no worth, or real value to the silver coin to make amends for its want of silver. That is impossible to be done; for it is only the quantity of silver in it that is, and eternally will be, the measure of its value. And to convince any one of this, I ask, whether he, that is forced

to receive but 320 ounces of silver under the denomination of 1001. (for 400 ounces of silver which he lent under the like denomination of 1001.) will think these 320 ounces of silver, however denominated, worth those 400 ounces he lent? If any one can be supposed so silly, he need but go to the next market, or shop, to be convinced, that men value not money by the denomination, but by the quantity of silver there is in it. One may as rationally hope to lengthen a foot by dividing it into fifteen parts, instead of twelve, and calling them inches, as to increase the value of the silver, that is in a shilling, by dividing it into fifteen parts instead of twelve, and calling them pence. This is all that is done, when a shilling is raised from twelve to fifteen pence.

Clipping of money is raising it without public authority; the same denomination remaining to the piece, that hath now less silver in it than it had before.

Altering the standard, by coining pieces under the same denomination with less silver in them than they formerly had, is doing the same thing by public authority. The only odds is, that, by clipping, the loss is not forced on any one (for nobody is obliged to receive clipped money); by altering the standard, it is.

Altering the standard, by raising the money, will not get to the public, or bring to the mint to be coined, one ounce of silver: but will defraud the king, the church, the universities and hospitals, &c. of so much of their settled revenue, as the money is raised, v. g. twenty per cent. if the money (as is proposed) be raised one fifth. It will weaken, if not totally destroy, the public faith, when all that have trusted the public, and assisted our present necessities, upon acts of parliament in the million lottery, bank act, and other loans, shall be defrauded of twenty per cent. of what those acts of parliament were security for. And to conclude, this raising our money will defraud all private men of twenty per cent. in all their debts and settled revenues.

Clipping, by Englishmen, is robbing the honest man who receives clipped money, and transferring the silver, i. e. the value is pared off from it, into the clipper's pocket. Clipping by foreigners is robbing England itself; and thus the Spaniards lately robbed Portugal of a great part of its treasure, or commodities (which is the same thing) by importing upon them clipped money of the Portugal stamp.

Clipping, and clipped money, have, besides this robbery of the public, other great inconveniencies: as the disordering of trade, raising foreign exchange, and a general disturbance, which every one feels thereby in his private affairs.

Clipping is so gainful and so secret a robbery, that penalties cannot restrain it, as we see by experience.

Nothing, I humbly conceive, can put a stop to clipping, now it is grown so universal, and men become so skilful in it, but making it unprofitable.

Nothing can make clipping unprofitable, but making all light money go only for its weight. This stops clipping in a moment, brings out all the milled and weighty money, deprives us not of any part of our clipped money for the use of trade, and brings it orderly, and by degrees, and without force, into the mint to be recoinced.

If clipped money be called in all at once, and stopped from passing by weight, I fear it will stop trade, put our affairs all at a stand, and introduce confusion. Whereas, if it be permitted to pass by its weight, till it can by degrees be coined (the stamp securing its fineness, as well then as now, and the scales determining its weight), it will serve for paying of great sums as commodiously almost as weighty money, and the weighty money, being then brought out, will serve for the market trade, and less payments, and also to weigh the clipped money by.

On the other side, if clipped money be allowed to pass current by tale, till it be all recoinced, one of these two effects will apparently follow: either that we shall want money for trade, as the clipped money decreases, by being coined into weighty; (for very few, if any body, who gets weighty money into their hands, will part with it, whilst clipped money, not of half the value is current;) or if they do the coiners and clippers will pick it up, and new coin and clip it, whereby clipped money will be increased; so that, by this way, either money will be wanting to trade, or clipped money continued. If clipped money be stopped all at once, there is immediately a stop of trade. If it be permitted to pass in tale, as if it were lawful, weighty money, whilst it is recoincing, and till all be recoinced, that way also there will be an end of trade, or no end of clipped money. But, if it be made to pass for its weight, till it be all recoinced, both these evils are avoided, and the weighty money, which we want, will be brought out to boot.

Money is necessary to the carrying on of trade. For where money fails, men cannot buy, and trade stops.

Credit will supply the defect of it to some small degree, for a little while. But, credit being nothing but the expectation of money within some limited time, money must be had, or credit will fail.

Money also is necessary to us, in a certain proportion to the plenty of it amongst our neighbours. For, if any of our neighbours have it in a much greater abundance than we, we are many ways obnoxious to them. 1. They can maintain a greater force. 2. They can tempt away our people, by greater wages, to serve them, by land, or sea, or in any labour. 3. They can command the markets, and thereby break our trade, and make us poor. 4. They can on any occasion ingross naval and warlike stores, and thereby endanger us.

In countries where domestic mines do not supply it, nothing can bring in silver but tribute, or trade. Tribute is the effect of conquest: trade, of skill and industry.

By commerce silver is brought in, only by an overbalance of trade.

An overbalance of trade, is when the quantity of commodities, which we send to any country do more than pay for those we bring from thence: for then the overplus is brought home in bullion.

Bullion is silver, whose workmanship has no value. And thus foreign coin hath no value here for its stamp, and our coin is bullion in foreign dominions.

It is useless and labour in vain to coin silver imported into any country, where it is not to stay.

Silver imported cannot stay in any country in which, by an over-balance of their whole trade, it is not made theirs, and doth not become a real increase of their wealth.

If, by a general balance of its trade, England yearly sends out commodities to the value of four hundred thousand ounces of silver, more than the commodities we bring home from abroad costs us, there is one hundred thousand pounds every year clear again: which will come home in money, by a real increase of our wealth, and will stay here.

On the other side, if, upon a general balance of our whole trade, we yearly import commodities from other parts to the value of an hundred thousand pounds more than our commodities exported pay for, we every year grow an hundred thousand pounds poorer. And if, besides that, we should also import a million in bullion from Spain every year, yet it is not ours; it is no increase to our wealth, nor can it stay here; but must be

exported again, every grain of it, with an hundred thousand pounds of our own money to boot.

I have heard it proposed, as a way to keep our money here, that we should pay our debts contracted beyond seas, by bills of exchange.

The idleness of such a proposition will appear, when the nature of exchange is a little considered.

Foreign exchange is the paying of money in one country, to receive it in another.

The exchange is high, when a man pays for bills of exchange above the par. It is low, when he pays less than the par.

The par is a certain number of pieces of the coin of one country, containing in them an equal quantity of silver to that in another number of pieces, of the coin of another country: v. g. supposing 36 skillings of Holland to have just as much silver in them as 20 English shillings. Bills of exchange drawn from England to Holland at the rate of 36 skillings Dutch for each pound sterling, is according to the par. He that pays the money here, and receives it there, neither gets nor loses by the exchange; but receives just the same quantity of silver in the one place, that he parts with in the other. But, if he pays one pound sterling, to receive but 30 skillings in Holland, he pays one sixth more than the par, and so pays one sixth more silver for the exchange, let the sum be what it will.

The reason of high exchange, is the buying much commodities in any foreign country, beyond the value of what that country takes of ours. This makes Englishmen have need of great sums there, and this raises the exchange, or price of bills. For what grows more into demand, increases presently in price.

Returning money by exchange, into foreign parts, keeps not one farthing from going out: it only prevents the more troublesome and hazardous way of sending money in specie, forwards and backwards. Bills of exchange are sent more commodiously, and by scrips of paper even the accounts between particular debtors and creditors, in different countries, as far as the commerce between those two places is equivalent: but where the over-balance, on either side, demands payment, there bills of exchange can do nothing; but bullion, or money in specie, must be sent. For in a country where we owe money, and have no debts owing to us, bills will not find credit, but for a short time, till money can be sent to reimburse those that paid them; unless we can think men beyond sea will part with their money

for nothing. If the traders of England owe their correspondents of Holland a hundred thousand pounds, their accounts with all the rest of the world standing equal, and remaining so, one farthing of this hundred thousand pounds cannot be paid by bills of exchange. For example, I owe a thousand pounds of it; and to pay that, buy a Bill of N. here, drawn on John de Wit, of Amsterdam, to pay P. Van Lore, my correspondent there. The money is paid accordingly, and thereby I am out of Van Lore's debt; but not one farthing of the debt of England to Holland is thereby paid; for N. of whom I bought the bill of exchange, is now as much indebted to John de Wit, as I was before to P. Van Lore. Particular debtors and creditors are only changed by bills of exchange; but the debt, owing from one country to the other, cannot be paid without real effects sent thither to that value, either in commodities, or money. Where the balance of trade barely pays for commodities with commodities, there money must be sent, or else the debt cannot be paid.

I have spoken of silver coin alone, because that makes the money of account, and measure of trade, all through the world. For all contracts are, I think, every-where made, and accounts kept in silver coin. I am sure they are so in England, and the neighbouring countries.

Silver therefore, and silver alone, is the measure of commerce. Two metals, as gold and silver, cannot be the measure of commerce both together, in any country: because the measure of commerce must be perpetually the same, invariable, and keeping the same proportion of value in all its parts. But so only one metal does, or can do itself: so silver is to silver, and gold to gold. An ounce of silver is always of equal value to an ounce of silver, and an ounce of gold to an ounce of gold: and two ounces of the one, or the other, of double the value to an ounce of the same. But gold and silver change their value one to another: for supposing them to be in value as sixteen to one now; perhaps the next month they may be as fifteen and three quarters, or fifteen and seven-eighths to one. And one may as well make a measure, v. g. a yard, whose parts lengthen and shrink, as a measure of trade of materials that have not always a settled, invariable value to one another.

One metal, therefore, alone can be the money of account and contract, and the measure of commerce in any country. The fittest for this use, of all other, is silver, for many reasons, which need not here be mentioned. It is enough that the world has agreed in it, and made it their common money;

and, as the Indians rightly call it, measure. All other metals, gold, as well as lead, are but commodities.

Commodities are moveables, valuable by money, the common measure.

Gold, though not the money of the world, and the measure of commerce, nor fit to be so, yet may, and ought to be coined, to ascertain its weight and fineness; and such coin may safely have a price, as well as a stamp set upon it, by public authority; so the value set be under the market-price. For then such pieces coined will be a commodity as passable as silver money, very little varying in their price: as guineas, which were coined at the value of 20s. but passed usually for between 21 or 22s. according to the current rate; but, not having so high a value put upon them by the law, nobody could be forced to take them to their loss at 21s. 6d. if the price of gold should happen at any time to be cheaper.

From what has been said, I think it appears,

That silver is that which mankind have agreed on, to take and give in exchange for all commodities as an equivalent.

That it is by the quantity of silver they give, or take, or contract for, that they estimate the value of other things, and satisfy for them; and thus, by its quantity, silver becomes the measure of commerce.

Hence it necessarily follows, that a greater quantity of silver has a greater value: a less quantity of silver has a less value; and an equal quantity an equal value.

That money differs from uncoined silver only in this, that the quantity of silver in each piece of money is ascertained by the stamp it bears; which is set there to be a public voucher of its weight and fineness.

That gold is treasure, as well as silver, because it decays not in keeping, and never sinks much in value.

That gold is fit to be coined, as well as silver; to ascertain its quantity to those who have a mind to traffic in it; but not fit to be joined with silver, as a measure of commerce.

That jewels too are treasure, because they keep without decay; and have constantly a great value in proportion to their bulk; but cannot be used for money, because their value is not measured by their quantity, nor can they, as gold and silver, be divided, and keep their value.

The other metals are not treasure, because they decay in keeping, and because of their plenty; which makes their value little in a great bulk; and so unfit for money, commerce, and carriage.

That the only way to bring treasure into England, is the well-ordering our trade.

That the only way to bring silver and gold to the mint, for the increase of our stock of money and treasure, which shall stay here, is an over-balance of our whole trade. All other ways to increase our money and riches, are but projects that will fail us.

These things premised, I shall now proceed to show wherein I differ from Mr. Lowndes, and upon what grounds I do so.

Mr. Lowndes proposes, that our money should be raised (as it is called) one fifth: that is, That all our present denominations of money, as penny, shilling, half-crown, crown, &c. should each have one fifth less silver in it, or be answered with coin, of one fifth less value. How he proposes to have it done, I shall consider hereafter. I shall at present only examine the reasons he gives for it.

His first reason, , he gives us in these words, “The value of the silver in the coin ought to be raised to the foot of six shillings three-pence in every crown; because the price of standard silver in bullion is risen to six shillings five-pence an ounce.”

This reason seems to me to labour under several mistakes; as

That standard silver can rise in respect of itself.

That standard bullion is now, or ever was worth, or sold to the traders in it for 6s. 5d. the ounce, of lawful money of England. For if that matter of fact holds not to be so, that an ounce of sterling bullion is worth 6s. 5d. of our milled weighty money, this reason ceases: and our weighty crown-pieces ought not to be raised to 6s. 3d. because our light clipped money will not purchase an ounce of standard bullion under the rate of 6s. 5d. of that light money. And let me add here, nor for that rate neither. If therefore the author means here, that an ounce of standard silver is risen to 6s. 5d. of our clipped money, I grant it him, and higher too. But then that has nothing to do with the raising our lawful coin, which remains unclipped; unless he will say too, that standard bullion is so risen, as to be worth, and to actually sell for, 6s. 5d. the ounce, of our weighty milled money. This I not only deny, but farther add, that it is impossible to be so. For 6s. 5d. of milled money weighs an ounce and a quarter near. Can it therefore be possible, that one ounce of any commodity should be worth an ounce and a quarter of the self-same commodity, and of exactly the same goodness? for so is standard silver to standard silver. Indeed one has a mark upon it which the other has

not; but it is a mark that makes it rather more, than less valuable: or if the mark, by hindering its exportation, makes its less valuable for that purpose, the melting-pot can easily take it off.

The complaint made of melting down our weighty money answers this reason evidently. For can it be supposed, that a goldsmith will give one ounce and a quarter of coined silver for one ounce of bullion; when, by putting it into his melting pot, he can, for less than a penny charge, make it bullion? (For it is always to be remembered, what I think is made clear, that the value of silver, considered as it is money, and the measure of commerce, is nothing but its quantity.) And thus a milled shilling, which has double the weight of silver in it to a current shilling, whereof half the silver is clipped away, has double the value. And to show that this is so, I will undertake, that any merchant, who has bullion to sell, shall sell it for a great deal less number of shillings in tale, to any one who will contract to pay him in milled money, than if he be paid in the current clipped money.

Those who say bullion is risen, I desire to tell me what they mean by risen? Any commodity, I think, is properly said to be risen, when the same quantity will exchange for a greater quantity of another thing; but more particularly of that thing, which is the measure of commerce in the country. And thus corn is said to be risen among the English in Virginia, when a bushel of it will sell, or exchange for more pounds of tobacco, amongst the Indians, when it will sell for more yards of wampompeak, which is their money; and amongst the English here, when it will exchange for a greater quantity of silver than it would before. Rising and falling of commodities, are always between several commodities of distinct worths. But nobody can say that tobacco (of the same goodness) is risen in respect of itself. One pound of the same goodness will never exchange for a pound and a quarter of the same goodness. And so it is in silver: an ounce of silver will always be of equal value to an ounce of silver: nor can it ever rise, or fall, in respect of itself: an ounce of standard silver can never be worth an ounce and a quarter of standard silver; nor one ounce of uncoined silver exchange for an ounce and a quarter of coined silver: the stamp cannot so much debase its value. Indeed the stamp, hindering its free exportation, may make the goldsmith (who profits by the return of money) give one hundred and twentieth, or one sixtieth, or perhaps sometimes, one thirtieth more, that is, 5s. 2d $\frac{1}{2}$. 5s. 3d. or 5s. 4d. the ounce of coined silver for uncoined, when there is no need of sending silver beyond seas; as there always is, when the

balance of trade will not supply our wants, and pay our debts there. But much beyond this the goldsmith will never give for bullion; since he can make it out of coined money at a cheaper rate.

It is said, bullion is risen to 6s. 5d. the ounce, i. e. that an ounce of uncoined silver will exchange for an ounce and a quarter of coined silver. If any one can believe this, I will put this short case to him; He has of bullion, or standard, uncoined silver, two round plates, each of an exact size and weight of a crownpiece: he has besides, of the same bullion, a round plate of the weight and size of a shilling, and another yet less, of an exact weight and size of a three-pence. The two great plates being of equal weight and fineness, I suppose he will allow to be of equal value, and that the two less, joined to either of them, make it one-fifth more worth than the other is by itself, they having all three together one fifth more silver in them. Let us suppose then, one of the greater, and the two less plates to have received the next moment (by miracle, or by the mill, it matters not how) the mark, or stamp, of our crown, our shilling, and our three-pence: can any body say, that now they have got the stamp of our mint upon them, they are so fallen in value, or the other unstamped piece so risen, that that unstamped piece, which a moment before was worth only one of the other pieces, is now worth them all three? Which is to say, that an ounce of uncoined silver is worth an ounce and a quarter of coined. This is what men would persuade us, when they say, that bullion is raised to 6s. 5d. (of lawful money) the ounce, which I say is utterly impossible. Let us consider this a little further, in another instance. The present milled crown pieces, say they, will not exchange for an ounce of bullion, without the addition of a shilling and three-pence of weighty coin added to it. Coin but that crown-piece into 6s. 3d. and then they say it will buy an ounce of bullion, or else they give up their reason and measure of raising the money. Do that which is allowed to be equivalent to coining of a present milled crown-piece, into 6s. 3d. viz. call it 75 pence, and then also it must by this rule of raising buy an ounce of bullion. If this be so, the self-same milled crown-piece will, and will not exchange for an ounce of bullion. Call it 60 pence, and it will not: the very next moment call it 75 pence, and it will. I am afraid nobody can think change of denomination has such power.

Mr. Lowndes supports this his first reason with these words, . “This reason, which I humbly conceive will appear irrefragable, is grounded upon a truth so apparent, that it may well be compared to an axiom, even in

mathematical reasoning; to wit, that, whensoever the intrinsic value of silver in the coin hath been, or shall be, less than the price of silver in bullion, the coin hath, and will be melted down.”

This I think, though it be allowed Mr. Lowndes for as apparent a truth, and as certain a maxim as he could wish, yet serves not at all to his purpose of lessening the coin. For when the coin is, as it should be, according to the standard (let the standard be what it will) weighty and unclipped, it is impossible that the value of coined silver should be less than the value or price of uncoined; because, as I have shown, the value and quantity of silver are the same: and where the quantities are equal, the values are equal, excepting only the odds that may be between bullion that may be freely exported, and coined silver that may not; the odds whereof scarce ever amounts to above 2d. per ounce, and rarely to above a penny, or an half-penny. And this odds (whatever it be) will equally belong to his raised milled money, which cannot be exported, as it will to our present milled money, which cannot be exported, as I shall have occasion to show more particularly hereafter. All this disorder, and a thousand others, come from light and unlawful money being current. For then it is no wonder that bullion should be kept up to the value of your clipped money; that is, that bullion should not be sold by the ounce for less than 6s. 5d. when that 6s. 5d. clipped money, paid for it, does not weigh above an ounce. This instance therefore, of the present price of bullion, proves nothing but that the quantity of silver in money governs the value of it, and not the denomination; as appears, when clipped money is brought to buy bullion. This is a fair trial: silver is set against silver, and by that is seen, whether clipped money be of the same value with weighty of the same denomination, or whether it be not the quantity of silver in it that regulates its value.

I cannot but wonder that Mr. Lowndes, a man so well skilled in the law, especially of the mint, the exchequer, and of our money, should all along in this argument speak of clipped money, as if it were the lawful money of England; and should propose by that (which is in effect by the clipper’s shears) to regulate a new sort of coin to be introduced into England. And if he will stand to that measure, and lessen the new coin to the rate of bullion sold in exchange for present, current, clipped money, to prevent its being melted down he must make it yet much lighter than he proposes; so that raising it, or, to give it its due name, that lessening of it one fifth will not

serve the turn: for I will be bold to say, that bullion now in England is no where to be bought by the ounce for 6s. 5d. of our present, current, clipped money. So that if this rule be true, and nothing can save the weighty coin from melting down, but reducing it to the weight that clipped money is brought to, he must lessen the money in his new coin much more than one fifth; for an ounce of standard bullion will always be worth an ounce of clipped money, whether that in tale amounts to 6s. 5d. 6s. 6d. 10s. or any other number of shillings, or pence, of the nick-named clipped money. For a piece of silver that was coined for a shilling, but has but half the silver clipped off, in the law, and in propriety of speech, is no more a shilling than a piece of wood, which was once sealed a yard, is still a yard, when one half of it is broken off.

Let us consider this maxim a little farther: which out of the language of the mint in plain English, I think amounts to thus much, viz. "That when an ounce of standard bullion costs a greater number of pence in tale, than an ounce of that bullion can be coined into, by the standard of the mint, the coin will be melted down." I grant it, if bullion should rise to 15 pence the ounce above 5s. 2d. as is now pretended; which is to say, that an ounce of bullion cannot be bought for less than an ounce and a quarter of the like silver coined. But that, as I have showed, is impossible to be: and every one would be convinced of the contrary, if we had none now but lawful money current. But it is no wonder, if the price and value of things be confounded, and uncertain, when the measure itself is lost. For we have now no lawful silver money current amongst us; and therefore cannot talk, nor judge right, by our present, uncertain, clipped money, of the value and price of things, in reference to our lawful, regular coin, adjusted and kept to the unvarying standard of the mint. The price of silver in bullion above the value of silver in coin, when clipping has not defaced our current cash (for then the odds is very rarely above a penny, or two-pence the ounce) is so far from being the cause of melting down our coin, that this price, which is given above the value of the silver in our coin, is given only to preserve our coin from being melted down: for nobody buys bullion at above 5s. 2d. the ounce (which is just the value), for any other reason, but to avoid the crime and hazard of melting down our coin.

I think it will be agreed on all hands, that nobody will melt down our money, but for profit. Now profit can be made by melting down our money but only in two cases.

First, When the current pieces of the same denomination are unequal, and of different weights, some heavier, some lighter: for then the traders in money cull out the heavier, and melt them down with profit. This is the ordinary fault of coining with the hammer, wherein it usually sufficed, That a bar of silver was cut into as many half-crowns, or shillings, as answered its whole weight; without being very exact in making each particular piece of its due weight; whereby some pieces came to be heavier, and some lighter, than by the standard they should. And then the heavier pieces were culled out, and there was profit to be made (as one easily perceives) in melting them down. But this cause of melting down our money is easily prevented, by the exacter way of coining by the mill, in which each single piece is brought to its just weight. This inequality of pieces of the same denomination, is to be found in our money, more than ever, since clipping has been in fashion: and therefore it is no wonder, that, in this irregular state of our money, one complaint is, that the heavy money is melted down. But this also the making clipped money go at present for its weight (which is a sudden reducing of it to the standard) and then, by degrees, recoinning it into milled money (which is the ultimate and more complete reducing it to the standard), perfectly cures.

The other case, wherein our money comes to be melted down, is a losing trade; or, which is the same thing in other words, an over-great consumption of foreign commodities. Whenever the over-balance of foreign trade makes it difficult for our merchants to get bills of exchange, the exchange presently rises, and the returns of money raise them in proportion to the want of money Englishmen have in any parts beyond seas. They, who thus furnish them with bills, not being able to satisfy their correspondents, on whom those bills are drawn, with the product of our commodities there, must send silver from hence to reimburse them, and repay the money they have drawn out of their hands. Whilst bullion may be had for a small price more than the weight of our current cash, these exchangers generally choose rather to buy bullion, than run the risque of melting down our coin, which is criminal by the law. And thus the matter for the most part went, whilst milled and clipped money passed promiscuously in payment: for so long a clipped half-crown was as good here as a milled one, since one passed, and could be had as freely as the other. But as soon as there began to be a distinction between clipped and unclipped money, and weighty money could no longer be had for the light, bullion (as was natural) arose; and it

would fall again to-morrow to the price it was at before, if there were none but weighty money to pay for it. In short, whenever the whole of our foreign trade and consumption exceeds our exportation of commodities, our money must go to pay our debts so contracted, whether melted or not melted down. If the law makes the exportation of our coin penal, it will be melted down; if it leaves the exportation of our coin free, as in Holland, it will be carried out in specie. One way, or other, go it must, as we see in Spain; but whether melted down, or not melted down, it matters little: our coin and treasure will be both ways equally diminished, and can be restored only by an over-balance of our whole exportation to our whole importation of consumable commodities. Laws, made against exportation of money, or bullion, will be all in vain. Restraint, or liberty in that matter, makes no country rich or poor: as we see in Holland, which had plenty of money under the free liberty of its exportation, and Spain, in great want of money under the severest penalties against carrying of it out. But the coining, or not coining our money on the same foot it was before, or in bigger or less pieces, and under whatsoever denominations you please, contributes nothing to, or against its melting down, or exportation, so our money be all kept, each species in its full weight of silver, according to the standard: for if some be heavier, and some lighter, allowed to be current, so under the same denomination the heavier will be melted down, where the temptation of profit is considerable, which in well-regulated coin kept to the standard cannot be. But this melting down carries not away one grain of our treasure out of England. The coming and going of that depends wholly upon the balance of our trade; and therefore it is a wrong conclusion which we find, . “That continuing either old, or new coins on the present foot, will be nothing else but furnishing a species to melt down at an extravagant profit, and will encourage a violent exportation of our silver, for the sake of the gain only, till we shall have little or none left.” For example: let us suppose all our light money new coined, upon the foot that this gentleman would have it, and all our old milled crowns going for 75 pence as he proposes, and the rest of the old milled money proportionably; I desire it to be showed how this would hinder the exportation of one ounce of silver, whilst our affairs are in the present posture. Again, on the other side, supposing all our money were now milled coin upon the present foot, and our balance of trade changing, our exportation of commodities were a million more than our importation, and likely to continue so yearly; whereof one half was to

Holland, and the other to Flanders, there being an equal balance between England and all other parts of the world we trade to? I ask, what possible gain could any Englishman make by melting down, and carrying out our money to Holland and Flanders, when a million was to come thence hither, and Englishmen had more there already than they knew how to use there, and could not get home without paying dear there for bills of exchange? If that were the case of our trade, the exchange would presently fall here and rise there beyond the par of their money to ours, i. e. an English merchant must give in Holland more silver, for the bills he bought there, than he should receive upon those bills here, if the two sums were weighed one against the other or run the risque of bringing it home in specie. And what then could any Englishman get by exporting money or silver thither?

These are the only two cases wherein our coin can be melted down with profit; and I challenge any one living to show me any other. The one of them is removed only by a regular just coin, kept equal to the standard; be that what it will, it matters not, as to the point of melting down of the money. The other is to be removed only by the balance of our trade kept from running us behind-hand, and contracting debts in foreign countries by an over-consumption of their commodities.

To those who say, that the exportation of our money, whether melted down, or not melted down, depends wholly upon our consumption of foreign commodities, and not at all upon the sizes of the several species of our money, which will be equally exported or not exported, whether coined upon the old, or the proposed new foot: Mr. Lowndes replies:

1. That “the necessity of foreign expence, and exportation to answer the balance of trade, may be diminished, but cannot in any sense be augmented, by raising the value of our money.”

I beg his pardon, if I cannot assent to this. Because the necessity of our exportation of money, depending wholly upon the debts which we contract in foreign parts, beyond what our commodities exported can pay; the coining our money in bigger, or less pieces, under the same, or different denominations, or on the present, or proposed foot, in itself neither increasing those debts, nor the expences that make them, can neither augment, nor diminish the exportation of our money.

2. He replies, . That melters of the coin “will have less profit by fourteen-pence halfpenny in the crown,” when the money is coined upon the new foot.

To this I take liberty to say, that there will not be a farthing more profit in melting down the money, if it were all new milled money, upon the present foot, than if it were all new coined, as is proposed, one fifth lighter. For whence should the profit arise more in the one, than the other? But Mr. Lowndes goes upon this supposition; That standard bullion is now worth six shillings and five-pence an ounce of milled money, and would continue to sell for six shillings and five-pence the ounce, if our money were all weighty milled money: both which I take to be mistakes, and think I have proved them to be so.

3. He says, “It is hoped that the exchange to Holland may be kept at a stand, or at least from falling much lower.” I hope so too. But how that concerns this argument, or the coining of the money upon a new foot, I do not see.

4. He says, . There is a great difference, with “regard to the service or disservice of the public, between carrying out bullion, or coin for necessary uses, or for prohibiting commodities.” The gain to the exporters, which is that which makes them melt it down and export it, is the same in both cases. And the necessity of exporting it is the same. For it is to pay debts, which there is an equal necessity of paying, when once contracted, though for useless things. They are the goldsmiths and dealers in silver, that usually export what silver is sent beyond sea, to pay the debts they have contracted by their bills of exchange. But those dealers in exchange seldom know, or consider, how they, to whom they give their bills, have, or will employ, the money they receive upon those bills. Prohibited commodities, it is true, should be kept out, and useless ones impoverish us by being brought in. But this is the fault of our importation: and there the mischief should be cured by laws, and our way of living. For the exportation of our treasure is not the cause of their importation, but the consequence. Vanity and luxury spends them: that gives them vent here: that vent causes their importation: and when our merchants have brought them, if our commodities will not be enough, our money must go to pay for them. But what this paragraph has in it against continuing our coin upon the present foot, or for making our coin lighter, I confess here again, I do not see.

It is true what Mr. Lowndes observes here, the importation of gold, and the going of guineas at 30s. has been a great prejudice and loss to the kingdom. But that has been wholly owing to our clipped money, and not at all to our money being coined at five shillings and two-pence the ounce; nor

is the coining our money lighter, the cure of it. The only remedy for that mischief, as well as a great many others, is the putting an end to the passing of clipped money by tale, as if it were lawful coin.

5. His fifth head, , is to answer those, who hold, that, by the lessening our money one fifth, all people, who are to receive money upon contracts already made, will be defrauded of twenty per cent. of their due: and thus all men will lose one fifth of their settled revenues, and all men, that have lent money, one fifth of their principal and use. To remove this objection, Mr. Lowndes says, that silver in England is grown scarce, and consequently dearer, and so is of higher price. Let us grant for the present it is of higher price (which how he makes out I shall examine by and by.) This, if it were so, ought not to annul any man's bargain, nor make him receive less in quantity than he lent. He was to receive again the same sum, and the public authority was guarantee, that the same sum should have the same quantity of silver, under the same denomination. And the reason is plain, why in justice he ought to have the same quantity of silver again, notwithstanding any pretended rise of its value. For if silver had grown more plentiful, and by consequence (by our author's rule) cheaper, his debtor would not have been compelled, by the public authority, to have paid him, in consideration of its cheapness, a greater quantity of silver than they contracted for. Cocoa nuts were the money of a part of America, when we first came thither. Suppose then you had lent me last year 300, or fifteen score cocoa nuts, to be repaid this year, would you be satisfied and think yourself paid your due, if I should tell you, cocoa nuts were scarce this year, and that fourscore were of as much value this year as an hundred the last; and that therefore you were well and fully paid, if I restored to you only 240 for the 300 I borrowed? Would you not think yourself defrauded of two thirds of your right by such a payment? Nor would it make any amends for this to justice, or reparation to you, that the public had (after your contract, which was made for fifteen score) altered the denomination of score, and applied it to sixteen instead of twenty. Examine it, and you will find this just the case, and the loss proportionable in them both; that is, a real loss of twenty per cent. As to Mr. Lowndes's proofs, that silver is now one fifth more value than it was, and therefore a man has right done him, if he receive one fifth less than his contract, I fear none of them will reach Mr. Lowndes's point. He saith, . "By daily experience nineteen penny-weights, and three tenths of a penny-weight of sterling silver, which is just the weight of a crown-piece,

will purchase more coined money than five unclipped shillings." I wish he had told us where this daily experience he speaks of is to be found: for I dare say nobody hath seen a sum of unclipped shillings paid for bullion any where these twelve months, to go no further back.

In the next place, I wish he had told us how much more than five lawful milled shillings, bullion of the weight of a crown piece will purchase. If he had said it would purchase six shillings and three-pence weighty money, he had proved the matter in question. And whoever has the weight of a crown in silver paid him in Mr. Lowndes's new coin, instead of six shillings and three-pence of our present money, has no injury done him, if it will certainly purchase him six shillings and three-pence all unclipped of our present money. But every one, at first sight, perceives this to be impossible, as I have already proved it. I have in this the concurrence of Mr. Lowndes's new scheme, to prove it to be so. For, , he proposes that his silver unit, having the weight and fineness of a present unclipped crown-piece, should go for 75 pence; and that the present shilling should go for fifteen pence; by which establishment there will be 75 pence in his unit, and 93 pence three farthings in six shillings and three-pence, weighty money of the present coin; which is an undeniable confession, that it is as impossible for his silver unit, having no more silver in it than a present unclipped crown, to be worth, and so to purchase, six unclipped shillings, and three-pence of our present money; as it is for 75 pence to be worth 93 of the same pence, or 75 to be equal to 93.

If he means by more, that his sterling silver of the weight of a crown-piece will purchase a penny, or two-pence more than five unclipped shillings, which is the most, and which is but accidental too; what is this rise of its value to fifteen pence? And what amends will one sixtieth (a little more or less) rise in value, make for one fifth diminished in weight, and lost in quantity? which is all one as to say, that a penny, or thereabouts, shall make amends for fifteen pence taken away.

Another way to recommend his new coin, to those who shall receive it, instead of the present weightier coin, he tells them, , it will pay as much debt, and purchase as much commodities as our present money which is one fifth heavier: what he says of debts is true. But yet I would have it well considered by our English gentlemen, that though creditors will lose one fifth of their principal and use, and landlords will lose one fifth of their income, yet the debtors and tenants will not get it. It will be asked, who then

will get it? Those, I say, and those only, who have great sums of weighty money (whereof one sees not a piece now in payments) hoarded up by them, will get by it. To those, by the proposed change of our money, will be an increase of one fifth, added to their riches, paid out of the pockets of the rest of the nation. For what these men received for four shillings, they will pay again for five. This weighty money hoarded up, Mr. Lowndes, , computes at one million and six hundred thousand pounds. So that by raising our money one fifth, there will three hundred and twenty thousand pounds be given to those who have hoarded up our weighty money; which hoarding up of money is thought by many to have no other merit in it than the prejudicing our trade and public affairs, and increasing our necessities, by keeping so great a part of our money from coming abroad, at a time when there was so great need of it. If the sum of unclipped money in the nation be, as some suppose, much greater; then there will, by this contrivance of the raising our coin, be given to these rich hoarders much above the aforesaid sum of three hundred and twenty thousand pounds of our present money. Nobody else, but these hoarders, can get a farthing by this proposed change of our coin; unless men in debt have plate by them, which they will coin to pay their debts. Those too, I must confess, will get one-fifth by all the plate of their own, which they shall coin and pay debts with, valuing their plate at bullion; but if they shall consider the fashion of their plate, what that cost when they bought it, and the fashion that new plate will cost them, if they intend ever to have plate again, they will find this one fifth seeming present profit, in coining their plate to pay their debts, amounts to little or nothing at all. Nobody then but the hoarders will get by this twenty per cent.; and I challenge any one to show, how any body else (but that little in the case of plate coined to pay debts) shall get a farthing by it. It seems to promise fairest to the debtors: but to them too it will amount to nothing; for he, that takes up money to pay his debts, will receive this new money, and pay it again at the same rate he received it, just as he does now our present coin, without any profit at all; and though commodities (as is natural) should be raised, in proportion to the lessening of the money, nobody will get by that any more than they do now, when all things are grown dearer; only he that is bound up by contract to receive any sum under such a denomination of pounds, shillings, and pence, will find his loss sensibly, when he goes to buy commodities, and make new bargains. The markets and the shops will soon convince him, that his money, which is

one-fifth lighter, is also one-fifth worse; when he must pay twenty per cent. more for all the commodities he buys, with the money of the new foot, than if he bought it with the present coin.

This Mr. Lowndes himself will not deny, when he calls to mind what he himself, speaking of the inconveniencies we suffer by our clipped money, says, . “Persons, before they conclude in any bargains, are necessitated first to settle the price or value of the very money they are to receive for their goods; and if it be clipped or bad money, they set the price of their goods accordingly: which I think has been one great cause of raising the price, not only of merchandize, but even of edibles, and other necessities for the sustenance of the common people, to their great grievance.” That every one who receives money, after the raising our money, on contracts made before the change, must lose twenty per cent. in all he shall buy, is demonstration by Mr. Lowndes’s own scheme. Mr. Lowndes proposes that there should be shillings coined upon the new foot, one-fifth lighter than our present shillings, which should go for twelve-pence a-piece; and that the unclipped shillings of the present coin should go for fifteen pence a-piece: and the crown for seventy-five pence. A man, who has a debt of a hundred pounds owing him, upon bond, or lease, receives it in these new shillings instead of lawful money of the present standard; he goes to market with twenty shillings in one pocket of this new money, which are valued at 240 pence; and in the other pocket with four milled crown pieces, (or twenty milled shillings of the present coin) which are valued at three hundred pence, which is one fifth more: it is demonstration then, that he loses one-fifth, or twenty per cent. in all that he buys, by the receipt of this new money, for the present coin which was his due; unless those he deals with will take four for five pence, or four shillings for five shillings. He buys, for example, a quart of oil for fifteen-pence: if he pay for it with the old money in one pocket, one shilling will do it: if with the new money in the other, he must add three-pence to it, or a quarter of another shilling; and so of all the rest that he pays for, with either the old money, which he should have received his debts in, or with the new, which he was forced to receive for it. Thus far, it is demonstration, he loses twenty per cent. by receiving his debt in a new money thus raised, when he uses it to buy any thing. But to make him amends, Mr. Lowndes tells him, silver is now dearer, and all things consequently will be bought cheaper twenty per cent. And yet at the same time he tells him, in the passage above cited, out of , that all other things are

grown dearer. I am sure there is no demonstration, that they will be sold twenty per cent. cheaper. And, if I may credit housekeepers and substantial tradesmen, all sorts of provisions and commodities are lately risen excessively: and, notwithstanding the scarcity of silver, begin to come up to the true value of our clipped money, every one selling their commodities so as to make themselves amends, in the number of light pieces for what they want in weight. A creditor ought to think the new light money equivalent to the present heavier, because it will buy as much commodities. But what if it should fail, as it is ten to one but it will, what security has he for it? He is told so, and he must be satisfied. That salt, wine, oil, silk, naval stores, and all foreign commodities, will none of them be sold us by foreigners, for a less quantity of silver than before, because we have given the name of more pence to it, is, I think, demonstration. All our names (if they are any more to us) are to them but bare sounds; and our coin, as theirs to us, but mere bullion, valued only by its weight; and a Swede will no more sell you his hemp and pitch, or a Spaniard his oil, for less silver, because you tell him silver is scarcer now in England, and therefore risen in value one fifth, than a tradesman of London will sell his commodity, cheaper to the Isle of Man because they are grown poorer, and money is scarce there.

All foreign commodities must be shut out of the number of those that will fall, to comply with our raising our money. Corn also, it is evident, does not rise, or fall, by the differences of more, or less plenty of money, but by the plenty and scarcity that God gives; for our money, in appearance, remaining the same, the price of corn is double one year, to what it was the precedent; and therefore we must certainly make account, that since the money is one-fifth lighter, it will buy one-fifth less corn, communibus annis; and this being the great expence of the poor, that takes up almost all their earnings, if corn be, communibus annis, sold for one-fifth more money in tale, than before the change of our money, they too must have one-fifth more in tale, of the new money, for their wages than they have now; and the day-labourer must have, not only twelve, but fifteen pence of the new money a-day, which is the present shilling that he has now, or else he cannot live; so that all foreign commodities, with corn and labour, keeping up their value to the quantity of silver they sell for now, and not complying, in the fall of their real price, with the nominal raising of our money; there is not much left, wherein landlords and creditors are to expect the recompence of twenty per cent. abatement of price in commodities, to make up their loss in

the lightness of our money they are paid their rents and debts in. It would be easy to show the same thing, concerning our other native commodities, and make it clear that we have no reason to expect they should abate of their present price, any more than corn and labour: but this is enough, and any one who has a mind to it, may trace the rest at his leisure.

And thus I fear the hopes of cheaper penny-worths, which might beguile some men into a belief that landlords and creditors would receive no less by the proposed new money, is quite vanished. But if the promise of better penny-worths, and a fall of all commodities twenty per cent. should hold true, this would not at all relieve creditors and landlords, and set them upon equal terms with their neighbours: because the cheap penny-worths will not be for them alone, but every body else, as well as they, will share in that advantage; so that their silver being diminished one fifth in their rents and debts, which are paid them, they would still be twenty per cent. greater losers than their unhoarding neighbours, and forty per cent. greater losers than the hoarders of money; who will certainly get twenty per cent. in the money, whatever happens in the price of things: and twenty per cent. more in the cheapness of commodities, if that promised recompence be made good to creditors and landlords; for the hoarders of money (if the price of things falls) will buy as cheap as they; so that whatever is said of the cheapness of commodities, it is demonstration, (whether that proves true or no) that creditors and landlords, and all those who are to receive money upon bargains made before the proposed change of our coin, will unavoidably lose twenty per cent.

One thing Mr. Lowndes says in this paragraph is very remarkable, which I think decides the question. His words, , are these, “That if the value of the silver in the coins (by an extrinsic denomination) be raised above the value, or market-price, of the same silver reduced to bullion, the subjects would be proportionably injured and defrauded, as they were formerly in the case of base monies, coined by public authority.” It remains therefore only to show that the market-price of standard bullion is not one-fifth above our coin that is to be raised, and then we have Mr. Lowndes of our side too against its raising. I think it is abundantly proved already, that standard bullion neither is, nor can be, worth one-fifth more than our lawful weighty money: and if it be not, by Mr. Lowndes’s confession, there is no need of raising our present legal milled money to that degree; and it is only our clipped money that wants amendment: and when that is recoinced and reduced all to milled

and lawful money, that then too will have no need of raising. This I shall now prove out of Mr. Lowndes's own words here.

Mr. Lowndes, in the forecited words, compares the value of silver in our coin to the value of the same silver reduced to bullion, which he supposing to be as four to five, makes that the measure of the raising our money. If this be the difference of value between silver in bullion, and silver in coin; and if it be true, that four ounces of standard bullion be worth five ounces of the same silver coined; or, which is the same thing, that bullion will sell by the ounce for six shillings and five pence unclipped money; I will take the boldness to advise his majesty to buy, or to borrow any where so much bullion, or, rather than be without it, melt down so much plate, as is equal in weight to twelve hundred pounds sterling of our present milled money. This let him sell for milled money; and, according to our author's rule, it will yield fifteen hundred pounds. Let that fifteen hundred pounds be reduced into bullion, and sold again, and it will produce eighteen hundred and sixty pounds; which eighteen hundred and sixty pounds of weighty money being reduced into bullion, will still produce one-fifth more in weight of silver, being sold for weighty money; and thus his majesty may get at least three hundred and twenty thousand pounds by selling of bullion for weighty money, and melting that down into bullion, as fast as he receives it; till he has brought into his hands the million and six hundred thousand pounds, which Mr. Lowndes computes there is of weighty money left in England.

I doubt not but every one who reads it will think this a very ridiculous proposition. But he must think it ridiculous for no other reason, but because he sees it is impossible that bullion should sell for one-fifth above its weight of the same silver coined; that is, that an ounce of standard silver should sell for six shillings and five-pence of our present weighty money; for if it will, it is no ridiculous thing that the king should melt down, and make that profit of his money.

If our author's rule (, where he says, "That the only just and reasonable foot, upon which the coins should be current, is the very price of the silver thereof, in case it be molten in the same place where coins are made current") be to be observed; our money is to be raised but an halfpenny, or at most a penny in five shillings: for that was the ordinary odds in the price between bullion and coined silver, before clipping had deprived us, in commerce, of all our milled and weighty money. And silver in standard bullion would not be in value one jot above the same silver in coin, if

clipped money were not current by tale, and coined silver, (as Mr. Lowndes proposes, .) as well as bullion, had the liberty of exportation. For when we have no clipped money, but all our current coin is weight, according to the standard, all the odds of value that silver in bullion has to silver in coin, is only owing to the prohibition of its exportation in money; and never rises, nor can rise above what the goldsmith shall estimate the risque and trouble of melting it down; which is so little that the importers of silver could never raise it to above a penny an ounce, but at such times as the East-India company, or some foreign sale, calling for a great quantity of silver at a time, made the goldsmiths scramble for it; and so the importers of bullion raise its price upon them, according to the present need of great quantities of silver which every goldsmith (eager to ingross to himself as much as he could) was content to pay high for, rather than go without: his present gains from those whom he furnished, and whom otherwise he could not furnish, making him amends.

The natural value then, between silver in bullion, and in coin, is (I say) every-where equal, bating the charge of coinage, which gives the advantage to the side of the coin. The ordinary odds here in England, between silver in bullion, and the same in our coin, is, by reason that the stamp hinders its free exportation, about a penny in the crown. The accidental difference, by reason of sudden occasions, is sometimes (but rarely) two-pence in five shillings, or somewhat more in great urgencies. And since the ordinary rate of things is to be taken as a measure of their price, and Mr. Lowndes tells us, . “That if the value of the silver in their coins should be raised above the value, or market-price of the same silver reduced to bullion, the subject would be proportionably injured and defrauded;” I leave him to make the inference, what will be the consequence in England, if our coin be raised here one fifth, or twenty per cent.

Mr. Lowndes says farther, . That silver has a price. I answer: silver to silver can have no other price, but quantity for quantity. If there be any other difference in value, it is, or can be nothing but one of these two: first, either the value of the labour employed about one parcel of silver more than another makes a difference in their price; and thus fashioned plate sells for more than its weight of the same silver; and in countries where the owners pay for the coin, silver in coin is more worth than its weight in bullion; but here, where the public pays the coinage, they are of very near equal value, when there is no need of exportation: for then there is no more odds than

the trouble of carrying the bullion to the mint, and fetching again, are worth; or the charge of refining so much of it, as will bring it to standard, if it be worse than standard.

Or, secondly, some privilege belonging to one parcel of silver, which is denied to another, viz. here in England a liberty of exportation allowed to silver in bullion, denied to silver stamped. This when there is need of exportation of silver, gives some small advantage of value to uncoined silver here, above coined; but that is ordinarily very inconsiderable; and can never reach to one fifth, nor half one fifth, as has been already shown. And this I think will answer all that is said about the price of silver in that place.

It is true what Mr. Lowndes says, in the next words, . “That five shillings coined upon the foot proposed, will actually contain more real and intrinsic value of silver by a great deal, than is in the current money, now commonly applied to the payment of the said rents, revenues, and debts.” But will he hence conclude, because there is now lost in those rents, revenues, and debts, a great deal more than twenty per cent. under the present irregularity of our coin, and the robbery in clipped money, without any the least neglect, or miscarriage in the owner, that intitled him to that loss, that therefore it is just that the loss of twenty per cent. be established on him by law for the future, in the reforming of our coin?

Mr. Lowndes’s second reason for lessening of our coin, we have, , in these words, “The value of the silver in the coin ought to be raised, to encourage the bringing of bullion to the mint to be coined.” This raising of money is in effect, as has been seen, nothing but giving a denomination of more pence to the same quantity of silver, viz. That the same quantity of silver shall hereafter be called seventy-five pence, which is now called but sixty-pence. For that is all is done, as is manifest, when a crown-piece, which now but goes for sixty-pence, shall be made to go for seventy-five pence; for it is plain, it contains nothing of silver, or worth in it, more than it did before. Let us suppose, that all our silver coin now in England were sixpences, shillings, half-crowns, and crowns, all milled money, full weight, according to the present standard; and that it should be ordered, that for the future, the crown-piece, instead of going for sixty-pence, should go for seventy-five pence, and so proportionably, of all the other pieces; I ask then, how such a change of denomination shall bring bullion to the mint to be coined, and from whence? I suppose this change of names, or ascribing to it more imaginary parts of any denomination, has no charms in it to bring

bullion to the mint to be coined: for whether you call the piece coined, twelve-pence, or fifteen-pence, or sixty, or seventy-five, a crown or a sceptre, it will buy no more silk, salt, or bread than it would before. That therefore cannot tempt people to bring it to the mint. And if it will pay more debts, that is perfect defrauding, and ought not to be permitted. Next, I ask, from whence shall this raising fetch it? For bullion cannot be brought hither to stay here, whilst the balance of our trade requires all the bullion we bring in to be exported again, and more silver out of our former stock with it, to answer our exigencies beyond sea. And whilst it is so, the goldsmiths and returners of money will give more for bullion to export, than the mint can give for it to coin; and so none of that will come to the mint.

But, says our author, . “An halfpenny an ounce profit, which will be in the proposed coin, above the present price of sterling bullion, will be an encouragement to those who have English plate, to bring it in to be coined.” I doubt whether there will be any such profit; for I imagine, that standard bullion cannot now be bought per ounce, for six shillings and five-pence of our clipped running cash, which is the measure whereby Mr. Lowndes determines of the price of sterling silver. But, taking this halfpenny an ounce profit for granted, it will not bring to the mint any plate, whose fashion is valued by the owner at above an halfpenny per ounce; and how much then it is like to bring it to the mint it is easy to guess.

The true and only good reason that brings bullion to the mint to be coined, is the same that brings it to England to stay there, viz. The gain we make by an over-balance of trade. When our merchants carry commodities abroad, to a greater value than those they bring home, the overplus comes to them in foreign coin, or bullion, which will stay here when we gain by the balance of our whole trade. For then we can have no debts beyond sea to be paid with it. In this thriving posture of our trade, those to whose share this bullion falls, not having any use of it whilst it is in bullion, choose to carry it to the mint to have it coined there, whereby it is of more use to them for all the business of silver in trade, or purchasing land; the mint having ascertained the weight and fineness of it: so that on any occasion every one is ready to take it at its known value, without any scruple; a convenience that is wanting in bullion. But when our trade runs on the other side, and our exported commodities will not pay for those foreign ones we consume, our treasure must go; and then it is in vain to bestow the labour of coining on bullion, that must be exported again. To what purpose is it, to make it

pass through our mint, when it will away? The less pains and charge it costs us, the better.

His third reason, , is, that this raising our coin by making it “more in tale, will make it more commensurate to the general need thereof,” and thereby hinder the increase of hazardous paper-credit, and the inconveniency of bartering.

Just as the boy cut his leather into five quarters (as he called them) to cover his ball, when cut into four quarters it fell short: but after all his pains, as much of his ball lay bare as before: if the quantity of coined silver, employed in England, fall short, the arbitrary denomination of a greater number of pence given to it, or, which is all one, to the several coined pieces of it, will not make it commensurate to the size of our trade, or the greatness of our occasions. This is as certain, as that if the quantity of a board, which is to stop a leak of a ship fifteen inches square, be but twelve inches square, it will not be made to do it, by being measured by a foot, that is divided into fifteen inches, instead of twelve, and so having a larger tale, or number of inches in denomination given to it.

This, indeed, would be a convincing reason, if sounds would give weight to silver, and the noise of a greater number of pence (less in quantity proportionably as they are more in number) were a larger supply of money, which our author, , says our occasions require, and which he by an increase of the tale of pence hopes to provide. But that mistake is very visible, and shall be farther shown in the business of bartering.

The necessity of trust and bartering is one of the many inconveniencies springing from the want of money. This inconvenience the multiplying arbitrary denominations will no more supply, nor any ways make our scarcity of coin commensurate to the need there is of it, than if the cloth which was providing for clothing the army, falling short, one should hope to make it commensurate to that need there is of it, by measuring it by a yard one fifth shorter than the standard, or changing the standard of the yard, and so getting the full denomination of yards, necessary according to the present measure. For this is all will be done by raising our coin, as is proposed. All it amounts to is no more but this, viz. That each piece, and consequently our whole stock of money should be measured and denominated by a penny, one fifth less than the standard.

Where there is not coined silver, in proportion to the value of the commodities that daily change owners in trade, there is a necessity of trust

of bartering, i. e. changing commodities for commodities, without the intervention of money. For example; let us suppose in Bermudas but an hundred pounds in ready money, but that there is every day there a transferring of commodities from one owner to another to the value of double as much. When the money is all got into hands, that have already bought all that they have need of, for that day, whoever has need of any thing else that day, must either go on tick, or barter for it, i. e. give the commodities he can best spare for the commodities he wants, v. g. sugar for bread, &c. Now it is evident here, that changing the denomination of the coin, they already have in Bermudas, or coining it over again under new denominations, will not contribute in the least towards the removing this necessity of trust or bartering. For the whole silver they have in coin being but four hundred ounces; and the exchange of the commodities, made in a distance of time, wherein this money is paid not above once, being to the value of eight hundred ounces of silver; it is plain, that one half of the commodities, that shift hands, must of necessity be taken upon credit, or exchanged by barter; those who want them having no money to pay for them. Nor can any alteration of the coin, or denomination of these four hundred ounces of silver, help this: because the value of the silver, in respect of other commodities, will not thereby be at all increased; and the commodities changed, being (as in the case) double in value to the four hundred ounces of coined silver to be laid out in them, nothing can supply this want but a double quantity, i. e. eight hundred ounces of coined silver; how denominated it matters not, so there be a fit proportion of small pieces to supply small payments.

Suppose the commodities passing every day in England, in markets and fairs, between strangers, or such as trust not one another, were to the value of a million of ounces of silver; and there was but half a million of ounces of coined silver in the hands of those who wanted those commodities; it is demonstration they must truck for them, or go without them. If then the coined silver of England be not sufficient to answer the value of commodities moving in trade amongst us, credit, or barter, must do it. Where the credit and money fail, barter alone must do it: which being introduced by the want of a greater plenty of coined silver, nothing but a greater plenty of coined silver can remove it. The increase of denomination does, or can do nothing in the case; for it is silver by its quantity, and not denomination, that is the price of things, and measure of commerce; and it

is the weight of silver in it, and not the name of the piece, that men estimate commodities by, and exchange them for.

If this be not so, when the necessity of our affairs abroad, or ill husbandry at home, has carried away half our treasure, and a moiety of our money is gone out of England; it is but to issue a proclamation, that a penny shall go for two-pence, six-pence for a shilling, half a crown for a crown, &c. and immediately, without any more ado, we are as rich as before. And when half the remainder is gone, it is but doing the same thing again, and raising the denomination anew, and we are where we were, and so on: where, by supposing the denomination raised $15/16$, every man will be as rich with an ounce of silver in his purse, as he was before when he had sixteen ounces there; and in as great plenty of money, able to carry on his trade, without bartering; his silver, by this short way of raising, being changed into the value of gold: for when silver will buy sixteen times as much wine, oil, and bread, &c. to-day, as it would yesterday, (all other things remaining the same, but the denomination) it hath the real worth of gold.

This, I guess, every body sees cannot be so. And yet this must be so, if it be true that raising the denomination one fifth can supply the want, or one jot raise the value of silver in respect of other commodities, i. e. make a less quantity of it to-day buy a greater quantity of corn, oil, and cloth, and all other commodities, than it would yesterday, and thereby remove the necessity of bartering. For, if raising the denomination can thus raise the value of coin, in exchange for other commodities, one fifth, by the same reason it can raise it two fifths, and afterwards three fifths, and again, if need be, four fifths, and as much farther as you please. So that, by this admirable contrivance of raising our coin, we shall be as rich, and so well able to support the charge of the government, and carry on our trade without bartering, or any other inconvenience, for want of money, with sixty thousand ounces of coined silver in England, as if we had six, or sixty millions. If this be not so, I desire any one to show me, why the same way of raising the denomination, which can raise the value of money, in respect of other commodities, one fifth, cannot, when you please, raise it to another fifth, and so on? I beg to be told where it must stop, and why at such a degree, without being able to go farther.

It must be taken notice of, that the raising I speak of here, is the raising of the value of our coin in respect of other commodities (as I call it all

along) in contradistinction to raising the denomination. The confounding of these in discourses concerning money, is one great cause, I suspect, that this matter is so little understood, and so often talked of with so little information of the hearers.

A penny is a denomination no more belonging to eight than to eighty, or to one single grain of silver: and so it is not necessary that there should be sixty such pence, no more nor less, in an ounce of silver, i. e. twelve in a piece called a shilling, and sixty in a piece called a crown: such-like divisions being only extrinsical denominations, are every-where perfectly arbitrary. For here in England there might as well have been twelve shillings in a penny, as twelve pence in a shilling, i. e. the denomination of the less piece might have been a shilling, and of the bigger a penny. Again, the shilling might have been coined ten times as big as the penny, and the crown ten times as big as the shilling; whereby the shilling would have but ten-pence in it, and the crown an hundred. But this, however ordered, alters not one jot the value of the ounce of silver, in respect of other things, any more than it does its weight. This raising being but giving of names at pleasure to aliquot parts of any piece, viz. that now the sixtieth part of an ounce of silver shall be called a penny, and to-morrow that the seventy-fifth part of an ounce shall be called a penny, may be done with what increase you please. And thus it may be ordered by a proclamation, that a shilling shall go for twenty-four pence, an half-crown for sixty instead of thirty pence, and so of the rest. But that an half-crown should be worth, or contain sixty such pence, as the pence were before this change of denomination was made, that no power on earth can do. Nor can any power but that which can make the plenty or scarcity of commodities, raise the value of our money thus double, in respect of other commodities, and make that the same piece, or quantity of silver, under a double denomination, shall purchase double the quantity of pepper, wine, or lead, an instant after such proclamation, to what it would do an instant before. If this could be, we might, as every one sees, raise silver to the value of gold, and make ourselves as rich as we pleased. But it is but going to market with an ounce of silver of one hundred and twenty-pence, to be convinced that it will purchase no more than an ounce of silver of sixty-pence. And the ringing of the piece will as soon purchase more commodities, as its change of denomination, and the multiplied name of pence, when it is called six score instead of sixty.

It is proposed, that the twelve-pence should be raised to fifteen-pence, and the crown to seventy-five pence, and so proportionably of the rest; but yet that the pound sterling should not be raised. If there be any advantage in raising, why should not that be raised too? And, as the crown-piece is raised from sixty to seventy-five pence, why should not the pound sterling be raised in the same proportion, from two hundred and forty-pence to three hundred pence?

Further, If this raising our coin can so stretch our money, and enlarge our pared remainder of it, as “to make it more commensurate to the general need thereof, for carrying on the common traffic and commerce of the nation, and to answer occasions requiring a large supply of money,” as Mr. Lowndes tells us in his third reason, , why are we so niggardly to ourselves in this time of occasion, as to stop at one fifth? Why do we not raise it one full moiety, and thereby double our money? If Mr. Lowndes’s rule, , “That if the value of the silver in the coin should be raised above the market-price of the same silver, reduced to bullion, the subject would be proportionably injured and defrauded,” must keep us from these advantages, and the public care of justice stop the raising of the money at one fifth; because, if our money be raised beyond the market-price of bullion, it will be so much defrauding of the subject: I then say, it must not be raised one fifth, nor half one fifth, that is, it must not be raised fifteen-pence in the crown: no, nor five-pence. For I deny that the market-price of standard-bullion ever was, or ever can be five shillings seven-pence, of lawful weighty money, the ounce: so that if our present milled money be raised one fifth, the subjects will, by Mr. Lowndes’s rule, be defrauded sixteen per cent. nay. above eighteen per cent. For the market-price of standard bullion being ordinarily under five shillings four-pence the ounce, when sold for weighty money (which is but one thirtieth), whatever our present milled money is raised above one thirtieth, it is, by Mr. Lowndes’s rule, so much defrauding the subject. For the market-price of any thing, and so of bullion, is to be taken from its ordinary rate all the year round, and not from the extraordinary rise of two or three market-days in a year. And that the market-price of standard silver was not found, nor pretended to be above five shillings and four-pence the ounce, before clipping had left none but light running cash to pay for bullion, or any thing else, is evident from a paper then published, which I took the liberty to examine in my “considerations of the consequences of raising the value of money,” &c. printed 1692. The author of that paper, it is

manifest, was not ignorant of the price of silver, nor had a design to lessen its rate, but set down the highest price it then bore.

If then Mr. Lowndes's rule of justice, and care of the subject, be to regulate the rise of our milled money, it must not be raised above one thirtieth part. If the advantages he promises, of making our money, by raising it one fifth "more commensurate to the general need thereof," be to be laid-hold on, it is reasonable to raise it higher, "to make it yet more commensurate to the general need there is of it." Which-ever of the two Mr. Lowndes will prefer, either reason of state or rule of justice, one fifth must not be his measure of raising our present milled money. If the advantage of making our money more proportionate to our trade and other necessities, be to govern its proposed raising, every one will cry out to Mr. Lowndes, If your way will do what you say, the raising it one half will be much better than one fifth, and therefore pray let an half-crown be raised to a crown, and six-pence to a shilling. If equity and the consideration of the subjects property ought to govern in the case, you must not raise our milled crown to above five shillings and four-pence.

If it be here said to me, that I do then allow that our money may be raised one thirtieth, i. e. that the crown-piece should be raised to five shillings and two-pence, and so proportionably of the other species of our coin: I answer, he that infers so, makes his inference a little too quick.

But let us for once allow the ordinary price of standard silver to be five shillings four-pence the ounce, to be paid for in weighty coin (for that must always be remembered, when we talk of the rate of bullion) and that the rate of bullion is the just measure of raising our money. This I say is no reason for the raising our milled crown now to five shillings four-pence, and recoinng all our clipped money upon that foot; unless we intend, as soon as that is done, to new raise and coin it again. For, whilst our trade and affairs abroad require the exportation of silver and the exportation of our coined silver is prohibited, and made penal by our law, standard bullion will always be sold here for a little more than its weight of coined silver. So that, if we shall endeavour to equal our weighty coined silver to standard bullion, by raising it, whilst there is a necessity of the exporation of silver, we shall do no otherwise than a child, who runs to overtake and get up to the top of his shadow, which still advances at the same rate that he does. The privilege that bullion has to be exported freely, will give it a little advance in price above our coin, let the denomination of that be raised, or fallen as you

please, whilst there is need of its exportation, and the exportation of our coin is prohibited by law. But this advance will be but little, and will always keep within the bounds, which the risque and trouble of melting down our coin shall set to it, in the estimate of the exporter. He that will rather venture to throw an hundred pounds into his melting-pot, when no-body sees him, and reduce it to bullion, than give an hundred and five pounds for the same weight of the like bullion, will never give five shillings and five-pence of milled money for an ounce of standard bullion; nor buy at that price what he can have near five per cent. cheaper, without any risque, if he will not accuse himself. And I think it may be concluded, that very few, who have furnaces, and other conveniences ready for melting silver, will give one per cent. for standard bullion, which is under five shillings and three-pence per ounce, who can, only for the trouble of melting it, reduce our coin to as good bullion.

The odds of the price in bullion to coin on this account (which is the only one, when the coin is kept to the standard) can never be the reason for raising our coin to preserve it from melting down: because this price above its weight is given for bullion, only to avoid melting down our coin; and so this difference of price between standard bullion and our coin can be no cause of its melting down.

These three reasons which I have examined, contain the great advantages, which our author supposes the proposed raising of our coin will produce. And therefore I have dwelt longer upon them. His remaining six reasons being of less moment, and offering most of them but some circumstantial conveniences, as to the computation of our money, &c. I shall more briefly pass over. Only before I proceed to them, I shall here set down the different value of our money, collected from our author's history of the several changes of our coin since Edward the first's reign, quite down to this present time. A curious history indeed, for which I think myself, and the world, indebted to Mr. Lowndes's great learning in this sort of knowledge, and his great exactness in relating the particulars.

I shall remark only the quantity of silver was in a shilling, in each of those changes; that so the reader may at first sight, without farther trouble, compare the lessening, or increase of the quantity of silver upon every change. For in propriety of speech, the adding to the quantity of silver in our coin is the true raising of its value; and the diminishing the quantity of

silver in it, is the sinking of its value; however they come to be transposed, and used in the quite contrary sense.

If my calculations, from the weight and fineness I find set down in Mr. Lowndes's extract out of the indentures of the mint, have not misled me, the quantity of silver to a grain, which was in a shilling in every change of our money, is set down in the following table:

One shilling contained of fine silver		
28 Edw. 1...264 gr.	4 Hen. 6.. 176 gr.	37 Hen. 8...40 gr.
18 Edw. 3...236 gr.	49 Hen. 6...142 gr.	3 Edw. 6...40 gr.
27 Edw. 3...213 gr.	1 Hen. 8...118 gr.	5 Edw. 6...20 gr.
9 Hen. 5...176 gr.	34 Hen. 8...100 gr.	6 Edw. 6...88 gr.
1 Hen. 6...142 gr.	36 Hen. 8... 60 gr.	2 Eliz.....89 gr.
	43 Eliz....86 gr.	

And so it has remained from the 43d year of queen Elizabeth to this day.

Mr. Lowndes's 69

Mr. Lowndes having given us the fineness of the standard silver in every reign, and the number of pieces a pound troy was coined into, closes this history with words to this purpose, , "By this deduction it doth evidently appear, that it hath been a policy constantly practised in the mints of England, to raise the value of the coin in its extrinsic denomination, from time to time, as any exigence or occasion required, and more especially to encourage the bringing of bullion into the realm to be coined." This, indeed, is roundly to conclude for his hypothesis. But I could wish, that from the histories of those times, wherein the several changes were made, he had showed us the exigencies and occasions that produced the raising of the coin, and what effects it had.

If I mistake not, Henry the VIIIth's several raisings of our coin brought little increase of silver into England. As the several species of our coin lessened in their respective quantities of silver, so the treasure of the realm decreased too: and he, that found the kingdom rich, did not, as I remember, by all his raising our coin, leave it so.

Another thing, that (from this history) makes me suspect, that the raising the denomination was never found effectively to draw silver into England, is the lowering the denomination, or adding more silver to the species of our coin: as in Hen. VI's time, the shilling was increased from one hundred forty-two grains of silver to one hundred seventy-six: and in the sixth of Edw. VI, in whose time raising the denomination seems to have been tried to the utmost, when a shilling was brought to twenty grains of silver. And

the great alteration that was then quickly made on the other hand, from twenty to eighty grains at one leap, seems to show that this lessening the silver in our coin had proved prejudicial: for this is a greater change in sinking of the denomination in proportion, than ever was made at once in raising it; a shilling being made four times weightier in silver, the sixth, than it was in the fifth year of Edward VI's reign.

Kingdoms are seldom found weary of the riches they have, or averse to the increase of their treasure. If therefore the raising the denomination did in reality bring silver into the realm, it cannot be thought that they would at any time sink the denomination, which, by the rule of contraries, should be at least suspected to drive or keep it out.

Since, therefore, we are not from matter of fact informed, what were the true motives that caused those several changes in the coin; may we not with reason suspect, that they were owing to that policy of the mint, set down by our author, , in these words, "That the proposed advance is agreeable to the policy that in past ages hath been practised, not only in our mint, but in the mints of all politic governments; namely, to raise the value of silver in the coin to promote the work of the mint?" As I remember, suitable to this policy of the mint, there was, some two years since, a complaint of a worthy gentleman, not ignorant of it, that the mill in the mint stood still; and therefore there was a proposal offered for bringing grist to the mill.

The business of money, as in all times, even in this our quick-sighted age, hath been thought a mystery: those employed in the mint must, by their places, be supposed to penetrate deepest into it. It is no impossible thing then to imagine, that it was not hard, in the ignorance of past ages, when money was little, and skill in the turns of trade less, for those versed in the business and policy of the mint to persuade a prince, especially if money were scarce, that the fault was in the standard of the mint, and that the way to increase the plenty of money, was to raise (a well-sounding word) the value of the coin. This could not but be willingly enough hearkened to; when, besides the hopes of drawing an increase of silver into the realm, it brought present gain, by the part which the king got of the money, which was hereupon all coined a-new, and the mint officers lost nothing, since it promoted the work of the mint.

This opinion Mr. Lowndes himself gives sufficient grounds for in his book, particularly , where we read these words, "Although the former debasements of the coins, by public authority, especially those in the reigns

of king Henry VIII. and king Edward VI. might be projected for the profit of the crown, and the projectors might measure that profit by the excessive quantities of alloy, that were mixed with the silver and the gold,” (and let me add, or by the quantity of silver lessened in each specie, which is the same thing.) “And though this was enterprized by a prince, who could stretch his prerogative very far upon his people; and was done in times, when the nation had very little commerce, inland or foreign, to be injured or prejudiced thereby; yet experience presently showed, that the projectors were mistaken, and that it was absolutely necessary to have the base money reformed.” This, at least, they were not mistaken in, that they brought work to the mint, and a part of the money coined to the crown for seniorage: in both which there was profit. Mr. Lowndes tells us, , “That Henry VIII. had to the value of fifty shillings for every pound weight of gold coined.” I have met with it somewhere, that formerly the king might take what he pleased for coinage. I know not too, but the flattering name of raising money might prevail then, as it does now; and impose so far on them as to make them think the raising, i. e. diminishing the silver in their coin, would bring it into the realm, or stay it here, when they found it going out. For if we may guess at the other by Henry VIII’s raising, it was probably when, by reason of expence in foreign wars, or ill-managed trade, they found money begin to grow scarce.

The having the species of our coin one-fifth bigger, or one-fifth less, than they are at present, would be neither good nor harm to England, if they had always been so. Our standard has continued in weight and fineness, just as it is now, for very near this hundred years last past: and those who think the denomination and size of our money have any influence on the state of our wealth, have no reason to change the present standard of our coin: since under that we have had a greater increase, and longer continuance of plenty of money, than perhaps any other country can show: I see no reason to think, that a little bigger or less size of the pieces coined is of any moment, one way or the other. The species of money in any country, of whatsoever sizes, fit for coining, if their proportions to one another be suited to arithmetic and calculations, in whole numbers, and the ways of accounts in that country; if they are adapted to small payments, and carefully kept to their just weight and fineness, can have no harm in them. The harm comes by the change, which unreasonably and unjustly gives away and transfers men’s properties, disorders trade, puzzles accounts, and needs a new

arithmetic to cast up reckonings, and keep accounts in; besides a thousand other inconveniencies; not to mention the charge of recoinng the money; for this may be depended on, that, if our money be raised as is proposed, it will enforce the recoinng of all our money, both old and new, (except the new shillings) to avoid the terrible difficulty and confusion there will be in keeping accounts in pounds, shillings, and pence, (as they must be) when the species of our money are so ordered as not to answer those denominations in round numbers.

This consideration leads me to Mr. Lowndes's fifth and sixth reasons, , wherein he recommends the raising our money in the proportion proposed, for its convenience, to our accounting by pounds, shillings, and pence; and for obviating perplexity among the common people, he proposes the present weighty crown to go at six shillings three-pence; and the new scepter, or unit, to be coined of the same weight, to go at the same rate; and half-crowns, half-scepters, or half-units, of the weight of the present half-crown, to go for two shillings seven-pence half-penny: by no number of which pieces can there be made an even pound sterling, or any number of even shillings under a pound; but they always fall into fractions of pounds and shillings, as may be seen by the following table:

1	Half-crown, half-scepter, or half-unit piece.....	3s. 1½d.
1	Crown, scepter, or unit piece.....	6s. 3d.
3	Half-crown pieces.....	9s. 4½d.
2	Crown pieces...	12s. 6d.
5	Half-crown pieces.....	15s. 7½d.
3	Crown pieces...	18s. 9d.
7	Half-crown pieces...£1 1	10½d.
4	Crown pieces...£1	5s.

The present shilling, and new testoon, going for fifteen pence, no number of them make any number of even shillings; but five shillings, ten shillings, fifteen shillings, and twenty shillings; but in all the rest they always fall into fractions.

The like may be said of the present sixpences, and future half-testoons, going for seven-pence halfpenny; the quarter testoons, which are to go for three-pence three farthings; and the gross and groats, which are to go for five-pence; the half gross, or groat, which is to go for two-pence halfpenny, and the prime, which is to go for a penny farthing: out of any tale of each of which species there can no just number of shillings be made, as I think, but five shillings, ten shillings, fifteen shillings, and twenty shillings; but they always fall into fractions. This new-intended shilling alone seems to be suited to our accounting in pounds, shillings, and pence. The great pieces,

as scepters and half-scepters, which are made to serve for the payment of greater sums, and are for dispatch in tale, will not in tale fall into even pounds: and I fear it will puzzle a better arithmetician than most countrymen are, to tell, without pen and ink, how many of the lesser pieces (except the shillings) however combined, will make just sixteen or seventeen shillings; and I imagine there is not one countryman of three, but may have it for his pains, if he can tell an hundred pounds made up of a promiscuous mixture of the species of this new-raised money (excluding the shillings) in a day's time; and that, which will help to confound him, and every body else, will be the old crowns, half-crowns, shillings, and sixpences, current for new numbers of pence; so that I take it for granted, that if our coin be raised as is proposed, not only all our clipped, but all our weighty and milled money, must of necessity be recoin'd too; if you would not have trade disturbed, and people more diseased with new money, which they cannot tell, nor keep accounts in, than with light and clipped money, which they are cheated with; and what a charge the new coining of all our money will be to the nation, I have computed in another place. That I think is of some consideration in our present circumstances, though the confusion that this new raised money, I fear, is like to introduce, and the want of money, and stop of trade, when the clipped is called in, and the weighty is to be recoin'd, be of much greater.

His fourth, eighth, and ninth reasons, and 86, are taken from the saving our present milled money from being cut and recoin'd. The end I confess to be good: it is very reasonable that so much excellent coin, as good as ever was in the world, should not be destroyed. But there is, I think, a surer and easier way, to preserve it, than what Mr. Lowndes proposes. It is past doubt, it will be in no danger of recoining, if our money be kept upon the present foot: but if it be raised, as Mr. Lowndes proposes, all the present milled money will be in danger, and the difficulty of counting it upon the new proposed foot, will enforce it to be recoin'd into new pieces of crowns, half-crowns, shillings, and sixpences, that may pass for the same number of pence the present do, viz. 60, 30, 12, and 6, as I have above shown. He says in his fourth reason, that "if pieces having the same bigness should have different values, it might be difficult for the common people (especially those not skilled in arithmetic) to compute how many of one kind will be equal to the sum of another." Such difficulties and confusion in counting money, I agree with him, ought carefully to be avoided; and therefore, since

if pieces having the same bigness and stamp, which the people are acquainted with, shall have new values different from those which people are accustomed to; and these new values shall in numbers of pence not answer our way of accounting by pounds and shillings; “It will be difficult for the common people (especially those not skilled in arithmetic) to compute how many of any one kind will make any sum they are to pay or receive;” especially when the numbers of any one kind of pieces will be brought into so few even sums of pounds and shillings. And thus Mr. Lowndes’s argument here turns upon himself, and is against raising our coin to the value proposed by him, from the confusion it will produce.

His eighth reason, , we have in these words: “It is difficult to conceive how any design of amending the clipped money can be compassed, without raising the value of the silver remaining in them, because of the great deficiency of the silver clipped away, which (upon recoinage) must necessarily be defrayed or born one way or other.”

It is no difficulty to conceive that clipped money, being not lawful money, should be prohibited to pass for more than its weight. Next, it is no difficulty to conceive, that clipped money, passing for no more than its weight, and so being in the state of standard bullion, which cannot be exported, should be brought to the mint, and there exchanged for weighty money. By this way, “it is no difficulty to conceive how the amending the clipped money may be compassed, because this way the deficiency of the silver clipped away will certainly be defrayed or born one way or other.”

And thus I have gone over all Mr. Lowndes’s reasons for raising our coin: wherein, though I seem to differ from him, yet I flatter myself, it is not altogether so much as at first sight may appear; since by what I find in another part of his book, I have reason to judge he is a great deal of my mind; for he has five very good arguments for continuing the present standard of fineness, each of which is as strong for continuing also the present standard of weight, i. e. continuing a penny of the same weight of standard silver, which at present it has. He that has a mind to be satisfied of this, may read Mr. Lowndes’s first five reasons for continuing the present standard of fineness, which he will find in his 29, 30, 31, and 32 pages of his report: and when Mr. Lowndes himself has again considered what there is of weight in them, and how far it reaches, he will at least not think it strange if they appear to me and others good arguments against putting less

silver into our coin of the same denomination, let that diminution be made what way it will.

What Mr. Lowndes says about gold coins, , &c. appears to me highly rational, and I perfectly agree with him: excepting only that I do not think gold is in regard of silver risen one-third in England: which I think may be thus made out: A guinea weighing five penny-weights and nine grains, or one hundred and twenty-nine grains; and a pound sterling weighing one thousand eight hundred and sixty grains; a guinea at twenty shillings, is as one hundred and twenty-nine to one thousand eight hundred and sixty; that is, as one to fourteen and an half.

A guinea at two and twenty shillings, is as one hundred and twenty-nine to two thousand forty-two, i. e. as one to sixteen.

A guinea at thirty shillings, is as one hundred twenty-nine to two thousand seven hundred eighty-four, i. e. as one to twenty-one and an half, near.

He therefore that receives twenty shillings milled money for a guinea, receives one thousand eight hundred and sixty grains standard silver for one hundred and twenty-nine grains of standard gold, i. e. fourteen and an half for one.

He who receives two and twenty shillings milled money for a guinea, has two thousand forty-two grains standard silver for one hundred and twenty-nine grains standard gold, i. e. sixteen for one.

He who receives thirty shillings milled money for a guinea, has two thousand seven hundred eighty-four grains standard silver for one hundred twenty-nine grains of gold, i. e. twenty-one and an half for one.

But the current cash being (upon trials made about Midsummer last) computed by Mr. Lowndes, , to want half its standard weight, and not being mended since, it is evident, he who receives thirty shillings of our present clipped money for a guinea, has but one thousand three hundred ninety-two grains of standard silver for one hundred twenty-nine grains of gold, i. e. has but ten and three quarters of silver, for one of gold.

I have left out the utmost precisions of fractions in these computations, as not necessary in the present case, these whole numbers showing well enough the difference of the value of guineas at those several rates.

If it be true, what I here assert, viz. that he who receives thirty shillings in our current clipped money for a guinea, receives not eleven grains of silver for one of gold; whereas the value of gold to silver in all our

neighbouring countries is about fifteen to one, which is about a third part more; it will probably be demanded how it comes to pass that foreigners, or others, import gold, when they do not receive as much silver for it here as they may have in all other countries? The reason whereof is visibly this, that they exchange it not here for silver, but for our commodities: and our bargains for commodities, as well as all other contracts, being made in pounds, shillings, and pence, our clipped money retains amongst the people (who know not how to count but by current money) a part of its legal value, whilst it passes for the satisfaction of legal contracts, as if it were lawful money. As long as the king receives it for his taxes, and the landlord for his rent, it is no wonder the farmer and tenant should receive it for his commodities. And this, perhaps, would do well enough, if our money and trade were to circulate only amongst ourselves, and we had no commerce with the rest of the world, and needed it not. But here lies the loss, when foreigners shall bring over gold hither, and with that pay for our commodities at the rate of thirty shillings the guinea, when the same quantity of gold that is in a guinea, is not beyond sea worth more silver than is in twenty, or one and twenty and sixpence of our milled and lawful money; by which way of paying for our commodities, England loses near one-third of the value of all the commodities it thus sells; and it is all one as if foreigners paid for them in money coined and clipped beyond sea, wherein was one-third less silver than there ought to be; and thus we lose near one-third in all our exportation, whilst foreign gold imported is received in payment for thirty shillings a guinea. To make this appear, we need but trace this way of commerce a little, and there can be no doubt of the loss we suffer by it.

Let us suppose, for example, a bale of Holland linen worth there one hundred and eighty ounces of our standard silver; and a bale of serge here worth also the same weight of one hundred and eighty ounces of the same standard silver; it is evident these two bales are exactly of the same value. Mr. Lowndes tells us, , “That at this time the gold that is in a guinea (if it were carried to Spain, Italy, Barbary, and some other places) would not purchase so much silver there, as is equal to the standard of twenty of our shillings,” i. e. would be in value there to silver scarce as one to fourteen and an half: and I think I may say that gold in Holland is, or lately was, as one to fifteen, or not much above. Taking then standard gold in Holland to be in proportion to standard silver as one to about fifteen, or a little more;

twelve ounces of our standard gold, or as much gold as is in forty-four guineas and an half, must be given for that bale of Holland linen, if any one will pay for it there in gold: but if he buys that bale of serge here for one hundred and eighty ounces of silver, which is forty-eight pounds sterling, if he pays for it in gold at thirty shillings the guinea, two and thirty guineas will pay for it; so that in all the goods that we sell beyond sea for gold imported, and coined into guineas, unless the owners raise them one-third above what they would sell them for in milled money, we lose twelve in forty-four and an half, which is very near one third.

This loss is wholly owing to the permitting clipped money in payment; and this loss we must unavoidably suffer, whilst clipped money is current amongst us: and this robbing of England of near one-third of the value of the commodities we send out will continue, whilst people had rather receive guineas at thirty shillings than silver coin (no other being to be had) that is not worth half what they take it for; and yet this clipped money, as bad as it is, and however unwilling people are to be charged with it, will always have credit enough to pass, whilst the goldsmiths and bankers receive it; and they will always receive it, whilst they can pass it over again to the king with advantage, and can have hopes to prevail, that at last when it can be born no longer, must be called in, no part of the loss of light money, which shall be found in their hands, shall fall upon them, though they have for many years dealt in it, and by reason of its being clipped, have had all the running cash of the kingdom in their hands, and made profit of it. I say, clipped money, however bad it be, will always pass whilst the king's receivers, the bankers of any kind, and at last the exchequer, take it; for who will not receive clipped money, rather than have none for his necessary occasions, whilst he sees the great receipt of the exchequer admits it, and the bank and goldsmiths will take it of him, and give him credit for it, so that he needs keep no more of it by him than he pleases? In this state, while the exchequer receives clipped money, I do not see how it can be stopped from passing. A clipped half-crown that goes at the exchequer, will not be refused by any one, who has hopes by his own or others hands to convey it thither, and who, unless he take it, cannot trade, or shall not be paid; whilst therefore the exchequer is open to clipped money, it will pass, and whilst clipped money passes, clippers will certainly be at work; and what a gap this leaves to foreigners, if they will make use of it, to pour in clipped money upon us, (as its neighbours did into Portugal) as long as we have either goods or weighty

money, left to be carried away at fifty per cent. or greater profit, it is easy to see.

I will suppose the king receives clipped money in the exchequer, and at half, or three-quarters loss, coins it into milled money. For if he receives all, how much soever clipped, I suppose the clipper's shears are not so squeamish as not to pare away above one-half. It will be a wonderful conscientiousness in them, no where that I know to be paralleled, if they will content themselves with less profit than they can make, and will leave seven penny-worth of silver in an half-crown, if six penny-worth and the stamp be enough to make it pass for half a crown. When his majesty hath coined this into milled money of standard weight, and paid it out again to the bankers, goldsmiths, or others, what shall then become of it? Either they will lay it up to get rid of their clipped money, for nobody will part with heavy money whilst he has any light; nor will any heavy money come abroad whilst there is light left; for whoever has clipped money by him, will sell good bargains, or borrow at any rate of those who are willing to part with any weighty, to keep that by him, rather than the clipped money he has in his hands; so that, as far as this reaches, no milled money, how much soever be coined, will appear abroad; or if it does, will it long escape the coiners and clippers hands, who will be at work presently upon it, to furnish the exchequer with more clipped money at fifty, sixty, seventy, or I know not what advantage? Though this be enough to cut off the hopes of milled money appearing in payments, whilst any clipped is current, yet to this we may add, that gold imported at an over-value, will sweep it away as fast as it is coined, whilst clipped money keeps up the rate of guineas above their former value. This will be the circulation of our money, whilst clipped is permitted any way to be current; and if store enough of clipped money at home, or from abroad, can be but provided, (as it is more than probable it may now the trade is so universal, and has been so long practised with great advantage, and no great danger, as appears by the few have suffered, in regard to the great numbers it is evident are engaged in the trade, and the vent of it here in England is so known and sure) I do not see how in a little while we shall have any money or goods at all left in England, if clipping be not immediately stopped; and how clipping can be stopped, but by an immediate, positive prohibition, whereby all clipped money shall be forbid to pass, in any payment whatsoever, or to pass for more than its weight, I would be glad to learn. Clipping is the great leak, which for some time past

has contributed more to sink us, than all the forces of our enemies could do. It is like a breach in the sea-bank, which widens every moment till it be stopped; and my timorous temper must be pardoned, if I am frightened with the thoughts of clipped money being current one moment longer, at any other value but of warranted standard bullion: and therefore there can be nothing more true and reasonable, nor that deserves better to be considered, than what Mr. Lowndes says in his corollary, .

Whoever desires to know the different ways of coining money by the hammer and by the mill, may inform himself in the exact account Mr. Lowndes has given of both under his second general head; where he may also see the probablest guess that has been made of the quantity of our clipped money, and the silver deficient in it; and an account of what silver money was coined in the reigns of queen Elizabeth, king James Ist, and Charles Ist, more exact than it is to be had any where else. There is only one thing which I shall mention, since Mr. Lowndes does it here again under this head, , and that is melting down our coin; concerning which I shall venture humbly to propose these following questions:

1. Whether bullion be any thing but silver, whose workmanship has no value?
2. Whether that workmanship, which can be had for nothing, has, or can have, any value?
3. Whether, whilst the money in our mint is coined for the owners, without any cost to them, our coin can ever have any value above any standard bullion?
4. Whether, whilst our coin is not of value above standard bullion, goldsmiths, and others, who have need of standard silver, will not rather take what is by the free labour of the mint, already essayed and adjusted to their use, and melt that down, than be at the trouble of melting, mixing, and assaying of silver for the uses they have?
5. Whether the only cure for this wanton, though criminal melting down our coin, be not, that the owners should pay one moiety of the sixteen-pence halfpenny which is paid per pound troy for coinage of silver, which the king now pays all?
6. Whether by this means standard silver in coin will not be more worth than standard silver in bullion, and so be preserved from this wanton melting down, as soon as an over-balance of our trade shall bring us silver

to stay here? for till then, it is in vain to think of preserving our coin from melting down, and therefore to no purpose till then to change that law.

7. Whether any laws, or any penalties, can keep our coin from being carried out, when debts contracted beyond seas call for it?

8. Whether it be any odds to England, whether it be carried out, melted down into bullion, or in specie?

9. Whether, whilst the exigencies of our occasions and trade call for it abroad, it will not always be melted down for the conveniency of exportation, so long as the law prohibits its exportation in specie?

10. Whether standard silver in coin and in bullion will not immediately be of the same value, as soon as the prohibition of carrying our money in specie is taken off?

11. Whether an ounce of silver the more would be carried out in a year, if that prohibition were taken off?

12. Whether silver in our coin, will not always, during the prohibition of its exportation, be a little less worth than silver in bullion, whilst the consumption of foreign commodities, beyond what ours pay for, makes the exportation of silver necessary? And so, during such a state, raise your money as much, and as you will, “silver in the coin will never fetch as much as the silver in bullion,” as Mr. Lowndes expresses it, .

As to the inconveniencies and damages we sustain by clipped money passing by tale as if it were lawful, nothing can be more true, more judicious, nor more weighty, than what Mr. Lowndes says, under his third general head; wherein I perfectly agree with him, excepting only where he builds any thing upon the proposed raising our coin one-fifth. And to what he says, , concerning our being “deprived of the use of our heavy money, by men’s hoarding it, in prospect that the silver, contained in those weighty pieces, will turn more to their profit than lending it at interest, purchasing, or trading therewith;” I crave leave to add, that those hoarders of money, a great many of them, drive no less, but rather a greater trade, by hoarding the weighty money, than if they let it go abroad; for by that means all the current cash being light, clipped, and hazardous money, it is all tumbled into their hands, which gives credit to their bills, and furnishes them, to trade for as much as they please, whilst every body else scarce trades at all, (but just as necessity forces) and is ready to stand still.

Where he says, , “It is not likely the weighty monies will soon appear abroad, without raising their value, and recoinng the clipped monies:” I

should agree with him if it ran thus: without recoinning the clipped, and in the mean time making it go for its weight; for that will, I humbly conceive, bring out the heavy money, without raising its value, as effectually and sooner; for it will do it immediately: his will take up some time; and I fear, if clipped money be not stopped all at once, and presently, from passing any way in tale, the damage it will bring will be irreparable.

“Mr. Lowndes’s fourth general head is to propose the means that must be observed, and the proper methods to be used in and for the re-establishment of the silver coins.”

The first is, “That the work should be finished in as little time as may be: not only to obviate a farther damage by clipping in the interim, but also that the needful advantages of the new money may be sooner obtained for the service of the nation.”

These, I agree with him, are very good and necessary ends; but they are both to be attained, I conceive, much sooner by making clipped money go for its weight, than by the method Mr. Lowndes proposes; for this immediately puts an end to clipping, and obviates all farther damage thereby. Next, it immediately brings out all the hoarded weighty money, and so that advantage will be sooner obtained for the service of the nation, than it can any other way besides. Next, it preserves the use of clipped money for the service of the nation, in the interim, till it can be recoinced all at the Tower.

His second proposition is, “That the loss, or the greatest part of it, ought to be born by the public, and not by particulars, who, being very numerous, will be prejudiced against a reformation for the public benefit, if it be to be effected at the cost of particular men.”

A tax given to make good the defect of silver in clipped money, will be paid by particulars; and so the loss will be born by particular men: and whether these particulars be not more numerous, or at least a great number of innocent men of them more sensibly burdened that way, than if it takes its chance in the hands of those men who have profited by the having it in their hand, will be worth considering. And I wish it here well weighed, which of the two ways the greater number of men would be most dangerously prejudiced against this reformation. But as Mr. Lowndes orders the matter, every body will, I fear, be prejudiced against this reformation, when (as he divides it, , 134,) the owners will bear near one-half of the loss, in the price of his clipped money, and every body else his part of the

remainder, in a tax levied on them for it. I wish a remedy could be found without any body's loss. Most of those ways I have heard proposed to make reparation to every particular man for the clipped money shall be found in his hands, do so delay the remedy, if not entail clipping upon us, that I fear such a care of particulars endangers the whole; and if that suffer, it will go but ill with particulars. I am not for hindering those who have clipped money from any recompense which can be provided and made them. The question here is not whether the honest countryman shall bear the loss of his clipped money, without any more ado, or pay a tax to recompense himself? That which, I humbly conceive, the nation is most concerned in, is that clipping should be finally stopped, and that the money which remains should go according to its true value, for the carrying on of commerce, and the present supply of people's exigencies, till that part of it, which is defaced, can by the mint be brought to its legal and due form; and therefore I think it will be the rational desire of all particulars, that the shortest and surest way, not interfering with law or equity, should be taken to put an effectual end to an evil, which every moment it continues, works powerfully towards a general ruin.

His fourth proposition, "That no room must be left for jealousy," I acknowledge to be a good one, if there can be a way found to obtain it.

I cannot but wonder to find the words, , "That no person whatsoever shall hereafter be obliged to accept, in legal payments, any money whatsoever that is already clipped, or may hereafter be clipped, or diminished; and that no person shall tender or receive any such money in payment, under some small penalty to be made easily recoverable, &c."

As if any man now were obliged to receive clipped money in legal payments, and there were not already a law, with severe penalties, against those who tendered clipped money in payment.

It is a doubt to me, whether, the warden, masterworker, &c. of the mint at the Tower, could find fit and skilful persons enough to set nine other mints at work, in other parts of England, in a quarter of a year, as Mr. Lowndes proposes, . Besides, Mr. Lowndes tells us, , that the engines, which "put the letters upon the edges of the larger silver pieces, and mark the edges of the rest with a graining, are wrought secretly." And, indeed, this is so great a guard against counterfeiting, as well as clipping our money, that it deserves well to be kept a secret, as it has been hitherto. But how that can be, if money be to be coined in nine other mints, set up in

several parts, it is hard to conceive; and lastly, perhaps, some may apprehend it may be of ill consequence to have so many men instructed and employed in the art of coining only for a short job, and then turned loose again to shift for themselves by their own skill and industry, as they can.

The provision made in his fourth rule, , to prevent the gain of “subtle dealers by culling out the heaviest of the clipped pieces,” though it be the product of great sagacity and foresight, exactly calculated, and as well contrived, as in that case it can be; yet I fear is too subtle for the apprehension and practice of countrymen, who many of them, with their little quickness in such matters, have also but small sums of money by them, and so neither having arithmetic, nor choice of clipped money to adjust it to the weight there required, will be hardly made to understand it. But I think the clippers have, or will take care that there shall not be any great need of it.

To conclude; I confess myself not to see the least reason why our present milled money should be at all altered in fineness, weight, or value. I look upon it to be the best and safest from counterfeiting, adulterating, or any ways being fraudulently diminished, of any that ever was coined. It is adjusted to our legal payments, reckonings and accounts, to which our money must be reduced: the raising its denomination will neither add to its worth, nor make the stock we have more proportionate to our occasions, nor bring one grain of silver the more into England, nor one farthing advantage to the public: it will only serve to defraud the king, and a great number of his subjects, and perplex all; and put the kingdom to a needless charge of recoinage all, both milled as well as clipped money.

If I might take upon me to offer any thing new, I would humbly propose, that since market and retail trade requires less divisions than sixpences, a sufficient quantity of four-penny, four-penny halfpenny, and five-penny pieces should be coined. These in change will answer all the fractions between sixpence and a farthing, and thereby supply the want of small monies, whereof I believe nobody ever saw enough common to answer the necessity of small payments; whether, either because there was never a sufficient quantity of such pieces coined, or whether, because of their smallness they are apter to be lost out of any hands, or because they oftener falling into children’s hands, they lose them, or lay them up; so it is, there is always a visible want of them; to supply which, without the inconveniences

attending very small coin, the proposed pieces, I humbly conceive, will serve.

If it be thought fit for this end to have four-pence, four-penny halfpenny, and five-penny pieces coined, it will, I suppose, be convenient that they should be distinguished from sixpences, and from one another by a deep and very large plain difference in the stamp on both sides, to prevent mistakes and loss of time in telling of money. The fourpence-halfpenny has already the harp for a known distinction, which may be fit to be continued; the five-pence may have the feathers, and the four-pence this mark IV. of four on the reverse; and on the other side they may each have the king's head with a crown on it, to show on that side too that the piece so coined is one of those under a sixpence; and with that they may each, on that side also, have some marks of distinction one from another, as the five-pence this mark of V. the fourpence-halfpenny a little harp, and the four-pence nothing.

These or any other better distinctions which his majesty shall order, will in tale readily discover them, if by chance any of them fall into larger payments, for which they are not designed.

And thus I have, with as much brevity and clearness as I could, complied with what Mr. Lowndes professes to be the end of printing his report in these words, viz. "That any persons, who have considered an affair of this nature, may (if they please) communicate their thoughts for rendering the design here aimed at more perfect, or more agreeable to the public service." It must be confessed, that my considerations have led me to thoughts, in some parts of this affair, quite opposite to Mr. Lowndes's: but how far this has been from any desire to oppose him, or to have a dispute with a man, no otherwise known to me but by his civilities, and whom I have a very great esteem for, will appear by what I printed about raising the value of money, about three years since. All that I have said here, in answer to him, being nothing but the applying the principles I then went on, particularly now, to Mr. Lowndes's arguments, as they came in my way, that so thereby others may judge what will, or will not, be the consequences of such a change of our coin, as he proposes; the only way, I think, of rendering his design more agreeable to the public services.

One shilling contained of fine silver.

SHORT OBSERVATIONS ON A PRINTED PAPER, ENTITLED FOR ENCOURAGING THE COINAGE OF SILVER MONEY IN ENGLAND, AND AFTER FOR KEEPING IT THERE

The author says, “Silver yielding the proposed 2d. or 3d. more by the ounce, than it will do by being coined into money, there will be none coined into money, and matter of fact shows there is none.”

It would be hard to know what he means, when he says, “silver yields 2d. or 3d. more by the ounce, than it will do by being coined into money:” but that he tells us in plain words at the bottom of the leaf, “that an ounce of silver uncoined is of 2d. more value than after it is coined it will be;” which, I take the liberty to say, is so far from being true, that I affirm it is impossible to be so. For which I shall only give this short reason: viz. Because the stamp neither does, nor can take away any of the intrinsic value of the silver; and therefore an ounce of coined standard silver, must necessarily be of equal value to an ounce of uncoined standard silver. For example; suppose a goldsmith has a round plate of standard silver, just of the shape, size, and weight of a coined crown-piece, which, for brevity’s sake, we will suppose to be an ounce; this ounce of standard silver is certainly of equal value to any other ounce of unwrought standard silver in his shop; away he goes with his round piece of silver to the Tower, and has there the stamp set upon it; when he brings this numerical piece back again to his shop coined, can any one imagine that it is now 2d. less worth than it was, when he carried it out smooth, a quarter of an hour before; or that it is not still of equal value to any other ounce of unwrought standard silver in his shop? He that can say it is 2d. less worth than it was before it had the king’s image and inscription on it, may as well say, that 60 grains of silver, brought from the Tower, are worth but 58 grains of silver in Lombard-street.

But the author very warily limits this ill effect of coinage only to England; why it is in England, and not every where, would deserve a reason.

But let us grant it to be true, as our author affirms, that coined silver in England is one thirtieth worse, or of less value, than uncoined: the natural consequence from this, if it be true, is, that it is very unfit that the mint should be employed in England, where it debases the silver one thirtieth; for, if the stamp lessens the value of our silver this year, it will also do so the next, and so on to the end of the world, it always working the same way. Nor will the altering the denomination, as is proposed, at all help it.

But yet he thinks he has some proof for his proposition, because it is matter of fact there is no money coined at the mint. This is the great grievance, and is one indeed, but for a different reason from what seems to inspire that paper.

The matter in short is this; England sending more consumable commodities to Spain than it receives from thence, the merchants, who manage their trade, bring back the overplus in bullion, which, at their return, they sell as a commodity. The chapmen, that give highest for this, are, as in all cases of buying and selling, those who can make most profit by it; and those are the returners of our money, by exchange, into those countries, where our debts, any way contracted, make a need of it: for they getting 6, 8, 10, &c. per cent. according to the want and demand of money from England there, and according to the risque of the sea, buy up this bullion, as soon as it comes in, to send it to their correspondents in those parts, to make good their credit for the bills they have drawn on them, and so can give more for it than the mint-rate, i. e. more than equal weight of milled money for an equal weight of standard bullion; they being able to make more profit of it by returns.

Suppose the balance of our trade with Holland were in all other commodities equal, but that in the last East-India sale we bought of them of East-India commodities to the value of a million, to be paid in a month; within a month a million must be returned into Holland; this presently raises the exchange, and the traders in exchange sell their bills at high rates; but the balance of trade being (as is supposed in the case) equal in all other commodities, this million can no way be repaid to their correspondents, on whom those bills were drawn, but by sending them money, or bullion, to reimburse them.

This is the true reason why the bullion brought from Spain is not carried to the mint to be coined, but bought by traders in foreign exchange, and exported by them, to supply the overplus of our expences there, which are

not paid for by our commodities. Nor will the proposed raising of our money, as it is called, whether we coin our money for the future one thirtieth, or one twentieth, or one half lighter than now it is, bring one ounce more to the mint than now, whilst our affairs in this respect remain in the same posture. And I challenge the author to show that it will; for saying is but saying. Bullion can never come to the mint to be coined, whilst the over-balance of trade and foreign expences are so great, that to satisfy them, not only the bullion your trade in some parts now yearly brings in, but also some of your formerly coined money is requisite, and must be sent out: but when a change in that brings in and lodges bullion here, (for now it seems it only passes through England) the increase of silver and gold staying in England will again bring it to the mint to be coined.

This makes it easily intelligible, how it comes to pass, that when now at the mint they can give but 5s. 2d. per ounce for silver, they can give 5s. 4d. the ounce in Lombard-street, (which is what our author means when he says, “silver is now worth but 5s. 2d. the ounce at the mint, and is worth 5s. 4d. elsewhere.”) The reason whereof is plain, viz. Because the mint, giving weighty money for bullion, can give so much and no more for silver than it is coined at, which is 5s. 2d. the ounce, the public paying all the odds, that is between coined and uncoined silver, which is the manufacture of coinage: but the banker, or returner of money, having use for silver beyond sea, where he can make his profit of it by answering bills of exchange, which he sells dear, must either send our money in specie, or melt down our coin to transport, or else with it buy bullion.

The sending our money in specie, or melting it down, has some hazard, and therefore, if he could have bullion for 5s. 2d. per ounce, or a little dearer, it is like he would always rather choose to exchange corn for bullion, with some little loss, rather than run the risque of melting it down for exportation.

But this would scarce make him pay 2d. in the crown, which is almost three and an half per cent. if there were not something more in it, than barely the risque of melting, or exportation; and that is the lightness of the greatest part of our current coin. For example, N. has given bills for thirty thousand pounds sterling in Flanders, and so has need of ten thousand weight of silver to be transported thither; he has thirty thousand pounds sterling by him in ready money, whereof five thousand pounds is weighty milled money; what shall hinder him then from throwing that into his

melting-pot, and so reducing it to bullion, to be transported? But what shall he do for the other twenty-five thousand pounds, which, though he has by him, is yet clipped and light money, that is, at least twenty per cent. lighter than the standard? If he transports or melts down this, there is so much clear loss to him; it is therefore more advantage for him to buy bullion at 5s. 4d. the ounce with that light money, than to transport, or melt it down; wherein, though the seller of the bullion has less weight in silver than he parts with, yet he finds his account, as much as if he received it in weighty coin, whilst a clipped crown-piece, or shilling, passes as well in payment for any commodity here in England as a milled one. Thus our mint is kept from coining.

But this paper, For encouraging the coining, &c. would fain have the mill at work, though there be no grist to be had, unless you grind over again what is ground already, and pay toll for it a second time: a proposition fit only for the miller himself to make; for the meanest housewife in the country would laugh at it, as soon as proposed. However, the author pleases himself, and thinks he has a good argument to make it pass, viz. because the toll to be paid for it will not amount to three hundred and thirty thousand pounds, as is said in a late treatise about raising the value of money, , for, he says that writer is mistaken, in saying that “3s. and 6d. is allowed at the mint for the coinage of every pound troy,” whereas there is but sixteen-pence halfpenny there allowed for the same; which sixteen-pence halfpenny being above one-third of 3s. 6d. it follows by his own computation, that the new coining our money will cost the nation above one hundred and ten thousand pounds; a small sum in this our plenty of riches, to be laid out for the purchasing these following inconveniencies, without any the least advantage.

A loss to the king of one thirtieth (if you coin your money 2d. per crown, one twentieth, if you coin your money 3d. per crown lighter) of all his standing revenue.

A like loss of one twentieth, or one thirtieth, in all rents that are settled; for these have, during the term, the nature of rent-sec: but five per cent. loss in a man's income he thinks so little, it will not be perceived.

Trouble to merchants in their trade. These inconveniencies he is forced to allow. He might have said disorder to all people in their trade, though he says it will be but a little trouble to merchants, and without any real damage to trade. The author would have done well to have made out this, and a

great many other assertions in that paper; but saying is much easier, if that may pass for proof.

Indeed he has, by a short way, answered the book above-mentioned, in the conclusion of his paper, in these words: “And he that so grossly mistakes in so material points of what he would assert, it is plain is not free from mistakes.” It does not appear that he, who published that book, ever thought himself free from mistakes; but he that mistakes in two material points, may be in the right in two others, and those will still need an answer. But one of these material points will, I think, by what is already said, appear not to be a mistake; and for any thing the author of the paper hath said, or can say, it will always be true, that an ounce of silver coined, or not coined, is, and eternally will be, of equal value to any other ounce of silver. As to any other mistake, concerning the rate of coinage, it is like he had his information from some disinterested person, whom he thought worthy of credit. And whether it be 3s. 6d. as he was told, or only sixteen-pence halfpenny per pound troy, as the paper says, whether the reader will believe the one or the other, or think it worth his more exact inquiry, this is certain, the kingdom ought not to be at that, or any other charge, where there is no advantage, as there will be none in this proposed coinage, but quite the contrary.

In his answer to

Object. 1. He says from Edw. III. “Silver has from time to time (as it grew in esteem) been by degrees raised in all mints.” If an ounce of silver now not exchanging, or paying for what one tenth of an ounce would have purchased in Edw. III’s time, and so being ten times less worth now, than it was then, be growing in esteem, this author is in the right; else silver has not, since Edw. III’s reign, from time to time grown in esteem. Be that as it will, he assigns a wrong cause of raising of silver, as he calls it, in our mint. For if growing thus in request, i. e. by lessening its value, had been the reason of altering our money, this change of coin, or raising the denomination of silver in ours, and other mints, ought to have been greater by much, since Henry VII’s time, than it was between that and Edward III’s; because the great change of the value of silver has been made, by the plenty of it poured into this part of the world from the West-Indies, not discovered till Henry VII’s reign. So that I think I may say, that the value of silver from Edward III. to Henry VII. changed not one tenth, but from Henry VII. till now it changed above seven tenths; and yet, money having

been raised in our mint two thirds since Edward III's time, the far greater part of the raising of it, was before Henry VII's time, and a very small part of it since; so that the cause, insinuated by our author, it is evident, was not the cause of lessening our coin so often, whatever it was: and it is possible there wanted not men of projects in those days, who for private ends, by wrong suggestions, and false reasonings, covered with mysterious terms, led those into mistakes, who had not the time and will nicely to examine; though a crown-piece three times as big as one of ours now, might, for its size alone, deserve to be reformed.

To Object. 2. he says, "The raising the denomination of money in Spain and Portugal, was making it go for more when coined, than its true value."

This, I say, is impossible, and desire the author to prove it. It did in Spain and Portugal, just what it will do here and every-where; it made not the silver coined go for more than its value, in all things to be bought, but just so much as the denomination was raised, just so much the less of commodity had the buyer in exchange for it: as it would be here, if you should coin six-pences into shillings; if any one went to market with this new money, he would find that, whereas he had a bushel of wheat last week for eight shillings of the former coin, he would have now but half a bushel for eight of the new shillings, when the same denomination had but half the quantity of silver. Indeed those, who were to receive money upon former contracts, would be defrauded of half their due, receiving, in their full tale of any denomination contracted for, but half the silver they should have; the cheat whereof they would find, when they went to market with their new money. For this I have above proved, that one ounce of silver is, and eternally will be, equal in value to another ounce of silver; and all that can possibly put a difference between them, is only the different value of the workmanship, bestowed on one more than another, which in coinage our author tells in this paper is but sixteen-pence halfpenny per pound troy. I demand therefore, of our author, to show that any sort of coinage, or, as he calls it, raising of money, can raise the value of coined silver, or make it go for more than uncoined, bating the charge of coinage; unless it be to those who, being to receive money upon former contracts, will, by receiving the tale agreed for, receive less than they should of silver, and so be defrauded of what they really contracted for.

What effect such a raising of their money had in one particular, I will tell our author. In Portugal they count their money by reys, a very small, or

rather imaginary coin, just as if we here should count all our sums by farthings. It pleased the government, possibly being told that it would raise the value of their money, to raise in denomination the several species, and make them go for a greater (let us suppose double the) number of reys than formerly. What was the consequence? It not only confounded the property of the subject, and disturbed affairs to no purpose; but treaties of commerce having settled the rates of the customs at so many reys on the several commodities, the king immediately lost in the value half his customs. The same that in proportion will happen in the settled revenue of the crown here, upon the proposed change.

For though our author in these words, “whereas all now desired by this act is to keep silver, when coined, of the same value it was before,” would insinuate, that this raising the denomination, or lessening our coin, as is proposed, will do no such thing; yet it is demonstration, that when our coin is lessened 3d. in 5s. the king will receive five per cent. less in value in his customs, excise, and all his settled revenue, and so proportionably, as the quantity of silver, in every species of our coin, shall be made less than now it is coined in those of the same denomination.

But, whatever our author means by “making money go for more when coined than its true value, or by keeping silver, when coined, of the same value it was before;” this is evident, that raising their money thus, by coining it with less silver in it than it had before, had not the effect in Portugal and Spain, which our author proposes from it here: for it has not brought one penny more to the mint there, nor kept their money, or silver, from exportation since, though forfeiture and death be the penalties joined in aid to this trick of raising to keep it in.

But our author tells us in answer to Object. 4. This “will scarce ever at all be perceived.” If of 100 guineas a man has in his pocket, five should be picked out, so he should not perceive it, the fraud and the loss would not be one jot the less; and though he perceived it not when, or how it was done, yet he will find it in his accounts, and the going so much back in his estate at the end of the year.

To Object. 3. he says, The “raising your coin (it may be) may raise the price of bullion here in England.” An ounce of silver will always be equal in value to an ounce of silver every where, bating the workmanship. I say it is impossible to be otherwise, and require our author to show it possible in England, or any where, or else hereafter to spare his “may be.” To avoid

fallacies, I desire to be understood, when I use the word silver alone, to mean nothing but silver, and to lay aside the consideration of baser metals that may be mixed with it; for I do not say that an ounce of standard, that has almost one twelfth of copper in it, is of equal value with an ounce of fine silver that has no alloy at all; but that any two ounces of equally alloyed silver will always be of equal value; the silver being the measure of commerce, it is the quantity of silver that is in every piece he receives, and not the denomination of it, which the merchant looks after, and values it by.

But this raising of the denomination our author would have pass, because it will be “better for the possessors of bullion,” as he says, Answ. 3. But who are they who now in England are possessed of so much bullion? or what private men are there in England of that consideration, that for their advantage, all our money should be new coined, and of a less weight, with so great a charge to the nation, and loss to his majesty’s revenue?

He farther adds, Answ. 3. It doth not thence inevitably follow, it will “raise the price of bullion beyond sea.”

It will as inevitably follow, as that nineteen ounces of silver will never be equal in weight, or worth, to twenty ounces of silver: so much as you lessen your coin, so much more you must pay in tale, as will make the quantity of silver the merchant expects, for his commodity; under what denomination soever he receives it.

The clothier, thus buying his Spanish wool, oil, and labour, at five per cent. more in denomination, sells his woollen manufacture proportionably dearer to the English merchant, who, exporting it to Spain, where their money is not changed, sells it at the usual market-rate, and so brings home the same quantity of bullion for it, which he was wont; which, therefore, he must sell to you at the same raised value your money is at: and what then is gained by all this? The denomination is only changed, to the prejudice of the public; but as to all the great matters of your trade, the same quantity of silver is paid for commodities as before, and they sold in their several foreign markets for the same quantity of silver. But whatever happens in the rate of foreign bullion, the raising of the denomination of our money will bring none of it to our mint to be coined; that depends on the balance of our trade, and not on lessening our coin under the same denomination: for whether the pieces we call crowns be coined 16, 24, or 100 grains lighter, it will be all one as to the value of bullion, or the bringing more, or less of it into England, or to our mint.

What he says in his answer to Object. 4. besides what we have already taken notice of, is partly against his bill, and partly mistake.

He says, "It may be some (as it is now) gain to those, that will venture to melt down the milled and heavy money now coined." That men do venture to melt down the milled and heavy money is evident from the small part of milled money is now to be found of that great quantity of it that has been coined; and a farther evidence is this, that milled money will now yield four, or five more per cent. than the other, which must be to melt down, and use as bullion, and not as money in ordinary payments. The reason whereof is, the shameful and horrible debasing (or, as our author would have it, raising) our unmilled money by clipping.

For the odds betwixt milled and unmilled money being now, modestly speaking, above 20 per cent. and bullion, for reasons elsewhere given, being not to be had, refiners, and such as have need of silver, find it the cheapest way to buy milled money for clipped, at four, five, or more per cent. loss.

I ask, therefore, this gentleman, What shall become of all our present milled and heavy money, upon the passing of this act? To which his paper almost confesses, what I will venture to answer for him, viz. that as soon as such a law is passed, the milled and heavy money will all be melted down: for it being five per cent. heavier, i. e. more worth than what is to be coined in the mint, nobody will carry it thither to receive five per cent. less for it, but sell it to such as will give four or four and a half per cent. more for it, and at that rate melt it down with advantage: for Lombard-street is too quick-sighted, to give sixty ounces of silver for fifty-seven ounces of silver, when bare throwing it into the melting-pot will make it change for its equal weight. So that by this law five per cent. gain on all our milled money will be given to be shared between the possessor and the melter of our milled money, out of the honest creditor and landlord's pocket, who had the guaranty of the law, that under such a tale of pieces, of such a denomination as he let his land for, he should have to such a value, i. e. such a weight in silver. Now I ask, Whether it be not a direct and unanswerable reason against this bill, that he confesses, that it will be "a gain to those, who will melt down the milled and heavy money," with so much loss to the public; and not as he says, "with very small loss to those, that shall be paid in the new," unless he calls five per cent. very small loss; for just so much is it to receive but fifty-seven grains, or ounces of silver, for sixty, which is the proportion in making your crowns 3d. lighter. This is certain, nobody will

pay away milled or weighty crowns for debts, or commodities, when it will yield him four, or five per cent. more; so that which is now left of weighty money, being scattered up and down the kingdom, into private hands, which cannot tell how to melt it down, will be kept up, and lost to our trade. And, as to your clipped and light money, will you make a new act for coinage, without taking any care for that? The making a new standard for your money cannot do less than make all money, which is lighter than that standard, unpassable; and thus the milled and heavy money not coming into payment, and the light and clipped not being lawful money, according to the new standard, there must needs be a sudden stop of trade, and it is to be feared, a general confusion of affairs; though our author says, “it will not any ways interrupt trade.”

The latter part of the section, about raising the value of land, I take the liberty to say is a mistake; which, though a sufficient reply to an assertion without proof, yet I shall not so far imitate this author, as barely to say things: and therefore, I shall add this reason for what I say, viz. Because nothing can truly raise the value, i. e. the rent of land, but the increase of your money: but because raising the value of land is a phrase, which, by its uncertain sense, may deceive others, we may reckon up these several meanings of it.

The value of land is raised, when its intrinsic worth is increased, i. e. when it is fitted to bring forth a greater quantity of any valuable product. And thus the value of land is raised only by good husbandry.

The value of land is raised, when remaining of the same fertility, it comes to yield more rent, and thus its value is raised only by a greater plenty of money and treasure.

Or it may be raised in our author’s way, which is, by raising the rent in tale of pieces, but not in the quantity of silver received for it; which, in truth, is no raising it at all, any more than it could be accounted the raising of a man’s rent, if he let his land this year for forty sixpences, which last year he let for twenty shillings. Nor would it alter the case, if he should call those forty sixpences forty shillings; for having but half the silver of forty shillings in them, they would be but of half the value, however their denomination were changed.

In his answer to the fifth objection, there is this dangerous insinuation, That coin in any country where it is coined, goes not by weight, i. e. has its value from the stamp and denomination, and not the quantity of silver in it.

Indeed, in contracts already made, if your species be by law coined a fifth part lighter, under the same denomination, the creditor must take a hundred such light shillings, or twenty such light crown-pieces for 5l. if the law calls them so, but he loses one fifth, in the intrinsic value of his debt. But, in bargains to be made, and things to be purchased, money has, and will always have its value from the quantity of silver in it, and not from the stamp and denomination, as has been already proved, and will, some time or other, be evidenced with a witness, in the clipped money. And if it were not so, that the value of money were not according to the quantity of silver in it, i. e. that it goes by weight, I see no reason why clipping should be so severely punished.

As to foreigners, he is forced to confess, that it is all one what our money is, greater or less, who regard only the quantity of silver, they sell their goods for; how then can the lessening our money bring more plenty of bullion into England, or to the mint?

But he says, “The owners and importers of silver will find a good market at the mint, &c.” But always a better in Lombard-street, and not a grain of it will come to the mint, as long as by an under-balance of trade, or other foreign expences, we contract debts beyond sea, which require the remitting of greater sums thither, than are imported in bullion. “If for above forty years after silver was raised, in the forty-third year of queen Elizabeth, from 5s. to 5s. 2d. the ounce, uncoined silver was not worth above 4s. 10d. per ounce;” — the cause was not that of raising silver in the mint, but an over-balance of trade, which bringing in an increase of silver yearly, for which men having no occasion abroad, brought it to the mint to be coined, rather than let it lie dead by them in bullion: and whenever that is the case again in England, it will occasion coining again, and not till then. “No money was in those days exported,” says he; no, nor bullion neither, say I; why should, or how could it, when our exported merchandize paid for all the commodities we brought home, with an overplus of silver and gold, which, staying here, set the mint on work. But the passing this bill, will not hinder the exportation of one ounce either of bullion or money, which must go, if you contract debts beyond sea; and how its having been once melted in England, which is another thing proposed in this bill, shall hinder its exportation, is hard to conceive, when even coining has not been able to do it, as is demonstrable, if it be examined what vast sums of milled money have been coined in the two last reigns, and how little of it is now left. Besides, if the

exportation of bullion should be brought under any greater difficulty than of any other commodity, it is to be considered whether the management of that trade, which is in skilful hands, will not thereupon be so ordered, as to divert it from coming to England for the future, and cause it to be sent from Spain, directly to those places, where they know English debts will make it turn to best account, to answer bills of exchange sent hither.

SOME THOUGHTS CONCERNING EDUCATION

THE 1824 TEXT

Some Thoughts Concerning Education, a 1693 treatise concerning the education of gentlemen, was regarded for over a century as the most important philosophical work on education in Britain. The text was translated into almost all of the major written European languages during the eighteenth century, and nearly every European writer on education after Locke, including Jean-Jacques Rousseau, acknowledged its influence. Locke outlines a new theory of mind, contending that the gentleman's mind was a *tabula rasa* or “blank slate”; containing no innate ideas. The treatise explains how to educate that mind using three distinct methods: the development of a healthy body; the formation of a virtuous character; and the choice of an appropriate academic curriculum.

Locke attempts to popularise several strands of seventeenth century educational reform as well as introduce his own philosophical ideas on education. English writers such as John Evelyn, John Aubrey, John Eachard and John Milton had previously advocated similar reforms in curriculum and teaching methods, but they had not succeeded in reaching a wide audience. As England became increasingly mercantilist and secularist, the humanist educational values of the Renaissance, which had enshrined scholasticism, came to be regarded by many as irrelevant. Following in the intellectual tradition of Francis Bacon, who had challenged the cultural authority of the classics, reformers such as Locke argued against Cambridge and Oxford's decree that “all Bachelaur and Undergraduats in their Disputations should lay aside their various Authors, such that caused many dissensions and strifes in the Schools, and only follow Aristotle and those that defend him, and take their Questions from him, and that they exclude from the Schools all steril and inane Questions, disagreeing from the antient and true Philosophy .” Instead of demanding that their sons spend all of their time studying Greek and Latin texts, an increasing number of families began to demand a practical education for their sons; by exposing them to

the emerging sciences, mathematics, and the modern languages, these parents hoped to prepare their sons for the changing economy and, indeed, for the new world they saw forming around them.

In 1684 Edward Clarke asked his friend, John Locke, for advice on raising his son and heir, Edward, Jr.; Locke responded with a series of letters that eventually served as the basis of *Some Thoughts Concerning Education*. But it was not until nine years later in 1693, encouraged by the Clarkes and another friend, William Molyneux, that Locke actually published the treatise. Locke felt timid when it came to public exposure and decided to publish the text anonymously, as he had done with other major works. Although Locke revised and expanded the text five times before he died, he never substantially altered its style.

Of Locke's major claims in the treatise, two factors play a defining role in eighteenth century educational theory. The first is that education makes the man; as Locke writes at the opening of his treatise, "I think I may say that of all the men we meet with, nine parts of ten are what they are, good or evil, useful or not, by their education." Locke argues against both the Augustinian view of man, which grounds its conception of humanity in original sin, and the Cartesian position, which holds that man innately knows basic logical propositions. Locke posits an "empty" mind — a *tabula rasa* — that is "filled" by experience. In describing the mind in these terms, Locke draws from Plato's *Theatetus*, which suggests that the mind is like a "wax tablet". Although Locke argues strenuously for the *tabula rasa* theory of mind, he nevertheless believes in innate talents and interests.

Locke also discusses a theory of the self. He writes: "the little and almost insensible impressions on our tender infancies have very important and lasting consequences." That is, the "associations of ideas" made when young are more significant than those made when mature because they are the foundation of the self — they mark the *tabula rasa*. In the treatise, in which he first introduces the theory of the association of ideas, Locke warns against letting "a foolish maid" convince a child that "goblins and sprites" are associated with the darkness, for "darkness shall ever afterwards bring with it those frightful ideas, and they shall be so joined, that he can no more bear the one than the other." Locke's emphasis on the role of experience in the formation of the mind and his concern with false associations of ideas has led many to characterise his theory of mind as passive rather than active.

Locke dedicates the bulk of *Some Thoughts Concerning Education* to explaining how to instil virtue in children. He defines virtue as a combination of self-denial and rationality: “that a man is able to deny himself his own desires, cross his own inclinations, and purely follow what reason directs as best, though the appetite lean the other way”. Future virtuous adults must be able not only to practice self-denial but also to see the rational path. Locke is convinced that children can reason early in life and that parents should address them as reasoning beings. Moreover, he argues that parents should, above all, attempt to create a “habit” of thinking rationally in their children. Locke continually emphasises habit over rule — children should internalise the habit of reasoning rather than memorise a complex set of prohibitions. This focus on rationality and habit corresponds to two of Locke’s concerns in the *Essay Concerning Human Understanding*.

SOME THOUGHTS CONCERNING EDUCATION.

JOHN LOCKE

March 7, 1690

EDWARD CLARKE

TO EDWARD CLARKE, OF CHIPLEY, ESQ.

SIR,

These Thoughts concerning Education, which now come abroad into the world, do of right belong to you, being written several years since for your sake, and are no other than what you have already by you in my letters. I have so little varied any thing, but only the order of what was sent you at different times, and on several occasions, that the reader will easily find, in the familiarity and fashion of the style, that they were rather the private conversation of two friends, than a discourse designed for public view.

The importunity of friends is the common apology for publications men are afraid to own themselves forward to. But you know I can truly say, that if some, who having heard of these papers of mine, had not pressed to see them, and afterwards to have them printed, they had lain dormant still in that privacy they were designed for. But those whose judgment I defer much to, telling me, that they were persuaded, that this rough draught of mine might be of some use, if made more public, touched upon what will always be very prevalent with me. For I think it every man's indispensable duty, to do all the service he can to his country; and I see not what difference he puts between himself and his cattle, who lives without that thought. This subject is of so great concernment, and a right way of education is of so general advantage, that did I find my abilities answer my wishes, I should not have needed exhortations or importunities from others. However, the meanness of these papers, and my just distrust of them, shall not keep me, by the shame of doing so little, from contributing my mite, where there is no more required of me, than my throwing it into the public receptacle. And if there be any more of their size and notions, who liked

them so well, that they thought them worth printing, I may flatter myself, they will not be lost labour to every body.

I myself have been consulted of late by so many, who profess themselves at a loss how to breed their children; and the early corruption of youth is now become so general a complaint; that he cannot be thought wholly impertinent, who brings the consideration of this matter on the stage, and offers something, if it be but to excite others, or afford matter of correction. For errors in education should be less indulged than any: these, like faults in the first concoction, that are never mended in the second or third, carry their afterwards-incorrigible taint with them, through all the parts and stations of life.

I am so far from being conceited of any thing I have here offered, that I should not be sorry, even for your sake, if some one abler and fitter for such a task, would in a just treatise of education, suited to our English gentry, rectify the mistakes I have made in this: it being much more desirable to me, that young gentlemen should be put into (that which every one ought to be solicitous about) the best way of being formed and instructed, than that my opinion should be received concerning it. You will however, in the mean time, bear me witness, that the method here proposed has had no ordinary effects upon a gentleman's son, it was not designed for. I will not say the good temper of the child did not very much contribute to it, but this I think, you and the parents are satisfied of, that a contrary usage, according to the ordinary disciplining of children, would not have mended that temper, nor have brought him to be in love with his book; to take a pleasure in learning, and to desire, as he does, to be taught more, than those about him think fit always to teach him.

But my business is not to recommend this treatise to you, whose opinion of it I know already; nor it to the world, either by your opinion or patronage. The well educating of their children is so much the duty and concern of parents, and the welfare and prosperity of the nation so much depends on it, that I would have every one lay it seriously to heart; and after having well examined and distinguished what fancy, custom, or reason advises in the case, set his helping hand to promote every-where that way of training up youth, with regard to their several conditions, which is the easiest, shortest, and likeliest to produce virtuous, useful, and able men in their distinct callings: though that most to be taken care of, is the

gentleman's calling. For if those of that rank are by their education once set right, they will quickly bring all the rest into order.

I know not whether I have done more than shown my good wishes towards it in this short discourse; such as it is the world now has it; and if there be any thing in it worth their acceptance, they owe their thanks to you for it. My affection to you gave the first rise to it, and I am pleased, that I can leave to posterity this mark of the friendship has been between us. For I know no greater pleasure in this life, nor a better remembrance to be left behind one, than a long continued friendship, with an honest, useful, and worthy man, and lover of his country.

I am, SIR,
Your most humble
And most faithful servant,

JOHN LOCKE.
March 7, 1690.

§ 1. A sound mind in a sound body, is a short, but full description of a happy state in this world; he that has these two, has little more to wish for; and he that wants either of them, will be but little the better for any thing else. Men's happiness, or misery, is most part of their own making. He whose mind directs not wisely, will never take the right way; and he whose body is crazy and feeble, will never be able to advance in it. I confess, there are some men's constitutions of body and mind so vigorous, and well framed by nature, that they need not much assistance from others; but, by the strength of their natural genius, they are, from their cradles, carried towards what is excellent; and, by the privilege of their happy constitutions, are able to do wonders. But examples of this kind are but few; and I think I may say, that, of all the men we meet with, nine parts of ten are what they are, good or evil, useful or not, by their education. It is that which makes the great difference in mankind. The little, or almost insensible, impressions on our tender infancies, have very important and lasting consequences; and there it is, as in the fountains of some rivers, where a gentle application of the hand turns the flexible waters into channels, that make them take quite contrary courses; and by this little direction, given them at first, in the source, they receive different tendencies, and arrive at last at very remote and distant places.

§ 2. I imagine the minds of children, as easily turned, this or that way, as water itself; and though this be the principal part, and our main care should be about the inside, yet the clay cottage is not to be neglected. I shall therefore begin with the case, and consider first the healthHealth. of the body, as that which perhaps you may rather expect, from that study I have been thought more peculiarly to have applied myself to; and that also which will be soonest despatched, as lying, if I guess not amiss, in a very little compass.

§ 3. How necessary health is to our business and happiness; and how requisite a strong constitution, able to endure hardships and fatigue, is, to one that will make any figure in the world; is too obvious to need any proof.

§ 4. The consideration I shall here have, of health, shall be, not what a physician ought to do, with a sick or crazy child; but what the parents, without the help of physic, should do for the preservation and improvement of an healthy, or, at least, not sickly constitution, in their children: and this perhaps might be all dispatched in this one short rule, viz. that gentlemen should use their children, as the honest farmers and substantial yeomen do theirs. But because the mothers, possibly, may think this a little too hard, and the fathers, too short, I shall explain myself more particularly; only laying down this, as a general and certain observation for the women to consider, viz. that most children's constitutions are either spoiled, or at least harmed, by cockering and tenderness.Tenderness.

§ 5. The first thing to be taken care of, is, that children be not too warmlyWarmth. clad or covered, winter or summer. The face, when we are born, is no less tender than any other part of the body: it is use alone hardens it, and makes it more able to endure the cold. And therefore the Scythian philosopher gave a very significant answer to the Athenian, who wondered how he could go naked in frost and snow: "How," said the Scythian, "can you endure your face exposed to the sharp winter air?" "My face is used to it," said the Athenian. "Think me all face," replied the Scythian. Our bodies will endure any thing, that from the beginning they are accustomed to.

An eminent instance of this, though in the contrary excess of heat, being to our present purpose, to show what use can do, I shall set down in the author's words, as I meet with it in a late ingenious voyage: 'The heats, says he, are more violent in Malta, than in any part of Europe: they exceed those of Rome itself, and are perfectly stifling; and so much the more, because

there are seldom any cooling breezes here. This makes the common people as black as gypsies: but yet the peasants defy the sun: they work on, in the hottest part of the day, without intermission, or sheltering themselves from his scorching rays. This has convinced me that nature can bring itself to many things, which seem impossible, provided we accustom ourselves from our infancy. The Malteses do so, who harden the bodies of their children, and reconcile them to the heat, by making them go stark naked, without shirt, drawers, or any thing on their head, from their cradles, till they are ten years old.'

Give me leave, therefore, to advise you, not to fence too carefully against the cold of this our climate: there are those in England, who wear the same clothes winter and summer, and that without any inconvenience, or more sense of cold than others find. But if the mother will needs have an allowance for frost and snow, for fear of harm; and the father, for fear of censure; be sure let not his winter-clothing be too warm: and amongst other things remember, that when nature has so well covered his head with hair, and strengthened it with a year or two's age, that he can run about by day without a cap, it is best that by night a child should also lie without one; there being nothing that more exposes to head-ach, colds, catarrhs, coughs, and several other diseases, than keeping the head warm.

§ 6. I have said [he] here, because the principal aim of my discourse is, how a young gentleman should be brought up from his infancy, which in all things will not so perfectly suit the education of daughters; though, where the difference of sex requires different treatment, it will be no hard matter to distinguish.

§ 7. I would also advise his feet^{Feet.} to be washed every day in cold water; and to have his shoes so thin, that they might leak and let in water, whenever he comes near it. Here, I fear, I shall have the mistress, and maids too, against me. One will think it too filthy; and the other, perhaps, too much pains to make clean his stockings. But yet truth will have it, that his health is much more worth than all such considerations, and ten times as much more. And he that considers how mischievous and mortal a thing, taking wet in the feet is, to those who have been bred nicely, will wish he had, with the poor people's children, gone bare-foot; who, by that means, come to be so reconciled by custom, to wet their feet, that they take no more cold or harm by it, than if they were wet in their hands. And what is it, I pray, that makes this great difference between the hands and the feet in

others, but only custom? I doubt not, but if a man from his cradle had been always used to go bare-foot, whilst his hands were constantly wrapped up in warm mittens, and covered with handshoes, as the Dutch call gloves; I doubt not, I say, but such a custom would make taking wet in his hands as dangerous to him, as now taking wet in their feet is to a great many others. The way to prevent this, is to have his shoes made so, as to leak water; and his feet washed constantly every day in cold water. It is recommendable for its cleanliness: but that which I aim at in it, is health. And therefore I limit it not precisely to any time of the day. I have known it used every night, with very good success, and that, all the winter, without the omitting it so much as one night, in extreme cold weather: when thick ice covered the water, the child bathed his legs and feet in it; though he was of an age not big enough to rub and wipe them himself; and when he began this custom, was puling and very tender. But the great end being to harden those parts, by a frequent and familiar use of cold water, and thereby to prevent the mischiefs, that usually attend accidental taking wet in the feet, in those who are bred otherwise; I think it may be left to the prudence and convenience of the parents, to choose either night or morning. The time I deem indifferent, so the thing be effectually done. The health and hardiness procured by it, would be a good purchase at a much dearer rate. To which if I add the preventing of corns, that to some men would be a very valuable consideration. But begin first in the spring with lukewarm, and so colder and colder every time, till in a few days you come to perfectly cold water, and then continue it so, winter and summer. For it is to be observed in this, as in all other alterations. Alterations. from our ordinary way of living, the changes must be made by gentle and insensible degrees; and so we may bring our bodies to any thing, without pain, and without danger.

How fond mothers are like to receive this doctrine, is not hard to foresee. What can it be less than to murder their tender babes to use them thus? What! put their feet in cold water in frost and snow, when all one can do is little enough to keep them warm! A little to remove their fears by examples, without which the plainest reason is seldom hearkened to; Seneca tells us of himself, e and 83, that he used to bathe himself in cold spring water in the midst of winter. This, if he had not thought it not only tolerable, but healthy too, he would scarce have done, in an exuberant fortune, that could well have borne the expence of a warm bath; and in an age (for he was then old) that would have excused greater indulgence. If we think his stoical

principles led him to this severity; let it be so, that this sect reconciled cold water to his sufferance: what made it agreeable to his health? for that was not impaired by this hard usage. But what shall we say to Horace, who armed not himself with the reputation of any sect, and least of all affected stoical austerities? yet he assures us he was wont in the winter season to bathe himself in cold water. But perhaps Italy will be thought much warmer than England, and the chilliness of their waters not to come near ours in winter. If the rivers of Italy are warmer, those of Germany and Poland are much colder, than any in this our country; and yet in these, the jews, both men and women, bathe all over, at all seasons of the year, without any prejudice to their health. And every one is not apt to believe it is a miracle, or any peculiar virtue of St. Winifred's well, that makes the cold waters of that famous spring do no harm to the tender bodies that bathe in it. Every one is now full of the miracles done, by cold baths, on decayed and weak constitutions, for the recovery of health and strength; and therefore they cannot be impracticable, or intolerable, for the improving and hardening the bodies of those who are in better circumstances.

If these examples of grown men be not thought yet to reach the case of children, but that they may be judged still to be too tender and unable to bear such usage; let them examine what the Germans of old, and the Irish now do to them; and they will find that infants too, as tender as they are thought, nay, without any danger, endure bathing, not only of their feet, but of their whole bodies in cold water. And there are, at this day, ladies in the highlands of Scotland, who use this discipline to their children, in the midst of winter; and find that cold water does them no harm, even when there is ice in it.

§ 8. I shall not need here to mention swimming, Swimming. when he is of an age able to learn, and has any one to teach him. It is that saves many a man's life: and the Romans thought it so necessary, that they ranked it with letters; and it was the common phrase to mark one ill-educated, and good for nothing; that he had neither learned to read, nor to swim: "Nec literas didicit, nec natare." But besides the gaining a skill, which may serve him at need; the advantages to health, by often bathing in cold water, during the heat of summer, are so many, that I think nothing need to be said to encourage it; provided this one caution be used, that he never go into the water, when exercise has at all warmed him, or left any emotion in his blood or pulse.

§ 9. Another thing, that is of great advantage to every one's health, but especially children's, is, to be much in the open air, Air. and very little, as may be, by the fire, even in winter. By this he will accustom himself also to heat and cold, shine and rain; all which if a man's body will not endure, it will serve him to very little purpose in this world: and when he is grown up, it is too late to begin to use him to it: it must be got early and by degrees. Thus the body may be brought to bear almost any thing. If I should advise him to play in the wind and sun without a hat, I doubt whether it could be born. There would a thousand objections be made against it, which at last would amount to no more, in truth, than being sunburnt. And if my young master be to be kept always in the shade, and never exposed to the sun and wind, for fear of his complexion, it may be a good way to make him a beau, but not a man of business. And although greater regard be to be had to beauty in the daughters, yet I will take the liberty to say, that the more they are in the air, without prejudice to their faces, the stronger and healthier they will be; and the nearer they come to the hardships of their brothers in their education, the greater advantage will they receive from it, all the remaining part of their lives.

§ 10. Playing in the open air has but this one danger in it, that I know: and that is, that when he is hot with running up and down, he should sit or lie down on the cold or moist earth. This, I grant, and drinking cold drink, when they are hot with labour or exercise, brings more people to the grave, or to the brink of it, by fevers, and other diseases, than any thing I know. These mischiefs are easily enough prevented, whilst he is little, being then seldom out of sight. And if during his childhood he be constantly and rigorously kept from sitting on the ground, or drinking any cold liquor, whilst he is hot, the custom of forbearing, grown into a habit, Habits. will help much to preserve him, when he is no longer under his maid's or tutor's eye. This is all I think can be done in the case. For, as years increase, liberty must come with them; and, in a great many things, he must be trusted to his own conduct, since there cannot always be a guard upon him; except what you put into his own mind, by good principles and established habits, which is the best and surest, and therefore most to be taken care of. For, from repeated cautions and rules, ever so often inculcated, you are not to expect any thing, either in this, or any other case, farther than practice has established them into habit.

§ 11. One thing the mention of the girls brings into my mind, which must not be forgot; and that is, that your son's clothesClothes. be never made strait, especially about the breast. Let nature have scope to fashion the body, as she thinks best. She works of herself a great deal better and exacter, than we can direct her. And if women were themselves to frame the bodies of their children in their wombs, as they often endeavour to mend their shapes, when they are out, we should as certainly have no perfect children born, as we have few well-shaped, that are strait-laced, or much tampered with. This consideration should, methinks, keep busy people (I will not say ignorant nurses and boddice-makers) from meddling in a matter they understand not; and they should be afraid to put nature out of her way, in fashioning the parts, when they know not how the least and meanest is made. And yet I have seen so many instances of children receiving great harm from strait lacing, that I cannot but conclude, there are other creatures, as well as monkies, who, little wiser than they, destroy their young ones, by senseless fondness, and too much embracing.

§ 12. Narrow breasts, short and stinking breath, ill lungs, and crookedness, are the natural and almost constant effects of hard boddice, and clothes that pinch. That way of making slender waists, and fine shapes, serves but the more effectually to spoil them. Nor can there, indeed, but be disproportion in the parts, when the nourishment, prepared in the several offices of the body, cannot be distributed, as nature designs. And therefore, what wonder is it, if, it being laid where it can, or some part not so braced, it often makes a shoulder, or hip, higher or bigger than its just proportion? It is generally known, that the women of China, (imagining I know not what kind of beauty in it,) by bracing and binding them hard from their infancy, have very little feet. I saw lately a pair of china shoes, which I was told were for a grown woman; they were so exceedingly disproportioned to the feet of one of the same age, amongst us, that they would scarce have been big enough for one of our little girls. Besides this, it is observed, that their women are also very little, and short-lived; whereas the men are of the ordinary stature of other men, and live to a proportionable age. These defects in the female sex of that country, are by some imputed to the unreasonable binding of their feet; whereby the free circulation of the blood is hindered, and the growth and health of the whole body suffers. And how often do we see, that some small part of the foot being injured, by a wrench or a blow, the whole leg or thigh thereby loses its strength and nourishment,

and dwindles away? How much greater inconveniencies may we expect, when the thorax, wherein is placed the heart and seat of life, is unnaturally compressed, and hindered from its due expansion?

§ 13. As for his diet, Diet. it ought to be very plain and simple; and, if I might advise, flesh should be forborn, as long as he is in coats, or at least, till he is two or three years old. But whatever advantage this may be, to his present and future health and strength, I fear it will hardly be consented to, by parents, misled by the custom of eating too much flesh themselves; who will be apt to think their children, as they do themselves, in danger to be starved, if they have not flesh, at least twice a day. This I am sure, children would breed their teeth with much less danger, be freer from diseases whilst they were little, and lay the foundations of an healthy and strong constitution much surer, if they were not crammed so much as they are, by fond mothers and foolish servants, and were kept wholly from flesh, the first three or four years of their lives.

But if my young master must needs have flesh, let it be but once a day, and of one sort, at a meal. Plain beef, mutton, veal, &c. without other sauce than hunger, is best: and great care should be used, that he eat bread plentifully both alone and with every thing else. And whatever he eats, that is solid, make him chew it well. We English are often negligent herein; from whence follows indigestion, and other great inconveniencies.

§ 14. For breakfast and supper, milk, milk-pottage, water-gruel, flummery, and twenty other things, that we are wont to make in England, are very fit for children: only in all these let care be taken, that they be plain, and without much mixture, and very sparingly seasoned with sugar, or rather none at all: especially all-spice, and other things that may heat the blood, are carefully to be avoided. Be sparing also of salt, in the seasoning of all his victuals, and use him not to high-seasoned meats. Our palates grow into a relish and liking of the seasoning and cookery, which by custom they are set to; and an over-much use of salt, besides that it occasions thirst, and over-much drinking, has other ill effects upon the body. I should think that a good piece of well-made and well-baked brown bread, sometimes with, and sometimes without, butter or cheese, would be often the best breakfast for my young master. I am sure it is as wholesome, and will make him as strong a man as greater delicacies; and if he be used to it, it will be as pleasant to him. If he at any time calls for victuals between meals, use him to nothing but dry bread. If he be hungry, more than wanton, bread

alone will down; and if he be not hungry, it is not fit he should eat. By this you will obtain two good effects: 1. That by custom he will come to be in love with bread; for, as I said, our palates and stomachs too are pleased with the things we are used to. Another good you will gain hereby is, that you will not teach him to eat more nor oftener than nature requires. I do not think that all people's appetites are alike; some have naturally stronger, and some weaker stomachs. But this I think, that many are made gormands and gluttons by custom, that were not so by nature: and I see, in some countries, men as lusty and strong, that eat but two meals a day, as others that have set their stomachs by a constant usage, like larums, to call on them for four or five. The Romans usually fasted till supper: the only set meal, even of those who ate more than once a day: and those who used breakfasts, as some did at eight, some at ten, others at twelve of the clock, and some later, neither ate flesh, nor had any thing made ready for them. Augustus, when the greatest monarch on the earth, tells us, he took a bit of dry bread in his chariot. And Seneca in his 83d epistle, giving an account how he managed himself, even when he was old, and his age permitted indulgence, says, that he used to eat a piece of dry bread for his dinner, without the formality of sitting to it: though his estate would have as well paid for a better meal (had health required it) as any subject's in England, were it doubled. The masters of the world were bred up, with this spare diet: and the young gentlemen of Rome felt no want of strength or spirit, because they ate but once a day. Or if it happened by chance, that any one could not fast so long, as till supper, their only set meal; he took nothing but a bit of dry bread, or at most a few raisins, or some such slight thing with it, to stay his stomach. This part of temperance was found so necessary, both for health and business, that the custom of only one meal a day held out against that prevailing luxury, which their eastern conquests and spoils had brought in amongst them: and those, who had given up their old frugal eating, and made feasts, yet began them not till the evening. And more than one set meal a day was thought so monstrous, that it was a reproach, as low down as Cæsar's time, to make an entertainment, or sit down to a full table, till towards sun-set. And therefore, if it would not be thought too severe, I should judge it most convenient, that my young master should have nothing, but bread too for breakfast. You cannot imagine of what force custom is; and I impute a great part of our diseases in England to our eating too much flesh, and too little bread.

§ 15. As to his meals, Meals. I should think it best, that, as much as it can be conveniently avoided, they should not be kept constantly to an hour. For, when custom hath fixed his eating to certain stated periods, his stomach will expect victuals at the usual hour, and grow peevish if he passes it; either fretting itself into a troublesome excess, or flagging into a downright want of appetite. Therefore I would have no time kept constantly to, for his breakfast, dinner, and supper, but rather varied, almost every day. And if, betwixt these, which I call meals, he will eat, let him have, as often as he calls for it, good dry bread. If any one think this too hard and sparing a diet for a child, let them know, that a child will never starve, nor dwindle for want of nourishment, who, besides flesh at dinner, and spoon-meat, or some such other thing at supper, may have good bread and beer, as often as he has a stomach: for thus, upon second thoughts, I should judge it best for children to be ordered. The morning is generally designed for study, to which a full stomach is but an ill preparation. Dry bread, though the best nourishment, has the least temptation: and nobody would have a child crammed at breakfast, who has any regard to his mind or body, and would not have him dull and unhealthy. Nor let any one think this unsuitable to one of estate and condition. A gentleman, in any age, ought to be so bred, as to be fitted to bear arms, and be a soldier. But he that in this, breeds his son so, as if he designed him to sleep over his life, in the plenty and ease of a full fortune he intends to leave him, little considers the examples he has seen, or the age he lives in.

§ 16. His drink Drink. should be only small beer: and that too he should never be suffered to have between meals, but after he had eat a piece of bread. The reasons why I say this are these:

§ 17. 1. More fevers and surfeits are got by people's drinking when they are hot, than by any one thing I know. Therefore, if by play he be hot and dry, bread will ill go down; and so if he cannot have drink, but upon that condition, he will be forced to forbear. For if he be very hot, he should by no means drink. At least, a good piece of bread first to be eaten, will gain time to warm the beer blood-hot, which then he may drink safely. If he be very dry, it will go down so warmed, and quench his thirst better: and if he will not drink it so warmed, abstaining will not hurt him. Besides, this will teach him to forbear, which is an habit of great use for health of body and mind too.

§ 18. 2. Not being permitted to drink without eating, will prevent the custom of having the cup often at his nose; a dangerous beginning and preparation to good fellowship. Men often bring habitual hunger and thirst on themselves by custom. And, if you please to try, you may, though he be weaned from it, bring him by use to such a necessity of drinking in the night, that he will not be able to sleep without it. It being the lullaby, used by nurses, to still crying children; I believe mothers generally find some difficulty to wean their children from drinking in the night, when they first take them home. Believe it, custom prevails, as much by day as by night; and you may, if you please, bring any one to be thirsty every hour.

I once lived in a house, where, to appease a froward child, they gave him drink, as often as he cried; so that he was constantly bibbing: and though he could not speak, yet he drank more in twenty-four hours than I did. Try it when you please, you may with small, as well as with strong beer, drink yourself into a drought. The great thing to be minded in education is, what habitsHabits. you settle: and therefore in this, as all other things, do not begin to make any thing customary, the practice whereof you would not have continue and increase. It is convenient for health and sobriety, to drink no more than natural thirst requires: and he that eats not salt meats, nor drinks strong drink, will seldom thirst between meals, unless he has been accustomed to such unseasonable drinking.

§ 19. Above all, take great care that he seldom, if ever, taste any wine, or strong drink.Strong drink. There is nothing so ordinarily given children in England, and nothing so destructive to them. They ought never to drink any strong liquor, but when they need it as a cordial, and the doctor prescribes it. And in this case it is, that servants are most narrowly to be watched, and most severely to be reprehended, when they transgress. Those mean sort of people, placing a great part of their happiness in strong drink, are always forward to make court to my young master, by offering him that which they love best themselves: and, finding themselves made merry by it, they foolishly think it will do the child no harm. This you are carefully to have your eye upon, and restrain with all the skill and industry you can: there being nothing, that lays a surer foundation of mischief, both to body and mind, than children's being used to strong drink; especially to drink in private with the servants.

§ 20. FruitFruit. makes one of the most difficult chapters in the government of health, especially that of children. Our first parents ventured

paradise for it: and it is no wonder our children cannot stand the temptation, though it cost them their health. The regulation of this cannot come under any one general rule: for I am by no means of their mind, who would keep children almost wholly from fruit, as a thing totally unwholesome for them: by which strict way they make them but the more ravenous after it; and to eat good and bad, ripe or unripe, all that they can get, whenever they come at it. Melons, peaches, most sort of plums, and all sorts of grapes in England, I think children should be wholly kept from, as having a very tempting taste, in a very unwholesome juice; so that, if it were possible, they should never so much as see them, or know there were any such thing. But strawberries, cherries, goose-berries, or currants, when thorough ripe, I think may be very safely allowed them, and that with a pretty liberal hand, if they be eaten with these cautions. 1. Not after meals, as we usually do, when the stomach is already full of other food. But I think they should be eaten rather before, or between meals, and children should have them for their breakfasts. 2. Bread eaten with them. 3. Perfectly ripe. If they are thus eaten, I imagine them rather conducing, than hurtful to our health. Summer-fruits, being suitable to the hot season of the year they come in, refresh our stomachs, languishing and fainting under it: and therefore I should not be altogether so strict in this point, as some are to their children: who being kept so very short, instead of a moderate quantity of well-chosen fruit, which being allowed them, would content them, whenever they can get loose, or bribe a servant to supply them, satisfy their longing with any trash they can get, and eat to a surfeit.

Apples and pears too, which are thorough ripe, and have been gathered some time, I think may be safely eaten at any time, and in pretty large quantities; especially apples, which never did any body hurt, that I have heard, after October.

Fruits also dried without sugar I think very wholesome. But sweetmeats of all kinds are to be avoided; which, whether they do more harm to the maker or eater, is not easy to tell. This I am sure, it is one of the most inconvenient ways of expence, that vanity hath yet found out: and so I leave them to the ladies.

§ 21. Of all that looks soft and effeminate, nothing is more to be indulged children than sleep. Sleep. In this alone they are to be permitted to have their full satisfaction; nothing contributing more to the growth and health of children, than sleep. All that is to be regulated in it is, in what part

of the twenty-four hours they should take it: which will easily be resolved, by only saying, that it is of great use to accustom them to rise early in the morning. It is best so to do, for health: and he that, from his childhood, has by a settled custom made rising betimes easy and familiar to him, will not, when he is a man, waste the best and most useful part of his life in drowsiness and lying a-bed. If children therefore are to be called up early in the morning, it will follow of course, that they must go to bed betimes; whereby they will be accustomed to avoid the unhealthy and unsafe hours of debauchery, which are those of the evenings: and they who keep good hours, seldom are guilty of any great disorders. I do not say this, as if your son, when grown up, should never be in company past eight, nor never chat over a glass of wine till midnight. You are now, by the accustoming of his tender years, to indispose him to those inconveniences as much as you can; and it will be no small advantage, that contrary practice having made sitting-up uneasy to him, it will make him often avoid, and very seldom propose midnight revels. But if it should not reach so far, but fashion and company should prevail, and make him live, as others do, above twenty, it is worth the while to accustom him to early rising and early going to bed, between this and that; for the present improvement of his health, and other advantages.

Though I have said, a large allowance of sleep, even as much as they will take, should be made to children when they are little; yet I do not mean, that it should always be continued to them, in so large a proportion, and they suffered to indulge a drowsy laziness in their beds, as they grow up bigger. But whether they should begin to be restrained at seven, or ten years old, or any other time, is impossible to be precisely determined. Their tempers, strength, and constitutions must be considered: but some time between seven and fourteen, if they are too great lovers of their beds, I think it may be seasonable to begin to reduce them, by degrees, to about eight hours, which is generally rest enough for healthy grown people. If you have accustomed him, as you should do, to rise constantly very early in the morning, this fault of being too long in bed will easily be reformed, and most children will be forward enough to shorten that time themselves, by coveting to sit up with the company at night: though, if they be not looked after, they will be apt to take it out in the morning, which should by no means be permitted. They should constantly be called up, and made to rise at their early hour: but great care should be taken in waking them, that it be

not done hastily, nor with a loud or shrill voice, or any other sudden violent noise. This often affrights children, and does them great harm. And sound sleep, thus broke off with sudden alarms, is apt enough to discompose any one. When children are to be wakened out of their sleep, be sure to begin with a low call, and some gentle motion; and so draw them out of it by degrees, and give them none but kind words and usage, till they are come perfectly to themselves, and being quite dressed, you are sure they are thoroughly awake. The being forced from their sleep, how gently soever you do it, is pain enough to them: and care should be taken not to add any other uneasiness to it, especially such as may terrify them.

§ 22. Let his bed be hard, and rather quilts than feathers. Hard lodging strengthens the parts: whereas being buried every night in feathers, melts and dissolves the body, is often the cause of weakness, and the forerunner of an early grave. And, besides the stone, which has often its rise from this warm wrapping of the reins, several other indispositions, and that which is the root of them all, a tender weakly constitution, is very much owing to down-beds. Besides, he that is used to hard lodging at home, will not miss his sleep (where he has most need of it) in his travels abroad, for want of his soft bed and his pillows laid in order. And therefore I think it would not be amiss, to make his bed after different fashions; sometimes lay his head higher, sometimes lower, that he may not feel every little change he must be sure to meet with, who is not designed to lie always in my young master's bed at home, and to have his maid lay all things in print, and tuck him in warm. The great cordial of nature is sleep. He that misses that, will suffer by it; and he is very unfortunate, who can take his cordial only in his mother's fine gilt cup, and not in a wooden dish. He that can sleep soundly takes the cordial: and it matters not, whether it be on a soft bed, or the hard boards. It is sleep only that is the thing necessary.

§ 23. One thing more there is, which hath a great influence upon the health, and that is going to stool regularly; people that are very loose, have seldom strong thoughts, or strong bodies. But the cure of this, both by diet and medicine, being much more easy than the contrary evil, there needs not much to be said about it: for if it come to threaten, either by its violence, or duration, it will soon enough, and sometimes too soon, make a physician be sent for: and if it be moderate or short, it is commonly best to leave it to nature. On the other side, costiveness has too its ill effects, and

is much harder to be dealt with by physic; purging medicines, which seem to give relief, rather increasing than removing the evil.

§ 24. It being an indisposition I had a particular reason to inquire into, and not finding the cure of it in books, I set my thoughts on work, believing that greater changes than that, might be made in our bodies, if we took the right course, and proceeded by rational steps.

Then I considered, that going to stool was the effect of certain motions of the body, especially of the peristaltic motion of the guts.

I considered, that several motions that were not perfectly voluntary, might yet, by use and constant application, be brought to be habitual, if by an unintermitted custom they were at certain seasons endeavoured to be constantly produced.

I had observed some men, who, by taking after supper a pipe of tobacco, never failed of a stool; and began to doubt with myself, whether it were not more custom than the tobacco, that gave them the benefit of nature; or at least, if the tobacco did it, it was rather by exciting a vigorous motion in the guts, than by any purging quality; for then it would have had other effects.

Having thus once got the opinion, that it was possible to make it habitual; the next thing was to consider, what way and means were the likeliest to obtain it.

Then I guessed, that if a man, after his first eating in the morning, would presently solicit nature, and try whether he could strain himself so as to obtain a stool, he might in time, by a constant application, bring it to be habitual.

§ 25. The reasons that made me choose this time, were:

Because the stomach being then empty, if it received any thing grateful to it, (for I would never, but in case of necessity, have any one eat, but what he likes, and when he has an appetite,) it was apt to embrace it close by a strong constriction of its fibres; which constriction, I supposed, might probably be continued on in the guts, and so increase their peristaltic motion: as we see in the ileus, that an inverted motion being begun anywhere below, continues itself all the whole length, and makes even the stomach obey that irregular motion.

Because when men eat, they usually relax their thoughts; and the spirits, then free from other employments, are more vigorously distributed into the lower belly, which thereby contribute to the same effect.

Because, whenever men have leisure to eat, they have leisure enough also to make so much court to madam Cloacina, as would be necessary to our present purpose; but else, in the variety of human affairs and accidents, it was impossible to affix it to any hour certain; whereby the custom would be interrupted: whereas men in health seldom failing to eat once a day, though the hour be changed, the custom might still be preserved.

§ 26. Upon these grounds, the experiment began to be tried, and I have known none, who have been steady in the prosecution of it, and taken care to go constantly to the necessary-house, after their first eating, whenever that happened, whether they found themselves called on or no, and there endeavoured to put nature upon her duty; but in a few months they obtained their desired success, and brought themselves to so regular an habit, that they seldom ever failed of a stool, after their first eating, unless it were by their own neglect. For, whether they have any motion or no, if they go to the place, and do their part, they are sure to have nature very obedient.

§ 27. I would therefore advise that this course should be taken with a child every day, presently after he has eaten his breakfast. Let him be set upon the stool, as if disburdening were as much in his power, as filling his belly; and let not him or his maid know any thing to the contrary, but that it is so: and if he be forced to endeavour, by being hindered from his play, or eating again till he has been effectually at stool, or at least done his utmost, I doubt not but in a little while it will become natural to him. For there is reason to suspect that children, being usually intent on their play and very heedless of any thing else, often let pass those motions of nature, when she calls them but gently; and so they, neglecting the seasonable offers, do by degrees bring themselves into an habitual costiveness. That by this method costiveness may be prevented, I do more than guess: having known by the constant practice of it for some time, a child brought to have a stool regularly after his breakfast, every morning.

§ 28. How far any grown people will think fit to make trial of it, must be left to them; though I cannot but say, that considering the many evils that come from that defect, of a requisite easing of nature, I scarce know any thing more conducing to the preservation of health than this is. Once in four and twenty hours, I think is enough; and nobody, I guess, will think it too much. And by this means it is to be obtained without physic, which commonly proves very ineffectual in the cure of a settled and habitual costiveness.

§ 29. This is all I have to trouble you with, concerning his management, in the ordinary course of his health. Perhaps it will be expected from me, that I should give some directions of physic, Physic. to prevent diseases: for which, I have only this one, very sacredly to be observed: never to give children any physic for prevention. The observation of what I have already advised, will, I suppose, do that better than the ladies diet-drinks, or apothecary's medicines. Have a great care of tampering that way, lest, instead of preventing, you draw on diseases. Nor even upon every little indisposition is physic to be given, or the physician to be called to children; especially if he be a busy man, that will presently fill their windows with gally-pots, and their stomachs with drugs. It is safer to leave them wholly to nature, than to put them into the hands of one forward to tamper, or that thinks children are to be cured in ordinary distempers, by any thing but diet, or by a method very little distant from it; it seeming suitable both to my reason and experience, that the tender constitutions of children should have as little done to them as is possible, and as the absolute necessity of the case requires. A little cold-stilled red poppy-water, which is the true surfeit-water, with ease, and abstinence from flesh, often puts an end to several distempers in the beginning, which, by too forward applications, might have been made lusty diseases. When such a gentle treatment will not stop the growing mischief, nor hinder it from turning into a formed disease, it will be time to seek the advice of some sober and discreet physician. In this part, I hope, I shall find an easy belief; and nobody can have a pretence to doubt the advice of one, who has spent some time in the study of physic, when he counsels you not to be too forward in making use of physic and physicians.

§ 30. And thus I have done with what concerns the body and health, which reduces itself to these few and easily observable rules. Plenty of open air, exercise, and sleep: plain diet, no wine or strong drink, and very little or no physic; not too warm and strait clothing; especially the head and feet kept cold, and the feet often used to cold water and exposed to wet.

§ 31. Due care being had to keep the body in strength and vigour, so that it may be able to obey and execute the orders of the mind; Mind. the next and principal business is, to set the mind right, that on all occasions it may be disposed to consent to nothing, but what may be suitable to the dignity and excellency of a rational creature.

§ 32. If what I have said in the beginning of this discourse be true, as I do not doubt but it is, viz. that the difference to be found in the manners and

abilities of men, is owing more to their education than to any thing else; we have reason to conclude, that great care is to be had of the forming children's minds, and giving them that seasoning early, which shall influence their lives always after. For when they do well or ill, the praise or blame will be laid there: and when any thing is done awkwardly, the common saying will pass upon them, that it is suitable to their breeding.

§ 33. As the strength of the body lies chiefly in being able to endure hardships, so also does that of the mind. And the great principle and foundation of all virtue and worth is placed in this, that a man is able to deny himself his own desires, cross his own inclinations, and purely follow what reason directs as best, though the appetite lean the other way.

Early. § 34. The great mistake I have observed in people's breeding their children has been, that this has not been taken care enough of in its due season; that the mind has not been made obedient to discipline, and pliant to reason, when at first it was most tender, most easy to be bowed. Parents being wisely ordained by nature to love their children, are very apt, if reason watch not that natural affection very warily; are apt, I say, to let it run into fondness. They love their little ones, and it is their duty: but they often with them cherish their faults too. They must not be crossed, forsooth; they must be permitted to have their wills in all things: and they being in their infancies not capable of great vices, their parents think they may safely enough indulge their little irregularities, and make themselves sport with that pretty perverseness, which they think well enough becomes that innocent age. But to a fond parent, that would not have his child corrected for a perverse trick, but excused it, saying it was a small matter; Solon very well replied, "Aye, but custom is a great one."

§ 35. The fondling must be taught to strike, and call names; must have what he cries for, and do what he pleases. Thus parents, by humouring and cockering them when little, corrupt the principles of nature in their children, and wonder afterwards to taste the bitter waters, when they themselves have poisoned the fountain. For when their children are grown up, and these ill habits with them; when they are now too big to be dandled, and their parents can no longer make use of them as playthings; then they complain, that the brats are untoward and perverse; then they are offended to see them wilful, and are troubled with those ill humours, which they themselves infused and fomented in them; and then, perhaps too late, would be glad to get out those weeds which their own hands have planted, and which now

have taken too deep root to be easily extirpated. For he that has been used to have his will in every thing, as long as he was in coats, why should we think it strange that he should desire it, and contend for it still, when he is in breeches? Indeed, as he grows more towards a man, age shows his faults the more, so that there be few parents then so blind, as not to see them! few so insensible as not to feel the ill effects of their own indulgence. He had the will of his maid before he could speak or go; he had the mastery of his parents ever since he could prattle; and why, now he is grown up, is stronger and wiser than he was then, why now of a sudden must he be restrained and curbed? why must he at seven, fourteen, or twenty years old, lose the privilege which the parent's indulgence, till then, so largely allowed him? Try it in a dog, or an horse, or any other creature, and see whether the ill and resty tricks they have learned when young, are easily to be mended when they are knit: and yet none of those creatures are half so wilful and proud, or half so desirous to be masters of themselves and others, as man.

§ 36. We are generally wise enough to begin with them, when they are very young; and discipline betimes those other creatures we would make useful and good for somewhat. They are only our own offspring, that we neglect in this point; and having made them ill children, we foolishly expect they should be good men. For if the child must have grapes, or sugar-plums, when he has a mind to them, rather than make the poor baby cry, or be out of humour; why, when he is grown up, must he not be satisfied too, if his desires carry him to wine or women? They are objects as suitable to the longing of twenty-one or more years, as what he cried for, when little, was to the inclinations of a child. The having desires accommodated to the apprehensions and relish of those several ages, is not the fault; but the not having them subject to the rules and restraints of reason: the difference lies not in the having or not having appetites, but in the power to govern, and deny ourselves in them. He that is not used to submit his will to the reason of others, when he is young, will scarce hearken or submit to his own reason, when he is of an age to make use of it. And what kind of a man such a one is like to prove, is easy to foresee.

§ 37. These are oversights usually committed by those who seem to take the greatest care of their children's education. But, if we look into the common management of children, we shall have reason to wonder, in the great dissoluteness of manners, which the world complains of, that there are any footsteps at all left to virtue. I desire to know what vice can be named,

which parents, and those about children, do not season them with, and drop into them the seeds of, as often as they are capable to receive them? I do not mean by the examples they give, and the patterns they set before them, which is encouragement enough; but that which I would take notice of here, is the downright teaching them vice, and actual putting them out of the way of virtue. Before they can go, they principle them with violence, revenge, and cruelty. "Give me a blow that I may beat him," is a lesson, which most children every day hear: and it is thought nothing, because their hands have not strength enough to do any mischief. But I ask, does not this corrupt their minds? is not this the way of force and violence, that they are set in? and if they have been taught when little, to strike and hurt others by proxy, and encouraged to rejoice in the harm they have brought upon them, and see them suffer; are they not prepared to do it, when they are strong enough to be felt themselves, and can strike to some purpose?

The coverings of our bodies, which are for modesty, warmth, and defence, are, by the folly or vice of parents, recommended to their children for other uses. They are made matter of vanity and emulation. A child is set a longing after a new suit, for the finery of it: and when the little girl is tricked up in her new gown and commode, how can her mother do less than teach her to admire herself, by calling her, "her little "queen," and "her princess?" Thus the little ones are taught to be proud of their clothes, before they can put them on. And why should they not continue to value themselves for this outside fashionableness of the taylor or tire-woman's making, when their parents have so early instructed them to do so?

Lying and equivocations, and excuses little different from lying, are put into the mouths of young people, and commended in apprentices and children, whilst they are for their master's or parent's advantage. And can it be thought that he, that finds the straining of truth dispensed with, and encouraged, whilst it is for his godly master's turn, will not make use of that privilege for himself, when it may be for his own profit?

Those of the meaner sort are hindered by the streightness of their fortunes, from encouraging intemperance in their children, by the temptation of their diet, or invitations to eat or drink more than enough: but their own ill examples, whenever plenty comes in their way, show that it is not the dislike of drunkenness or gluttony that keeps them from excess, but want of materials. But if we look into the houses of those who are a little warmer in their fortunes, there eating and drinking are made so much the

great business and happiness of life, that children are thought neglected, if they have not their share of it. Sauces, and ragouts, and foods disguised by all the arts of cookery, must tempt their palates, when their bellies are full: and then, for fear the stomach should be overcharged, a pretence is found for the other glass of wine, to help digestion, though it only serves to increase the surfeit.

Is my young master a little out of order? the first question is, “What will my dear eat? what shall I get for thee?” Eating and drinking are instantly pressed: and every body’s invention is set on work to find out something luscious and delicate enough to prevail over that want of appetite, which nature has wisely ordered in the beginning of distempers, as a defence against their increase; that, being freed from the ordinary labour of digesting any new load in the stomach, she may be at leisure to correct and master the peccant humours.

And where children are so happy in the care of their parents, as by their prudence to be kept from the excess of their tables, to the sobriety of a plain and simple diet; yet there too they are scarce to be preserved from the contagion that poisons the mind. Though by a discreet management, whilst they are under tuition, their healths, perhaps, may be pretty well secured; yet their desires must need yield to the lessons, which every-where will be read to them upon this part of epicurism. The commendation that eating well has every-where, cannot fail to be a successful incentive to natural appetite, and bring them quickly to the liking and expence of a fashionable table. This shall have from every one, even the reprovers of vice, the title of living well. And what shall sullen reason dare to say against the public testimony? or can it hope to be heard, if it should call that luxury, which is so much owned, and universally practised by those of the best quality.

This is now so grown a vice, and has so great supports, that I know not whether it do not put in for the name of virtue; and whether it will not be thought folly, or want of knowledge of the world, to open one’s mouth against it. And truly I should suspect, that what I have here said of it might be censured, as a little satire out of my way, did I not mention it with this view, that it might awaken the care and watchfulness of parents in the education of their children; when they see how they are beset on every side, not only with temptations, but instructors to vice, and that perhaps in those they thought places of security.

I shall not dwell any longer on this subject; much less run over all the particulars, that would show what pains are used to corrupt children, and instil principles of vice into them: but I desire parents soberly to consider, what irregularity or vice there is, which children are not visibly taught; and whether it be not their duty and wisdom to provide them other instructions.

Craving. § 38. It seems plain to me, that the principle of all virtue and excellency lies in a power of denying ourselves the satisfaction of our own desires, where reason does not authorise them. This power is to be got and improved by custom, made easy and familiar by an early practice. If therefore I might be heard, I would advise, that, contrary to the ordinary way, children should be used to submit their desires, and go without their longings, even from their very cradles. The very first thing they should learn to know, should be, that they were not to have any thing, because it pleased them, but because it was thought fit for them. If things suitable to their wants were supplied to them, so that they were never suffered to have what they once cried for, they would learn to be content without it; would never with bawling and peevishness contend for mastery; nor be half so uneasy to themselves and others as they are, because from the first beginning they are not thus handled. If they were never suffered to obtain their desire by the impatience they expressed for it, they would no more cry for other things, than they do for the moon.

§ 39. I say not this, as if children were not to be indulged in any thing, or that I expected they should, in hanging-sleeves, have the reason and conduct of counsellors. I consider them as children, who must be tenderly used, who must play, and have play-things. That which I mean is, that whenever they craved what was not fit for them to have, or do, they should not be permitted it, because they were little and desired it: nay, whatever they were importunate for, they should be sure, for that very reason, to be denied. I have seen children at a table, who, whatever was there, never asked for any thing, but contentedly took what was given them: and at another place I have seen others cry for every thing they saw, must be served out of every dish, and that first too. What made this vast difference but this, that one was accustomed to have what they called or cried for, the other to go without it? The younger they are, the less, I think, are their unruly and disorderly appetites to be complied with; and the less reason they have of their own, the more are they to be under the absolute power and restraint of those, in whose hands they are. From which I confess, it

will follow, that none but discreet people should be about them. If the world commonly does otherwise, I cannot help that. I am saying what I think should be; which, if it were already in fashion, I should not need to trouble the world with a discourse on this subject. But yet I doubt not but, when it is considered, there will be others of opinion with me, that the sooner this way is begun with children, the easier it will be for them, and their governors too: and that this ought to be observed as an inviolable maxim, that whatever once is denied them, they are certainly not to obtain by crying or importunity; unless one has a mind to teach them to be impatient and troublesome, by rewarding them for it, when they are so.

Early. § 40. Those therefore that intend ever to govern their children, should begin it whilst they are very little; and look that they perfectly comply with the will of their parents. Would you have your son obedient to you when past a child? Be sure then to establish the authority of a father, as soon as he is capable of submission, and can understand in whose power he is. If you would have him stand in awe of you, imprint it in his infancy; and, as he approaches more to a man, admit him nearer to your familiarity; so shall you have him your obedient subject (as is fit) whilst he is a child, and your affectionate friend when he is a man. For methinks they mightily misplace the treatment due to their children, who are indulgent and familiar when they are little, but severe to them, and keep them at a distance, when they are grown up. For liberty and indulgence can do no good to children: their want of judgment makes them stand in need of restraint and discipline. And, on the contrary, imperiousness and severity is but an ill way of treating men, who have reason of their own to guide them, unless you have a mind to make your children, when grown up, weary of you; and secretly to say within themselves, “When will you die, father?”

§ 41. I imagine every one will judge it reasonable, that their children, when little, should look upon their parents as their lords, their absolute governors; and, as such, stand in awe of them: and that, when they come to riper years, they should look on them as their best, as their only sure friends: and, as such, love and reverence them. The way I have mentioned, if I mistake not, is the only one to obtain this. We must look upon our children, when grown up, to be like ourselves; with the same passions, the same desires. We would be thought rational creatures, and have our freedom; we love not to be uneasy under constant rebukes and browbeatings; nor can we bear severe humours, and great distance in those

we converse with. Whoever has such treatment, when he is a man, will look out other company, other friends, other conversation, with whom he can be at ease. If therefore a strict hand be kept over children from the beginning, they will in that age be tractable, and quietly submit to it, as never having known any other: and if, as they grow up to the use of reason, the rigour of government be, as they deserve it, gently relaxed, the father's brow more smoothed to them, and the distance by degrees abated: his former restraints will increase their love, when they find it was only a kindness for them, and a care to make them capable to deserve the favour of their parents and the esteem of every body else.

§ 42. Thus much for the settling your authority over children in general. Fear and awe ought to give you the first power over their minds, and love and friendship in riper years to hold it: for the time must come, when they will be past the rod and correction; and then, if the love of you make them not obedient and dutiful; if the love of virtue and reputation keep them not in laudable courses; I ask, what hold will you have upon them, to turn them to it? Indeed, fear of having a scanty portion, if they displease you, may make them slaves to your estate; but they will be nevertheless ill and wicked in private, and that restraint will not last always. Every man must some time or other be trusted to himself, and his own conduct; and he that is a good, a virtuous, and able man, must be made so within. And therefore what he is to receive from education, what is to sway and influence his life, must be something put into him betimes; habits woven into the very principles of his nature; and not a counterfeit carriage, and dissembled outside, put on by fear, only to avoid the present anger of a father, who perhaps may disinherit him.

§ 43. This being laid down in general, as the course ought to be taken, it is fit we come now to consider the parts of the discipline to be used a little more particularly. I have spoken so much of carrying a strict hand over children, that perhaps I shall be suspected of not considering enough what is due to their tender age and constitutions. But that opinion will vanish, when you have heard me a little farther. For I am very apt to think, that great severity of punishmentPunishments. does but very little good; nay, great harm in education: and I believe it will be found, that, *cæteris paribus*, those children who have been most chastised, seldom make the best men. All that I have hitherto contended for, is, that whatsoever rigour is necessary, it is more to be used, the younger children are; and, having by a due application

wrought its effect, it is to be relaxed, and changed into a milder sort of government.

§ 44. A compliance and suppleness of their wills, being by a steady hand introduced by parents, before children have memories to retain the beginnings of it, will seem natural to them, and work afterwards in them as if it were so; preventing all occasions of struggling, or repining. The only care is, that it be begun early, and inflexibly kept to, till awe and respect be grown familiar, and there appears not the least reluctance in the submission, and ready obedience of their minds. When this reverence is once thus established, (which it must be early, or else it will cost pains and blows to recover it, and the more, the longer it is deferred,) it is by it, mixed still with as much indulgence, as they made not an ill use of, and not by beating, chiding, or other servile punishments, they are for the future to be governed, as they grow up to more understanding.

Self-denial. § 45. That this is so, will be easily allowed, when it is but considered what is to be aimed at, in an ingenuous education; and upon what it turns.

He that has not a mastery over his inclinations, he that knows not how to resist the importunity of present pleasure or pain, for the sake of what reason tells him is fit to be done, wants the true principle of virtue and industry, and is in danger of never being good for any thing. This temper, therefore, so contrary to unguided nature, is to be got betimes; and this habit, as the true foundation of future ability and happiness, is to be wrought into the mind, as early as may be, even from the first dawnings of any knowledge or apprehension in children; and so to be confirmed in them, by all the care and ways imaginable, by those who have the oversight of their education.

§ 46. 2. On the other side, if the mind be curbed, and humbled too much in children; if their spirits be abased and broken much, by too strict an hand over them; they lose all their vigour and industry, and are in a worse state than the former. For extravagant young fellows, that have liveliness and spirit, come sometimes to be set right, and so make able and great men: but dejected minds, timorous and tame, and low spirits, are hardly ever to be raised, and very seldom attain to any thing. To avoid the danger that is on either hand is the great art: and he that has found a way how to keep up a child's spirit, easy, active, and free; and yet, at the same time, to restrain him from many things he has a mind to, and to draw him to things

that are uneasy to him; he, I say, that knows how to reconcile these seeming contradictions, has, in my opinion, got the true secret of education.

Beating. § 47. The usual lazy and short way by chastisement, and the rod, which is the only instrument of government that tutors generally know, or ever think of, is the most unfit of any to be used in education; because it tends to both those mischiefs; which as we have shown, are the Scylla and Charybdis, which, on the one hand or the other, ruin all that miscarry.

§ 48. 1. This kind of punishment contributes not at all to the mastery of our natural propensity to indulge corporal and present pleasure, and to avoid pain at any rate; but rather encourages it; and thereby strengthens that in us, which is the root, from whence spring all vicious actions, and the irregularities of life. From what other motive, but of sensual pleasure, and pain, does a child act, who drudges at his book against his inclination, or abstains from eating unwholesome fruit, that he takes pleasure in, only out of fear of whipping. He in this only prefers the greater corporal pleasure, or avoids the greater corporal pain. And what is it to govern his actions, and direct his conduct, by such motives as these? what is it, I say, but to cherish that principle in him, which it is our business to root out and destroy? And therefore I cannot think any correction useful to a child, where the shame of suffering for having done amiss does not work more upon him than the pain.

§ 49. 2. This sort of correction naturally breeds an aversion to that which it is the tutor's business to create a liking to. How obvious is it to observe, that children come to hate things which were at first acceptable to them, when they find themselves whipped and chid, and teased about them; and it is not to be wondered at in them; when grown men would not be able to be reconciled to any thing by such ways. Who is there that would not be disgusted with any innocent recreation, in itself indifferent to him, if he should with blows, or ill language, be hauled to it, when he had no mind? or be constantly so treated, for some circumstances in his application to it? This is natural to be so. Offensive circumstances ordinarily infect innocent things, which they are joined with; and the very sight of a cup, wherein any one uses to take nauseous physic, turns his stomach; so that nothing will relish well out of it, though the cup be ever so clean, and well shaped, and of the richest materials.

§ 50. 3. Such a sort of slavish discipline makes a slavish temper. The child submits, and dissembles obedience, whilst the fear of the rod hangs

over him; but when that is removed, and, by being out of sight, he can promise himself impunity, he gives the greater scope to his natural inclination; which by this way is not at all altered, but on the contrary heightened and increased in him; and after such restraint, breaks out usually with the more violence. Or,

§ 51. 4. If severity carried to the highest pitch does prevail, and works a cure upon the present unruly distemper, it is often bringing in the room of it worse and more dangerous disease, by breaking the mind; and then, in the place of a disorderly young fellow, you have a low-spirited moped creature: who, however with his unnatural sobriety he may please silly people, who commend tame inactive children, because they make no noise, nor give them any trouble; yet, at last, will probably prove as uncomfortable a thing to his friends, as he will be, all his life, an useless thing to himself and others.

§ 52. Beating then, and all other sorts of slavish and corporal punishments, are not the discipline fit to be used in the education of those who would have wise, good, and ingenuous men: and therefore very rarely to be applied, and that only on great occasions and cases of extremity. On the other side, to flatter children by rewards. Rewards. of things that are pleasant to them, is as carefully to be avoided. He that will give to his son apples, or sugar-plums, or what else of this kind he is most delighted with, to make him learn his book, does but authorise his love of pleasure, and cocker up that dangerous propensity, which he ought by all means to subdue and stifle in him. You can never hope to teach him to master it, whilst you compound for the check you give his inclination in one place, by the satisfaction you propose to it in another. To make a good, a wise, and a virtuous man, it is fit he should learn to cross his appetite, and deny his inclination, to riches, finery, or pleasing his palate, &c whenever his reason advises the contrary, and his duty requires it. But when you draw him to do any thing that is fit, by the offer of money; or reward the pains of learning his book, by the pleasure of a luscious morsel; when you promise him a lace-cravat, or a fine new suit, upon performance of some of his little tasks; what do you, by proposing these as rewards, but allow them to be the good things he should aim at, and thereby encourage his longing for them, and accustom him to place his happiness in them? Thus people, to prevail with children to be industrious about their grammar, dancing, or some other such matter, of no great moment to the happiness or usefulness of their lives, by

misapplied rewards and punishments, sacrifice their virtue, invert the order of their education, and teach them luxury, pride, or covetousness, &c. For in this way, flattering those wrong inclinations, which they should restrain and suppress, they lay the foundations of those future vices, which cannot be avoided, but by curbing our desires, and accustoming them early to submit to reason.

§ 53. I say not this, that I would have children kept from the conveniencies or pleasures of life, that are not injurious to their health or virtue: on the contrary, I would have their lives made as pleasant, and as agreeable to them as may be, in a plentiful enjoyment of whatsoever might innocently delight them: provided it be with this caution, that they have those enjoyments, only as the consequences of the state of esteem and acceptance they are in with their parents and governors; but they should never be offered or bestowed on them, as the reward of this or that particular performance, that they show an aversion to, or to which they would not have applied themselves without that temptation.

§ 54. But if you take away the rod on one hand, and these little encouragements, which they are taken with, on the other; how then (will you say) shall children be governed? Remove hope and fear, and there is an end of all discipline. I grant, that good and evil, reward and punishment, are the only motives to a rational creature, these are the spur and reins, whereby all mankind are set on work and guided, and therefore they are to be made use of to children too. For I advise their parents and governors always to carry this in their minds, that children are to be treated as rational creatures.

§ 55. Rewards, I grant, and punishments must be proposed to children, if we intend to work upon them. The mistake, I imagine, is, that those that are generally made use of, are ill chosen. The pains and pleasures of the body are, I think, of ill consequence, when made the rewards and punishments whereby men would prevail on their children: for, as I said before, they serve but to increase and strengthen those inclinations, which it is our business to subdue and master. What principle of virtue do you lay in a child, if you will redeem his desires of one pleasure by the proposal of another? This is but to enlarge his appetite, and instruct it to wander. If a child cries for an unwholesome and dangerous fruit, you purchase his quiet by giving him a less hurtful sweet-meat. This perhaps may preserve his health, but spoils his mind, and sets that farther out of order. For here you only change the object; but flatter still his appetite, and allow that must be

satisfied, wherein, as I have showed, lies the root of the mischief: and till you bring him to be able to bear a denial of that satisfaction, the child may at present be quiet and orderly, but the disease is not cured. By this way of proceeding you foment and cherish in him that which is the spring from whence all the evil flows; which will be sure on the next occasion to break out again with more violence, give him stronger longings, and you more trouble.

Reputation. § 56. The rewards and punishments then whereby we should keep children in order, are quite of another kind; and of that force, that when we can get them once to work, the business, I think, is done, and the difficulty is over. Esteem and disgrace are, of all others, the most powerful incentives to the mind, when once it is brought to relish them. If you can once get into children a love of credit, and an apprehension of shame and disgrace, you have put into them the true principle, which will constantly work, and incline them to the right. But it will be asked, How shall this be done?

I confess, it does not, at first appearance, want some difficulty; but yet I think it worth our while to seek the ways (and practise them when found) to attain this, which I look on as the great secret of education.

§ 57. First, children (earlier perhaps than we think) are very sensible of praise and commendation. They find a pleasure in being esteemed and valued, especially by their parents, and those whom they depend on. If therefore the father caress and commend them, when they do well; show a cold and neglectful countenance to them upon doing ill; and this accompanied by a like carriage of the mother, and all others that are about them; it will in a little time make them sensible of the difference: and this, if constantly observed, I doubt not but will of itself work more than threats or blows, which lose their force, when once grown common, and are of no use when shame does not attend them; and therefore are to be forborn, and never to be used, but in the case hereafter mentioned, when it is brought to extremity.

§ 58. But secondly, to make the sense of esteem or disgrace sink the deeper, and be of the more weight, other agreeable or disagreeable things should constantly accompany these different states; not as particular rewards and punishments of this or that particular action, but as necessarily, belonging to, and constantly attending one, who by his carriage has brought himself into a state of disgrace or commendation. By which way of treating

them, children may as much as possible be brought to conceive, that those that are commended and in esteem for doing well, will necessarily be beloved and cherished by every body, and have all other good things as a consequence of it; and, on the other side, when any one by miscarriage falls into dis-esteem, and cares not to preserve his credit, he will unavoidably fall under neglect and contempt: and, in that state, the want of whatever might satisfy or delight him, will follow. In this way the objects of their desires are made assisting to virtue; when a settled experience from the beginning teaches children, that the things they delight in, belong to, and are to be enjoyed by those only, who are in a state of reputation. If by these means you can come once to shame them out of their faults, (for besides that, I would willingly have no punishment,) and make them in love with the pleasure of being well thought on, you may turn them as you please, and they will be in love with all the ways of virtue.

§ 59. The great difficulty here is, I imagine, from the folly and perverseness of servants, who are hardly to be hindered from crossing herein the design of the father and mother. Children, discountenanced by their parents for any fault, find usually a refuge and relief in the caresses of those foolish flatterers, who thereby undo whatever the parents endeavour to establish. When the father or mother looks sour on the child, every body else should put on the same coldness to him, and nobody give him countenance, till forgiveness asked, and a reformation of his fault, has set him right again, and restored him to his former credit. If this were constantly observed, I guess there would be little need of blows or chiding: their own ease and satisfaction would quickly teach children to court commendation, and avoid doing that, which they found every body condemned, and they were sure to suffer for, without being chid or beaten. This would teach them modesty and shame; and they would quickly come to have a natural abhorrence for that, which they found made them slighted and neglected by every body. But how this inconvenience from servants is to be remedied, I must leave to parents care and consideration. Only I think it of great importance; and that they are very happy, who can get discreet people about their children.

§ 60. Frequent beating or chiding is therefore carefully to be avoided; because this sort of correction never produces any good, farther than it serves to raise shameShame. and abhorrence of the miscarriage that brought it on them. And if the greatest part of the trouble be not the sense that they

have done amiss, and the apprehension that they have drawn on themselves the just displeasure of their best friends, the pain of whipping will work but an imperfect cure. It only patches up for the present, and skins it over, but reaches not to the bottom of the sore. Ingenuous shame, and the apprehension of displeasure, are the only true restraints; these alone ought to hold the reins, and keep the child in order. But corporal punishments must necessarily lose that effect, and wear out the sense of shame, where they frequently return. Shame in children has the same place that modesty has in women; which cannot be kept, and often transgressed against. And as to the apprehension of displeasure in the parents, they will come to be very insignificant, if the marks of that displeasure quickly cease, and a few blows fully expiate. Parents should well consider what faults in their children are weighty enough to deserve the declaration of their anger: but when their displeasure is once declared to a degree that carries any punishment with it, they ought not presently to lay by the severity of their brows, but to restore their children to their former grace with some difficulty; and delay a full reconciliation, till their conformity, and more than ordinary merit, make good their amendment. If this be not so ordered, punishment will by familiarity become a mere thing of course, and lose all its influence; offending, being chastised, and then forgiven, will be thought as natural and necessary as noon, night, and morning, following one another.

§ 61. Concerning reputation, Reputation. I shall only remark this one thing more of it: that, though it be not the true principle and measure of virtue, (for that is the knowledge of a man's duty, and the satisfaction it is to obey his Maker, in following the dictates of that light God has given him, with the hopes of acceptation and reward,) yet it is that which comes nearest to it: and being the testimony and applause that other people's reason, as it were, by a common consent, gives to virtuous and well-ordered actions, it is the proper guide and encouragement of children, till they grow able to judge for themselves, and to find what is right by their own reason.

§ 62. This consideration may direct parents, how to manage themselves in reproving and commending their children. The rebukes and chiding, which their faults will sometimes make hardly to be avoided, should not only be in sober, grave, and unpassionate words, but also alone and in private: but the commendations children deserve they should receive before others. This doubles the reward, by spreading their praise; but the backwardness parents show in divulging their faults, will make them set a

greater value on their credit themselves, and teach them to be the more careful to preserve the good opinion of others, whilst they think they have it: but when, being exposed to shame, by publishing their miscarriages, they give it up for lost, that check upon them is taken off; and they will be the less careful to preserve others good thoughts of them, the more they suspect that their reputation with them is already blemished.

§ 63. But if a right course be taken with children, there will not be so much need of the application of the common rewards and punishments, as we imagined, and as the general practice has established. For all their innocent folly, playing, and childishChildishness. actions, are to be left perfectly free and unrestrained, as far as they can consist with the respect due to those that are present; and that with the greatest allowance. If these faults of their age, rather than of the children themselves, were, as they should be, left only to time, and imitation, and riper years to cure, children would escape a great deal of misapplied and useless correction; which either fails to overpower the natural disposition of their childhood, and so, by an ineffectual familiarity, makes correction in other necessary cases of less use; or else if it be of force to restrain the natural gaiety of that age, it serves only to spoil the temper both of body and mind. If the noise and bustle of their play prove at any time inconvenient, or unsuitable to the place or company they are in, (which can only be where their parents are,) a look or a word from the father or mother, if they have established the authority they should, will be enough either to remove, or quiet them for that time. But this gamesome humour, which is wisely adapted by nature to their age and temper, should rather be encouraged, to keep up their spirits, and improve their strength and health, than curbed or restrained: and the chief art is to make all that they have to do, sport and play too.

§ 64. And here give me leave to take notice of one thing I think a fault in the ordinary method of education; and that is, the charging of children's memories, upon all occasions, with rulesRules. and precepts, which they often do not understand, and are constantly as soon forgot as given. If it be some action you would have done, or done otherwise; whenever they forget or do it awkwardly, make them do it over and over again, till they are perfect: whereby you will get these two advantages: First, to see whether it be an action they can do, or is fit to be expected of them. For sometimes children are bid to do things, which, upon trial, they are found not able to do; and had need be taught and exercised in, before they are required to do

them. But it is much easier for a tutor to command, than to teach. Secondly, another thing got by it will be this, that by repeating the same action, till it be grown habitual in them, the performance will not depend on memory, or reflection, the concomitant of prudence and age, and not of childhood; but will be natural in them. Thus, bowing to a gentleman when he salutes him, and looking in his face when he speaks to him, is by constant use as natural to a wellbred man, as breathing; it requires no thought, no reflection. Having this way cured in your child any fault, it is cured for ever: and thus, one by one, you may weed them out all, and plant what habits you please.

§ 65. I have seen parents so heap rules on their children, that it was impossible for the poor little ones to remember a tenth part of them, much less to observe them. However, they were either by words or blows corrected for the breach of those multiplied and often very impertinent precepts. Whence it naturally followed, that the children minded not what was said to them; when it was evident to them, that no attention they were capable of, was sufficient to preserve them from transgression, and the rebukes which followed it.

Let therefore your rules to your son be as few as is possible, and rather fewer than more than seem absolutely necessary. For if you burden him with many rules, one of these two things must necessarily follow, that either he must be very often punished, which will be of ill consequence, by making punishment too frequent and familiar; or else you must let the transgressions of some of your rules go unpunished, whereby they will of course grow contemptible, and your authority become cheap to him. Make but few laws, but see they be well observed, when once made. Few years require but few laws; and as his age increases, when one rule is by practice well established, you may add another.

§ 66. But pray remember, children are not to be taught by rules, which will be always slipping out of their memories. What you think necessary for them to do, settle in them by an indispensable practice, as often as the occasion returns; and, if it be possible, make occasions. This will beget habits. Habits, in them, which, being once established, operate of themselves, easily and naturally, without the assistance of the memory. But here let me give two cautions: 1. The one is, that you keep them to the practice of what you would have grow into a habit in them, by kind words and gentle admonitions, rather as minding them of what they forget, than by harsh rebukes and chiding as if they were wilfully guilty. 2dly, Another thing you

are to take care of, is, not to endeavour to settle too many habits at once, lest by a variety you confound them, and so perfect none. When constant custom has made any one thing easy and natural to them, and they practise it without reflection, you may then go on to another.

This method of teaching children by a repeated practice, Practice. and the same action done over and over again, under the eye and direction of the tutor, till they have got the habit of doing it well, and not by relying on rules trusted to their memories; has so many advantages, which way soever we consider it, that I cannot but wonder (if ill customs could be wondered at in any thing) how it could possibly be so much neglected. I shall name one more that comes now in my way. By this method we shall see, whether what is required of him be adapted to his capacity, and any way suited to the child's natural genius and constitution: for that too must be considered in a right education. We must not hope wholly to change their original tempers, nor make the gay pensive and grave, nor the melancholy sportive, without spoiling them. God has stamped certain characters upon men's minds, which, like their shapes, may perhaps be a little mended; but can hardly be totally altered and transformed into the contrary.

He therefore that is about children, should well study their natures and aptitudes, and see, by often trials, what turn they easily take, and what becomes them; observe what their native stock is, how it may be improved, and what it is fit for: he should consider what they want, whether they be capable of having it wrought into them by industry, and incorporated there by practice; and whether it be worth while to endeavour it. For in many cases, all that we can do, or should aim at, is, to make the best of what nature has given, to prevent the vices and faults to which such a constitution is most inclined, and give it all the advantages it is capable of. Every one's natural genius should be carried as far as it could; but to attempt the putting another upon him, will be but labour in vain; and what is so plaistered on, will at best sit but untowardly, and have always hanging to it the ungracefulness of constraint and affectation.

Affectation Affectation. is not, I confess, an early fault of childhood, or the product of untaught nature: it is of that sort of weeds, which grow not in the wild uncultivated waste, but in garden-plots, under the negligent hand, or unskilful care of a gardener. Management and instruction, and some sense of the necessity of breeding, are requisite to make any one capable of affectation, which endeavours to correct natural defects, and has always the

laudable aim of pleasing, though it always misses it; and the more it labours to put on gracefulness, the farther it is from it. For this reason it is the more carefully to be watched, because it is the proper fault of education; a perverted education indeed, but such as young people often fall into, either by their own mistake, or the ill conduct of those about them.

He that will examine wherein that gracefulness lies, which always pleases, will find it arises from that natural coherence, which appears between the thing done, and such a temper of mind, as cannot but be approved of as suitable to the occasion. We cannot but be pleased with an humane, friendly, civil temper, wherever we meet with it. A mind free, and master of itself and all its actions, not low and narrow, not haughty and insolent, not blemished with any great defect; is what every one is taken with. The actions, which naturally flow from such a well-formed mind, please us also, as the genuine marks of it; and being, as it were, natural emanations from the spirit and disposition within, cannot but be easy and unconstrained. This seems to me to be that beauty, which shines through some men's actions, sets off all that they do, and takes with all they come near; when by a constant practice they have fashioned their carriage, and made all those little expressions of civility and respect, which nature or custom has established in conversation, so easy to themselves, that they seem not artificial or studied, but naturally to follow from a sweetness of mind and a well-turned disposition.

On the other side, affectation is an awkward and forced imitation of what should be genuine and easy, wanting the beauty that accompanies what is natural; because there is always a disagreement between the outward action, and the mind within, one of these two ways: 1. Either when a man would outwardly put on a disposition of mind, which then he really has not, but endeavours by a forced carriage to make show of; yet so, that the constraint he is under, discovers itself: and thus men affect sometimes to appear sad, merry, or kind, when, in truth, they are not so.

The other is, when they do not endeavour to make show of dispositions of mind, which they have not, but to express those they have by a carriage not suited to them: and such in conversation are all constrained motions, actions, words, or looks, which, though designed to show either their respect or civility to the company, or their satisfaction and easiness in it, are not yet natural nor genuine marks of the one or the other; but rather of some defect or mistake within. Imitation of others, without discerning what is

graceful in them, or what is peculiar to their characters, often makes a great part of this. But affectation of all kinds, whencesoever it proceeds, is always offensive: because we naturally hate whatever is counterfeit; and condemn those who have nothing better to recommend themselves by.

Plain and rough nature, left to itself, is much better than an artificial ungracefulness, and such studied ways of being ill-fashioned. The want of an accomplishment, or some defect in our behaviour, coming short of the utmost gracefulness, often escapes observation and censure. But affectation in any part of our carriage, is lighting up a candle to our defects; and never fails to make us be taken notice of, either as wanting sense, or wanting sincerity. This governors ought the more diligently to look after; because as I above observed, it is an acquired ugliness, owing to mistaken education; few being guilty of it, but those who pretend to breeding, and would not be thought ignorant of what is fashionable and becoming in conversation; and, if I mistake not, it has often its rise from the lazy admonitions of those who give rules, and propose examples, without joining practice with their instructions, and making their pupils repeat the action in their sight, that they may correct what is indecent or constrained in it, till it be perfected into an habitual and becoming easiness.

§ 67. Manners, Manners. as they call it, about which children are so often perplexed, and have so many goodly exhortations made them, by their wise maids and governesses, I think, are rather to be learned by example than rules; and then children, if kept out of ill company, will take a pride to behave themselves prettily, after the fashion of others, perceiving themselves esteemed and commended for it. But, if by a little negligence in this part, the boy should not put off his hat, nor make legs very gracefully, a dancing-master will cure that defect, and wipe off all that plainness of nature, which the *à-la-mode* people call clownishness. And since nothing appears to me to give children so much becoming confidence and behaviour, and so to raise them to the conversation of those above their age, as dancing; Dancing. I think they should be taught to dance, as soon as they are capable of learning it. For, though this consist only in outward gracefulness of motion, yet, I know not how, it gives children manly thoughts and carriage, more than any thing. But otherwise I would not have little children much tormented about punctilios, or niceties of breeding.

Never trouble yourself about those faults in them, which you know age will cure. And therefore want of well-fashioned civility in the carriage,

whilst civility is not wanting in the mind, (for there you must take care to plant it early,) should be the parents least care, whilst they are young. If his tender mind be filled with a veneration for his parents and teachers, which consists in love and esteem, and a fear to offend them; and with respect and good-will to all people; that respect will of itself teach those ways of expressing it, which he observes most acceptable. Be sure to keep up in him the principles of good-nature and kindness; make them as habitual as you can, by credit and commendation, and the good things accompanying that state; and when they have taken root in his mind, and are settled there by a continued practice, fear not; the ornaments of conversation, and the outside of fashionable manners, will come in their due time, if, when they are removed out of their maid's care, they are put into the hands of a well-bred man to be their governor.

Whilst they are very young, any carelessness is to be borne with in children, that carries not with it the marks of pride or ill-nature: but those, whenever they appear in any action, are to be corrected immediately, by the ways above mentioned. What I have said concerning manners, I would not have so understood, as if I meant that those, who have the judgment to do it, should not gently fashion the motions and carriage of children, when they are very young. It would be of great advantage, if they had people about them, from their being first able to go, that had the skill, and would take the right way to do it. That which I complain of is the wrong course that is usually taken in this matter. Children who were never taught any such thing as behaviour, are often (especially when strangers are present) chide for having some way or other failed in good manners, and have thereupon reproofs and precepts heaped upon them, concerning putting off their hats, or making of legs, &c. Though in this those concerned pretend to correct the child, yet, in truth, for the most part, it is but to cover their own shame: and they lay the blame on the poor little ones, sometimes passionately enough, to divert it from themselves, for fear the by-standers should impute to their want of care and skill the child's ill behaviour.

For, as for the children themselves, they are never one jot bettered by such occasional lectures: they at other times should be shown what to do, and by reiterated actions be fashioned before-hand into the practice of what is fit and becoming; and not told, and talked to do upon the spot, what they have never been accustomed to, nor know how to do as they should: to hare and rate them thus at every turn, is not to teach them, but to vex and torment

them to no purpose. They should be let alone, rather than chid for a fault, which is none of theirs, nor is in their power to mend for speaking to. And it were much better their natural, childish negligence, or plainness, should be left to the care of riper years, than that they should frequently have rebukes misplaced upon them, which neither do, nor can give them graceful motions. If their minds are well disposed, and principled with inward civility, a great part of the roughness, which sticks to the outside for want of better teaching, time and observation will rub off, as they grow up, if they are bred in good company; but if in ill, all the rules in the world, all the correction imaginable, will not be able to polish them. For you must take this for a certain truth, that let them have what instructions you will, and ever so learned lectures of breeding daily inculcated into them, that which will most influence their carriage, will be the company they converse with, and the fashion of those about them. Children (nay, and men too) do most by example. We are all a sort of chameleons, that still take a tincture from things near us: nor is it to be wondered at in children, who better understand what they see, than what they hear.

§ 68. I mentioned above, one great mischief that came by servants to children, when by their flatteries they take off the edge and force of the parents rebukes, and so lessen their authority. And here is another great inconvenience, which children receive from the ill examples which they meet with, amongst the meaner servants.

They are wholly, if possible, to be kept from such conversation: for the contagion of these ill precedents, both in civility and virtue, horribly infects children, as often as they come within reach of it. They frequently learn, from unbred or debauched servants, such language, untowardly tricks and vices, as otherwise they possibly would be ignorant of all their lives.

§ 69. It is a hard matter wholly to prevent this mischief. You will have very good luck if you never have a clownish or vicious servant, and if from them your children never get any infection. But yet, as much must be done towards it, as can be; and the children kept as much as may be in the company of their parents, and those to whose care they are committed. To this purpose, their being in their presence should be made easy to them: they should be allowed the liberties and freedom suitable to their ages, and not be held under unnecessary restraints, when in their parent's or governor's sight. If it be a prison to them, it is no wonder they should not like it. They must not be hindered from being children, or from

playing or doing as children; but from doing ill. All other liberty is to be allowed them. Next, to make them in love with the company of their parents, they should receive all their good things there, and from their hands. The servants should be hindered from making court to them, by giving them strong drink, wine, fruit, playthings, and other such matters, which may make them in love with their conversation.

§ 70. Having named company, I am almost ready to throw away my pen, and trouble you no farther on this subject. For since that does more than all precepts, rules, and instructions, methinks it is almost wholly in vain to make a long discourse of other things, and to talk of that almost to no purpose. For you will be ready to say, “What shall I do with my son? If I keep him always at home, he will be in danger to be my young master; and if I send him abroad, how is it possible to keep him from the contagion of rudeness and vice, which is every-where so in fashion? In my house he will perhaps be more innocent, but more ignorant too of the world: wanting there change of company, and being used constantly to the same faces, he will, when he comes abroad, be a sheepish or conceited creature.”

I confess, both sides have their inconveniencies. Being abroad, it is true, will make him bolder, and better able to bustle and shift amongst boys of his own age; and the emulation of school-fellows often puts life and industry into young lads. But till you can find a school, wherein it is possible for the master to look after the manners of his scholars, and can show as great effects of his care of forming their minds to virtue, and their carriage to good breeding, as of forming their tongues to the learned languages; you must confess, that you have a strange value for words, when, preferring the languages of the ancient Greeks and Romans to that which made them such brave men, you think it worth while to hazard your son’s innocence and virtue, for a little Greek and Latin. For, as for that boldness and spirit, which lads get amongst their play-fellows at school, it has ordinarily such a mixture of rudeness, and an ill-turned confidence, that those misbecoming and disingenuous ways of shifting in the world must be unlearned, and all the tincture washed out again, to make way for better principles, and such manners as make a truly worthy man. He that considers how diametrically opposite the skill of living well, and managing, as a man should do, his affairs in the world, is to that malapertness, tricking, or violence, learnt among school-boys, will think the faults of a privater education infinitely to be preferred to such improvements; and will take

care to preserve his child's innocence and modesty at home, as being nearer of kin, and more in the way of those qualities, which make a useful and able man. Nor does any one find, or so much as suspect, that the retirement and bashfulness, which their daughters are brought up in, makes them less knowing or less able women. Conversation, when they come into the world, soon gives them a becoming assurance; and whatsoever, beyond that, there is of rough and boisterous, may in men be very well spared too: for courage and steadiness, as I take it, lie not in roughness and ill breeding.

Virtue is harder to be got, than a knowledge of the world; and, if lost in a young man, is seldom recovered. Sheepishness and ignorance of the world, the faults imputed to a private education, are neither the necessary consequences of being bred at home; nor, if they were, are they incurable evils. Vice is the more stubborn, as well as the more dangerous evil of the two; and therefore, in the first place, to be fenced against. If that sheepish softness, which often enervates those, who are bred like fondlings at home, be carefully to be avoided, it is principally so for virtue's sake; for fear lest such a yielding temper should be too susceptible of vicious impressions, and expose the novice too easily to be corrupted. A young man, before he leaves the shelter of his father's house, and the guard of a tutor, should be fortified with resolution, and made acquainted with men, to secure his virtue; lest he should be led into some ruinous course, or fatal precipice, before he is sufficiently acquainted with the dangers of conversation, and has steadiness enough not to yield to every temptation. Were it not for this, a young man's bashfulness, and ignorance of the world, would not so much need an early care. Conversation would cure it in a great measure; or, if that will not do it early enough, it is only a stronger reason for a good tutor at home. For, if pains be to be taken to give him a manly air and assurance betimes, it is chiefly as a fence to his virtue, when he goes into the world, under his own conduct.

It is preposterous, therefore, to sacrifice his innocency to the attaining of confidence, and some little skill of bustling for himself among others, by his conversation with ill-bred and vicious boys; when the chief use of that sturdiness, and standing upon his own legs, is only for the preservation of his virtue. For if confidence or cunning come once to mix with vice, and support his miscarriages, he is only the surer lost; and you must undo again, and strip him of that he has got from his companions, or give him up to ruin. Boys will unavoidably be taught assurance by conversation with men,

when they are brought into it; and that is time enough. Modesty and submission, till then, better fits them for instruction: and therefore there needs not any great care to stock them with confidence beforehand. That which requires most time, pains, and assiduity, is to work into them the principles and practice of virtue and good breeding. This is the seasoning they should be prepared with, so as not easily to be got out again: this they had need to be well provided with. For conversation, when they come into the world, will add to their knowledge and assurance, but be too apt to take from their virtue; which therefore they ought to be plentifully stored with, and have that tincture sunk deep into them.

How they should be fitted for conversation, and entered into the world, when they are ripe for it, we shall consider in another place. But how any one's being put into a mixed herd of unruly boys, and there learning to wrangle at trap, or rook at span-farthing, fits him for civil conversation, or business, I do not see. And what qualities are ordinarily to be got from such a troop of play-fellows, as schools usually assemble together, from parents of all kinds, that a father should so much covet it, is hard to divine. I am sure, he who is able to be at the charge of a tutor, at home, may there give his son a more genteel carriage, more manly thoughts, and a sense of what is worthy and becoming, with a greater proficiency in learning into the bargain, and ripen him up sooner into a man; than any at school can do. Not that I blame the school-master in this, or think it to be laid to his charge. The difference is great between two or three pupils in the same house, and three or fourscore boys lodged up and down. For, let the master's industry and skill be ever so great, it is impossible he should have 50 or 100 scholars under his eye, any longer than they are in the school together: nor can it be expected, that he should instruct them successfully in any thing but their books; the forming of their minds and manners requiring a constant attention, and particular application to every single boy; which is impossible in a numerous flock, and would be wholly in vain, (could he have time to study and correct every one's particular defects and wrong inclinations,) when the lad was to be left to himself, or the prevailing infection of his fellows, the greatest part of the four-and-twenty hours.

But fathers, observing that fortune is often most successfully courted by bold and bustling men, are glad to see their sons pert and forward betimes; take it for an happy omen, that they will be thriving men, and look on the tricks they play their school-fellows, or learn from them, as a proficiency in

the art of living, and making their way through the world. But I must take the liberty to say, that he that lays the foundation of his son's fortune in virtue and good breeding, takes the only sure and warrantable way. And it is not the waggeries or cheats practised among school-boys, it is not their roughness one to another, nor the well-laid plots of robbing an orchard together, that makes an able man; but the principles of justice, generosity, and sobriety, joined with observation and industry, qualities which I judge school-boys do not learn much of one another. And if a young gentleman, bred at home, be not taught more of them, than he could learn at school, his father has made a very ill choice of a tutor. Take a boy from the top of a grammar-school, and one of the same age, bred as he should be in his father's family, and bring them into good company together; and then see which of the two will have the more manly carriage, and address himself with the more becoming assurance to strangers. Here I imagine the school-boy's confidence will either fail or discredit him; and if it be such as fits him only for the conversation of boys, he had better be without it.

Vice, Vice. if we may believe the general complaint, ripens so fast now-a-days, and runs up to seed so early in young people, that it is impossible to keep a lad from the spreading contagion, if you will venture him abroad in the herd, and trust to chance, or his own inclination, for the choice of his company at school. By what fate vice has so thriven amongst us these few years past, and by what hands it has been nursed up into so uncontrolled a dominion, I shall leave to others to inquire. I wish that those who complain of the great decay of christian piety and virtue everywhere, and of learning and acquired improvements in the gentry of this generation, would consider how to retrieve them in the next. This I am sure, that, if the foundation of it be not laid in the education and principling of the youth, all other endeavours will be in vain. And if the innocence, sobriety, and industry of those who are coming up, be not taken care of and preserved, it will be ridiculous to expect, that those who are to succeed next on the stage, should abound in that virtue, ability, and learning, which has hitherto made England considerable in the world. I was going to add courage too, though it has been looked on as the natural inheritance of Englishmen. What has been talked of some late actions at sea, of a kind unknown to our ancestors, gives me occasion to say, that debauchery sinks the courage of men; and when dissoluteness has eaten out the sense of true honour, bravery seldom stays long after it. And I think it impossible to find an instance of any

nation, however renowned for their valour, who ever kept their credit in arms, or made themselves redoubtable amongst their neighbours, after corruption had once broke through, and dissolved the restraint of discipline; and vice was grown to such a head, that it durst show itself barefaced, without being out of countenance.

It is virtue. then, direct virtue, which is the hard and valuable part to be aimed at in education; and not a forward pertness, or any little arts of shifting. All other considerations and accomplishments should give way, and be postponed, to this. This is the solid and substantial good, which tutors should not only read lectures, and talk of; but the labour and art of education should furnish the mind with, and fasten there, and never cease till the young man had a true relish of it, and placed his strength, his glory, and his pleasure in it.

The more this advances, the easier way will be made for other accomplishments in their turns. For he that is brought to submit to virtue, will not be refractory, or resty, in any thing that becomes him. And therefore I cannot but prefer breeding of a young gentleman at home in his father's sight, under a good governor, as much the best and safest way to this great and main end of education; when it can be had, and is ordered as it should be. Gentlemen's houses are seldom without variety of company: Company. they should use their sons to all the strange faces that come there, and engage them in conversation with men of parts and breeding, as soon as they are capable of it. And why those, who live in the country, should not take them with them, when they make visits of civility to their neighbours, I know not: this I am sure, a father that breeds his son at home, has the opportunity to have him more in his own company, and there give him what encouragement he thinks fit: and can keep him better from the taint of servants, and the meaner sort of people, than is possible to be done abroad. But what shall be resolved in the case, must in great measure be left to the parents, to be determined by their circumstances and conveniencies. Only I think it the worst sort of good husbandry for a father not to strain himself a little for his son's breeding; which, let his condition be what it will, is the best portion he can leave him. But if, after all, it shall be thought by some, that the breeding at home has too little company, and that at ordinary schools not such as it should be for a young gentleman; I think there might be ways found out to avoid the inconveniencies on the one side and the other.

§ 71. Having under consideration how great the influence of company is, and how prone we are all, especially children, to imitation; I must here take the liberty to mind parents of this one thing, viz. that he that will have his son have a respect for him and his orders, must himself have a great reverence for his son. “*Maxima debetur pueris reverentia.*” You must do nothing before him, which you would not have him imitate. If any thing escape you, which you would have pass for a fault in him, he will be sure to shelter himself under your example, Example. and shelter himself so, as that it will not be easy to come at him to correct it in him the right way. If you punish him for what he sees you practise yourself, he will not think that severity to proceed from kindness in you, or carefulness to amend a fault in him; but will be apt to interpret it the peevishness and arbitrary imperiousness of a father, who, without any ground for it, would deny his son the liberty and pleasures he takes himself. Or if you assume to yourself the liberty you have taken, as a privilege belonging to riper years, to which a child must not aspire, you do but add new force to your example, and recommend the action the more powerfully to him. For you must always remember, that children affect to be men earlier than is thought: and they love breeches, not for their cut, or ease, but because the having them is a mark or a step towards manhood. What I say of the father’s carriage before his children, must extend itself to all those who have any authority over them, or for whom he would have them have any respect.

§ 72. But to return to the business of rewards and punishments. Punishment. All the actions of childishness, and unfashionable carriage, and whatever time and age will of itself be sure to reform, being (as I have said) exempt from the discipline of the rod, there will not be so much need of beating children, as is generally made use of. To which if we add learning to read, write, dance, foreign languages, &c. as under the same privilege, there will be but very rarely any occasion for blows or force in an ingenuous education. The right way to teach them those things, is, to give them a liking and inclination to what you propose to them to be learned, and that will engage their industry and application. This I think no hard matter to do, if children be handled as they should be, and the rewards and punishments above mentioned be carefully applied, and with them these few rules observed in the method of instructing them.

§ 73. 1. None of the things they are to learn should ever be made a burden to them, or imposed on them as a task. Task. Whatever is so

proposed, presently becomes irksome: the mind takes an aversion to it, though before it were a thing of delight or indifferency. Let a child be but ordered to whip his top at a certain time of the day, whether he has, or has not a mind to it; let this be but required of him as a duty, wherein he must spend so many hours morning and afternoon, and see whether he will not soon be weary of any play at this rate. Is it not so with grown men? What they do cheerfully of themselves, do they not presently grow sick of, and can no more endure, as soon as they find it is expected of them as a duty? Children have as much a mind to show that they are free, that their own good actions come from themselves, that they are absolute and independent, as any of the proudest of you grown men, think of them as you please.

§ 74. 2. As a consequence of this, they should seldom be put about doing even those things you have got an inclination in them to, but when they have a mind and disposition to it. He that loves reading, writing, music, &c. finds yet in himself certain seasons wherein those things have no relish to him: and, if at that time he forces himself to it, he only pothors and wearies himself to no purpose. So it is with children. This change of temper should be carefully observed in them, and the favourable seasons of aptitude and inclination be heedfully laid hold of: and if they are not often enough forward of themselves, a good disposition should be talked into them, before they be set upon any thing. This I think no hard matter for a discreet tutor to do, who has studied his pupil's temper, and will be at a little pains to fill his head with suitable ideas, such as may make him in love with the present business. By this means a great deal of time and tiring would be saved: for a child will learn three times as much when he is in tune, as he will with double the time and pains, when he goes awkwardly, or is dragged unwillingly to it. If this were minded as it should, children might be permitted to weary themselves with play, and yet have time enough to learn what is suited to the capacity of each age. But no such thing is considered in the ordinary way of education, nor can it well be. That rough discipline of the rod is built upon other principles, has no attraction in it, regards not what humour children are in, nor looks after favourable seasons of inclination. And indeed it would be ridiculous, when compulsion and blows have raised an aversion in the child to his task, to expect he should freely of his own accord leave his play, and with pleasure court the occasions of learning: whereas, were matters ordered right, learning any thing they should be taught, might be made as much a recreation to their

play, as their play is to their learning. The pains are equal on both sides: nor is it that which troubles them; for they love to be busy, and the change and variety is that which naturally delights them. The only odds is, in that which we call play they act at liberty, and employ their pains (whereof you may observe them never sparing) freely; but what they are to learn, is forced upon them; they are called, compelled, and driven to it. This is that which at first entrance, balks and cools them; they want their liberty: get them but to ask their tutor to teach them, as they do often their play-fellows, instead of his calling upon them to learn; and they being satisfied that they act as freely in this, as they do in other things, they will go on with as much pleasure in it, and it will not differ from their other sports and play. By these ways, carefully pursued, a child may be brought to desire to be taught any thing you have a mind he should learn. The hardest part, I confess, is with the first or eldest; but when once he is set aright, it is easy by him to lead the rest whither one will.

§ 75. Though it be past doubt, that the fittest time for children to learn any thing is, when their minds are in tune, and well disposed to it; when neither flagging of spirit, nor intentness of thought upon something else, makes them awkward and averse; yet two things are to be taken care of: 1. that these seasons either not being warily observed, and laid hold on, as often as they return; or else not returning as often as they should; the improvement of the child be not thereby neglected, and so he be let grow into an habitual idleness, and confirmed in this indisposition. 2. That though other things are ill learned when the mind is either indisposed, or otherwise taken up; yet it is of great moment, and worth our endeavours, to teach the mind to get the mastery over itself; and to be able, upon choice, to take itself off from the hot pursuit of one thing, and set itself upon another with facility and delight; or at any time to shake off its sluggishness, and vigorously employ itself about what reason, or the advice of another, shall direct. This is to be done in children, by trying them sometimes; when they are by laziness unbent, or by avocation bent another way, and endeavouring to make them buckle to the thing proposed. If by this means the mind can get an habitual dominion over itself, lay by ideas or business, as occasion requires, and betake itself to new and less acceptable employments, without reluctancy or discomposure, it will be an advantage of more consequence than Latin or logic, or most of those things children are usually required to learn.

Compulsion. § 76. Children being more active and busy in that age, than in any other part of their life, and being indifferent to any thing they can do, so they may be but doing; dancing and scotch-hoppers would be the same thing to them, were the encouragements and discouragements equal. But to things we would have them learn, the great and only discouragement I can observe, is, that they are called to it; it is made their business; they are teased and chid about it, and do it with trembling and apprehension; or, when they come willingly to it, are kept too long at it, till they are quite tired: all which intrenches too much on that natural freedom they extremely affect. And it is that liberty alone, which gives the true relish and delight to their ordinary play-games. Turn the tables, and you will find, they will soon change their application; especially if they see the examples of others, whom they esteem and think above themselves. And if the things which they observe others to do, be ordered so that they insinuate themselves into them, as the privilege of an age or condition above theirs; then ambition, and the desire still to get forward, and higher, and to be like those above them, will set them on work, and make them go on with vigour and pleasure; pleasure in what they have begun by their own desire. In which way the enjoyment of their dearly beloved freedom will be no small encouragement to them. To all which, if there be added the satisfaction of credit and reputation, I am apt to think, there will need no other spur to excite their application and assiduity, as much as is necessary. I confess, there needs patience and skill, gentleness and attention, and a prudent conduct to attain this at first. But why have you a tutor, if there needed no pains? But when this is once established, all the rest will follow more easily, than in any more severe and imperious discipline. And I think it no hard matter to gain this point; I am sure it will not be, where children have no ill examples set before them. The great danger therefore, I apprehend, is only from servants, and other ill-ordered children, or such other vicious or foolish people, who spoil children, both by the ill pattern they set before them in their own ill manners, and by giving them together, the two things they should never have at once; I mean, vicious pleasures and commendation.

§ 77. As children Chiding. should very seldom be corrected by blows; so, I think, frequent, and especially, passionate chiding, of almost as ill consequence. It lessens the authority of the parents, and the respect of the child: for I bid you still remember, they distinguish early betwixt passion

and reason: and as they cannot but have a reverence for what comes from the latter, so they quickly grow into a contempt of the former; or if it causes a present terrour, yet it soon wears off; and natural inclination will easily learn to slight such scare-crows, which make a noise, but are not animated by reason. Children being to be restrained by the parents only in vicious (which, in their tender years, are only a few) things, a look or nod only ought to correct them, when they do amiss: or, if words are sometimes to be used, they ought to be grave, kind, and sober, representing the ill, or unbecomingness of the faults, rather than a hasty rating of the child for it, which makes him not sufficiently distinguish whether your dislike be not more directed to him than his fault. Passionate chiding usually carries rough and ill language with it, which has this further ill effect, that it teaches and justifies it in children; and the names that their parents or preceptors give them they will not be ashamed or backward to bestow on others, having so good authority for the use of them.

Obstinacy. § 78. I foresee here it will be objected to me: what then, will you have children never beaten, nor chid, for any fault? this will be to let loose the reins to all kind of disorder. Not so much as is imagined, if a right course has been taken in the first seasoning of their minds, and implanting that awe of their parents above mentioned. For beating, by constant observation, is found to do little good, where the smart of it is all the punishment is feared or felt in it; for the influence of that quickly wears out, with the memory of it. But yet there is one, and but one fault, for which, I think, children should be beaten; and that is obstinacy or rebellion. And in this too, I would have it ordered so, if it can be, that the shame of the whipping, and not the pain, should be the greatest part of the punishment. Shame of doing amiss, and deserving chastisement, is the only true restraint belonging to virtue. The smart of the rod, if shame accompanies it not, soon ceases, and is forgotten, and will quickly, by use, lose its terrour. I have known the children of a person of quality kept in awe, by the fear of having their shoes pulled off, as much as others by apprehensions of a rod hanging over them. Some such punishment I think better than beating; for it is shame of the fault, and the disgrace that attends it, that they should stand in fear of, rather than pain, if you would have them have a temper truly ingenuous. But stubbornness, and an obstinate disobedience, must be mastered with force and blows: for this there is no other remedy. Whatever particular action you bid him to do, or forbear, you must be sure to see

yourself obeyed; no quarter, in this case, no resistance. For when once it comes to be a trial of skill, a contest for mastery betwixt you, as it is, if you command, and he refuses; you must be sure to carry it, whatever blows it costs, if a nod or words will not prevail; unless, for ever after, you intend to live in obedience to your son. A prudent and kind mother, of my acquaintance, was, on such an occasion, forced to whip her little daughter, at her first coming home from nurse, eight times successively, the same morning, before she could master her stubbornness, and obtain a compliance in a very easy and indifferent matter. If she had left off sooner, and stopped at the seventh whipping, she had spoiled the child for ever; and, by her unprevailing blows, only confirmed her refractoriness, very hardly afterwards to be cured: but wisely persisting, till she had bent her mind, and supplied her will, the only end of correction and chastisement, she established her authority thoroughly in the very first occasions, and had ever after a very ready compliance and obedience in all things from her daughter. For, as this was the first time, so, I think, it was the last too she ever struck her.

The pain of the rod, the first occasion that requires it, continued and increased without leaving off, till it has thoroughly prevailed; should first bend the mind, and settle the parents authority: and then gravity, mixed with kindness, should for ever after keep it.

This, if well reflected on, would make people more wary in the use of the rod and the cudgel; and keep them from being so apt to think beating the safe and universal remedy, to be applied at random, on all occasions. This is certain however, if it does no good, it does great harm; if it reaches not the mind, and makes not the will supple, it hardens the offender; and, whatever pain he has suffered for it, it does but endear to him his beloved stubbornness, which has got him this time the victory, and prepares him to contest and hope for it for the future. Thus, I doubt not, but by illordered correction, many have been taught to be obstinate and refractory, who otherwise would have been very pliant and tractable. For, if you punish a child so, as if it were only to revenge the past fault, which has raised your choler; what operation can this have upon his mind, which is the part to be amended? If there were no sturdy humour or wilfulness mixed with his fault, there was nothing in it, that required the severity of blows. A kind, or grave admonition is enough, to remedy the slips of frailty, forgetfulness, or inadvertency, and is as much as they will stand in need of. But, if there were

a perverseness in the will, if it were a designed, resolved disobedience, the punishment is not to be measured by the greatness or smallness of the matter wherein it appeared, but by the opposition it carries, and stands in, to that respect and submission that is due to the father's orders; which must always be rigorously exacted, and the blows by pauses laid on, till they reach the mind, and you perceive the signs of a true sorrow, shame, and purpose of obedience.

This, I confess, requires something more than setting children a task, and whipping them without any more ado, if it be not done, and done to our fancy. This requires care, attention, observation, and a nice study of children's tempers, and weighing their faults well, before we come to this sort of punishment. But is not that better, than always to have the rod in hand, as the only instrument of government; and, by frequent use of it, on all occasions, misapply and render inefficacious this last and useful remedy, where there is need of it? For, what else can be expected, when it is promiscuously used upon every little slip? When a mistake in concordance, or a wrong position in verse, shall have the severity of the lash, in a well-tempered and industrious lad, as surely as a wilful crime in an obstinate and perverse offender; how can such a way of correction be expected to do good on the mind, and set that right? which is the only thing to be looked after; and, when set right, brings all the rest that you can desire along with it.

§ 79. Where a wrong bent of the will wants not amendment, there can be no need of blows. All other faults, where the mind is rightly disposed, and refuses not the government and authority of the father or tutor, are but mistakes, and may often be over-looked; or, when they are taken notice of, need no other but the gentle remedies of advice, direction, and reproof; till the repeated and wilful neglect of those shows the fault to be in the mind, and that a manifest perverseness of the will lies at the root of their disobedience. But whenever obstinacy, which is an open defiance, appears, that cannot be winked at, or neglected, but must, in the first instance, be subdued and mastered; only care must be had, that we mistake not; and we must be sure it is obstinacy, and nothing else.

§ 80. But since the occasions of punishment, especially beating, are as much to be avoided as may be, I think it should not be often brought to this point. If the awe I spoke of be once got, a look will be sufficient in most cases. Nor indeed should the same carriage, seriousness, or application be expected from young children, as from those of riper growth. They must be

permitted, as I said, the foolish and childish actions, suitable to their years, without taking notice of them; inadvertency, carelessness, and gaiety, is the character of that age. I think the severity I spoke of, is not to extend itself to such unseasonable restraints; nor is that hastily to be interpreted obstinacy or wilfulness, which is the natural product of their age or temper. In such miscarriages they are to be assisted, and helped towards an amendment, as weak people under a natural infirmity; which, though they are warned of, yet every relapse must not be counted a perfect neglect, and they presently treated as obstinate. Faults of frailty, as they should never be neglected, or let pass without minding; so, unless the will mix with them, they should never be exaggerated, or very sharply reprov'd; but with a gentle hand set right, as time and age permit. By this means, children will come to see what is in any miscarriage, that is chiefly offensive, and so learn to avoid it. This will encourage them to keep their wills right, which is the great business; when they find, that it preserves them from any great displeasure; and that in all their other failings they meet with the kind concern and help, rather than the anger and passionate reproaches of their tutor and parents. Keep them from vice, and vicious dispositions, and such a kind of behaviour in general will come, with every degree of their age, as is suitable to that age, and the company they ordinarily converse with: and as they grow in years, they will grow in attention and application. But that your words may always carry weight and authority with them, if it shall happen, upon any occasion, that you bid him leave off the doing of any even childish things, you must be sure to carry the point, and not let him have the mastery. But yet, I say, I would have the father seldom interpose his authority and command in these cases, or in any other, but such as have a tendency to vicious habits. I think there are better ways of prevailing with them; and a gentle persuasion in reasoning (when the first point of submission to your will is got) will most times do much better.

§ 81. It will perhaps be wondered, that I mention reasoningReasoning. with children: and yet I cannot but think that the true way of dealing with them. They understand it as early as they do language; and, if I mis-observe not, they love to be treated as rational creatures, sooner than is imagined. It is a pride should be cherished in them, and, as much as can be, made the greatest instrument to turn them by.

But when I talk of reasoning, I do not intend any other, but such as is suited to the child's capacity and apprehension. Nobody can think a boy of

three or seven years old should be argued with as a grown man. Long discourses, and philosophical reasonings, at best, amaze and confound, but do not instruct, children. When I say, therefore, that they must be treated as rational creatures, I mean that you should make them sensible, by the mildness of your carriage, and the composure, even in your correction of them, that what you do is reasonable in you, and useful and necessary for them; and that it is not out of caprice, passion, or fancy, that you command or forbid them any thing. This they are capable of understanding; and there is no virtue they should be excited to, nor fault they should be kept from, which I do not think they may be convinced of: but it must be by such reasons as their age and understanding are capable of, and those proposed always in very few and plain words. The foundations on which several duties are built, and the fountains of right and wrong, from which they spring, are not, perhaps, easily to be let into the minds of grown men, not used to abstract their thoughts from common received opinions. Much less are children capable of reasonings from remote principles. They cannot conceive the force of long deductions: the reasons that move them must be obvious and level to their thoughts, and such as may (if I may so say) be felt and touched. But yet, if their age, temper, and inclinations, be considered, they will never want such motives, as may be sufficient to convince them. If there be no other more particular, yet these will always be intelligible, and of force, to deter them from any fault, fit to be taken notice of in them, viz. that it will be a discredit and disgrace to them, and displease you.

§ 82. But, of all the ways whereby children are to be instructed, and their manners formed, the plainest, easiest, and most efficacious, is to set before their eyes the examplesExamples. of those things you would have them do or avoid. Which, when they are pointed out to them, in the practice of persons within their knowledge, with some reflections on their beauty or unbecomingness, are of more force to draw or deter their imitation, than any discourses which can be made to them. Virtues and vices can by no words be so plainly set before their understandings, as the actions of other men will show them, when you direct their observation, and bid them view this or that good or bad quality in their practice. And the beauty or uncomeliness of many things, in good and ill breeding, will be better learnt, and make deeper impressions on them, in the examples of others, than from any rules or instructions can be given about them.

This is a method to be used, not only whilst they are young; but to be continued, even as long as they shall be under another's tuition or conduct. Nay, I know not whether it be not the best way to be used by a father, as long as he shall think fit, on any occasion, to reform any thing he wishes mended in his son; nothing sinking so gently, and so deep, into men's minds, as example. And what ill they either overlook, or indulge in themselves, they cannot but dislike, and be ashamed of, when it is set before them in another.

§ 83. It may be doubted concerning whipping, Whipping. when, as the last remedy, it comes to be necessary; at what times, and by whom it should be done: whether presently upon the committing the fault, whilst it is yet fresh and hot; and whether parents themselves should beat their children. As to the first; I think it should not be done presently, lest passion mingle with it: and so, though it exceed the just proportion, yet it loses of its due weight; for even children discern when we do things in passion. But, as I said before, that has most weight with them, that appears sedately to come from their parents reason; and they are not without this distinction. Next, if you have any discreet servant capable of it, and has the place of governing your child, (for if you have a tutor, there is no doubt,) I think it is best the smart should come more immediately from another's hand, though by the parent's order, who should see it done; whereby the parent's authority will be preserved, and the child's aversion, for the pain it suffers, rather be turned on the person that immediately inflicts it. For I would have a father seldom strike his child, but upon very urgent necessity, and as the last remedy; and then perhaps it will be fit to do it so, that the child should not quickly forget it.

§ 84. But, as I said before, beating is the worst, and therefore the last, means to be used in the correction of children; and that only in cases of extremity, after all gentler ways have been tried, and proved unsuccessful: which, if well observed, there will be very seldom any need of blows. For, it not being to be imagined that a child will often, if ever, dispute his father's present command in any particular instance; and the father not interposing his absolute authority, in peremptory rules, concerning either childish or indifferent actions, wherein his son is to have his liberty; or concerning his learning or improvement, wherein there is no compulsion to be used; there remains only the prohibition of some vicious actions, wherein a child is capable of obstinacy, and consequently can deserve beating: and so there

will be but very few occasions of that discipline to be used by any one, who considers well, and orders his child's education as it should be. For the first seven years, what vices can a child be guilty of, but lying, or some ill-natured tricks; the repeated commission whereof, after his father's direct command against it, shall bring him into the condemnation of obstinacy, and the chastisement of the rod? If any vicious inclination in him be, in the first appearance and instances of it, treated as it should be, first, with your wonder; and then, if returning again a second time, discountenanced with the severe brow of the father, tutor, and all about him, and a treatment suitable to the state of discredit before mentioned; and this continued till he be made sensible and ashamed of his fault; I imagine there will be no need of any other correction, nor ever any occasion to come to blows. The necessity of such chastisement is usually the consequence only of former indulgences or neglects. If vicious inclinations were watched from the beginning, and the first irregularities which they caused, corrected by those gentler ways, we should seldom have to do with more than one disorder at once; which would be easily set right without any stir or noise, and not require so harsh a discipline as beating. Thus, one by one, as they appeared, they might all be weeded out, without any signs or memory that ever they had been there. But we letting their faults (by indulging and humouring our little ones) grow up, till they are sturdy and numerous, and the deformity of them makes us ashamed and uneasy; we are fain to come to the plough and the harrow; the spade and the pick-ax must go deep to come at the roots, and all the force, skill, and diligence we can use, is scarce enough to cleanse the vitiated seed-plat, overgrown with weeds, and restore us the hopes of fruits to reward our pains in its season.

§ 85. This course, if observed, will spare both father and child the trouble of repeated injunctions, and multiplied rules of doing and forbearing. For I am of opinion, that of those actions, which tend to vicious habits, (which are those alone that a father should interpose his authority and commands in,) none should be forbidden children, till they are found guilty of them. For such untimely prohibitions, if they do nothing worse, do at least so much towards teaching and allowing them, that they suppose that children may be guilty of them, who would possibly be safer in the ignorance of any such faults. And the best remedy to stop them, is, as I have said, to show wonder and amazement at any such action as hath a vicious tendency, when it is first taken notice of in a child. For example, when he is

first found in a lye, or any ill-natured trick, the first remedy should be, to talk to him of it as a strange monstrous matter, that it could not be imagined he would have done: and so shame him out of it.

§ 86. It will be (it is like) objected, that whatsoever I fancy of the tractableness of children, and the prevalency of those softer ways of shame and commendation; yet there are many, who will never apply themselves to their books, and to what they ought to learn, unless they are scourged to it. This, I fear, is nothing but the language of ordinary schools and fashion, which have never suffered the other to be tried as it should be, in places where it could be taken notice of. Why, else, does the learning of Latin and Greek need the rod, when French and Italian need it not? Children learn to dance and fence without whipping: nay, arithmetic, drawing, &c. they apply themselves well enough to, without beating: which would make one suspect, that there is something strange, unnatural, and disagreeable to that age, in the things required in grammar-schools, or in the methods used there, that children cannot be brought to, without the severity of the lash, and hardly with that too; or else, that it is a mistake, that those tongues could not be taught them without beating.

§ 87. But let us suppose so some negligent or idle, that they will not be brought to learn by the gentle ways proposed (for we must grant, that there will be children found of all tempers); yet it does not thence follow, that the rough discipline of the cudgel is to be used to all. Nor can any one be concluded unmanageable by the milder methods of government, till they have been thoroughly tried upon him; and, if they will not prevail with him to use his endeavours, and do what is in his power to do, we make no excuses for the obstinate: blows are the proper remedies for those: but blows laid on, in a way different from the ordinary. He that wilfully neglects his book, and stubbornly refuses any thing he can do, required of him by his father, expressing himself in a positive serious command, should not be corrected with two or three angry lashes, for not performing his task, and the same punishment repeated again and again, upon every the like default: but, when it is brought to that pass, that wilfulness evidently shows itself, and makes blows necessary; I think the chastisement should be a little more sedate, and a little more severe, and the whipping (mingled with admonition between) so continued, till the impressions of it on the mind were found legible in the face, voice, and submission of the child, not so sensible of the smart, as of the fault he has been guilty of, and melting in true sorrow under

it. If such a correction as this, tried some few times at fit distances, and carried to the utmost severity, with the visible displeasure of the father all the while, will not work the effect, turn the mind, and produce a future compliance; what can be hoped from blows, and to what purpose should they be any more used? Beating, when you can expect no good from it, will look more like the fury of an enraged enemy, than the good-will of a compassionate friend; and such chastisement carries with it only provocation, without any prospect of amendment. If it be any father's misfortune to have a son thus perverse and untractable, I know not what more he can do but pray for him. But I imagine, if a right course be taken with children from the beginning, very few will be found to be such; and when there are any such instances, they are not to be the rule for the education of those who are better natured, and may be managed with better usage.

§ 88. If a tutor can be got, that, thinking himself in his father's place, charged with his care, and relishing these things, will at the beginning apply himself to put them in practice, he will afterwards find his work very easy: and you will, I guess, have your son in a little time a greater proficient in both learning and breeding, than perhaps you imagine. But let him by no means beat him, at any time, without your consent and direction: at least till you have experience of his discretion and temper. But yet, to keep up his authority with his pupil, besides concealing that he has not the power of the rod, you must be sure to use him with great respect yourself, and cause all your family to do so too. For you cannot expect your son should have any regard for one, whom he sees you, or his mother, or others slight. If you think him worthy of contempt, you have chosen amiss; and if you show any contempt of him, he will hardly escape it from your son: and whenever that happens, whatever worth he may have in himself, and abilities for this employment, they are all lost to your child, and can afterwards never be made useful to him.

§ 89. As the father's example must teach the child respect for his tutor; so the tutor's example must lead the child into those actions he would have him do. His practice must by no means cross his precepts, unless he intend to set him wrong. It will be to no purpose for the tutor to talk of the restraint of the passions, whilst any of his own are let loose: and he will in vain endeavour to reform any vice or indecency in his pupil, which he allows in himself. Ill patterns are sure to be followed more than good rules: and

therefore he must also carefully preserve him from the influence of ill precedents, especially the most dangerous of all, the examples of the servants; from whose company he is to be kept, not by prohibitions, for that will but give him an itch after it, but by other ways I have mentioned.

Governor. § 90. In all the whole business of education, there is nothing like to be less hearkened to, or harder to be well observed, than what I am now going to say; and that is, that children should, from their first beginning to talk, have some discreet, sober, nay wise person about them, whose care it should be to fashion them aright, and keep them from all ill, especially the infection of bad company. I think this province requires great sobriety, temperance, tenderness, diligence, and discretion; qualities hardly to be found united in persons, that are to be had for ordinary salaries: nor easily to be found any-where. As to the charge of it, I think it will be the money best laid out that can be about our children; and therefore, though it may be expensive more than is ordinary, yet it cannot be thought dear. He that at any rate procures his child a good mind, well-principled, tempered to virtue and usefulness, and adorned with civility and good-breeding, makes a better purchase for him, than if he had laid out the money for an addition of more earth to his former acres. Spare it in toys and play-games, in silk and ribbons, laces and other useless expences, as much as you please; but be not sparing in so necessary a part as this. It is not good husbandry to make his fortune rich, and his mind poor. I have often, with great admiration, seen people lavish it profusely in tricking up their children in fine clothes, lodging, and feeding them sumptuously, allowing them more than enough of useless servants; and yet at the same time starve their minds, and not take sufficient care to cover that, which is the most shameful nakedness, viz. their natural wrong inclinations and ignorance. This I can look on as no other than a sacrificing to their own vanity; it showing more their pride, than true care of the good of their children. Whatsoever you employ to the advantage of your son's mind will show your true kindness, though it be to the lessening of his estate. A wise and good man can hardly want either the opinion or reality of being great and happy. But he that is foolish or vicious, can be neither great nor happy, what estate soever you leave him: and I ask you, whether there be not men in the world, whom you had rather have your son be, with 500l. per annum, than some other you know, with 5000l.?

§ 91. The consideration of charge ought not, therefore, to deter those who are able: the great difficulty will be, where to find a proper person. For

those of small age, parts, and virtue, are unfit for this employment: and those that have greater, will hardly be got to undertake such a charge. You must therefore look out early, and inquire every-where; for the world has people of all sorts: and I remember, Montaigne says in one of his essays, that the learned Castalio was fain to make trenchers at Basil, to keep himself from starving, when his father would have given any money for such a tutor for his son, and Castalio have willingly embraced such an employment upon very reasonable terms; but this was for want of intelligence.

§ 92. If you find it difficult to meet with such a tutor as we desire, you are not to wonder. I only can say, spare no care nor cost to get such an one. All things are to be had that way: and I dare assure you, that, if you can get a good one, you will never repent the charge; but will always have the satisfaction to think it the money, of all other, the best laid out. But be sure take nobody upon friends, or charitable, no, nor bare great commendations. Nay, if you will do as you ought, the reputation of a sober man, with a good stock of learning, (which is all usually required in a tutor,) will not be enough to serve your turn. In this choice be as curious, as you would be in that of a wife for him: for you must not think of trial, or changing afterwards; that will cause great inconvenience to you, and greater to your son. When I consider the scruples and cautions I here lay in your way, methinks it looks as if I advised you to something, which I would have offered at, but in effect not done. But he that shall consider, how much the business of a tutor, rightly employed, lies out of the road; and how remote it is from the thoughts of many, even of those who propose to themselves this employment; will perhaps be of my mind, that one, fit to educate and form the mind of a young gentleman, is not every-where to be found; and that more than ordinary care is to be taken in the choice of him, or else you may fail of your end.

§ 93. The character of a sober man, and a scholar, is, as I have above observed, what every one expects in a tutor. Tutor. This generally is thought enough, and is all that parents commonly look for. But when such an one has emptied out, into his pupil, all the Latin and logic he has brought from the university, will that furniture make him a fine gentleman? Or can it be expected that he should be better bred, better skilled in the world, better principled in the grounds and foundations of true virtue and generosity, than his young tutor is?

To form a young gentleman, as she should be, it is fit his governor himself should be well-bred, understand the ways of carriage, and measures of civility, in all the variety of persons, times, and places; and keep his pupil, as much as his age requires, constantly to the observation of them. This is an art not to be learnt, nor taught by books: nothing can give it, but good company and observation joined together. The taylor may make his clothes modish, and the dancing-master give fashion to his motions; yet neither of these, though they set off well, make a well-bred gentleman: no, though he have learning to boot; which, if not well managed, makes him more impertinent and intolerable in conversation. Breeding is that, which sets a gloss upon all his other good qualities, and renders them useful to him, in procuring him the esteem and good-will of all that he comes near. Without good-breeding, his other accomplishments make him pass but for proud, conceited, vain, or foolish.

Courage, in an ill-bred man, has the air, and escapes not the opinion, of brutality: learning becomes pedantry; wit, buffoonery; plainness, rusticity; good-nature, fawning: and there cannot be a good quality in him, which want of breeding will not warp, and disfigure to his disadvantage. Nay, virtue and parts, though they are allowed their due commendation, yet are not enough to procure a man a good reception, and make him welcome wherever he comes. Nobody contents himself with rough diamonds, and wears them so, who would appear with advantage. When they are polished and set, then they give a lustre. Good qualities are the substantial riches of the mind; but it is good-breeding sets them off: and he that will be acceptable, must give beauty, as well as strength, to his actions. Solidity, or even usefulness, is not enough: a graceful way and fashion, in every thing, is that which gives the ornament and liking. And, in most cases, the manner of doing is of more consequence than the thing done; and upon that depends the satisfaction, or disgust, wherewith it is received. This, therefore, which lies not in the putting off the hat, nor making of compliments, but in a due and free composure of language, looks, motion, posture, place, &c. suited to persons and occasions, and can be learned only by habit and use, though it be above the capacity of children, and little ones should not be perplexed about it; yet it ought to be begun, and in a good measure learned, by a young gentleman, whilst he is under a tutor, before he comes into the world upon his own legs; for then usually it is too late to hope to reform several habitual indecencies, which lie in little things. For the carriage is not as it

should be, till it is become natural in every part; falling, as skilful musicians fingers do, into harmonious order, without care, and without thought. If in conversation a man's mind be taken up with a solicitous watchfulness about any part of his behaviour, instead of being mended by it, it will be constrained, uneasy, and ungraceful.

Besides, this part is most necessary to be formed by the hands and care of a governor: because, though the errors committed in breeding are the first that are taken notice of by others, yet they are the last that any one is told of. Not but that the malice of the world is forward enough to tattle of them; but it is always out of his hearing, who should make profit of their judgment, and reform himself by their censure. And indeed this is so nice a point to be meddled with, that even those who are friends, and wish it were mended, scarce ever dare mention it, and tell those they love, that they are guilty in such or such cases of ill breeding. Errors in other things may often with civility be shown another; and it is no breach of good manners, or friendship, to set him right in other mistakes: but good-breeding itself allows not a man to touch upon this; or to insinuate to another, that he is guilty of want of breeding. Such information can come only from those who have authority over them: and from them too it comes very hardly and harshly to a grown man; and, however softened, goes but ill down with any one, who has lived ever so little in the world. Wherefore it is necessary, that this part should be the governor's principal care; that an habitual gracefulness, and politeness in all his carriage, may be settled in his charge, as much as may be, before he goes out of his hands: and that he may not need advice in this point, when he has neither time nor disposition to receive it, nor has any body left to give it him. The tutor therefore ought, in the first place, to be well-bred: and a young gentleman, who gets this one qualification from his governor, sets out with great advantage; and will find, that this one accomplishment will more open his way to him, get him more friends, and carry him farther in the world, than all the hard words, or real knowledge, he has got from the liberal arts, or his tutor's learned encyclopædia; not that those should be neglected, but by no means preferred, or suffered to thrust out the other.

§ 94. Besides being well-bred, the tutor should know the world well; the ways, the humours, the follies, the cheats, the faults of the age he is fallen into, and particularly of the country he lives in. These he should be able to show to his pupil, as he finds him capable; teach him skill in men, and their

manners; pull off the mask, which their several callings and pretences cover them with; and make his pupil discern what lies at the bottom, under such appearances; that he may not, as unexperienced young men are apt to do, if they are unwarned, take one thing for another, judge by the outside, and give himself up to show, and the insinuation of a fair carriage, or an obliging application. A governor should teach his scholar to guess at, and beware of, the designs of men he hath to do with, neither with too much suspicion, nor too much confidence; but, as the young man is by nature most inclined to either side, rectify him, and bend him the other way. He should accustom him to make, as much as is possible, a true judgment of men by those marks, which serve best to show what they are, and give a prospect into their inside; which often shows itself in little things, especially when they are not in parade, and upon their guard. He should acquaint him with the true state of the world, and dispose him to think no man better or worse, wiser or foolisher, than he really is. Thus, by safe and insensible degrees, he will pass from a boy to a man; which is the most hazardous step in all the whole course of life. This therefore should be carefully watched, and a young man with great diligence handed over it; and not, as now usually is done, be taken from a governor's conduct, and all at once thrown into the world under his own, not without manifest danger of immediate spoiling; there being nothing more frequent, than instances of the great looseness, extravagancy, and debauchery, which young men have run into, as soon as they have been let loose from a severe and strict education: which, I think, may be chiefly imputed to their wrong way of breeding, especially in this part; for, having been bred up in a great ignorance of what the world truly is, and finding it quite another thing, when they come into it, than what they were taught it should be, and so imagined it was; are easily persuaded, by other kind of tutors, which they are sure to meet with, that the discipline they were kept under, and the lectures that were read to them, were but the formalities of education, and the restraints of childhood; that the freedom belonging to men, is to take their swing in a full enjoyment of what was before forbidden them. They show the young novice the world, full of fashionable and glittering examples of this every-where, and he is presently dazzled with them. My young master, failing not to be willing to show himself a man, as much as any of the sparks of his years, lets himself loose to all the irregularities he finds in the most debauched; and thus courts credit and manliness, in the casting off the modesty and sobriety he has till

then been kept in; and thinks it brave, at his first setting out, to signalize himself in running counter to all the rules of virtue, which have been preached to him by his tutor.

The showing him the world as really it is, before he comes wholly into it, is one of the best means, I think, to prevent this mischief. He should, by degrees, be informed of the vices in fashion, and warned of the applications and designs of those who will make it their business to corrupt him. He should be told the arts they use, and the trains they lay; and now and then have set before him the tragical or ridiculous examples of those who are ruining, or ruined, this way. The age is not like to want instances of this kind, which should be made land-marks to him; that by the disgraces, diseases, beggary, and shame of hopeful young men, thus brought to ruin, he may be cautioned, and be made see, how those join in the contempt and neglect of them that are undone, who, by pretences of friendship and respect, led them into it, and helped to prey upon them whilst they were undoing; that he may see, before he buys it by a too dear experience, that those who persuade him not to follow the sober advices he has received from his governors, and the counsel of his own reason, which they call being governed by others, do it only, that they may have the government of him themselves; and make him believe, he goes like a man of himself, by his own conduct, and for his own pleasure, when, in truth, he is wholly as a child, led by them into those vices, which best serve their purposes. This is a knowledge, which, upon all occasions, a tutor should endeavour to instil, and by all methods try to make him comprehend, and thoroughly relish.

I know it is often said, that to discover to a young man the vices of the age is to teach them him. That, I confess, is a good deal so, according as it is done; and therefore requires a discreet man of parts, who knows the world, and can judge of the temper, inclination, and weak side of his pupil. This farther is to be remembered, that it is not possible now (as perhaps formerly it was) to keep a young gentleman from vice, by a total ignorance of it; unless you will all his life mew him up in a closet, and never let him go into company. The longer he is kept thus hood-winked, the less he will see, when he comes abroad into open day-light, and be the more exposed to be a prey to himself and others. And an old boy, at his first appearance, with all the gravity of his ivy-bush about him, is sure to draw on him the eyes and chirping of the whole town volery; amongst which, there will not be wanting some birds of prey, that will presently be on the wing for him.

The only fence against the world, is a thorough knowledge of it: into which a young gentleman should be entered by degrees, as he can bear it; and the earlier the better, so he be in safe and skilful hands to guide him. The scene should be gently opened, and his entrance made step by step, and the dangers pointed out that attend him, from the several degrees, tempers, designs, and clubs of men. He should be prepared to be shocked by some, and caressed by others; warned who are like to oppose, who to mislead, who to undermine him, and who to serve him. He should be instructed how to know and distinguish men; where he should let them see, and when dissemble the knowledge of them, and their aims and workings. And if he be too forward to venture upon his own strength and skill, the perplexity and trouble of a misadventure now and then, that reaches not his innocence, his health, or reputation, may not be an ill way to teach him more caution.

This, I confess, containing one great part of wisdom, is not the product of some superficial thoughts, or much reading; but the effect of experience and observation in a man, who has lived in the world with his eyes open, and conversed with men of all sorts. And therefore I think it of most value to be instilled into a young man, upon all occasions which offer themselves, that when he comes to launch into the deep himself, he may not be like one at sea without a line, compass, or sea-chart; but may have some notice before-hand of the rocks and shoals, the currents and quick-sands, and know a little how to steer, that he sink not, before he get experience. He that thinks not this of more moment to his son, and for which he more needs a governor, than the languages and learned sciences, forgets of how much more use it is to judge right of men, and manage his affairs wisely with them, than to speak Greek and Latin, or argue in mood and figure; or to have his head filled with the abstruse speculations of natural philosophy and metaphysics; nay, than to be well versed in Greek and Roman writers, though that be much better for a gentleman, than to be a good peripatetic or cartesian: because those ancient authors observed and painted mankind well, and give the best light into that kind of knowledge. He that goes into the eastern parts of Asia, will find able and acceptable men, without any of these: but without virtue, knowledge of the world, and civility, an accomplished and valuable man can be found no-where.

A great part of the learning now in fashion in the schools of Europe, and that goes ordinarily into the round of education, a gentleman may, in a good measure, be unfurnished with, without any great disparagement to himself,

or prejudice to his affairs. But prudence and good-breeding are, in all the stations and occurrences of life, necessary; and most young men suffer in the want of them; and come rawer, and more awkward, into the world, than they should, for this very reason; because these qualities, which are, of all other, the most necessary to be taught, and stand most in need of the assistance and help of a teacher, are generally neglected, and thought but a slight, or no part of a tutor's business. Latin and learning make all the noise: and the main stress is laid upon his proficiency in things, a great part whereof belongs not to a gentleman's calling; which is to have the knowledge of a man of business, a carriage suitable to his rank, and to be eminent and useful in his country, according to his station. Whenever either spare hours from that, or an inclination to perfect himself in some parts of knowledge, which his tutor did but just enter him in, set him upon any study; the first rudiments of it, which he learned before, will open the way enough for his own industry to carry him as far as his fancy will prompt, or his parts enable him to go: or, if he thinks it may save his time and pains, to be helped over some difficulties by the hands of a master, he may then take a man that is perfectly well skilled in it, or choose such an one, as he thinks fittest for his purpose. But to initiate his pupil in any part of learning, as far as is necessary for a young man in the ordinary course of his studies, an ordinary skill in the governor is enough. Nor is it requisite that he should be a thorough scholar, or possess in perfection all those sciences, which it is convenient a young gentleman should have a taste of, in some general view, or short system. A gentleman, that would penetrate deeper, must do it by his own genius and industry afterwards: for nobody ever went far in knowledge, or became eminent in any of the sciences, by the discipline and constraint of a master.

The great work of a governor is to fashion the carriage, and form the mind; to settle in his pupil good habits, and the principles of virtue and wisdom; to give him, by little and little, a view of mankind; and work him into a love and imitation of what is excellent and praise-worthy; and, in the prosecution of it, to give him vigour, activity, and industry. The studies which he sets him upon, are but, as it were, the exercises of his faculties, and employment of his time, to keep him from sauntering and idleness, to teach him application, and accustom him to take pains, and to give him some little taste of what his own industry must perfect. For who expects, that under a tutor a young gentleman should be an accomplished critic,

orator, or logician; go to the bottom of metaphysics, natural philosophy, or mathematics; or be a master in history or chronology? though something of each of these is to be taught him; but it is only to open the door, that he may look in, and, as it were, begin an acquaintance, but not to dwell there: and a governor would be much blamed, that should keep his pupil too long, and lead him too far in most of them. But of good breeding, knowledge of the world, virtue, industry, and a love of reputation, he cannot have too much: and, if he have these, he will not long want what he needs or desires of the other.

And, since it cannot be hoped he should have time and strength to learn all things, most pains should be taken about that which is most necessary; and that principally looked after, which will be of most and frequentest use to him in the world.

Seneca complains of the contrary practice in his time: and yet the Burgersdiciuses and the Scheiblers did not swarm in those days, as they do now in these. What would he have thought, if he had lived now, when the tutors think it their great business to fill the studies and heads of their pupils with such authors as these? He would have had much more reason to say, as he does, “Non vitæ, sed scholæ discimus;” We learn not to live, but to dispute; and our education fits us rather for the university than the world. But it is no wonder, if those who make the fashion, suit it to what they have, and not to what their pupils want. The fashion being once established, who can think it strange, that in this, as well as in all other things, it should prevail; and that the greatest part of those, who find their account in an easy submission to it, should be ready to cry out heresy, when any one departs from it? It is nevertheless matter of astonishment, that men of quality and parts should suffer themselves to be so far misled by custom and implicit faith. Reason, if consulted with, would advise, that their children’s time should be spent in acquiring what might be useful to them, when they come to be men, rather than to have their heads stuffed with a deal of trash, a great part whereof they usually never do (it is certain they never need to) think on again as long as they live; and so much of it, as does stick by them, they are only the worse for. This is so well known, that I appeal to parents themselves, who have been at cost to have their young heirs taught it, whether it be not ridiculous for their sons to have any tincture of that sort of learning, when they come abroad into the world; whether any appearance of it would not lessen and disgrace them in company. And that certainly must

be an admirable acquisition, and deserves well to make a part in education, which men are ashamed of, where they are most concerned to show their parts and breeding.

There is yet another reason, why politeness of manners, and knowledge of the world, should principally be looked after in a tutor: and that is, because a man of parts and years may enter a lad far enough in any of those sciences, which he has no deep insight into himself. Books in these will be able to furnish him, and give him light and precedency enough to go before a young follower: but he will never be able to set another right in the knowledge of the world, and, above all, in breeding, who is a novice in them himself.

This is a knowledge he must have about him, worn into him by use and conversation, and a long forming himself by what he has observed to be practised and allowed in the best company. This, if he has it not of his own, is no-where to be borrowed, for the use of his pupil: or if he could find pertinent treatises of it in books, that would reach all the particulars of an English gentleman's behaviour; his own ill-fashioned example, if he be not well-bred himself, would spoil all his lectures; it being impossible, that any one should come forth well-fashioned out of unpolished, ill-bred company.

I say this, not that I think such a tutor is every day to be met with, or to be had at the ordinary rates: but that those, who are able, may not be sparing of inquiry or cost, in what is of so great moment; and that other parents, whose estates will not reach to greater salaries, may yet remember, what they should principally have an eye to, in the choice of one, to whom they would commit the education of their children; and what part they should chiefly look after themselves, whilst they are under their care, and as often as they come within their observation; and not think, that all lies in Latin and French, or some dry systems of logic and philosophy.

§ 95. But to return to our method again. Though I have mentioned the severity of the father's brow, and the awe settled thereby in the mind of children when young, as one main instrument, whereby their education is to be managed; yet I am far from being of an opinion, that it should be continued all along to them: whilst they are under the discipline and government of pupilage, I think it should be relaxed, as fast as their age, discretion, and good behaviour could allow it; even to that degree, that a father will do well, as his son grows up, and is capable of it, to talk familiarly with him; nay, ask his advice, and consult with him,

about those things wherein he has any knowledge or understanding. By this the father will gain two things, both of great moment. The one is, that it will put serious considerations into his son's thoughts, better than any rules or advices he can give him. The sooner you treat him as a man, the sooner he will begin to be one: and if you admit him into serious discourses sometimes with you, you will insensibly raise his mind above the usual amusements of youth, and those trifling occupations which it is commonly wasted in. For it is easy to observe, that many young men continue longer in the thought and conversation of school-boys, than otherwise they would, because their parents keep them at that distance, and in that low rank, by all their carriage to them.

§ 96. Another thing of greater consequence, which you will obtain by such a way of treating him, will be his friendship. Many fathers, though they proportion to their sons liberal allowances, according to their age and condition; yet they keep the knowledge of their estates and concerns from them with as much reservedness, as if they were guarding a secret of state from a spy or an enemy. This, if it looks not like jealousy, yet it wants those marks of kindness and intimacy, which a father should show to his son; and, no doubt, often hinders, or abates that cheerfulness and satisfaction, wherewith a son should address himself to, and rely upon his father. And I cannot but often wonder to see fathers, who love their sons very well, yet so order the matter, by a constant stiffness, and a mien of authority and distance to them all their lives, as if they were never to enjoy or have any comfort from those they love best in the world, till they have lost them by being removed into another. Nothing cements and establishes friendship and good-will, so much as confident communication of concerns and affairs. Other kindnesses, without this, leave still some doubts; but when your son sees you open your mind to him; when he finds, that you interest him in your affairs, as things you are willing should, in their turn, come into his hands, he will be concerned for them as for his own; wait his season with patience, and love you in the mean time, who keep him not at the distance of a stranger. This will also make him see, that the enjoyment you have, is not without care; which the more he is sensible of, the less will he envy you the possession, and the more think himself happy under the management of so favourable a friend, and so careful a father. There is scarce any young man of so little thought, or so void of sense, that would not be glad of a sure friend, that he might have recourse to, and freely

consult on occasion. The reservedness and distance that fathers keep, often deprive their sons of that refuge, which would be of more advantage to them, than an hundred rebukes and chidings. Would your son engage in some frolic, or take a vagary; were it not much better he should do it with, than without your knowledge? For since allowances for such things must be made to young men, the more you know of his intrigues and designs, the better will you be able to prevent great mischiefs; and, by letting him see what is like to follow, take the right way of prevailing with him to avoid less inconveniencies. Would you have him open his heart to you, and ask your advice? You must begin to do so with him first, and by your carriage beget that confidence.

§ 97. But whatever he consults you about, unless it lead to some fatal and irremediable mischief, be sure you advise only as a friend of more experience; but with your advice mingle nothing of command or authority, nor more than you would to your equal, or a stranger. That would be to drive him for ever from any farther demanding or receiving advantage from your counsel. You must consider, that he is a young man, and has pleasures and fancies, which you are passed. You must not expect his inclinations should be just as yours, nor that at twenty he should have the same thoughts you have at fifty. All that you can wish is, that since youth must have some liberty, some outleaps; they might be with the ingenuity of a son, and under the eye of a father, and then no very great harm can come of it. The way to obtain this, as I said before, is (according as you find him capable) to talk with him about your affairs, propose matters to him familiarly, and ask his advice; and when he ever lights on the right, follow it as his; and, if it succeed well, let him have the commendation. This will not at all lessen your authority, but increase his love and esteem of you. Whilst you keep your estate, the staff will still be in your own hands; and your authority the surer, the more it is strengthened with confidence and kindness. For you have not that power you ought to have over him, till he comes to be more afraid of offending so good a friend, than of losing some part of his future expectation.

§ 98. Familiarity of discourse, if it can become a father to his son, may much more be condescended to by a tutor to his pupil. All their time together should not be spent in reading of lectures, and magisterially dictating to him what he is to observe and follow; hearing him in his turn, and using him to reason about what is proposed, will make the rules go

down the easier, and sink the deeper, and will give him a liking to study and instruction: and he will then begin to value knowledge, when he sees that it enables him to discourse; and he finds the pleasure and credit of bearing a part in the conversation, and of having his reasons sometimes approved and hearkened to. Particularly in morality, prudence, and breeding, cases should be put to him, and his judgment asked: this opens the understanding better than maxims, how well soever explained; and settles the rules better in the memory for practice. This way lets things into the mind, which stick there, and retain their evidence with them; whereas words at best are faint representations, being not so much as the true shadows of things, and are much sooner forgotten. He will better comprehend the foundations and measures of decency and justice, and have livelier and more lasting impressions of what he ought to do, by giving his opinion on cases proposed, and reasoning with his tutor on fit instances, than by giving a silent, negligent, sleepy audience to his tutor's lectures; and much more than by captious logical disputes, or set declamations of his own, upon any question. The one sets the thoughts upon wit, and false colours, and not upon truth: the other teaches fallacy, wrangling, and opiniatry; and they are both of them things that spoil the judgment, and put a man out of the way of right and fair reasoning, and therefore carefully to be avoided by one who would improve himself, and be acceptable to others.

§ 99. When, by making your son sensible that he depends on you, and is in your power, you have established your authority; and by being inflexibly severe in your carriage to him, when obstinately persisting in any ill-natured trick which you have forbidden, especially lying, you have imprinted on his mind that awe which is necessary; and on the other side, when (by permitting him the full liberty due to his age, and laying no restraint in your presence to those childish actions, and gaiety of carriage, which, whilst he is very young, are as necessary to him as meat or sleep) you have reconciled him to your company, and made him sensible of your care and love of him by indulgence and tenderness, especially caressing him on all occasions wherein he does any thing well, and being kind to him, after a thousand fashions, suitable to his age, which nature teaches parents better than I can: when, I say, by these ways of tenderness and affection, which parents never want for their children, you have also planted in him a particular affection for you; he is then in the state you could desire, and you have formed in his mind that true reverence, Reverence. which is always afterwards carefully to

be continued and maintained in both parts of it, love and fear, as the great principles whereby you will always have hold upon him to turn his mind to the ways of virtue and honour.

§ 100. When this foundation is once well laid, and you find this reverence begin to work in him, the next thing to be done is carefully to consider his temper, Temper. and the particular constitution of his mind. Stubbornness, lying, and ill-natured actions, are not (as has been said) to be permitted in him from the beginning, whatever his temper be: those seeds of vices are not to be suffered to take any root, but must be carefully weeded out, as soon as ever they begin to show themselves in him; and your authority is to take place, and influence his mind from the very dawning of any knowledge in him, that it may operate as a natural principle, whereof he never perceived the beginning; never knew that it was, or could be otherwise. By this, if the reverence he owes you be established early, it will always be sacred to him; and it will be as hard for him to resist it, as the principles of his nature.

§ 101. Having thus very early set up your authority, and, by the gentler applications of it, shamed him out of what leads towards an immoral habit; as soon as you have observed it in him, (for I would by no means have chiding used, much less blows, till obstinacy and incorrigibleness make it absolutely necessary,) it will be fit to consider which way the natural make of his mind inclines him. Some men, by the unalterable frame of their constitutions, are stout, others timorous; some confident, others modest, tractable or obstinate, curious or careless, quick or slow. There are not more differences in men's faces, and the outward lineaments of their bodies, than there are in the makes and tempers of their minds: only there is this difference, that the distinguishing characters of the face, and the lineaments of the body, grow more plain and visible with time and age, but the peculiar physiognomy of the mind is most discernible in children, before art and cunning have taught them to hide their deformities, and conceal their ill inclinations under a dissembled outside.

§ 102. Begin therefore betimes nicely to observe your son's temper; and that, when he is under least restraint, in his play, and, as he thinks, out of your sight. See what are his predominant passions, and prevailing inclinations; whether he be fierce or mild, bold or bashful, compassionate or cruel, open or reserved, &c. For as these are different in him, so are your methods to be different, and your authority must hence take measures to

apply itself different ways to him. These native propensities, these prevalencies of constitution, are not to be cured by rules, or a direct contest; especially those of them that are the humbler and meaner sort which proceed from fear and lowness of spirit; though with art they may be much mended, and turned to good purpose. But this be sure of, after all is done, the bias will always hang on that side where nature first placed it: and if you carefully observe the characters of his mind now in the first scenes of his life, you will ever after be able to judge which way his thoughts lean, and what he aims at even hereafter, when, as he grows up, the plot thickens, and he puts on several shapes to act it.

§ 103. I told you before, that children love liberty; and therefore they should be brought to do the things that are fit for them, without feeling any restraint laid upon them. I now tell you, they love something more; and that is dominion: Dominion. and this is the first original of most vicious habits, that are ordinary and natural. This love of power and dominion shows itself very early, and that in these two things.

§ 104. 1. We see children (as soon almost as they are born, I am sure long before they can speak) cry, grow peevish, sullen, and out of humour, for nothing but to have their wills. They would have their desires submitted to by others; they contend for a ready compliance from all about them, especially from those that stand near or beneath them in age or degree, as soon as they come to consider others with those distinctions.

§ 105. 2. Another thing, wherein they show their love of dominion, is their desire to have things to be theirs; they would have property and possession, pleasing themselves with the power which that seems to give, and the right they thereby have to dispose of them as they please. He that has not observed these two humours working very betimes in children, has taken little notice of their actions: and he who thinks that these two roots of almost all the injustice and contention that so disturb human life, are not early to be weeded out, and contrary habits introduced, neglects the proper season to lay the foundations of a good and worthy man. To do this, I imagine, these following things may somewhat conduce.

§ 106. 1. That a child should never be suffered to have what he craves, Craving. much less what he cries for, I had said, or so much as speaks for. But that being apt to be misunderstood, and interpreted as if I meant a child should never speak to his parents for any thing, which will perhaps be thought to lay too great a curb on the minds of children, to the

prejudice of that love and affection which should be between them and their parents; I shall explain myself a little more particularly. It is fit that they should have liberty to declare their wants to their parents, and that with all tenderness they should be hearkened to, and supplied, at least, whilst they are very little. But it is one thing to say, I am hungry; another to say, I would have roast-meat. Having declared their wants, their natural wants, the pain they feel from hunger, thirst, cold, or any other necessity of nature, it is the duty of their parents, and those about them, to relieve them: but children must leave it to the choice and ordering of their parents what they think properest for them, and how much; and must not be permitted to choose for themselves; and say, I would have wine, or white bread; the very naming of it should make them lose it.

§ 107. That which parents should take care of here, is to distinguish between the wants of fancy and those of nature; which Horace has well taught them to do in this verse,

“*Queis humana sibi doleat natura negatis.*”

Those are truly natural wants, which reason alone, without some other help, is not able to fence against, nor keep from disturbing us. The pains of sickness and hurts, hunger, thirst, and cold, want of sleep and rest, or relaxation of the part wearied with labour, are what all men feel, and the best disposed mind cannot but be sensible of their uneasiness; and therefore ought, by fit applications, to seek their removal, though not with impatience, or over-great haste, upon the first approaches of them, where delay does not threaten some irreparable harm. The pains that come from the necessities of nature, are monitors to us to beware of greater mischiefs, which they are the forerunners of; and therefore they must not be wholly neglected, nor strained too far. But yet, the more children can be inured to hardships of this kind, by a wise care to make them stronger in body and mind, the better it will be for them. I need not here give any caution to keep within the bounds of doing them good, and to take care, that what children are made to suffer should neither break their spirits, nor injure their health; parents being but too apt of themselves to incline, more than they should, to the softer side.

But whatever compliance the necessities of nature may require, the wants of fancy children should never be gratified in, nor suffered to mention. The very speaking for any such thing should make them lose it. Clothes, when they need, they must have; but if they speak for this stuff, or

that colour, they should be sure to go without it. Not that I would have parents purposely cross the desires of their children in matters of indifferency: on the contrary, where their carriage deserves it, and one is sure it will not corrupt or effeminate their minds, and make them fond of trifles, I think, all things should be contrived, as much as could be, to their satisfaction, that they might find the ease and pleasure of doing well. The best for children is, that they should not place any pleasure in such things at all, nor regulate their delight by their fancies; but be indifferent to all that nature has made so. This is what their parents and teachers should chiefly aim at: but till this be obtained, all that I oppose here, is the liberty of asking; which, in these things of conceit, ought to be restrained by a constant forfeiture annexed to it.

This may perhaps be thought a little too severe, by the natural indulgence of tender parents: but yet it is no more than necessary. For since the method I propose is to banish the rod, this restraint of their tongues will be of great use to settle that awe we have elsewhere spoken of, and to keep up in them the respect and reverence due to their parents. Next, it will teach them to keep in, and so master their inclinations. By this means they will be brought to learn the art of stifling their desires, as soon as they rise up in them, when they are easiest to be subdued. For giving vent, gives life and strength to our appetites; and he that has the confidence to turn his wishes into demands, will be but a little way from thinking he ought to obtain them. This I am sure of, every one can more easily bear a denial from himself, than from any body else. They should therefore be accustomed betimes to consult and make use of their reason, before they give allowance to their inclinations. It is a great step towards the mastery of our desires, to give this stop to them, and shut them up in silence. This habit, got by children, of staying the forwardness of their fancies, and deliberating whether it be fit or no before they speak, will be of no small advantage to them in matters of greater consequence in the future course of their lives. For that which I cannot too often inculcate, is that whatever the matter be, about which it is conversant, whether great or small, the main (I had almost said only) thing to be considered, in every action of a child, is, what influence it will have upon his mind; what habit it tends to, and is like to settle in him; how it will become him when he is bigger; and, if it be encouraged, whither it will lead him when grown up.

My meaning therefore is not, that children should purposely be made uneasy: this would relish too much of inhumanity and ill-nature, and be apt to infect them with it. They should be brought to deny their appetites; and their minds, as well as bodies, be made vigorous, easy, and strong, by the custom of having their inclinations in subjection, and their bodies exercised with hardships; but all this without giving them any mark or apprehension of ill-will towards them. The constant loss of what they craved or carved to themselves should teach them modesty, submission, and a power to forbear: but the rewarding their modesty and silence, by giving them what they liked, should also assure them of the love of those who rigorously exacted this obedience. The contenting themselves now, in the want of what they wished for, is a virtue, that another time should be rewarded with what is suited and acceptable to them; which should be bestowed on them, as if it were a natural consequence of their good behaviour, and not a bargain about it. But you will lose your labour, and, what is more, their love and reverence too, if they can receive from others what you deny them. This is to be kept very staunch, and carefully to be watched. And here the servants come again in my way.

§ 108. If this be begun by times, and they accustom themselves early to silence their desires, this useful habit will settle them; and, as they come to grow up in age and discretion, they may be allowed greater liberty; when reason comes to speak in them, and not passion. For whenever reason would speak, it should be hearkened to. But, as they should never be heard, when they speak for any particular thing they would have, unless it be first proposed to them; so they should always be heard, and fairly and kindly answered, when they ask after any thing they would know, and desire to be informed about. CuriosityCuriosity. should be as carefully cherished in children, as other appetites suppressed.

However strict a hand is to be kept upon all desires of fancy, yet there is one case wherein fancy must be permitted to speak, and be hearkened to also. RecreationRecreation. is as necessary as labour or food: but because there can be no recreation without delight, which depends not always on reason, but oftener on fancy, it must be permitted children not only to divert themselves, but to do it after their own fashion, provided it be innocently, and without prejudice to their health; and therefore in this case they should not be denied, if they proposed any particular kind of recreation; though I think, in a well-ordered education, they will seldom be brought to the

necessity of asking any such liberty. Care should be taken, that what is of advantage to them, they should always do with delight; and, before they are wearied with one, they should be timely diverted to some other useful employment. But if they are not yet brought to that degree of perfection, that one way of improvement can be made a recreation to them, they must be let loose to the childish play they fancy; which they should be weaned from, by being made surfeited of it: but from things of use, that they are employed in, they should always be sent away with an appetite; at least be dismissed before they are tired, and grow quite sick of it; that so they may return to it again, as to a pleasure that diverts them. For you must never think them set right, till they can find delight in the practice of laudable things; and the useful exercises of the body and mind, taking their turns, make their lives and improvement pleasant in a continued train of recreations, wherein the wearied part is constantly relieved and refreshed. Whether this can be done in every temper, or whether tutors and parents will be at the pains, and have the discretion and patience to bring them to this, I know not; but that it may be done in most children, if a right course be taken to raise in them the desire of credit, esteem, and reputation, I do not at all doubt. And when they have so much true life put into them, they may freely be talked with, about what most delights them, and be directed, or let loose to it, so that they may perceive that they are beloved and cherished, and that those under whose tuition they are, are not enemies to their satisfaction. Such a management will make them in love with the hand that directs them, and the virtue they are directed to.

This farther advantage may be made by a free liberty permitted them in their recreations, that it will discover their natural tempers, show their inclinations and aptitudes; and thereby direct wise parents in the choice, both of the course of life and employment they shall design them for, and of fit remedies, in the mean time, to be applied to whatever bent of nature they may observe most likely to mislead any of their children.

§ 109. 2. Children, who live together, often strive for mastery, whose wills shall carry it over the rest: whoever begins the contest, should be sure to be crossed in it. But not only that, but they should be taught to have all the deference, complaisance, and civility one for the other imaginable. This, when they see it procures them respect, love, and esteem, and that they lose no superiority by it, they will take more pleasure in, than in insolent domineering; for so plainly is the other.

The accusations of children one against another, which usually are but the clamours of anger and revenge, desiring aid, should not be favourably received nor hearkened to. It weakens and effeminates their minds to suffer them to complain: Complaints. and if they endure sometimes crossing or pain from others, without being permitted to think it strange or intolerable, it will do them no harm to learn sufferance, and harden them early. But, though you give no countenance to the complaints of the querulous, yet take care to curb the insolence and ill-nature of the injurious. When you observe it yourself, reprove it before the injured party: but if the complaint be of something really worth your notice and prevention another time, then reprove the offender by himself alone, out of sight of him that complained, and make him go and ask pardon, and make reparation. Which coming thus, as it were from himself, will be the more cheerfully performed, and more kindly received, the love strengthened between them, and a custom of civility grow familiar amongst your children.

§ 110. 3. As to having and possessing of things, teach them to part with what they have, easily and freely to their friends; and let them find by experience, that the most liberal Liberality. has always most plenty, with esteem and commendation to boot, and they will quickly learn to practise it. This, I imagine, will make brothers and sisters kinder and civiller to one another, and consequently to others, than twenty rules about good manners, with which children are ordinarily perplexed and cumbered. Covetousness, and the desire of having in our possession, and under our dominion, more than we have need of, being the root of all evil, should be early and carefully weeded out; and the contrary quality, or a readiness to impart to others, implanted. This should be encouraged by great commendation and credit, and constantly taking care, that he loses nothing by his liberality. Let all the instances he gives of such freeness, be always repaid, and with interest; and let him sensibly perceive, that the kindness he shows to others is no ill husbandry for himself; but that it brings a return of kindness, both from those that receive it, and those who look on. Make this a contest among children, who shall out-do one another this way. And by this means, by a constant practice, children having made it easy to themselves to part with what they have, good-nature may be settled in them into an habit, and they may take pleasure, and pique themselves in being kind, liberal, and civil to others.

If liberality ought to be encouraged, certainly great care is to be taken that children transgress not the rules of justice: Justice. and whenever they do, they should be set right; and, if there be occasion for it, severely rebuked.

Our first actions being guided more by self-love than reason or reflection, it is no wonder that in children they should be very apt to deviate from the just measures of right and wrong, which are in the mind the result of improved reason and serious meditation. This the more they are apt to mistake, the more careful guard ought to be kept over them, and every the least slip in this great social virtue taken notice of and rectified; and that in things of the least weight and moment, both to instruct their ignorance, and prevent ill habits, which, from small beginnings, in pins and cherry-stones, will, if let alone, grow up to higher frauds, and be in danger to end at last in downright hardened dishonesty. The first tendency to any injustice that appears, must be suppressed with a show of wonder and abhorrency in the parents and governors. But because children cannot well comprehend what injustice is, till they understand property, and how particular persons come by it, the safest way to secure honesty, is to lay the foundations of it early in liberality, and an easiness to part with to others whatever they have, or like, themselves. This may be taught them early, before they have language and understanding enough to form distinct notions of property, and to know what is theirs by a peculiar right exclusive of others. And since children seldom have any thing but by gift, and that for the most part from their parents, they may be at first taught not to take or keep any thing, but what is given them by those whom they take to have a power over it; and, as their capacities enlarge, other rules and cases of justice, and rights concerning “meum” and “tuum,” may be proposed and inculcated. If any act of injustice in them appears to proceed, not from mistake, but perverseness in their wills, when a gentle rebuke and shame will not reform this irregular and covetous inclination, rougher remedies must be applied: and it is but for the father or tutor to take and keep from them something that they value, and think their own; or order somebody else to do it; and by such instances make them sensible, what little advantage they are like to make, by possessing themselves unjustly of what is another’s, whilst there are in the world stronger and more men than they. But if an ingenuous detestation of this shameful vice be but carefully and early instilled into them, as I think it may, that is the true and genuine method to obviate this crime; and will be a

better guard against dishonesty, than any considerations drawn from interest; habits working more constantly and with greater facility, than reason; which, when we have most need of it, is seldom fairly consulted, and more rarely obeyed.

§ 111. Crying. is a fault that should not be tolerated in children; not only for the unpleasant and unbecoming noise it fills the house with, but for more considerable reasons, in reference to the children themselves: which is to be our aim in education.

Their crying is of two sorts; either stubborn and domineering, or querulous and whining.

Their crying is very often a striving for mastery, and an open declaration of their insolence or obstinacy: when they have not the power to obtain their desire, they will, by their clamour and sobbing, maintain their title and right to it. This is an avowed continuing of their claim, and a sort of remonstrance against the oppression and injustice of those who deny them what they have a mind to.

§ 112. 2. Sometimes their crying is the effect of pain or true sorrow, and a bemoaning themselves under it.

These two, if carefully observed, may, by the mien, look, and actions, and particularly by the tone of their crying, be easily distinguished; but neither of them must be suffered, much less encouraged.

The obstinate or stomachful crying should by no means be permitted; because it is but another way of flattering their desires, and encouraging those passions, which it is our main business to subdue: and if it be, as often it is, upon the receiving any correction, it quite defeats all the good effects of it; for any chastisement, which leaves them in this declared opposition, only serves to make them worse. The restraints and punishments laid on children are all misapplied and lost, as far as they do not prevail over their wills, teach them to submit their passions, and make their minds supple and pliant to what their parents reason advises them now, and so prepare them to obey what their own reason should advise hereafter. But if, in any thing wherein they are crossed, they may be suffered to go away crying, they confirm themselves in their desires, and cherish the ill humour, with a declaration of their right, and a resolution to satisfy their inclinations the first opportunity. This therefore is another argument against the frequent use of blows: for, whenever you come to that extremity, it is not enough to whip or beat them; you must do it till you find you have subdued their minds; till

with submission and patience they yield to the correction; which you shall best discover by their crying, and their ceasing from it upon your bidding. Without this, the beating of children is but a passionate tyranny over them; and it is mere cruelty, and not correction, to put their bodies in pain, without doing their minds any good. As this gives us a reason why children should seldom be corrected, so it also prevents their being so. For if, whenever they are chastised, it were done thus without passion, soberly and yet effectually too, laying on the blows and smart, not furiously and all at once, but slowly, with reasoning between, and with observation how it wrought, stopping when it had made them pliant, penitent, and yielding; they would seldom need the like punishment again, being made careful to avoid the fault that deserved it. Besides, by this means, as the punishment would not be lost, for being too little, and not effectual; so it would be kept from being too much, if we gave off as soon as we perceived that it reached the mind, and that was bettered. For, since the chiding or beating of children should be always the least that possibly may be, that which is laid on in the heat of anger, seldom observes that measure; but is commonly more than it should be, though it prove less than enough.

§ 113. 2. Many children are apt to cry, upon any little pain they suffer; and the least harm that befalls them, puts them into complaints and bawling. This few children avoid: for it being the first and natural way to declare their sufferings or wants, before they can speak, the compassion that is thought due to that tender age foolishly encourages, and continues it in them long after they can speak. It is the duty, I confess, of those about children, to compassionate them, whenever they suffer any hurt; but not to show it in pitying them. Help and ease them the best you can, but by no means bemoan them. This softens their minds, and makes them yield to the little harms that happen to them; whereby they sink deeper into that part which alone feels, and make larger wounds there, than otherwise they would. They should be hardened against all sufferings, especially of the body, and have no tenderness but what rises from an ingenuous shame and a quick sense of reputation. The many inconveniences this life is exposed to, require we should not be too sensible of every little hurt. What our minds yield not to, makes but a slight impression, and does us but very little harm; it is the suffering of our spirits that gives and continues the pain. This brawniness and insensibility of mind, is the best armour we can have against the common evils and accidents of life; and being a temper that is to

be got by exercise and custom, more than any other way, the practice of it should be begun betimes, and happy is he that is taught it early. That effeminacy of spirit, which is to be prevented or cured, and which nothing, that I know, so much increases in children as crying; so nothing, on the other side, so much checks and restrains, as their being hindered from that sort of complaining. In the little harms they suffer, from knocks and falls, they should not be pitied for falling, but bid do so again; which, besides that it stops their crying, is a better way to cure their heedlessness, and prevent their tumbling another time, than either childing or bemoaning them. But, let the hurts they receive be what they will, stop their crying, and that will give them more quiet and ease at present, and harden them for the future.

§ 114. The former sort of crying requires severity to silence it; and where a look, or a positive command, will not do it, blows must: for it proceeding from pride, obstinacy, and stomach, the will, where the fault lies, must be bent, and made to comply, by a rigour sufficient to master it: but this latter, being ordinarily from softness of mind, a quite contrary cause, ought to be treated with a gentler hand. Persuasion, or diverting the thoughts another way, or laughing at their whining, may perhaps be at first the proper method. But for this, the circumstances of the thing, and the particular temper of the child, must be considered: no certain invariable rules can be given about it; but it must be left to the prudence of the parents or tutor. But this I think I may say in general, that there should be a constant discountenancing of this sort of crying also; and that the father, by his authority, should always stop it, mixing a greater degree of roughness in his looks or words, proportionably as the child is of a greater age, or a sturdier temper; but always, let it be enough to silence their whimpering, and put an end to the disorder.

§ 115. Cowardice and courage are so nearly related to the fore-mentioned tempers, that it may not be amiss here to take notice of them. Fear is a passion, that, if rightly governed, has its use. And though self-love seldom fails to keep it watchful and high enough in us, yet there may be an excess on the daring side; fool-hardiness. Fool-hardiness. and insensibility of danger being as little reasonable, as trembling and shrinking at the approach of every little evil. Fear was given us as a monitor to quicken our industry, and keep us upon our guard against the approaches of evil: and therefore to have no apprehension of mischief at hand, not to make a just estimate of the danger, but heedlessly to run into it, be the hazard what it will, without

considering of what use or consequence it may be; is not the resolution of a rational creature, but brutish fury. Those who have children of this temper, have nothing to do but a little to awaken their reason, which self-preservation will quickly dispose them to hearken to; unless (which is usually the case) some other passion hurries them on headlong, without sense, and without consideration. A dislike of evil is so natural to mankind, that nobody, I think, can be without fear of it; fear being nothing but an uneasiness under the apprehension of that coming upon us which we dislike. And therefore, whenever any one runs into danger, we may say it is under the conduct of ignorance, or the command of some more imperious passion, nobody being so much an enemy to himself, as to come within the reach of evil out of free choice, and court danger for danger's sake. If it be therefore pride, vain-glory, or rage, that silences a child's fear, or makes him not hearken to its advice, those are by fit means to be abated, that a little consideration may allay his heat, and make him bethink himself whether this attempt be worth the venture. But this being a fault that children are not so often guilty of, I shall not be more particular in its cure. Weakness of spirit is the more common defect, and therefore will require the greater care.

Fortitude is the guard and support of the other virtues; and without courage a man will scarce keep steady to his duty, and fill up the character of a truly worthy man.

Courage, Courage. that makes us bear up against dangers that we fear, and evils that we feel, is of great use in an estate, as ours is in this life, exposed to assaults on all hands: and therefore it is very advisable to get children into this armour as early as we can. Natural temper, I confess, does here a great deal: but even where that is defective, and the heart is in itself weak and timorous, it may, by a right management, be brought to a better resolution. What is to be done to prevent breaking children's spirits by frightful apprehensions instilled into them when young, or bemoaning themselves under every little suffering, I have already taken notice. How to harden their tempers, and raise their courage, if we find them too much subject to fear, is farther to be considered.

True fortitude I take to be the quiet possession of a man's self, and an undisturbed doing his duty, whatever evil besets, or danger lies in his way. This there are so few men attain to, that we are not to expect it from children. But yet something may be done; and a wise conduct, by insensible degrees, may carry them farther than one expects.

The neglect of this great care of them, whilst they are young, is the reason, perhaps, why there are so few that have this virtue, in its full latitude, when they are men. I should not say this in a nation so naturally brave as ours is, did I think, that true fortitude required nothing but courage in the field and a contempt of life in the face of an enemy. This, I confess, is not the least part of it, nor can be denied, the laurels and honours always justly due to the valour of those who venture their lives for their country. But yet this is not all: dangers attack us in other places besides the field of battle; and though death be the king of terrors, yet pain, disgrace, and poverty, have frightful looks, able to discompose most men, whom they seem ready to seize on: and there are those who condemn some of these, and yet are heartily frightened with the other. True fortitude is prepared for dangers of all kinds, and unmoved, whatsoever evil it be that threatens: I do not mean unmoved with any fear at all. Where danger shows itself, apprehension cannot, without stupidity, be wanting. Where danger is, sense of danger should be; and so much fear as should keep us awake, and excite our attention, industry, and vigour; but not disturb the calm use of our reason, nor hinder the execution of what that dictates.

The first step to get this noble and manly steadiness, is, what I have above mentioned, carefully to keep children from frights of all kinds, when they are young. Let not any fearful apprehensions be talked into them, nor terrible objects surprise them. This often so shatters and discomposes the spirits, that they never recover it again; but during their whole life, upon the first suggestion, or appearance of any terrifying idea, are scattered and confounded; the body is enervated, and the mind disturbed, and the man scarce himself, or capable of any composed or rational action. Cowardice. Whether this be from an habitual motion of the animal spirits, introduced by the first strong impression: or from the alteration of the constitution, by some more unaccountable way; this is certain, that so it is. Instances of such, who in a weak timorous mind have born, all their whole lives through, the effects of a fright when they were young, are every-where to be seen; and therefore, as much as may be, to be prevented.

The next thing is, by gentle degrees, to accustom children to those things they are too much afraid of. But here great caution is to be used, that you do not make too much haste, nor attempt this cure too early, for fear lest you increase the mischief instead of remedying it. Little ones in arms may be easily kept out of the way of terrifying objects, and till they can talk and

understand what is said to them, are scarce capable of that reasoning and discourse, which should be used to let them know there is no harm in those frightful objects, which we would make them familiar with, and do, to that purpose, by gentle degrees, bring nearer and nearer to them. And therefore it is seldom there is need of any application to them of this kind, till after they can run about and talk. But yet, if it should happen, that infants should have taken offence at any thing which cannot be easily kept out of their way; and that they show marks of terrour, as often as it comes in sight; all the allays of fright, by diverting their thoughts, or mixing pleasant and agreeable appearances with it, must be used, till it be grown familiar and inoffensive to them.

I think we may observe, that when children are first born, all objects of sight, that do not hurt the eyes, are indifferent to them; and they are no more afraid of a blackamoor, or a lion, than of their nurse, or a cat. What is it then, that afterwards, in certain mixtures of shape and colour, comes to affright them? Nothing but the apprehensions of harm, that accompany those things. Did a child suck every day a new nurse, I make account it would be no more affrighted with the change of faces at six months old, than at sixty. The reason then, why it will not come to a stranger, is because, having been accustomed to receive its food and kind usage only from one or two that are about it, the child apprehends, by coming into the arms of a stranger, the being taken from what delights and feeds it, and every moment supplies its wants, which it often feels, and therefore fears when the nurse is away.

Timorousness. The only thing we naturally are afraid of, is pain, or loss of pleasure. And because these are not annexed to any shape, colour, or size of visible objects, we are frightened with none of them, till either we have felt pain from them, or have notions put into us, that they will do us harm. The pleasant brightness and lustre of flame and fire so delights children, that at first they always desire to be handling of it: but when constant experience has convinced them, by the exquisite pain it has put them to, how cruel and unmerciful it is, they are afraid to touch it, and carefully avoid it. This being the ground of fear, it is not hard to find whence it arises, and how it is to be cured in all mistaken objects of terrour: and when the mind is confirmed against them, and has got a mastery over itself, and its usual fears in lighter occasions, it is in good preparation to meet more real dangers. Your child shrieks, and runs away at the sight of a frog, let another catch it, and lay it

down at a good distance from him: at first accustom him to look upon it; when he can do that, then to come nearer to it, and see it leap without emotion; then to touch it lightly, when it is held fast in another's hand; and so on, till he can come to handle it as confidently as a butterfly, or a sparrow. By the same way any other vain terrors may be removed, if care be taken that you go not too fast, and push not the child on to a new degree of assurance, till he be thoroughly confirmed in the former. And thus the young soldier is to be trained on to the warfare of life; wherein care is to be taken, that more things be not represented as dangerous, than really are so; and then, that whatever you observe him to be more frightened at than he should, you be sure to toll him on to, by insensible degrees, till he at last, quitting his fears, masters the difficulty, and comes off with applause. Successes of this kind, often repeated, will make him find, that evils are not always so certain, or so great, as our fears represent them; and that the way to avoid them is not to run away, or be discomposed, dejected, and deterred by fear, where either our credit or duty requires us to go on.

But, since the great foundation of fear in children is pain, the way to hardenHardiness. and fortify children against fear and danger, is to accustom them to suffer pain. This, it is possible, will be thought, by kind parents, a very unnatural thing towards their children; and by most, unreasonable, to endeavour to reconcile any one to the sense of pain, by bringing it upon him. It will be said, it may perhaps give the child an aversion for him that makes him suffer; but can never recommend to him suffering itself. This is a strange method. You will not have children whipped and punished for their faults; but you would have them tormented for doing well, or for tormenting's sake. I doubt not but such objections as these will be made, and I shall be thought inconsistent with myself, or fantastical in proposing it. I confess, it is a thing to be managed with great discretion; and therefore it falls not out amiss, that it will not be received or relished, but by those who consider well, and look into the reason of things. I would not have children much beaten for their faults, because I would not have them think bodily pain the greatest punishment; and I would have them, when they do well, be sometimes put in pain, for the same reason, that they might be accustomed to bear it without looking on it as the greatest evil. How much education may reconcile young people to pain and sufferance, the examples of Sparta do sufficiently show: and they who have once brought themselves not to think bodily pain the greatest of evils, or

that which they ought to stand most in fear of, have made no small advance towards virtue. But I am not so foolish to propose the Lacedæmonian discipline in our age or constitution: but yet I do say, that inuring children gently to suffer some degrees of pain without shrinking, is a way to gain firmness to their minds, and lay a foundation for courage and resolution in the future part of their lives.

Not to bemoan them, or permit them to bemoan themselves, on every little pain they suffer, is the first step to be made. But of this I have spoken elsewhere.

The next thing is, sometimes designedly to put them in pain: but care must be taken that this be done when the child is in good humour, and satisfied of the goodwill and kindness of him that hurts him, at the time that he does it. There must no marks of anger or displeasure on the one side, nor compassion or repenting on the other, go along with it; and it must be sure to be no more than the child can bear, without repining or taking it amiss, or for a punishment. Managed by these degrees, and with such circumstances, I have seen a child run away laughing, with good smart blows of a wand on his back, who would have cried for an unkind word, and have been very sensible of the chastisement of a cold look from the same person. Satisfy a child, by a constant course of your care and kindness, that you perfectly love him; and he may by degrees be accustomed to bear very painful and rough usage from you, without flinching or complaining: and this we see children do every day in playing one with another. The softer you find your child is, the more you are to seek occasions at fit times thus to harden him. The great art in this is to begin with what is but very little painful, and to proceed by insensible degrees, when you are playing and in good humour with him, and speaking well of him: and when you have once got him to think himself made amends for his suffering, by the praise given him for his courage; when he can take a pride in giving such marks of his manliness, and can prefer the reputation of being brave and stout, to the avoiding a little pain, or the shrinking under it; you need not despair in time, and by the assistance of his growing reason, to master his timorousness, and mend the weakness of his constitution. As he grows bigger, he is to be set upon bolder attempts than his natural temper carries him to; and whenever he is observed to flinch from what one has reason to think he would come off well in, if he had but courage to undertake; that he should be assisted in at first, and by degrees shamed to, till at last practice has given more

assurance, and with it a mastery, which must be rewarded with great praise, and the good opinion of others, for his performance. When by these steps he has got resolution enough not to be deterred from what he ought to do, by the apprehension of danger; when fear does not, in sudden or hazardous occurrences, discompose his mind, set his body a trembling, and make him unfit for action, or run away from it; he has then the courage of a rational creature; and such an hardiness we should endeavour by custom and use to bring children to, as proper occasions come in our way.

§ 116. One thing I have frequently observed in children, that, when they have got possession of any poor creature, they are apt to use it ill; they often torment and treat very roughly young birds, butterflies, and such other poor animals, which fall into their hands, and that with a seeming kind of pleasure. This, I think, should be watched in them; and if they incline to any such cruelty, Cruelty. they should be taught the contrary usage; for the custom of tormenting and killing of beasts will, by degrees, harden their minds even towards men; and they who delight in the suffering and destruction of inferior creatures, will not be apt to be very compassionate or benign to those of their own kind. Our practice takes notice of this, in the exclusion of butchers from juries of life and death. Children should from the beginning be bred up in an abhorrence of killing or tormenting any living creature, and be taught not to spoil or destroy any thing unless it be for the preservation or advantage of some other that is nobler. And truly, if the preservation of all mankind, as much as in him lies, were every one's persuasion, as indeed it is every one's duty, and the true principle to regulate our religion, politics, and morality by, the world would be much quieter, and better-natured, than it is. But to return to our present business; I cannot but commend both the kindness and prudence of a mother I knew, who was wont always to indulge her daughters, when any of them desired dogs, squirrels, birds, or any such things, as young girls use to be delighted with: but then, when they had them, they must be sure to keep them well, and look diligently after them, that they wanted nothing, or were not ill used; for, if they were negligent in their care of them, it was counted a great fault, which often forfeited their possession; or at least they failed not to be rebuked for it, whereby they were early taught diligence and good-nature. And indeed I think people should be accustomed, from their cradles, to be tender to all sensible creatures, and to spoil or waste nothing at all.

This delight they take in doing of mischief (whereby I mean spoiling of any thing to no purpose, but more especially the pleasure they take to put any thing in pain that is capable of it) I cannot persuade myself to be any other than a foreign and introduced disposition, an habit borrowed from custom and conversation. People teach children to strike, and laugh when they hurt, or see harm come to others; and they have the examples of most about them to confirm them in it. All the entertainment of talk and history is of nothing almost but fighting and killing; and the honour and renown that is bestowed on conquerors (who for the most part are but the great butchers of mankind) farther mislead growing youths, who by this means come to think slaughter the laudable business of mankind, and the most heroic of virtues. By these steps unnatural cruelty is planted in us; and what humanity abhors, custom reconciles and recommends to us, by laying it in the way to honour. Thus, by fashion and opinion, that comes to be a pleasure, which in itself neither is, nor can be any. This ought carefully to be watched, and early remedied, so as to settle and cherish the contrary and more natural temper of benignity and compassion in the room of it; but still by the same gentle methods, which are to be applied to the other two faults before mentioned. It may not perhaps be unreasonable here to add this farther caution, viz. that the mischiefs or harms that come by play, inadvertency, or ignorance, and were not known to be harms, or designed for mischief's sake, though they may perhaps be sometimes of considerable damage, yet are not at all, or but very gently, to be taken notice of. For this, I think, I cannot too often inculcate, that whatever miscarriage a child is guilty of, and whatever be the consequence of it, the thing to be regarded in taking notice of it, is only what root it springs from, and what habit it is like to establish; and to that the correction ought to be directed, and the child not to suffer any punishment for any harm which may have come by his play or inadvertency. The faults to be amended lie in the mind; and if they are such as either age will cure, or no ill habits will follow from, the present action, whatever displeasing circumstances it may have, is to be passed by without any animadversion.

§ 117. Another way to instil sentiments of humanity, and to keep them lively in young folks, will be, to accustom them to civility, in their language and deportment towards their inferiours, and the meaner sort of people, particularly servants. It is not unusual to observe the children, in gentlemen's families, treat the servants of the house with domineering

words, names of contempt, and an imperious carriage; as if they were of another race, and species beneath them. Whether ill example, the advantage of fortune, or their natural vanity, inspire this haughtiness, it should be prevented, or weeded out; and a gentle, courteous, affable carriage towards the lower ranks of men, placed in the room of it. No part of their superiority will be hereby lost, but the distinction increased, and their authority strengthened, when love in inferiours is joined to outward respect, and an esteem of the person has a share in their submission; and domestics will pay a more ready and cheerful service, when they find themselves not spurned, because fortune has laid them below the level of others, at their master's feet. Children should not be suffered to lose the consideration of human nature in the shufflings of outward conditions: the more they have, the better-humoured they should be taught to be, and the more compassionate and gentle to those of their brethren, who are placed lower, and have scantier portions. If they are suffered from their cradles to treat men ill and rudely, because, by their father's title, they think they have a little power over them; at best it is ill-bred; and, if care be not taken, will, by degrees, nurse up their natural pride into an habitual contempt of those beneath them: and where will that probably end, but in oppression and cruelty?

§ 118. CuriosityCuriosity. in children (which I had occasion just to mention, § 108) is but an appetite after knowledge, and therefore ought to be encouraged in them, not only as a good sign, but as the great instrument nature has provided, to remove that ignorance they were born with, and which without this busy inquisitiveness will make them dull and useless creatures. The ways to encourage it, and keep it active and busy, are, I suppose, these following:

Not to check or discountenance any inquiries he shall make, nor suffer them to be laughed at; but to answer all his questions, and explain the matters he desires to know, so as to make them as much intelligible to him, as suits the capacity of his age and knowledge. But confound not his understanding with explications or notions that are above it, or with the variety or number of things that are not to his present purpose. Mark what it is his mind aims at in the question, and not what words he expresses it in: and, when you have informed and satisfied him in that, you shall see how his thoughts will enlarge themselves, and how by fit answers he may be led on farther than perhaps you could imagine. For knowledge is grateful to the understanding, as light to the eyes: children are pleased and delighted with

it exceedingly, especially if they see that their inquiries are regarded, and that their desire of knowing is encouraged and commended. And I doubt not but one great reason, why many children abandon themselves wholly to silly sports, and trifle away all their time insipidly, is, because they have found their curiosity baulked, and their inquiries neglected. But had they been treated with more kindness and respect, and their questions answered, as they should, to their satisfaction, I doubt not but they would have taken more pleasure in learning, and improving their knowledge, wherein there would be still newness and variety, which is what they are delighted with, than in returning over and over to the same play and play-things.

§ 119. 2. To this serious answering their questions, and informing their understandings in what they desire, as if it were a matter that needed it, should be added some peculiar ways of commendation. Let others, whom they esteem, be told before their faces of the knowledge they have in such and such things; and since we are all, even from our cradles, vain and proud creatures, let their vanity be flattered with things that will do them good; and let their pride set them on work on something which may turn to their advantage. Upon this ground you shall find, that there cannot be a greater spur to the attaining what you would have the elder learn and know himself, than to set him upon teaching it his younger brothers and sisters.

§ 120. 3. As children's inquiries are not to be slighted, so also great care is to be taken, that they never receive deceitful and illuding answers. They easily perceive when they are slighted or deceived, and quickly learn the trick of neglect, dissimulation, and falsehood, which they observe others to make use of. We are not to intrench upon truth in any conversation, but least of all with children; since, if we play false with them, we not only deceive their expectation, and hinder their knowledge, but corrupt their innocence, and teach them the worst of vices. They are travellers newly arrived in a strange country, of which they know nothing: we should therefore make conscience not to mislead them. And though their questions seem sometimes not very material, yet they should be seriously answered; for however they may appear to us (to whom they are long since known) inquiries not worth the making, they are of moment to those who are wholly ignorant. Children are strangers to all we are acquainted with; and all the things they meet with are at first unknown to them, as they once were to us; and happy are they who meet with civil people, that will comply with their ignorance, and help them to get out of it.

If you or I now should be set down in Japan, with all our prudence and knowledge about us, a conceit whereof makes us perhaps so apt to slight the thoughts and inquiries of children; should we, I say, be set down in Japan, we should, no doubt, (if we would inform ourselves of what is there to be known,) ask a thousand questions, which to a supercilious or inconsiderate Japanese, would seem very idle and impertinent; though to us they would be very material, and of importance to be resolved; and we should be glad to find a man so complaisant and courteous, as to satisfy our demands, and instruct our ignorance.

When any new thing comes in their way, children usually ask the common question of a stranger, What is it? whereby they ordinarily mean nothing but the name; and therefore to tell them how it is called, is usually the proper answer to that demand. The next question usually is, What is it for? And to this it should be answered truly and directly; the use of the thing should be told, and the way explained, how it serves to such a purpose, as far as their capacities can comprehend it; and so of any other circumstances they shall ask about it: not turning them going, till you have given them all the satisfaction they are capable of, and so leading them by your answers into farther questions. And perhaps to a grown man such conversation will not be altogether so idle and insignificant, as we are apt to imagine. The native and untaught suggestions of inquisitive children do often offer things that may set a considering man's thoughts on work. And I think there is frequently more to be learned from the unexpected questions of a child than the discourses of men, who talk in a road, according to the notions they have borrowed, and the prejudices of their education.

§ 121. 4. Perhaps it may not sometimes be amiss to excite their curiosity, by bringing strange and new things in their way, on purpose to engage their enquiry, and give them occasion to inform themselves about them; and if by chance their curiosity leads them to ask what they should not know, it is a great deal better to tell them plainly, that it is a thing that belongs not to them to know, than to pop them off with a falsehood, or a frivolous answer.

§ 122. Pertness, that appears sometimes so early, proceeds from a principle that seldom accompanies a strong constitution of body, or ripens into a strong judgment of mind. If it were desirable to have a child a more brisk talker, I believe there might be ways found to make him so; but, I suppose, a wise father had rather that his son should be able and useful, when a man, than pretty company, and a diversion to others, whilst a child;

though, if that too were to be considered, I think I may say, there is not so much pleasure to have a child prattle agreeably, as to reason well. Encourage therefore his inquisitiveness all you can, by satisfying his demands, and informing his judgment, as far as it is capable. When his reasons are any way tolerable, let him find the credit and commendation of them; and when they are quite out of the way, let him, without being laughed at for his mistake, be gently put into the right; and, if he show a forwardness to be reasoning about things that come in his way, take care, as much as you can, that nobody check this inclination in him, or mislead it by captious or fallacious ways of talking with him: for, when all is done, this, as the highest and most important faculty of our minds, deserves the greatest care and attention in cultivating it: the right improvement and exercise of our reason being the highest perfection that a man can attain to in this life.
